- Use publicity to inform the community about job needs, interests, and capacities of disabled people, similar to TV spots from Job Service on specific jobs.
- Talk with industries to design programs for people with disabilities similar to programs designed for immigrants.

Handicapped Parking

One survey item related to the issue of enforcement of parking ordinances was identified as a major problem by 8,607 people in 13 surveys. The item received an average importance rating of 83 percent and an average satisfaction rating of 41 percent.

Consumer Identified Dimensions:

- There are not enough handicapped parking places close to shopping and workplaces.
- Many spaces are not wide enough to unload wheelchairs or put down van lifts.
- Some spaces are not well-marked with an upright sign.
- Police do not ticket violators as often as they should.
- Courts are lax in enforcing handicapped parking laws.

Consumer-Generated Alternatives:

- Review local statutes, seek state uniformity. Include private as well as public zones.
- Ask local mayors to publicize local ordinances.
- Consumer groups can conduct public awareness campaigns and letter-writing campaigns to local officials.
- Develop rapport with several police officers to assure better enforcement.
- Conduct study sessions with police, courts, and consumer groups to promote enforcement.
- Consumers can monitor violations and use data to advocate for compliance.
- Consumers can discuss parking problems with merchants where they shop.
- Consumer groups can distribute stickers to violators.
- Consumers can attend city council meetings and voice concerns to get adequate legislation.
- Consumers can advise businesses about adequate spaces and upright signs.
- Consumer groups can patronize businesses who provide and enforce handicapped spaces.
- Publicize how to get parking IDs.
- Increase fines to over $25 to put teeth into the law.
- Form coalitions among groups needing access and parking.
- Provide consumer consultation in design of spaces.
- Put parking places on end of row for van lifts. In Anderson, IN, violators get a "candid camera" treatment. In a cooperative effort between local consumers and the town's newspaper, a photo and brief statement by violators appeared on the front page of the local section.
- Some police departments have deputized local disabled consumers to ticket handicapped parking violators, paying their salaries from fines.

Health Care: Affordability and Availability

Six survey items were selected relevant to the availability and affordability of health care, including whether hospitals accept Medicaid and Medicare, regulations for Medicaid and Medicare, and sensitivity of health care providers to consumers. Items were identified as relative problems by 3,485 consumers in seven surveys. They received an average importance rating of 88 percent and an average satisfaction rating of 48 percent.

Consumer-Identified Dimensions:

- Increasing numbers of doctors are refusing to take Medicaid or Medicare, because payment is very late and inconsistent.
- There is no respite care for families caring for disabled and elderly family members.
- People with disabilities often cannot afford regular, nonemergency medical care and medications.
- Transportation to medical appointments is difficult, especially regular long-distance transportation, and transportation for rural citizens who go to large cities for dialysis or cancer treatment.
- Medical professionals are often insensitive in dealing with disabled patients, preferring to deal with family members rather than communicate directly with the disabled patient as a responsible adult.
- Medical professionals are often unaware of special medical or physical assistance needs imposed by a disability. Thus, discomfort and temporary setbacks can result or even life-threatening situations.
- The general public is unaware that existing programs do not provide adequate medical care for people with disabilities.
- Disabled consumers are often unaware of medical aspects of their own disabilities or good self-care habits. This occurs because they accept the public's definition of themselves as sick and needing to be cared for rather than healthy human beings responsible for their own well being.
- Another problem is attendant care. If no state attendant care program is available (Wyoming has no Medicaid waiver or state-funded program), there is no paid attendant care for low-income disabled consumers. They must depend on family and friends or live in nursing homes.

Consumer-Generated Alternatives:

- Use local media to describe health problems of people with disabilities and solicit suggestions to solve these problems.
- Organize local volunteers, church and civic groups for medical transportation.
- Consumer groups should educate medical professionals about the special needs of disabled patients. The Association for Retarded Citizens does this for people with developmental disabilities.
- Invite medical professionals to speak to meetings of consumers to increase their own sensitivity and educate consumers at the same time.
- Provide inservice training for medi-

cal professionals in the dignified, courteous treatment of persons with disabilities. This should be conducted by consumer groups and consumer-run agencies.

- Provide education to consumers in how they can advocate for themselves with health care providers.
- Form coalitions with other consumer groups to work on common health care objectives.
- Form a protection and advocacy organization to help disabled patients in cases of unfair treatment by health care providers.
- Educate medical professionals about treating different disabilities as part of medical and nursing school curricula.
- Use mutual support groups, counselors, and self-education to encourage good medical habits, nutrition, exercise, and prevention of illness.
- Locate sources of health care for persons with disabilities; make a directory of these resources.
- Arrange local medical fitness centers for people with disabilities. Provide outreach to commercial fitness centers and provide transportation to them for people with disabilities.
- Place people with disabilities as employees of health care providers (i.e., as social workers and patient advocates).
- Involve independent living centers in training and advocacy.
- Consumer groups at the state level could conduct a survey of health care facilities that covers disabilities served, access to offices and parking, acceptance of Medicaid and Medicare, and sources for financial assistance. This could be conducted through state medical and dental societies and updated periodically.
- Educate consumers about medical aspects of their own disabilities. Train them to advocate for themselves with medical professionals, and teach them to take personal responsibility for educating health care providers about their own appropriate treatment and needs.
- Write government and elected officials about health care issues.
- Attend city council meetings, and petition for city funds to help with medical expenses.
- Seek establishment of adult day care and home health services. Develop directory of doctors who accept Medicaid and Medicare payments for treatment of people with disabilities.
- Provide toll-free legal advice about legal matters relating to nonacceptance of Medicaid and Medicare or refusal of treatment to disabled consumers.
- Advocate for program changes to facilitate more timely and consistent payment of Medicaid and Medicare.
- Advocate for cooperative living arrangements with shared attendant care for those who need help.
- Consumer groups need to present need for attendant care and cost effectiveness data to state legislature.
- Support national groups lobbying for national attendant care programs.

Housing Affordability, Availability, and Accessibility

Six survey items related to the affordability, availability, and accessibility of housing have been identified as major problems by 4,127 consumers in 12 surveys. They received an average importance rating of 86 percent and an average satisfaction rating of 37 percent.

Consumer-Identified Dimensions:

- There is an extreme shortage of accessible, affordable housing for people with disabilities.
- Eligibility requirements and regulations keep some disabled consumers, especially the nonelderly who live with family members or attendants, from living in public or subsidized housing.
- Builders do not comply with existing laws, where laws exist, that require a certain percentage of accessible units.
- Builders are unaware of laws, access codes, and modifications necessary for accessibility.
- Managers and directors of public housing are unaware of, and often indifferent to, the needs of disabled tenants.

Consumer-Generated Alternatives:

- Talk to owners if the manager is uncooperative.
- Disabled and low-income people should lobby social service agencies for housing assistance.
- Disabled consumers should educate city officials on housing needs of people with disabilities.
- Local consumer groups can bring complaints to local housing authorities.
- Consumers can be educated to be aware of tenant rights and raise money to finance suits when necessary.
- Disabled residents should become familiar with codes, where to file complaints where codes don't exist, and how to introduce legislation.
- Groups can obtain 202 and other HUD loans for accessible housing and manage the housing units themselves.
- Examine eligibility requirements for subsidized housing, use net, not gross income.
- A consumer group in Los Angeles located two HUD projects in good neighborhoods, the Telephone Pioneers donated money and labor to upgrade the structure.
- Establish subsidized housing administered by occupants. Provide income subsidy within housing cooperatives.
- Some communities in Minnesota provide vouchers to subsidize rent for housing anywhere in the community.
- Establish a referral network for accessible, affordable housing.
- Enforce existing laws setting aside a certain number of units for people with disabilities.
- Consumers need to educate building professionals and make information available.
- Advocate for statewide legislation to encourage adaptability of units.
- Consumers need to lobby elected officials on lack of accessible housing.
- Disabled community members need to get on housing boards.
- Educate disabled homeowners about programs to help modify their homes for access and safety.

Insurance for Auto, Life, and Liability

This issue refers to the availability and affordability of auto, life, and liability insurance for people with disabilities. This item was selected as a major problem by 2,355 people completing two surveys. It received an average importance rating of 89 percent and an average satisfaction rating of 35 percent.

Consumer-Identified Dimensions:

- Insurance premiums are more expensive for people with disabilities.

- Insurance companies discriminate based on disability.

Consumer Generated Alternatives:

- Have a group of disabled people discuss possible solutions with insurance companies regarding adequate prices.

Insurance for Health Care

One survey question related to the affordability of health insurance was identified as a problem by 5,624 consumers in two surveys. It received an average importance rating of 86 percent and an average satisfaction rating of 38 percent.

Consumer-Identified Dimensions:

- Disabled consumers cannot buy health insurance because of their disability and/or pre-existing conditions.
- Disabled consumers cannot afford health insurance.
- Health insurance often does not cover supplies, equipment, regular medications, or therapies used by disabled consumers.
- Inability to purchase individual health insurance and exclusion from some group policies are serious disincentives to individuals with disabilities looking for work.

Consumer-Generated Alternatives:

- Consumer groups can advocate for national health insurance.
- Disabled consumers can set up health insurance cooperatives as they did in Los Angeles.
- Shared risk insurance is an option so consumers with disabilities and pre-existing conditions can get group insurance.
- Educate consumers about supplemental insurance available through groups such as AARP, professional associations, and credit card holders.
- Publicize the fact that laws in some states (such as Missouri and Kansas) prohibit insurance companies from discriminating against persons with disabilities.
- Independent living centers can train and assist consumers in filling out forms, challenge actions and policies of Medicaid, Medicare, and insurance companies, and assist in advocacy, complaints, and appeals processes.
- Get information from and make use of the state insurance commissioner's office.

●

Media Portrayal and Public Information

Three survey items related to media portrayal of people with disabilities and their access to information about services, benefits, and programs were selected as problems by 7,547 consumers in three surveys. The items received an average importance rating of 81 percent and an average satisfaction rating of 39 percent.

Consumer-Identified Dimensions:

- The media do not provide enough information about what is available for disabled citizens.
- The media portray people with disabilities in a negative and unrealistic way, preferring the sensational or pitiful to the everyday and human side of disability.

Consumer-Generated Alternatives:

- Consumer groups should bring accessibility and independent-living issues to the attention of the press.
- Consumers should monitor coverage of disability issues.
- Consumers should educate the media to correct negative portrayals and terminology.
- Consumer groups should meet with service providers about developing a directory of services and programs for people with disabilities that could be disseminated through the media.

Public Access

Issues related to safe access to public places, including availability of curb cuts, accessible entrances, and snow removal, have been selected as major problems. Two related survey items were chosen by 204 consumers in two different surveys, with an average importance rating of 81 percent and an average satisfaction rating of 48 percent.

Consumer-Identified Dimensions:

- Disabled citizens are forced to stay home or use the street, because curb cuts and sidewalks are absent or inadequate, or in some instances, snow is not removed promptly.
- Many public buildings are totally inaccessible or technically accessible with inadequate or unsafe access.

Consumer-Generated Alternatives:

- Discuss among disabled consumers key areas that need to be made accessible.
- Make up an annual priority list of access and safety issues.
- Describe problems in newsletters and solicit opinions from other disabled community members.
- Offer modification assistance to owners of inaccessible buildings and appropriate government and social agencies.
- Offer assistance to government agencies on ways to increase the safety of streets and sidewalks.

Social Services

Four survey items related to information social agencies provide to consumers about services and legal issues were selected as major problems in six surveys. A total of 3,581 consumers responded to these questions, with an average importance rating of 88 percent and an average satisfaction rating of 51 percent.

Consumer-Identified Dimensions:

- Social service agencies fail to inform disabled consumers about all services available to them through their own agency, other agencies, or the community.
- Benefits or services from one agency can limit benefits or services from another agency.
- Most social service agencies are unaware of services available at other agencies.
- Disabled people are referred from one agency to another, often encountering agencies unable to serve them or refusing services.
- Forms and policies of social service agencies are confusing.

Consumer-Generated Alternatives:

- Organize a consumer group to review forms used by social service agencies.
- Form a consumer network for information and referral.
- Create more support groups for mutual assistance.
- Provide corrective feedback and information to social service agencies that fail to inform clients about benefits to disabled consumers.
- Provide social service agencies with training on benefits available to disabled consumers.
- Consumers should demand that VR cases be reopened, if they have not been fully informed about all benefits

available.

- Independent living centers should train consumers in what benefits are available and how to access them effectively.
- Independent living centers or consumer groups could organize regular cooperative meetings involving representatives of all social service agencies in the community, or if such an organization exists, become active and advocate for services to people with disabilities.
- If consumers are referred to an agency unable to serve them, they should contact the referring agency and tell them the referral was inappropriate and why.
- Educate consumers to use the state CAP agency, Legal Aid, and other available legal help when services are unjustly refused.
- Set up courses in self-reliance that teach consumers to use social services such as the one used by the CIL in Anaheim, Calif.

Transportation: Availability and Affordability

Three survey items related to the availability and affordability of accessible transportation services were identified as major problems by 4,008 consumers in nine surveys. They received an average importance rating of 83 percent and an average satisfaction rating of 40 percent.

Consumer-Identified Dimensions:

- Disabled citizens are segregated from the rest of the community and forced to remain at home because of lack of transportation.
- In most areas, public transportation is not wheelchair-accessible, and paratransit is expensive or nonexistent. In rural areas, accessible transportation is available infrequently.
- Lack of transportation is the primary barrier to community participation, education, employment, recreation, adequate medical care, and independent living for people with disabilities.
- Weekend and evening transportation is a problem.
- Transportation between neighboring cities and from rural areas to cities is a problem.
- Ideally, a city should have accessible mainline transportation for those who can use it and paratransit for those who need it.
- Recreational events and facilities are sometimes inaccessible. Transportation to recreational events is unavailable.

Consumer-Generated Alternatives:

- Consumer groups need to work with existing community recreational facilities to make them accessible and usable for people with disabilities.
- Contact organizers of recreational events for transportation for disabled participants.
- People with disabilities need to become involved in the planning of community recreational events and active in interest groups.
- Form a local task force on transportation, decide what local consumers need and want, then fight for it.
- It is against federal law for paratransit to cost more than mainline transportation. Educate consumers about this law, how to make complaints, and how to ensure its enforcement.
- Develop a share-a-fare system as they did in Kansas City, MO, where 900 wheelchair users a month participate.
- Give testimony to state legislatures on transportation funding.
- Have lift buses operate at fixed rates and schedules as they do in Denver, a city with almost 100 percent accessible buses.
- Slow transit schedules to accommodate disabled riders. Drivers should call out stops ahead of time.
- Include disabled drivers in existing driver training programs.
- Develop car pools.
- Conduct public education on varied modes of transportation needed by disabled citizens.
- Submit formal complaints to transportation authorities concerning mainline wheelchair-accessible buses.
- Develop creative rural and small city alternatives. Examples include merging existing systems serving disabled riders (Morgantown, W.V.), ownership of a lift van by a consumer group or cooperative (Cuba, MO), and use of idle church or school lift-equipped buses.

Utility Bills

One survey question related to the affordability of utility bills was identified as a major problem in four surveys. A total of 1,611 consumers answered this survey item, with an average importance rating of 89 percent and an average satisfaction rating of 34 percent.

Consumer-Identified Dimensions:

- Disabled consumers on a fixed income cannot afford inconsistent and high utility bills.
- Because of their medical needs, many disabled consumers cannot survive without water, gas for heat, and electricity to operate their equipment.

Consumer-Generated Alternatives:

- Obtain help to establish programs for weatherization.
- Encourage landlords to weatherize units.
- Educate landlords and disabled homeowners about tax credits for weatherizing and solar installation.
- Encourage consumers to join annualized level payment plans.
- Consumer groups should maintain a list of agencies that help pay utility bills.
- Call local consumer affairs office for help if utilities are shut off.
- Consult local phone company about discounts for disabled consumers.
- Write elected officials describing problems with utility bills and ask for legislative solutions and assistance programs.

This report represents the comments and suggestions of thousands of Americans with disabilities. They have identified specific community features that inhibit independent living, including inadequate job opportunities, job discrimination, insufficient accessible and affordable housing, inaccessible public places, and unavailable and unaffordable service options. These community problems are counterproductive to achieving society's goal of independence.

The common concerns outlined here frame an agenda for public, private, and self-help initiatives. These consumer-generated alternatives feature many practical steps that can be taken at local, state, and national levels. Taken together, these issues and options pose a challenge to all who believe that justice requires equal opportunities to achieve independence. ■

Preface

The hallmark of the disability rights and independent living movements is the assurance of equal access to all activities society offers, both work and leisure-related. Over 30 million people with disabilities accept responsibility for their work, family, and individual lives. Their substantial contribution to society can be attributed both to personal competence and to the strengths of those communities that foster and support attempts to live independently. However, there are still many physical and social barriers that limit adequate jobs, housing, accessible transportation, and other needed services. These community problems thwart even the most heroic personal attempts to pursue a full life.

This report outlines the major problems in communities that limit independence. It also provides alternatives for action from the perspective of people with disabilities. This report summarizes quantitative data from over 17,000 people with disabilities in 12 states and provides qualitative information about the issues and options they identified during local town meetings and public forums. Thus, this report is a compendium of common concerns of people with disabilities and their insights into what actions would help assure equality of opportunity.

The Concerns Report Method

This report on Common Concerns of Disabled Americans is based on research conducted by the Research and Training Center on Independent Living using the Concerns Report Method. The Concerns Report Method provides quantitative data about community features and issues that affect people with disabilities. It also yields qualitative information about consumers' local experiences with these issues and their suggested alternatives for improvement.

This report summarizes information generated from the three group processes that make up the Concerns Report Method: the working group, the Concerns Survey, and the town meeting. Local working groups--composed of people with representative disabilities--reviewed a menu of possible concerns. They then selected approximately 30 issues to appear on each of the 21 unique Concerns Surveys. Each survey item asked for ratings of importance on an issue and satisfaction with that issue (See Appendix 1 for an example and computational formulas). Questionnaires were administered to all identified citizens with disabilities in the local community or state. Average scores for importance and satisfaction were used to identify relative strengths (i.e., items of high importance and high satisfaction) and possible problems (i.e., items of high importance and low satisfaction). Finally, qualitative information was obtained when the results of each survey were discussed in town meetings. Disabled citizens discussed major issues, identifying specific dimensions of issues and generating possible solutions.

Appendix 2 provides a demographic profile of respondents by disability type, age, income, percentage of registered voters, and educational level.

To date, 17,039 people with disabilities have completed one of 21 different surveys using the Disabled Citizens Concerns Report Method. Participants came from 487 communities in 12 different states. Sponsoring organizations included independent living centers (ILCs), state vocational rehabilitation agencies (VR), and consumer advisory committees. Local surveys were developed in California, Kansas, Michigan, Minnesota, Missouri, and Montana. Statewide applications occurred in Indiana, Iowa, Kansas, North Dakota, Oklahoma, South Dakota, and Wyoming. This summary report is based on a review of work conducted during the past 7 years.

BEST COPY AVAILABLF

Major Problems Identified by Disabled Americans

This section provides a summary of issues identified as major problems. Problems are organized alphabetically under category headings, such as housing or transportation. Under each category, problematic aspects are noted as well as the total number of participants who responded to surveys in which that issue was chosen as a top problem. The overall average importance and satisfaction ratings (where 100% is highest and 0% is lowest) for all respondents are also presented. Appendix 1 presents the specific survey items in each category, the community or state survey in which they were selected, the number of respondents, and the average importance and satisfaction ratings for each survey.

Summaries follow for each of 19 issue categories: assistive devices, commercial services (accessibility), commercial services (discounts), community support and responsiveness, disability rights and advocacy, education, employment (accommodations, disincentives, and training), employment discrimination, employment opportunities, handicapped parking, health care (affordability and availability), housing (affordability, availability, and accessibility), insurance for auto, life, and liability, insurance for health care, media portrayal and public information, public access, social services and benefits, transportation (availability and affordability), and utility bills.

ASSISTIVE DEVICES: AFFORDABILITY AND AVAILABILITY

The issue of assistive devices (e.g., wheelchairs) involves aspects such as affordability, availability of financial assistance, cost of services and repair, cost of rental, and price. Six related survey items were chosen by consumers and responded to by 8,409 people with disabilities in 8 different surveys. The issues received consistently high importance ratings, an average of 81%, and relatively low satisfaction ratings, an average of 41%.

Consumer-Identified Dimensions

- Assistive devices, such as wheelchairs, are very expensive. Most people with disabilities do not have enough money to purchase devices.
- Rental of assistive devices, such as wheelchairs, is almost nonexistent. If rental is possible, consumers don't know where to go or have needed information.
- Medicaid and Medicare do not cover all assistive devices.

Consumer-Generated Alternatives

- Change legislation regarding Medicaid and Medicare to cover purchase and repair of assistive devices.

COMMERCIAL SERVICES: ACCESSIBILITY

The issue of accessibility of businesses, particularly public restrooms, has been selected as a problem in 3 different surveys. Two related survey items were responded to by 299 consumers. The issues were rated with an average importance of 87% and an average satisfaction rating of 47%.

Consumer-Identified Dimensions

- In many businesses and restaurants, the restrooms are inaccessible.
- The restroom doors are too hard to push, and the stalls are too narrow.

Consumer-Generated Alternatives

- Make a list of accessible and responsive businesses.
- Survey businesses and provide feedback and suggestions.

- Write letters to local businesses about upgrading facilities.

- Consumers should keep informed about and review access plans and permits for new construction in the community.

COMMERCIAL SERVICES: AVAILABILITY OF DISCOUNTS

A second issue related to commercial services and identified as a problem is the availability of special rates for disabled consumers. This issue was selected in one survey involving 1,185 respondents, with an importance rating of 82% and a satisfaction rating of 35%.

Consumer-Identified Dimensions

- Disabled people do not get the same discounts and shopping privileges as Senior Citizens. Most disabled people are on a very low fixed income.

Consumer-Generated Alternatives

- Independent living centers can sell discount cards to consumers for use with participating merchants. This was done by Westside CIL in Los Angeles.

- Have a group of disabled people discuss a proposal with local merchants.

COMMUNITY SUPPORT AND RESPONSIVENESS

This category includes issues related to family, community, and government support in meeting the needs of persons with disabilities.

Five somewhat related items were chosen by 1,914 consumers in 6 surveys. They received consistently high importance ratings, with an average of 86%, and relatively low satisfaction ratings, with an average of 46%.

Consumer-Identified Dimensions

- Families and communities do not encourage disabled members to be independent.

- The community does not provide opportunities or assistance for disabled people to live independently.

- There are not enough support groups available for people with disabilities and their families.

- Sexuality counseling for people with disabilities is not available.

- Local governments are unresponsive to disability issues, especially if solutions cost money. In the issue of voting sites, for example, disabled citizens are discouraged from registering and voting by inaccessible registration sites, polling places, and lack of transportation.

Consumer-Generated Alternatives

- Encourage community groups to organize support groups and events to involve disabled people and their families.

- Encourage churches to work with support groups, and include disabled people and their families in church activities.

- Use local media to feature stories about including people with disabilities in community activities.

- Ask city councils for help in organizing programs that will encourage independence for disabled people and their families.

- Independent living centers should provide training for their staff counselors in sexuality counseling or bring in professional counselors for a workshop and provide materials.

- Consumer groups should represent themselves at city council and county court meetings, become familiar with city budgets, and advocate for funds for access improvements and disability programs.

- Consumer groups should encourage and assist disabled citizens to register to vote.

- Use the American Civil Liberties Union to enforce existing access and registration laws.

DISABILITY RIGHTS AND ADVOCACY

Issues related to involving disabled citizens in advocacy activities, increasing their knowledge about their rights, and training in self-advocacy were selected in 4 different surveys. Three related questions were chosen by 2,430 people with disabilities. They received an average importance rating of 88%

and an average satisfaction rating of 45%.

Consumer-Identified Dimensions

- People with disabilities are unaware of their legal rights.
- Most people with disabilities are unaware of what pending legislation at state and national levels they should support or oppose.
- People with disabilities need training in forming advocacy organizations.

Consumer-Generated Alternatives

- Professionals and independent living centers can foster local and state leadership within the disabled community.
- People with disabilities need to inform themselves and attend advocacy meetings at all levels; to get on mailing lists for disability groups involved in legislation; and to obtain names, addresses, and numbers of elected officials.
- Disabled consumers should organize locally around identified and prioritized issues and form connections with state and national groups.
- Training in advocacy skills should be provided.

EDUCATION

Most consumers responding to the consumer concerns survey are adults speaking for their own issues. Accordingly, issues relating to the education of disabled children and youth emerge less frequently than they might if parent/advocates or consumers under 18 were more involved. However, two survey items relating to public education about disability and transition services for young adults were chosen as issues by 2,534 consumers in 2 surveys, with an average importance rating of 83% and a satisfaction rating of 49%.

Consumer-Identified Dimensions

- Disabled students are isolated from social interaction with nondisabled students.

- Nondisabled students are not educated abut disabilities and reach adulthood unaware of people with disabilities and disability issues.
- Disabled students end up on waiting lists for transition services for several years following high school graduation, resulting in loss of skills, knowledge, and motivation during the waiting period.

Consumer-Generated Alternatives

- Increase mainstreaming of disabled students.
- Recruit teachers and school employees with disabilities.
- Independent living centers should work with schools.
- Transition activities should be incorporated into the school curriculum for disabled students and not wait until after high school.

EMPLOYMENT ACCOMMODATIONS, DISINCENTIVES, AND TRAINING

Six survey items related to job accommodations in the workplace, work disincentives, and quality of job assistance and training programs were identified by 11,172 consumers as relative problems in 8 surveys. They received an average importance rating of 84% and an average satisfaction rating of 42%.

Consumer-Identified Dimensions

- Many businesses do not provide reasonable accommodations in the workplace.
- Work disincentives still exist within the Social Security system. In addition to loss of economic benefits are loss or reduction in medical benefits, housing subsidies, food stamps, attendant services, etc.
- Disabled job hunters lack basic job-seeking skills and are unaware of incentives to employers and laws prohibiting discrimination.
- Blind people have lost their tax credit; other disability groups were never eligible.
- People with disabilities do not know where to go for job training or assistance in finding a job.

Consumer-Generated Alternatives

- Consumer groups need to form a coalition to lobby legislators at federal and state levels for tax credits.
- VR could offer training in job-seeking skills.
- Consumer groups should develop guidelines on what constitutes reasonable accommodation in the workplace.
- Disseminate information about where to go for job training skills and job-related assistance.

EMPLOYMENT DISCRIMINATION

Two survey items related to job discrimination were identified by 13,136 consumers as top problems in 10 surveys. They received an average importance rating of 85% and an average satisfaction rating of 42%.

Consumer-Identified Dimensions

- People with disabilities are discriminated against because of their disability.
- Qualified disabled individuals are not given the same opportunity as nondisabled people.

Consumer-Generated Alternatives

- Consumers need to teach disabled job seekers about proper attitudes and how to develop a businesslike demeanor when dealing with a potential employer. Disabled people must sell an employer on their abilities and not rely on sympathy.
- If a specific employer is perceived as insensitive, invite a representative of that company to speak to a disability group about employment.
- Independent living centers and advocacy groups need to encourage and assist disabled job applicants and employees to enforce laws and regulations prohibiting discrimination.
- Disabled individuals can contact the Job Accommodations Network or similar resources for help in locating jobs and training, marketing themselves to prospective employers, and obtaining reasonable accommodation.

EMPLOYMENT OPPORTUNITIES

Two survey items related to employment opportunities were identified by 13,617 consumers as relative problems in 14 surveys. They received an average importance rating of 83% and an average satisfaction rating of 46%.

Consumer-Identified Dimensions

- Job opportunities for people with disabilities are very limited.
- If there is a nondisabled person and a disabled individual applying for a job, employers prefer to hire the nondisabled person.

Consumer-Generated Alternatives

- Consumers should educate employers in tax credits, reasonable accommodation, and advantages of hiring disabled employees.
- Disability groups must keep a coalition going at the national level to lobby for reduction of work disincentives.
- Job placement people should know which employers routinely hire disabled applicants.
- Use publicity to inform the community about job needs, interests, and capacities of disabled people, similar to TV spots from Job Service on specific jobs.
- Talk with industries to design adoption programs for people with disabilities similar to programs designed for immigrants.

HANDICAPPED PARKING

One survey item related to the issue of enforcement of parking ordinances was identified as a major problem by 8,607 people in 13 surveys. The item received an average importance rating of 83% and an average satisfaction rating of 41%.

Consumer-Identified Dimensions

- There are not enough handicapped parking places close to shopping and workplaces.
- Many spaces are not wide enough to unload wheelchairs or put down van lifts.

- Some spaces are not well-marked with an upright sign.
- Police do not ticket violators as often as they should.
- Courts are lax in enforcing handicapped parking laws.

Consumer-Generated Alternatives

- Review local statutes; seek state uniformity. Include private as well as public zones.
- Ask local mayors to publicize local ordinances.
- Consumer groups can conduct public awareness campaigns and letter-writing campaigns to local officials.
- Develop rapport with several police officers to assure better enforcement.
- Conduct study session with police, courts, and consumer groups to promote enforcement.
- Consumers can monitor violations and use data to advocate for compliance.
- Consumers can discuss parking problems with merchants where they shop.
- Consumer groups can distribute stickers to violators.
- Consumers can attend city council meetings and voice concerns to get adequate legislation.
- Consumers can advise businesses about adequate spaces and upright signs.
- Consumer groups can reinforce businesses who provide and enforce handicapped spaces.
- Publicize how to get parking IDs.
- Increase fines to over $25 to put teeth into the law.
- Form coalitions among groups needing access and parking.
- Provide consumer consultation in design of spaces.
- Put parking places on end of row for van lifts. In Anderson, IN, violators get a "candid camera" treatment. In a cooperative effort between local consumers and the town's newspaper, a photo and brief statement by violators appeared on the front page of the local section.

- Some police departments have deputized local disabled consumers to ticket handicapped parking violators, paying their salaries from fines.

HEALTH CARE: AFFORDABILITY AND AVAILABILITY

Six survey items were selected relevant to the availability and affordability of health care, including whether hospitals accept Medicaid and Medicare, regulations for Medicaid and Medicare, and sensitivity of health care providers to consumers. Items were identified as relative problems by 3,485 consumers in 7 surveys. They received an average importance rating of 88% and an average satisfaction rating of 48%.

Consumer-Identified Dimensions

- Increasing numbers of doctors are refusing to take Medicaid or Medicare, because payment is very late and inconsistent.
- There is no respite care for families caring for disabled and elderly family members.
- People with disabilities often cannot afford regular, nonemergency medical care and medications.
- Transportation to medical appointments is difficult, especially regular long-distance transportation, and transportation for rural citizens who go to large cities for dialysis or cancer treatment.
- Medical professionals are often insensitive in dealing with disabled patients, treating them in a patronizing manner or preferring to deal with family members rather than communicate directly with the disabled patient as a responsible adult.
- Medical professionals are often unaware of special medical or physical assistance needs imposed by a disability. Thus, discomfort and temporary setbacks can result or even life-threatening situations.
- The general public is unaware that existing programs do not provide adequate medical care for people with disabilities.

- Disabled consumers are often unaware of medical aspects of their own disabilities or good self-care habits. This occurs because they accept the public's definition of themselves as sick and needing to be cared for rather than healthy human beings responsible for their own well being.

- Another problem is attendant care. If no state attendant care program is available (example Wyoming has no Medicaid waiver or state-funded program), there is no paid attendant care for low-income disabled consumers. They must depend on family and friends or live in nursing homes.

Consumer-Generated Alternatives

- Use local media to describe health problems of people with disabilities and solicit suggestions to solve these problems.

- Organize local volunteers, church, and civic groups for medical transportation.

- Consumer groups should educate medical professionals about the special needs of disabled patients. The Association for Retarded Citizens does this for people with developmental disabilities.

- Invite medical professionals to speak to meetings of consumers to increase their own sensitivity and educate consumers at the same time.

- Provide inservice training for medical professionals in the dignified, courteous treatment of persons with disabilities. This should be conducted by consumer groups and consumer-run agencies.

- Provide education to consumers in how they can advocate for themselves with health care providers.

- Form coalitions with other consumer groups to work on common health care objectives.

- Form a Protection and Advocacy Organization to help disabled patients in cases of unfair treatment by health care providers.

- Educate medical professionals about treating different disabilities as part of medical and nursing school curricula.

- Use mutual support groups, counselors, and self-education to encourage good medical habits, nutrition, exercise, and prevention of illness.

- Locate sources of health care for persons with disabilities; make a directory of these resources.

- Arrange local medical fitness centers for people with disabilities. Provide outreach to commercial fitness centers and provide transportation to them for people with disabilities.

- Place people with disabilities as employees of health care providers (i.e., as social workers and patient advocates).

- Involve independent living centers in training and advocacy.

- Consumer groups at the state level could conduct a survey of health care facilities that covers disabilities served, access to offices and parking, acceptance of Medicaid and Medicare, and sources for financial assistance. This could be conducted through state medical and dental societies and updated periodically.

- Educate consumers about medical aspects of their own disabilities. Train them to advocate for themselves with medical professionals, and teach them to take personal responsibility for educating health care providers about their own appropriate treatment and needs.

- Write government and elected officials about health care issues.

- Attend city council meetings, and petition for city funds to help with medical expenses.

- Seek establishment of adult day care and home health services. Develop directory of doctors who accept Medicaid and Medicare payments for treatment of people with disabilities.

- Provide toll-free legal advice about legal matters relating to nonacceptance of Medicaid and Medicare or refusal of treatment to disabled consumers.

- Advocate for program changes to facilitate more timely and consistent payment of Medicaid and Medicare.

- Advocate for cooperative living arrangements with shared attendant care for those who need help.

- Consumer groups need to present need for attendant care and cost effectiveness data to state legislature.

- Support national groups lobbying for national attendant care programs.

HOUSING: AFFORDABILITY, AVAILABILITY, AND ACCESSIBILITY

Six survey items related to the affordability, availability, and accessibility of housing have been identified as major problems by 4,510 consumers in 13 surveys. They received an average importance rating of 86% and an average satisfaction rating of 37%.

Consumer-Identified Dimensions

- There is an extreme shortage of accessible, affordable housing for people with disabilities.
- Eligibility requirements and regulations keep some disabled consumers, especially the nonelderly who live with family members or attendants, from living in public or subsidized housing.
- Builders do not comply with existing laws, where laws exist, that require building a certain percentage of accessible units.
- Builders are unaware of laws, access codes, and modifications necessary for accessibility.
- Managers and directors of public housing are unaware of, and often indifferent to, the needs of disabled tenants.

Consumer-Generated Alternatives

- Talk to owners if the manager is uncooperative.
- Disabled and low-income people should be able to rely on social service agencies for housing assistance.
- Cities need more feedback from disabled consumers on housing needs of people with disabilities.
- Local consumer groups can bring complaints to local housing authorities.
- Consumers can be educated to be aware of tenant rights and raise money to finance suits when necessary.
- Disabled residents should become familiar with codes, where to file complaints where codes don't exist, and how to introduce legislation.
- Groups can obtain 202 and other HUD loans for accessible housing and manage the housing units themselves.
- Examine eligibility requirements for subsidized housing. Use net, not gross income, as they did in Los Angeles.
- A consumer group in Los Angeles located two HUD projects in good neighborhoods to lessen the likelihood of crime and improve surroundings. The Telephone Pioneers donated money and labor to upgrade the structure.

- Establish subsidized housing administered by occupants. Provide income subsidy within housing cooperatives.

- Some communities in Minnesota provide vouchers to subsidize rent for housing anywhere in the community.

- Establish a referral network for accessible, affordable housing.

- Enforce existing laws, setting aside a certain number of units for people with disabilities.

- Consumers need to educate building professionals and make information available.

- Advocate for statewide legislation to encourage adaptability of units.

- Consumers need to lobby elected officials on lack of accessible housing.

- Disabled community members need to get on housing boards.

- Educate disabled homeowners about programs to help modify their homes for access and safety.

INSURANCE FOR AUTO, LIFE, AND LIABILITY

This issue refers to the availability and affordability of auto, life, and liability insurance for people with disabilities. This item was selected as a major problem by 2,355 people completing two surveys. It received an average importance rating of 89% and an average satisfaction rating of 35%.

Consumer-Identified Dimensions

- Insurance premiums are more expensive for people with disabilities.

- Insurance companies discriminate based on disability.

-Consumer-Generated Alternatives

- Have a group of disabled people discuss possible solutions with insurance companies regarding adequate prices.

INSURANCE FOR HEALTH CARE

One survey questions related to the affordability of health insurance was identified as a relative problem by 5,624 consumers in 2 surveys. It received an average importance rating of 86% and an average satisfaction rating of 38%.

Consumer-Identified Dimensions

- Disabled consumers cannot buy health insurance because of their disability and/or pre-existing conditions.
- Disabled consumers cannot afford health insurance.
- Health insurance often does not cover supplies, equipment, regular medications, or therapies used by disabled consumers.
- Inability to purchase individual health insurance and exclusion from some group policies are serious disincentives to individuals with disabilities looking for work.

Consumer-Generated Alternatives

- Consumer groups can advocate for national health insurance.
- Disabled consumers can set up health insurance cooperatives as they did in Los Angeles.
- Shared risk insurance is an option so consumers with disabilities and pre-existing conditions can get group insurance.
- Educate consumers about supplemental insurance available through groups such as AARP, professional associations, credit card holders' benefits, etc.
- Publicize the fact that laws in some states (such as Missouri and Kansas) prohibit insurance companies from discriminating against persons with disabilities.
- Independent living centers can: train and assist consumers in filling out forms; challenge actions and policies of Medicaid, Medicare, and insurance companies; and assist in advocacy, complaints, and appeals processes.
- Get information from and make use of the state insurance commissioner's office.

MEDIA PORTRAYAL AND PUBLIC INFORMATION

Three survey items related to media portrayal of people with disabilities and their access to information about services, benefits, and programs were selected as problems. They were selected as problems by 7,547 consumers in 3 surveys. The items received an average importance rating of 81% and an average satisfaction rating of 39%.

Consumer-Identified Dimensions

- The media do not provide enough information about what is available for disabled citizens.
- The media portray people with disabilities in a negative and unrealistic way, preferring the sensational or pitiful to the everyday and human side of disability.

Consumer-Generated Alternatives

- Consumer groups should bring accessibility and independent living issues to the attention of the press.
- Consumers should monitor coverage of disability issues.
- Consumers should educate the media to correct negative portrayals and terminology.
- Consumer groups could meet with service providers about developing a directory of services and programs for people with disabilities that could be disseminated through the media.

PUBLIC ACCESS

Issues related to safe access to public places, including availability of curb cuts, accessible entrances, and snow removal, have been selected as major problems. Two related survey items were chosen by 204 consumers in 2 different surveys, with an average importance rating of 81% and an average satisfaction rating of 48%.

Consumer-Identified Dimensions

- Disabled citizens are forced to stay home or use the street, because curb cuts and sidewalks are absent or inadequate, or in some instances, snow is not removed promptly.
- Many public buildings are totally inaccessible or technically accessible with inadequate or unsafe access.

Consumer-Generated Alternatives

- Discuss among disabled consumers key areas that need to be made accessible.
- Make up a priority list of access and safety issues for each year.
- Describe problems in newsletters, and solicit opinions from other disabled community members.
- Offer modification assistance to owners of inaccessible buildings and appropriate government and social agencies.
- Offer assistance to government agencies on ways to increase the safety of streets and sidewalks.

SOCIAL SERVICES AND BENEFITS

Five survey items related to information social agencies provide to consumers about services and legal issues were selected as major problems in 7 surveys. A total of 3,964 consumers responded to these questions, with an average importance rating of 88% and an average satisfaction rating of 50%.

Consumer-Identified Dimensions

- Social service agencies fail to inform disabled consumers about all services available to them through their own agency, other agencies, or the community.
- Benefits or services from one agency can limit benefits or services from another agency.
- Most social service agencies are unaware of services available at other agencies.
- Disabled people are referred from one agency to another, often encountering agencies unable to serve them or refusing services.

- Forms and policies of social service agencies are confusing.

Consumer-Generated Alternatives

- Organize a consumer group to review forms used by social service agencies.
- Form a consumer network for information and referral.
- Create more support groups for mutual assistance.
- Provide corrective feedback and information to social service agencies that fail to inform clients about benefits to disabled consumers.
- Provide social service agencies with training on benefits available to disabled consumers.
- Consumers should demand that VR cases be reopened, if they have not been fully informed about all benefits available.
- Independent living centers should train consumers in what benefits are available and how to access them effectively.
- Independent living centers or consumer groups could organize regular cooperative meetings involving representatives of all social service agencies in the community, or if such an organization exists, become active and advocate for services to people with disabilities.
- If consumers are referred to an agency unable to serve them, they should contact the referring agency and tell them the referral was inappropriate and why.
- Educate consumers to use the state CAP agency, Legal Aid, and other available legal help when services are unjustly refused.
- Set up courses in self-reliance that teach consumers to use social services, such as the one used by the CIL in Anaheim, CA.

TRANSPORTATION: AVAILABILITY AND AFFORDABILITY

Five survey items related to the availability and affordability of accessible transportation services were identified as major problems by 8,213 consumers in 12 surveys. They received an average importance rating of 80% and an average satisfaction rating of 42%.

Consumer-Identified Dimensions

- Disabled citizens are segregated from the rest of the community and forced to remain at home because of lack of transportation.

- In most areas, public transportation is not wheelchair-accessible, and paratransit is expensive or nonexistent. In rural areas, accessible transportation is available infrequently.

- Lack of transportation is the primary barrier to community participation, education, employment, recreation, adequate medical care, and independent living for people with disabilities.

- Weekend and evening transportation is a problem.

- Transportation between neighboring cities and from rural areas to cities is a problem.

- Ideally, a city should have accessible mainline transportation for those who can use it and paratransit for those who need it.

- Recreational events and facilities are sometimes inaccessible. Transportation to recreational events is unavailable.

Consumer-Generated Alternatives

- Consumer groups need to work with existing community recreational facilities to make them accessible and usable for people with disabilities.

- Contact organizers of recreational events for transportation for disabled participants.

- People with disabilities need to become involved in the planning of community recreational events and active in interest groups.

- Form a local task force on transportation, decide what local consumers need and want, then fight for it.

- It is against federal law for paratransit to cost more than mainline transportation. Educate consumers about this law, how to make complaints, and how to ensure its enforcement.

- Develop share-a-fare, as they did in Kansas City, MO, where 900 wheelchair users a month use that system.

- Give testimony to state legislatures on transportation funding.

- Have lift buses operate at fixed rates and schedules as they do in Denver, a city with almost 100% accessible buses.

- Slow transit schedules to accommodate disabled riders. Drivers should call out stops ahead of time.

- Include disabled drivers in existing driver training programs.

- Develop car pools.

- Conduct public education on varied modes of transportation needed by disabled citizens.

- Submit formal complaints to transportation authorities concerning mainline wheelchair-accessible buses.

- Develop creative rural and small city alternatives. Examples include merging existing systems serving disabled riders (Morgantown, W. VA), ownership of a lift van by a consumer group or cooperative (Cuba, MO), and use of idle church or school lift-equipped buses.

UTILITY BILLS

One survey question related to the affordability of utility bills was identified as a major problem in 4 surveys. A total of 1,611 consumers answered this survey item, with an average importance rating of 89% and an average satisfaction rating of 34%.

Consumer-Identified Dimensions

- Disabled consumers on a fixed income cannot afford inconsistent and high utility bills.

- Because of their medical needs, many disabled consumers cannot survive without water, gas for heat, and electricity to operate their equipment.

Consumer-Generated Alternatives

- Obtain help to establish programs for weatherization.

- Encourage landlords to weatherize units.

- Educate landlords and disabled homeowners about tax credits for weatherizing and solar installation.

- Encourage consumers to join annualized level payment plans.

- Consumer groups can keep list for referral of agencies that help pay utility bills.

- Call local consumer affairs office for help, if utilities are shut off.

- Consult local phone company about discounts for disabled consumers.

- Write elected officials describing problems with utility bills, and ask for legislative solutions and assistance programs.

Summary Comments

This report represents the comments and suggestions of thousands of Americans with disabilities. They have identified specific community features that inhibit independent living. Some of these features include: inadequate job opportunities, job discrimination, insufficient accessible and affordable housing, inaccessible public places, and unavailable and unaffordable service options. These community problems are counterproductive to achieving society's goal of independence.

The common concerns outlined here frame an agenda for public, private, and self-help initiatives. These consumer-generated alternatives feature many practical steps that can be taken at local, state, and national levels. Taken together, these issues and options pose a challenge to all who believe that justice requires equal opportunities to achieve independence.

Appendix 1

Information about the formulas used to compute importance ratings, satisfaction ratings, problem scores, and major problems are addressed in this appendix. They are followed by a listing of all major problems identified by previous Concerns Report Surveys.

Concerns Report Ratings and Formulas

Each survey asked respondents to rate the importance of and satisfaction with each issue. Each item was rated on a 5-point scale. The following example on media portrayal illustrates the format used on each survey.

	How important is it that...					How satisfied are you that..				
	Not				Very	Not				Very
Local media portray disabled persons in a positive way.	0	1	2	3	4	0	1	2	3	4

Average satisfaction and importance ratings were computed for each item. These ratings were converted to percentage scores using the following formula: (Where N is the total number of respondents and n_4 is the number of 4 ratings, n_3 is the number of 3 ratings, and so on).

$$\frac{4(n_4) + 3(n_3) + 2(n_2) + 1(n_1) + 0(n_0)}{4N} \times 100$$

Thus, the highest possible rating is 100%, and the lowest is 0%. Next, a problem score was computed for each item. An item rating high in importance but low in satisfaction indicated the existence of a problem. Problem scores were computed using the following formula:

$$\frac{\text{Mean Importance Score X (100 - Mean Satisfaction Score)}}{100}$$

An issue was defined as a major problem, if its problem score was at least 1 standard deviation above the mean for that survey. Approximately 20% of the survey items on each survey were so designated.

Appendix 2

DEMOGRAPHIC PROFILE OF CONSUMER CONCERNS REPORT RESPONDENTS

Although each survey had its own different demographic page, the questions were similar enough to permit calculation of a general profile. This demographic information was computed based on information from all 21 surveys

DISABILITY CATEGORY

Blind or visually impaired	25%
Deaf or hearing impaired	20%
Mobility impaired	53%
Mental or cognitive disability	37%

AGE

Fifty-five or older	33%

INCOME

Jncome of less than $10,000.00	66%

REGISTERED TO VOTE

Registered voters	70%

EDUCATION

Less than a high school education	34%
High school education	36%
More than a high school education	24%

NOTE: Per cents may not add up to 100% (e.g., education), since not all respondents answered every demographic question, and some questions (e.g., disability), had multiple answers.

Appendix 3

Consumer Ratings of Importance and Satisfaction by Concerns Category, Survey Question, and Community/State

The following lists specific survey items, the communities or states in which surveys were conducted, the number of people (N) who responded, the average importance ratings, and average satisfaction ratings.

ASSISTIVE DEVICES: AFFORDABILITY AND AVAILABILITY	N	Importance	Satisfaction
Reasonably priced assistive devices are available to purchase.			
Lansing, MI	383	83%	36%
Montana counties (Billings, Butte, Helena, Great Falls)	145	84%	52%
North Dakota statewide	1,339	81%	58%
Financial assistance is available to rent or purchase assistive devices.			
Los Angeles, CA	201	85%	36%
Shawnee County, KS	51	94%	52%
Financial assistance is available for assistive devices that are not covered by Medicare or Medicaid.			
Iowa statewide	1,671	86%	48%
Montana counties	145	70%	31%
Services and repair of assistive devices are available at an affordable cost.			
Montana counties	145	79%	45%
Financial assistance is available to adapt personal transportation.			
Harvey County, KS	10	68%	17%
Assistive devices are reasonably priced.			
Indiana statewide	4,609	75%	41%

COMMERCIAL SERVICES: ACCESSIBILITY	N	Importance	Satisfaction
Public restrooms are accessible to you.			
Viburnum, MO	59	83%	59%
Restaurant restrooms are accessible to all customers			
Kansas City, KS	75	90%	42%
Kansas City, MO	165	87%	41%

COMMERCIAL SERVICES: AVAILABILITY OF DISCOUNTS	N	Importance	Satisfaction
Discounts are available to disabled persons on the same basis as they are to senior citizens.			
Orange County, CA	1,185	82%	35%

COMMUNITY SUPPORT AND RESPONSIVENESS	N	Importance	Satisfaction
Your local government responds to your needs in the community.			
Douglas County, KS	47	83%	44%
Orange County, CA	1,185	89%	41%
Community members understand the needs of disabled residents.			
Douglas County, KS	47	80%	40%
Montana counties (Butte, Billings, Helena, Great Falls)	145	82%	48%
Your state is responsive to your needs.			
Wichita, KS	468	85%	52%
Families and communities encourage disabled members to be independent.			
Viburnum, MO	59	87%	63%
Support groups are available for people with disabilities and their families.			
Harvey County, KS	10	93%	36%

DISABILITY RIGHTS AND ADVOCACY	N	Importance	Satisfaction
You know your rights as a disabled citizen.			
Northwest Minnesota	235	89%	51%
Wyoming statewide	1,015	86%	45%
Disabled consumers are actively involved in advocacy activities.			
Harvey County, KS	10	86%	47%
Training in self-advocacy is available.			
Oklahoma statewide	1,170	90%	36%

EDUCATION	N	Importance	Satisfaction
As part of the school curriculum, all students are educated and made sensitive to attributes and lifestyles of persons with disabilities.			
South Dakota statewide	2,151	83%	52%
Coordinated services to help disabled young adults move from school to adult life are available and adequate.			
Lansing, MI	383	85%	35%

EMPLOYMENT ACCOMMODATIONS DISINCENTIVES AND TRAINING	N	Importance	Satisfaction
Employers are willing to assist and accommodate disabled employees so they can perform job duties.			
Iowa statewide	1.671	87%	49%
Northwest Minnesota	235	89%	52%
Wyoming statewide	1,015	85%	43%
A person with a disability can earn enough money at a job to make up for loss of disability benefits.			
Kansas statewide	1.753	85%	37%
Lansing, MI	383	83%	33%
North Dakota statewide	1.339	79%	39%
Northwest Minnesota	235	86%	38%
Wyoming statewide	1,015	86%	36%
Adequate job training programs are available for persons with disabilities.			
Ann Arbor, MI	167	93%	40%
Indiana statewide	4,609	77%	46%
Current job training programs prepare you to be occupational-competitive with nondisabled persons.			
Indiana statewide	4,609	76%	46%
Local agencies assist disabled persons in finding interesting and worthwhile jobs.			
Indiana statewide	4,609	74%	42%
The Department of Vocational Rehabilitation provides adequate employmrnt services for individuals with severe disabilities.			
Lansing, MI	383	82%	33%

EMPLOYMENT DISCRIMINATION	N	Importance	Satisfaction
Employment agencies and prospective employers focus on the strengths and abilities rather than the deficits and disabilities of a disabled applicant.			
Douglas County, KS	47	79%	39%
Indiana statewide	4,609	78%	42%
Kansas statewide	1,753	83%	41%
Oklahoma statewide	1,170	91%	30%
Shawnee County, KS	51	94%	46%
Wichita, KS	468	83%	49%
Employees with disabilities have the same chances for advancement and promotion as nondisabled employees.			
Iowa statewide	1,671	87%	47%
Los Angeles, CA	201	91%	40%
South Dakota statewide	2,151	83%	47%
Wyoming statewide	1,015	87%	44%

EMPLOYMENT OPPORTUNITIES	N	Importance	Satisfaction
Adequate employment opportunities are available.			
Indiana statewide	4,609	76%	40%
Kansas City, KS	75	84%	34%
Kansas City, MO	165	86%	31%
Lansing, MI	383	85%	34%
Missoula County, MT	140	84%	48%
Montana counties	145	74%	34%
North Dakota statewide	1,339	78%	47%
Northwest Minnesota	235	85%	45%
Oklahoma statewide	1,170	92%	27%
Shawnee County, KS	51	92%	42%
South Dakota statewide	2,151	81%	46%
Qualified disabled and nondisabled are given the same opportunities at any available jobs.			
Iowa statewide	1,671	87%	46%
Kansas City, KS	75	88%	37%
Kansas City, MO	165	84%	30%
Missoula County, MT	140	85%	53%
South Dakota statewide	2,151	83%	47%
Wichita, KS	468	83%	46%
Wyoming statewide	1,015	86%	42%

HANDICAPPED PARKING	N	Importance	Satisfaction
Handicapped parking ordinances are strictly enforced.			
Ann Arbor, MI	167	92%	36%
Douglas County, KS	47	76%	31%
Harvey County, KS	10	89%	50%
Indiana statewide	4,609	78%	43%
Kansas City, KS	75	91%	26%
Kansas City, MO	165	86%	32%
Los Angeles, CA	201	88%	32%
Missoula, MT	140	76%	46%
Montana Counties	145	78%	36%
North Dakota statewide	1.339	80%	53%
Orange County, CA.	1,185	85%	39%
Viburnum, MO	59	81%	58%
Wichita, KS	465	83%	48%

HEALTH CARE: AFFORDABILITY AND AVAILABILITY	N	Importance	Satisfaction
Good medical care is available to you.			
Kansas City, MO	165	90%	38%
Affordable health care is available to you.			
Douglas County, KS	47	84%	46%
Kansas City, KS	75	89%	36%
Los Angeles, CA	201	90%	40%
Doctors and hospitals accept Medicaid and Medicare when you need it.			
Viburnum, MO	59	90%	67%
Health care providers are sensitive to the needs of disabled consumers.			
Viburnum, MO	59	91%	66%
Medicaid and Medicare regulations adequately provide for durable medical equipment and medications to disabled consumers.			
Viburnum, MO	59	84%	60%

Medicaid and Medicare provide adequate preventive care, adaptive equipment, and independent living services to prevent increased disability and dependence.			
Kansas statewide	1,753	86%	46%
Orange County, CA	1,185	89%	38%

HOUSING: AFFORDABILITY, AVAILABILITY, AND ACCESSIBILITY	N	Importance	Satisfaction
Accessible housing is available at an affordable cost.			
Los Angeles, CA	201	89%	29%
Accessible public housing units are affordable.			
Orange County, CA	1,185	81%	33%
Accessible housing is affordable.			
Ann Arbor	167	91%	26%
Montana counties	145	79%	42%
Northwest Minnesota	235	86%	51%
Affordable housing is available to all types of disabled residents.			
Harvey County, KS	10	97%	41%
Kansas City, KS	75	87%	36%
Kansas City, MO	165	86%	31%
Kansas statewide	1,753	87%	45%
Lansing, MI	383	85%	41%
Shawnee County, KS	51	96%	46%
Building professionals are knowledgeable about adaptive housing modifications necessary for maximum accessibility.			
Harvey County, KS	10	75%	19%
Los Angeles, CA	201	87%	38%
Missoula, MT	140	79%	51%
Landlords will make moderate changes to make their rental units safe and barrier-free.			
Ann Arbor, MI	167	90%	37%

INSURANCE FOR AUTO, LIFE, AND LIABILITY	N	Importance	Satisfaction
Auto, life, and liability insurance is available to disabled consumers on the same basis as it is to nondisabled consumers.			
Orange County, CA	1,185	84%	39%
Oklahoma statewide	1,170	94%	30%

INSURANCE FOR HEALTH CARE	N	Importance	Satisfaction
Health care insurance is affordable.			
Indiana statewide	4,609	84%	44%
Wyoming statewide	1,015	87%	31%

MEDIA PORTRAYAL AND PUBLIC INFORMATION	N	Importance	Satisfaction
Newly disabled people have adequate access to information regarding services and programs available to them.			
Kansas statewide	1,753	88%	46%
Orange County, CA	1,185	88%	36%
The media inform you about benefits for which you qualify.			
Indiana statewide	4,609	75%	40%
Orange County, CA	1,185	82%	33%
The media inform you about recreational and cultural programs planned for people with disabilities.			
Indiana statewide	4,609	72%	42%

PUBLIC ACCESS	N	Importance	Satisfaction
City streets and sidewalks provide safe and easy access to you.			
Montana counties	145	83%	47%
Viburnum, MO	59	80%	59%

Sidewalk snow removal is adequate.			
Montana counties	145	79%	37%

SOCIAL SERVICES AND BENEFITS	N	Importance	Satisfaction
Social service agencies inform all clients about all services available in the community.			
Kansas statewide	1,753	84%	45%
Shawnee County, KS	51	95%	53%
Social agencies inform you about legal issues related to disability and independent living services.			
Northwest Minnesota	235	85%	49%
Wyoming statewide	1,015	83%	43%
Social agencies are aware of the benefits available to disabled consumers.			
Viburnum, MO	59	93%	65%
Social agencies work to assure that disabled consumers are useful and vocal members of the community.			
Wichita, KS	468	85%	53%
Two single people receiving disability benefits can marry without their combined benefits being reduced.			
Lansing, MI	383	79%	27%

TRANSPORTATION: AVAILABILITY AND AFFORDABILITY	N	Importance	Satisfaction
Transportation services are available to any disabled consumer whenever needed.			
Ann Arbor, MI	167	90%	28%
Kansas City, MO	165	81%	29%
Kansas statewide	1,753	83%	41%
Lansing, MI	383	84%	38%
Missoula, MT	140	79%	53%
Montana counties	145	76%	34%

Adequate public transportation is available.			
Douglas County, KS	47	78%	38%
Iowa statewide	1,671	83%	51%
North Dakota statewide	1,339	81%	59%

Acknowledgments

We extend our appreciation to several colleagues who contributed to the production of this report: To Susan Elkins for her editorial assistance, Mark Mathews for his comments on early drafts and assistance in data collection, and Paula Whang-Ramos, Tom Seekins, and Kay Schriner for their help in developing the Concerns Report Method. We are also grateful to the many citizens with disabilities across the country who participated in the Concerns Surveys and shared their insights in local public meetings. Thanks also to Doug Burleigh, Jean Head, Jay Johnson, June Kailes, Brenda Premo, and Ted Witham whose insights contributed to this method. Finally, thanks to the many local sponsoring organizations whose wonderful staff and consumers made this summary report possible:

Ann Arbor Center for Independent Living, Inc., Ann Arbor, MI
Association for Retarded Citizens of Greater Lansing, Lansing, MI
Center for Handicapper Affairs, Lansing, MI
Dayle McIntosh Center for the Disabled, Anaheim, CA
Disabled Citizens Alliance for Independence, Viburnum, MO
Governor's Committee on Handicapped Concerns, Oklahoma City, OK
Harvey County Committee for Disabled Persons, Newton, KS

Mr. Edwards. Our first two witnesses will sit as a panel. First is Mr. Paul A. Roth, representing the National Association of Theatre Owners. Mr. Roth is president of the Roth Cos., Silver Spring, MD, and serves as chairman of the Government Relations Committee of the National Association of Theatre Owners.

I will introduce Mr. Lynch when he makes his statement. Without objection, all of the statements in full will be made part of the record, and we welcome Mr. Roth.

STATEMENT OF PAUL A. ROTH, PRESIDENT, THE ROTH COS., SILVER SPRING, MD, AND CHAIRMAN, GOVERNMENT RELATIONS COMMITTEE, NATIONAL ASSOCIATION OF THEATRE OWNERS, NORTH HOLLYWOOD, CA

Mr. Roth. Thank you, sir.

Good afternoon. My name is Paul Roth, and I am president of the Roth Cos. of Silver Spring, MD. I am a member of the board of directors of the National Association of Theatre Owners and chairman of NATO's Government Relations Committee in years gone by. I have previously served as president of the National Association of Theatre Owners.

Many of you are familiar with the connection between the name Roth and the motion picture theater industry. I have been involved in design, construction and operation of motion picture theaters in Maryland, Virginia, North and South Carolina for almost 40 years.

Before me, my father and uncle operated theaters beginning in the twenties. Our company grew from a small theater in a converted store in Harrisonburg, VA, to over 100 screens, and we are proud of that, and proud to be a part of the motion picture industry.

Since the first theater in this country opened in 1902, we have seen an evolution from flickering silent films shown on bed sheets in storefronts to massive, modern, computer-driven, high-tech, multiscreen facilities with 10 or more auditoriums.

There are now over 22,000 screens in this country. Our industry and our art form has had its ups and downs caused by everything from radio to night baseball and videocassettes.

However, one thing has remained constant, that the motion picture theater is the place in the community where everyone goes for affordable entertainment. The young, old, rich and poor and in between escape and enjoy the movies, whether the fond memories of Saturday matinees when we were kids or the memory of a fine motion picture that we saw last weekend, Americans have a love affair with feature films, and the motion picture theaters in which they are best seen and heard.

Attendance continues to grow and this year, over a billion people will enjoy movies in American theaters. Relative to other types of entertainment, movies will remain a bargain. As a theater operator and as a member of the community, I have always tried to make our theaters accessible to everyone.

In recent years, every theater that we built included ramps, special parking, bathrooms, drinking fountains and telephones designed to meet the requirements of disabled persons, wheelchair

2108

seating and some type of audio support system for the hearing impaired.

My efforts were certainly not unique. I know that theater owners all across the country have included the same type of requirements in new construction for many years.

A great deal of what we do is required by law and code and regulation, because we are considered by those codes, laws and regulations to be places of public assembly, so we have already had to accommodate the able and the disabled to a greater or lesser degree in all of our facilities.

Since we are so concerned about having large numbers of people of all ages in a semidarkened auditorium, I believe that our employees, our midlevel management, is well trained in handling the potential emergency, with the handicapped and children who are left by their parents, and older people who have difficulty adjusting their eyes to the semidarkness when they come out of the bright daylight, and a variety of other conditions.

So, for NATO and as an individual, I certainly support the goals of the Americans with Disabilities Act of 1989, but I must tell you that the loose language in this legislation causes great concern for even the most caring, concerned and involved people in our industry.

Let me give you a few brief examples. Section 302(1)(b) requires that seating for patrons in wheelchairs be integrated within an auditorium. Depending on how far you go with the definition of integration, that becomes impractical and potentially unsafe.

Wheelchair bases really are best and most practical and safest when they are located on a level surface, as close as possible to an entrance or an exit. The usual theater auditorium floor slopes at the rate of 1 foot to 1 inch to provide sight lines to the screen so that you can see over the patrons in front of you.

Placing wheelchairs on a slope creates the danger that the chair unexpectedly will slide forward, and the discomfort of the wheelchair patron when tilted down against the floor slope and trying to look up in the designed line of sight.

The average back-to-back placement of a row of theater chairs is 36 inches, and the seats average approximately 23 inches in width. In 36 inches back to back, and 23 inches side to side, it is simply impossible to accommodate the turning radius of a wheelchair for ingress and egress, and it is very difficult for non-chair-ridden patrons to get past that chair to go in or to go out.

Practical problems demand practical solutions. In many instances, exits are required at the screen end of the theater to compensate for the floor slope. Today's typical auditorium contains 250 to 400 theater seats. Using the slope of an inch to a foot in a depth of 60 to 100 feet of the auditorium, we can be talking about 5 to 7 feet of incline, which may have to be compensated for at the screen end of the theater with stairs.

Well, obviously, if we have a wheelchair patron 80 feet from the entrance to the auditorium seated in the screen end of the theater and the only way out is up seven steps, we could have a great deal of difficulty.

We also think that it is important that wheelchair patrons be able to get themselves easily to the restrooms, the water fountains and the refreshment facility, and I have a number of friends who are in wheelchairs.

It is difficult at best for some of them to roll a chair up that incline in the semidarkness. The point I am making, sir, is that we want to do what is best for all of our patrons, those in chairs, those in walkers, the old, the young, the what-have-you, but we don't want to be the victims of vague wording which would serve only to confuse us, architects, enforcement officials at the local and Federal level, and our patrons, and we want to be able to evacuate the auditorium as quickly and as safely as possible in the event of an emergency or false alarm, such as a bomb scare, which we have from time to time, and we are concerned that neither the changes in the legislation since the original version or the legislative history are terribly clear on a number of these matters.

Another example is to remind you that new construction is one thing, but existing facilities are a different matter. Many theaters, in rural communities or inner cities, are not new. These theaters provide lower-income areas with one of the few sources of entertainment for their children and senior citizens.

In many cases, these theaters offer films at bargain prices. They are low volume and low priced. Many a community or municipality has taken unusual steps to keep its theater in operation.

Unfortunately, if compliance with this act is not made clearer and easier, many of these theaters will close. They do not have the time, staff or resources to determine or argue, perhaps before a regulatory agency or in a courtroom, what is reasonable, readily achievable or an undue hardship or financial burden.

Another matter, S. 933, requires existing construction be readily accessible. We have been told this just means installing a wooden ramp or widening a door. That sounds easy, but wooden ramps will not pass muster with fire marshals, and widening doors can become a major construction problem.

So, we are back to reasonable. We have been told that if the company which operates this limited market theater in the inner city or in a small rural community is large enough, the expense of compliance will not be a burden.

We submit that a large company is already running the theater as an accommodation to the community. Given the prospect of the time-consuming, expensive rehabilitation, that theater will close, serving no one's interest, not the community's, the patrons' or employees'.

We want to know in plain language what is required and how we can comply. We do not want to add amorphous Federal regulations to the existing maze of laws, codes and ordinances to which we are already subject.

We want to provide affordable entertainment for as many people as possible. NATO's representatives attended a briefing on this bill at the White House on 22 September this year. Dr. Roper of the White House staff introduced representatives of the Department of Justice which has responsibility for writing the regulations for the public accommodations section of this bill.

Those representatives from the Justice Department were asked on 22 September to clarify certain sections of the statute. They were asked who is financially responsible for the installation of elevators in a shopping center, the landlord or the tenant, a requirement which, of course, affects theaters, restaurants, retailers.

The gentleman from the Department of Justice said, we don't know. If they don't know, how do we and our landlords and our other merchants know, and where in that nonknowledge can we take comfort? One final example, if I may.

There are at least three jobs in the theater which require employees to work in a limited area to reach and to live: Cashiers, refreshment attendants and projectionists. Ticket issuing machines, particularly the computerized ones that we are now using, are too high counter type, too deep from back to front that a person in a wheelchair could not efficiently operate them.

They can't reach the equipment, much less can they reach across the equipment to receive the money from the patron and to return the tickets as they are dispensed. The same is true of concession attendants, they must operate in a confined area between the counter and the back bar. Turning the wheelchair in that area would be difficult if not impossible, not to mention having access to the various pieces of equipment which dispenses popcorn, soda, candy and other items. Envision a person in a wheelchair trying to reach into the sizzling hot kettle of the popcorn popper and put the popping oil and corn in and when the popping is done, get it out without the possibility of some severe damage.

And the natural problems of being able to reach across the counter with the merchandise and back across the counter with the payment and the change. We show motion picture film at a standard rate of 90 feet a minute, which means that to show you a 2-hour feature we require approximately 2 miles of 35 millimeter film.

When that film arrives at the theater, it is in two bulky steel containers and it is on reels that only contain 18 minutes of film out of possibly six to seven times that much. That is in the feature.

It is necessary for a projectionist to get that film out of those cans, off those shipping reels and onto what we call projection platters, which are approximately 5 feet in diameter, depending on whether they are three or five tiers.

They could be as high as 5½ feet off the ground compounding the projection problem. You have to take the film off, take it up on rollers and thread it through the top of the projector.

These are tasks that we do not feel can be performed by people in wheelchairs, on crutches and with walkers with a variety of other problems. Since sound is so critical to the audience and focus is so critical to the audience, it becomes important that the projectionist be able accurately to read the sound level and the quality and to look out the projection port to be sure the picture is in frame on the screen and in focus. These would be difficult, if not impossible, tasks for persons with a variety of handicaps.

The bottom line, the facts to me in the operation of a theater are clear. My problem is the law is not clear. We want to hire people who can do the job, take pride in doing it, who can advance in our organization and reflect credit on themselves and their fellow workers and their employers.

If you can do the job, you ought to have the job. If you cannot do the job, it should be clearly exempted from the law and we should be responsible for working with you to find you a job that you can fill with pride, dignity and courtesy.

We are, the motion picture industry, eager and willing to entertain and employ as many as possible of those 43 million persons with some sort of physical or mental disabilities. We want them as moviegoers and we want them as movie workers. We support S. 933 but we desperately seek clarification of legislation which is at present vague and ambiguous so that no one, including in some cases the drafters, know what it means.

We stand ready to help, but we need your eyes, your ears, your attention to avoid the waste that will surely come from haste.

Thank you, sir.

Mr. EDWARDS. Thank you, Mr. Roth.

[The prepared statement of Mr. Roth follows:]

PREPARED STATEMENT OF PAUL A. ROTH, PRESIDENT, THE ROTH COS., SILVER SPRING, MD, AND CHAIRMAN, GOVERNMENT RELATIONS COMMITTEE, NATIONAL ASSOCIATION OF THEATRE OWNERS, NORTH HOLLYWOOD, CA

The members of the National Association of Theatre Owners (NATO) operate more than 12,000 motion picture theatre screens in all 50 states. NATO includes the very largest chains in the nation as well as hundreds and hundreds of independent theatre owners.

NATO members provide entertainment that is available to all. Last year over one billion people went to the movies in the United States. Truly, everyone enjoys motion pictures. The young, the old, the highly educated and less highly educated, the wealthy and the economically less fortunate, all have an opportunity to seek out a motion picture that meets their interests and usually for a price of less than $6. Unlike the Broadway theatre, the big city concert or professional sports, where tickets can cost $50 each, motion picture theatres offer entertainment that is economically available to most Americans. The 12,000 NATO motion picture theatre screens are geographically diversified so that almost everybody has a choice of several theatres within a reasonable distance of his or her home.

Motion picture theatre owners are experienced at moving a large number of people into and out of semi-darkened auditoriums, rapidly and safely. Although motion picture theatre staffs have traditionally included a large proportion of young first time job holders and an increasingly large number of senior citizens, the industry trains its employees to be able to deal with a large number of people in a relatively confined space. Theatre staff members are trained to deal with normal conditions and emergency conditions. Whenever one has a large number of people in a limited physical space, it is essential that preparations be made to deal with the worst case scenario and the theatre industry has accepted this responsibility. Our staff has to be able to move quickly should the need arise. This situation has caused NATO members to spend much time considering the special problems of the disabled both as patrons and employers.

The motion picture theatre industry has been a leader in facilitating innovations in construction to insure that disabled individuals have access to the nation's motion picture theatres. Handicapped parking spaces, ramps to assist in accessing lobbies and auditoriums, and drinking fountains, phones and restrooms designed for disabled users are all innovations offered early on by Exhibitors. Many theatres provide seating for the disabled in specially designated areas with fixed seating next to wheelchair spaces so disabled persons may sit with their non-disabled friends and family.

Theatre owners have led the way in the implementation of assistive listening systems (ALS), special in-theatre devices designed to allow the hearing-impaired to enjoy the motion picture experience. NATO is currently working to link hearing-impaired moviegoers to facilities already utilizing ALS via a national hard-of-hearing database.

The National Association of Theatre Owners supports legislation designed to prohibit discrimination on the basis of disabilities but at the same time NATO recommends that Congress recognize that there are certain rules of reason that must be followed in connection with this legislation.

I. ACCESS TO PUBLIC ACCOMMODATIONS

A. New Construction.

NATO supports the concept that new construction should be carefully engineered to insure full access for disabled persons. Theatres should include ramps to permit access to the auditoriums. Seating for persons in wheelchairs should be provided in close proximity to exits within each facility. NATO has compiled data which shows the number of persons in wheelchairs, on crutches, or using walkers, that attend theatres on a theatre per week basis in various areas of the country.

For example, a wheelchair count was conducted in 28 theatres in Maryland, Virginia, and Pennsylvania from December 1987, through March, 1988. The results of the survey showed that there was very little usage of the spaces for disabled persons available. Although many of our theatres provide two to four wheelchair positions, the theatres surveyed averaged one to two wheelchair patrons per week.

A similar survey conducted in 10 theatres with a total of 53 screens in the state of Massachusetts shows that in a typical week the theatres served approximately 66,000 patrons. Among these patrons, there were an average of 38 persons in wheelchairs, 48 persons on crutches, and 28 persons using walkers.

NATO will be glad to share these data with the Congress.

There has been some discussion as to whether the Americans with Disabilities Act of 1989 permits wheelchair seating to be limited to the front and back of a motion picture theatre auditorium as distinguished from being integrated throughout the entire auditorium. We contend that it is not only reasonable, but it is essential from a safety standpoint that wheelchair patrons be seated near an exit.

Today the typical motion picture theatre auditorium is much smaller than it has been in the past. Auditoriums with 200 to 300 seats are typical. In such a facility, every seat offers an excellent view of the screen. Motion picture theatres do not have price differentials for preferred seating. Attending a motion picture can be distinguished from attending a play or concert where seating prices vary based on location within the auditorium.

There is no discrimination in placing wheelchair seating in the front and rear of a motion picture theatre. By contrast, in the environment of a motion picture theatre, placing a wheelchair in the center of the auditorium and away from an exit can create a significant safety hazard. In the rare event of a fire, the theatre staff is trained to quickly enter the auditorium and assist disabled individuals. If such individuals are close to an exit, the theatre employee can effectively assist the disabled patron. If the disabled patron was seated in the middle of the theatre far from an exit, theatre employees would have difficulty in getting to the disabled individual. Furthermore, other patrons of the theatre would be impeded in exiting rapidly as may be required by the situation. For these reasons, state fire marshals have uniformly indicated that seating for disabled persons should be placed near an exit and not in the middle of an auditorium.

We recommend that whatever legislation is adopted by the Congress, recognition must be given to the fact that wheelchair patrons of theatres should be seated near an exit.

The proposed legislation would not only cover wheelchair theatre patrons but also patrons with other disabilities. As we indicated before, the motion picture theatre industry is now including audio equipment for the hearing impaired in many existing theatres as well as in newly constructed theatres. The proposed legislation also discusses the need for special equipment for the visually impaired. It is our understanding that some equipment is available for such individuals but that the equipment would only meet the needs of a small number of individuals. We would recommend that in order to comply with the Americans with Disabilities Act, businesses should be encouraged to provide these auxiliary aids for the disabled through incentives. Incentives will also alleviate a portion of the costs associated with making modifications. Currently, Section 190 of the Internal Revenue Code permits a maximum deduction of $35,000 for making structural alterations to accommodate the disabled. The cap should be removed and the deduction should be broadened to apply to non-structural alterations such as the installation of assistive listening systems in motion picture theatres.

B. Existing Facilities.

Many motion picture theatres are located in the inner city, in buildings that are quite old. These locations are often of marginal profitability and have great difficulty in competing with modern theatres located in suburban shopping malls. The shift in the movie going population from the city to the suburb can be easily documented by analyzing new theatre construction. In our industry, it is unusual to find significant new theatre construction in downtown areas.

Due to the age of these inner city theatres and the marginal profitability, it is not feasible to require substantial expenditures for renovating such facilities to meet the needs of disabled individuals. However, we think it is reasonable to include in the statute a provision that where an existing facility is substantially renovated, the plans for the renovation require adequate facilities to insure that disabled individuals can use the renovated theatre comfortably.

The bill sets forth requirements for the readily achievable removal of architectural barriers and for the alteration and major structural alteration of facilities. It fails, however, to indicate when the readily achievable removal of an architectural barrier would be considered an alteration. It also fails to indicate the point at which an alteration becomes a major structural alteration, thereby triggering the requirement not only for the readily accessibility of the actual area but also the accessibility of the route to the altered area. A revision based on Pennsylvania law would solve this problem. It would provide that alterations that cost up to 30% of the value of the building should require the readily accessibility of the altered area; alterations that cost 30-50% of the building's value should also require an accessible route to the actual area; and that alterations that cost more than 50% of the value of the building should require readily accessibility and usability of the entire facility. NATO would support this concept.

II. DISCRIMINATION IN EMPLOYMENT.

NATO supports legislation that would eliminate discrimination in employment on any basis whether race, religion, national origin, sex or disability. Our industry has been in the forefront of those promoting equal opportunity for all. However, we believe that it is necessary to again apply a rule of reason when evaluating specific job classifications. We would like to present three examples for consideration:

A. Motion picture theatre ticket seller.

Today's motion picture theatres are equipped with high technology computerized ticket booths. The equipment used in these booths has not been designed for persons in wheelchairs. A person in a wheelchair sitting behind a typical ticket booth counter could not reach from the wheelchair to the counter and certainly could not reach the money being proffered by the customer or return a ticket to the customer. Due to the mechanical limitations of this type of equipment and the size limitations of existing ticket booths, it is unreasonable to require that motion picture theatres owners offer this job to all disabled individuals if in fact such individuals could not physically perform the job under the structural limitations of the ticket booth.

B. Food concession operator.

The food concession operator in a motion picture theatre is required to move back and forth down a walkway behind a food service counter, reach and obtain the various items selected by the customer, dispense certain items, i.e., popcorn and soft drinks, and obtain payment and make change. Certain types of disabled individuals can perform this function efficiently. Persons in wheelchairs would have obvious difficulties. NATO recommends the rule of reason be applied to this job classification and the employer be required to determine whether the disabled individual in question can physically perform the task in light of existing job conditions. If in fact the person cannot perform the tasks under existing conditions, it should not be considered discriminatory for an employer to refuse to hire such an individual for this job.

C. Projection operator.

The projection operator in a motion picture theatre must be able to move easily in and out of the projection booth and must be able to pick up heavy disks of film and lift the film and insert it onto the projection platter. This activity requires not only access to the facility but certain manual dexterity, upper body strength and reach. Projection booths generally are extremely limited in space. Persons in wheelchairs would have difficulty moving around within the confines of such booths and will probably be unable to lift the film and place it in the projection equipment. Motion picture projection booths are often designed so that one booth services multiple screens. A person in a wheelchair would have great difficulty moving from one work station to another. Thus, this job classification is not one which can be reasonably engaged in by a person in a wheelchair.

Again, NATO urges that a rule of reason be applied in evaluating whether an individual with a particular disability can perform in this job classification. It could well be that individuals with limited disabilities could perform efficiently as a projectionist. However, an individual with a severe disability such as a paraplegic, could not perform as a projectionist.

NATO believes that whatever legislation is passed, clear recognition must be give to the proposition that before a finding of discrimination can be made, it must be determined whether the individual claiming discrimination is in fact capable of doing the job in question within the physical limitations that may be established by the disability and the limitations that may be established by the nature of the employer's facility.

III. CONCLUSION.

The proposed legislation continually refers to a "reasonable" standard and includes a restriction that no undue burdens shall be placed on owners of public accommodations or employers. We have provided specific examples with regard to our industry to indicate standards of "reasonableness" and "undue burden" that we think appropriate. We suggest that these examples be included in the legislative history supporting this Act.

We also recommend that when drafting regulations, the agencies in question be directed to develop specific facts to prove that the acts and practices required by the regulations will effectively meet the underlying objectives of the statute. Ultimately the increased costs required by the legislation will be paid by the public. It is senseless to require that the public pay the cost of regulatory action that does not meet its intended purposes. Use data should be developed on an industry by industry basis that will clearly show that the regulations that apply to such industry will actually result in more jobs for the disabled and increased use of public facilities by persons with such disabilities.

NATO supports the concept of elimination of all discrimination. NATO supports the concept of federal legislation to specifically eliminate discrimination based on disability. NATO believes that antidiscrimination legislation should establish general guidelines but permit sufficient latitude to enable employers, employees, state and local officials, educators and the public, to work together to promote reasonable standards to eliminate job discrimination based on disability.

We will be glad to provide any additional information requested.

Respectfully submitted,

Paul A. Roth

Paul A. Roth
Chairman, Government Relations

Mr. **Edwards**. We will have some questions and some reassurances, I believe, after Mr. Lynch testifies.

Robert Dale Lynch represents the American Institute of Architects. He is an architect from Coraopolis, PA, has been active in designing accessible buildings for the disabled.

During our consideration of the fair housing amendments last year, the AIA was very helpful in providing expert advice about the requirements to provide accessibility in new construction for individuals with disabilities.

We look forward to working again with the AIA to work out a strong provision in the ADA bill and because of more votes coming up, we are going to have to respectfully request the witnesses to try to limit their testimony to about 10 minutes but, however, the full statements will be made a part of the record.

Mr. Lynch, welcome and you may proceed.

STATEMENT OF ROBERT DALE LYNCH, AIA, AMERICAN INSTITUTE OF ARCHITECTS, WASHINGTON, DC

Mr. **Lynch**. Thank you, Mr. Chairman. I very much enjoy the opportunity to be here today. I am going to summarize my statement and submit a corrected copy for the record. A page was placed out of order in the copies that we submitted earlier.

Mr. Chairman, as you already know, my name is Robert Dale Lynch, AIA, a member of the American Institute of Architects, and I have my practice near Pittsburgh, PA. I should say Coraopolis. It doesn't pronounce the way it looks on paper——

Mr. **Edwards**. I have heard San Jose pronounced La Jolla.

Mr. **Lynch**. Today I represent an organization of about 56,000 members which represents architects across this country and we are this year celebrating our 132nd anniversary.

Ending the isolation of people who have disabilities, and expanding their opportunities for fulfillment have been part of AIA public policy for a long time.

The Americans with Disabilities Act recognizes the human resource in and affirms the humanity of citizens with disabilities. The AIA supports the intent of the legislation and we support congressional action to accomplish it.

Because we do, we want this legislation to work. Its requirements must be clear, understandable and achievable, or else it fails. Civil rights law trapped for years in costly litigation denies justice and opportunity for the very people it is designed to uplift.

Since the ADA bill would reach into so many aspects of national life, its effects are profound and complex. Unfortunately, the lack of clarity and the uncertainty of several important provisions would compound its complexity, would unfairly erect barriers to compliance by people who undertake to comply in good faith, and could significantly increase liability for a profession already beset by liability burdens.

The AIA is concerned principally with certain provisions of title II, which applies to public services, and of title III, which covers public accommodations and privately provided services.

I will leave our comments on title II to the written testimony so that I can confine my time to the limit requested.

In title III concerning alterations and major structural alterations, the legislation provides for alterations and major structural alterations. An alteration must make the altered area readily accessible and usable. In the case of major structural alterations, the path of travel to the altered area must be made accessible, too.

The AIA supports the distinction between the two alteration forms as necessary to encourage renovations by preventing small projects from burgeoning into costly, complex ones solely due to the need to provide an accessible route to the altered area.

Unfortunately, the ADA fails to do this clearly. It tries to make the distinction between the two types of alterations on the basis of structural changes rather than the value of the alterations.

As a result, a building owner who simply drops a ceiling in a small office could also be required to undertake more costly complicated projects to make the path of travel to that office accessible.

We suggest the legislation provide for alterations and major alterations and establish a renovation value to building value ratio to distinguish one for the other. This is a formula that we have currently been working on in Pennsylvania.

I helped to draft our new accessibility law in Pennsylvania, which was passed into law and signed by Governor Casey last December and we feel that we have come up with a pretty workable system that way.

The AIA is concerned that the ADA bill does not adequately take into account the special nature of historic properties. The Uniform Federal Accessibility Standards [UFAS] in section 4.17, sets forth standards for historic properties. It allows the Advisory Council on Historic Preservation to determine whether accessibility requirements of UFAS would "threaten or destroy" the historic integrity of a qualified building or facility. If so, then special accessibility rules would apply. The ADA bill should require a standard of this type for all qualified properties including those listed on or eligible for the National Register of Historic Places, or designated historic by a State statute or local ordinance.

Concerning new construction, the legislation imposes requirements for new construction, which apply to facilities open for first occupancy more than 30 months after the date of enactment.

Although the legislation attempts to accommodate projects already in the design process by delaying their effective date of compliance, there will be serious transition problems for some projects that are or will be under contract for design prior to the effective date of the bill. These projects must comply by the effective dates. They will, therefore, be subjected to costly, often complicated redesign, yet architects will not know with any certainty what they must do to comply. In its section estimating the bills cost for State and local government, the Senate report acknowledges the significant added costs of redesign.

One way to handle this problem is to retain the effective dates in the legislation for alteration and new construction, but have the law apply only to those projects that receive a contract for design after the date of enactment. This is similar to the new Pennsylvania Act 166.

Onto a matter that is of personal interest to architects is that of providing what we call a safe harbor, particularly necessary during the transition from enactment to final regulations. The legislation should provide in the statute language that compliance with requirements of the American National Standards Institute for ANSI standard A117.1, 1986 edition or an equivalent standard should be sufficient, though not necessary for compliance with the legislation.

ANSI A117.1 is a national model accessibility standard adopted throughout the country and known to many architects.

It has been around since 1961 and was the basis of the new Uniform Federal Accessibility Standards, as well.

Onto the matter of enforcement. The Senate bill also provides that courts should consider a good faith effort to comply when hearing complaints brought against a covered entity or individual. We support a stronger provision.

State or local building officials should be able to certify that an architect has complied with the act.

Certification by such officials that an architect has complied should then constitute a strong defense against complaints of discrimination. This can be accomplished by permitting the Department of Justice to certify on the application of a State or locality that its building code complies with or exceeds the Federal standard established by the ADA.

When the building official of a jurisdiction with a DOJ certified statute inspects a renovation or new construction project covered by ADA, his or her enforcement of the State or local statute would ensure compliance with the ADA. Under technical assistance—and this is something that I feel is very important because architects do not receive any formal education in what we call, some people have called barrier free design, what I would like to call universal design—there is not one architect in practice today who has ever received formal education in this area and it is a problem.

We can't really depend upon standards like the ANSI standards to educate architects because those are the minimum standards and without a good knowledge of what the nature of individuals' disabilities are they can often be misinterpreted and misused.

The AIA, therefore, urges that the technical assistance program give major attention and resources to the education of architects in the new law and in design for universal accessibility. I want to stress that not only architects in practice but we ought to consider the possibility of putting formal parts of the educational process into the universities.

Of the five universities in Pennsylvania that teach architecture, not one teaches a course in barrier free design or universal design.

I would like to close by saying that we architects, the designers and builders of the environment of man, must broaden our spectrum of design parameters to help improve the quality of life for those who cannot walk or talk or see or hear.

Our creative skills must be applied as well to design for the small and the tall, those who are frail or spastic, or those who are head-injured or mentally challenged. It is a modern day and unique challenge we should engage with unique vigor and we conclude our testimony with the enthusiastic support of the intent of this bill and we stand ready as the gentleman beside me said, to support in helping to make this as perfect as we can.

Thank you.

Mr. **Edwards**. Thank you very much, Mr. Lynch and, Mr. Roth, of course. The committee appreciates the attitudes of both witnesses. You have a lot of good will that we appreciate.

[The prepared statement of Mr. Lynch follows:]

Prepared Statement of Robert Dale Lynch, Architect, American Institute of Architects, Washington, DC

Mr. Chairman, my name is Robert Dale Lynch, AIA, an architect with my own practice near Pittsburgh, Pennsylvania. I have served on numerous state and local boards and commissions addressing accessibility problems for persons with disabilities, and have 15 years experience in this design field. I am today representing The American Institute of Architects (AIA). The AIA is the professional association of 56,000 members which represents the nation's architects. This year, the AIA celebrates its 132nd anniversary. We commend you for holding this hearing and appreciate the opportunity to appear.

American architects are not strangers to the challenges of disability. The architectural profession seeks to serve the diverse needs of people through the buildings and other structures they occupy and use. The design of each of these places should be sensitive to the problems of people with special needs. Too many people live isolated and unfulfilled lives because too many places fail to accommodate their disabilities. As technology has advanced, as society has paid more attention to the rights of disabled citizens, and as law has increasingly specified standards to guarantee those rights, architects have had to meet the ever greater design challenges that disabilities pose.

Ending the isolation of people who have disabilities, and expanding their opportunities for fulfillment have been part of AIA public policy for a long time. Such a policy makes sense not only from a humanitarian standpoint but from an economic one as well. Our nation's population is aging, and between now and the end of the century we face the likelihood of serious labor shortages. The 43 million Americans with disabilities can swell the ranks of workers and enlarge the pool of consumers--both essential to economic prosperity--but only if we expand their access to workplaces and public accomodations.

The Americans with Disabilities Act (ADA) recognizes the human resource in and affirms the humanity of citizens with disabilities. It seeks the same opportunity for them to secure a job, enter a workplace, use transportation, or visit a park that able-bodied people enjoy. The AIA supports the intent of the legislation and we support Congressional action to accomplish it. Because we do, we want this legislation to work. Its requirements must be clear, understandable, and achievable, or else it fails. Civil rights law trapped for years in costly litigation denies justice and opportunity for the very people it is designed to uplift.

Since the ADA bill would reach into so many aspects of national life, its effects are profound and complex. Unfortunately, the lack of clarity and the uncertainty of several important provisions would compound its complexity, would unfairly erect barriers to compliance by people who undertake to comply in good faith, and could significantly increase liability for a profession already beset by liability burdens. Given the increasing tendency of the Supreme Court to discount report language and legislative history, it is not sufficient to leave so many of the legislation's policy specifics to the regulatory process.

Because we expect that the Senate-passed bill, rather than the House bill as introduced, will form the basis for House deliberations, my remarks pertain to the provisions of S. 933 as approved by the Senate.

The AIA is concerned principally with certain provisions of Title II, which applies to public services, and of Title III which covers public accomodations and privately provided services. Let me review the AIA's specific concerns with this measure and suggest revisions to improve the bill's chances of accomplishing its purpose.

Existing Facilities and Key Stations

The AIA is concerned that the sections of Title II covering alterations for existing facilities and for rail stations are confusing, leaving in doubt what is required. It appears that separate requirements are set forth for existing facilities and for stations. Neither is defined in the legislative language, and so the distinction is unclear. To compound the confusion, the Senate report in Title III defines facilities to encompass stations.

It appears that alterations and "major structural alterations", as in Title III, are not required upon enactment, but if undertaken, then the altered area must be made readily accessible and usable. In the case of major structural alterations, the path of travel to the altered area must be made accessible, too. The AIA supports the distinction between the two alteration forms as necessary to encourage renovations by preventing small projects from burgeoning into costly, complex ones solely due to the need to provide an accessible route to the altered area. The legislation, however, provides no way of determining when an alteration becomes a major structural alteration, leaving the decision to the Attorney General. We also believe that the ADA's use of the term "structural" is inconsistent with the legislation's intent as described in the report. Major structural alteration implies major building support elements such as columns, beams and load-bearing walls, yet the report makes it clear that other alterations which are equally significant, though not structural in nature, are also within the scope of the legislation's intent. Suspended ceilings, partitions, and doorways, for example, are not deemed major structural elements by the architectural and engineering community. The inconsistency can be eliminated by referring only to "major alterations".

Later on, the legislation demands that all intercity rail stations and key stations for other rail types be made readily accessible and usable by people with disabilities, as soon as practicable. The Secretary of Transportation may delay the requirement for up to three years in some cases, and for up to 20 years in others, with extraordinary cost of compliance a factor in the length of delay for key stations. Is the legislation providing that alterations for facilities other than stations and key stations are voluntary, but that rail stations must be made readily accessible and usable following enactment? It is unclear. If that is the requirement, then the legislation ought to say so, with proper definitions of the terms "facilities" and "key stations", and logical structuring of the sections.

Title III also suffers from problems with clarity.

Readily Achievable Removal of Architectural Barriers

The legislation requires that public accommodations remove architectural barriers, effective upon enactment, if the removal is "readily achievable". "Readily achievable" is described as "easily accomplishable and able to be achieved without much difficulty or expense". Additional criteria for determining whether the removal is readily achievable include the size and type of the operation and the number of its employees and facilities. The provision fails to distinguish clearly between the cost and difficulty of removing a single barrier, and many barriers of the same type in a single facility. For example, the Senate report concludes that the installation of grab bars fits the readily achievable standard. The absence of a grab bar in a bathroom is evidently a barrier. The installation of a grab bar in a single bathroom is not much of a problem, but the installation of many grab bars in many bathrooms in a large office or hotel is a different matter entirely. The legislation should provide that if a facility has many architectural barriers that singly aren't difficult or costly to remove, the removal of all these barriers should either be phased in, or should occur when the facility is renovated.

Alterations and Major Structural Alterations

Title III also contemplates "alteration" of a facility which is more expensive and complex than the readily achievable removal of an architectural barrier. The legislation indicates that an alteration occurs at the choice of the facility owner. Title III does a better job than Title II in handling the distinction between accessibility improvements required upon enactment in existing facilities, and those that take place only when owners choose to initiate them. The legislation still suffers from the recurring problem of no clear distinction between a readily achievable removal of an architectural barrier and an alteration of a facility. Also, as in Title II, the legislation gives no clue as to what differentiates a major structural alteration from an alteration. The reason the legislation contains two types of alterations was so that a small or inexpensive alteration would not impose more costly renovation of an accessible route through the building. The legislation implies that changes to windows or to partitions, but not load-bearing walls could trigger the requirement for an accessible path of travel. This doesn't make any sense.

State laws already in existence provide better guidance. Pennsylvania law, for example, adopted in December 1988, provides that alterations valued less than 30 percent of the worth of a building must make only the altered area readily accessible and usable. Alterations valued at 30 to 50 percent of the building's worth must also include an accessible route to the altered area. Alterations valued more than 50 percent of the worth of the building must make the entire facility readily accessible and usable. For example, if the threshold for a major "structural" alteration is set too low, then many owners may simply delay or even refuse renovations in situations where building values are low. Referring again to the new Pennsylvania law, I believe it can be a useful guide in clarifying terms and distinguishing between major and

BEST COPY AVAILABLE

minor renovations. A copy of Pennsylvania's Act 166 of 1988 has been submitted to the subcommittee.

The AIA is concerned that the ADA bill does not adequately take into account the special nature of historic properties. The Uniform Federal Accessibility Standards (UFAS) in Section 4.17 sets forth standards for historic properties. It allows the Advisory Council on Historic Preservation to determine whether accessiblity requirements of UFAS would "threaten or destroy" the historic integrity of a qualified building or facility. If so, then special accessibility rules would apply. The ADA bill should require a standard of this type for all qualified properties including those listed on or eligible for the National Register of Historic Places, or designated historic by a state statute or local ordinance.

The alterations section of Title III also establishes a "maximum extent feasible" test. This phrase is too vague, although the Senate report attempts a definition.

New Construction

The legislation imposes requirements for new construction, which apply to facilities open for first occupancy more than 30 months after the date of enactment. It makes a distinction between public accommodations, which are defined in a list of facilities and establishments, and "potential places of employment" which appear to be all those facilities not considered "public" in the limited sense of being used or visited by customer, patient, client or patron. The AIA firmly agrees with the premise that accessibility features can be easily incorporated at little or no additional cost into the original design if universal accessibility for all is a conscious goal of the architect from the first day of design.

"Potential places of employment", however, is a new term. It is unclear in the legislation whether all spaces within potential places of employment must be made readily accessible and usable, such as a rarely visted utility or store-room. The legislation's requirements should cover all those spaces within an establishment or facility that would be generally used by the public, either as consumers or employees, and exempt accessibility of other special purposes spaces such as catwalks, elevator shafts and electrical panel closets as is done in the ANSI Standards, UFAS and PA Act 166.

Although the legislation attempts to accommodate projects already in the design process by delaying their effective date of compliance (a year after enactment for alterations, 30 months for new construction), there will be serious transition problems for some projects that are or will be under contract for design prior to the effective date of the bill. These projects must comply by the effective dates. They will therefore be subjected to

costly, often complicated redesign, yet architects will not know with any certainty what they must do to comply. In its section estimating the bill's cost for state and local government, the Senate report acknowledges the significant added costs of re-design. One way to handle this problem is to retain the effective dates in the legislation for alteration and new construction, but have the law apply only to those projects that receive a contract for design after the date of enactment. After much discussion in Pennsylvania it was determined that any design contract for renovations or new construction dated later than sixty (60) days after enactment of the accessibility law was a fair and efficient way to make a transition into the new law's requirements, without the delay and cost of re-design being involved. The burden of proof was put upon the architect or building owner. If he or she could show that design work began on the project before the effective date, that project did not have to comply with the new law. Projects currently on the drawing board would not be affected. New or altered buildings escaping early compliance, however, would eventually come under the alteration requirements. Our suggestion is also similar to, but we believe more effective than, the approach instituted in the Fair Housing Act Amendments regulations which exempt from compliance those projects whose final building permits are issued on or after January 14, 1990.

To provide a "safe harbor" for architects, particularly necessary during the transition from enactment to final regulations, the legislation should provide in the statute language that compliance with the requirements of the American National Standards Institute ANSI Standard A117.1 1986 or an equivalent standard would be sufficient, though not necessary, for compliance with the legislation. ANSI A117.1 is a national model accessibility standard adopted throughout the country, and known to many architects. Given the uncertainty of the ADA's requirements, and of the nature of the regulations, architects need a readily accepted standard to which they can refer with confidence. Since ANSI no longer prescribes the scope of the standard, such as how many accessible bathrooms should be placed in a new office project as opposed to what an accessible bathroom must include, the legislation as an alternative could instead refer to the Uniform Federal Accessibility Standard (UFAS), which contains a scoping element. In the new fair housing law enacted last year, ANSI is deemed a sufficient standard to follow in complying with accessibility requirements for housing.

Because the report makes it clear that the Architecural and Transportation Barriers Compliance Board shall extend and make necessary revisions to the federal Minimum Guidelines and Requirements for Accessible Design (MGRAD), a question is raised about the relationship of this provision to current ANSI Standards. Is the revised MGRAD supposed to supplant ANSI as the standard for the details of handicapped accessibility design? MGRAD now relies on the ANSI standard. The legislation should specify this continued reliance, except, to the extent that a scoping element is required. Incidentally the ANSI A117 Committee, of which I am a member, will be considering re-adoption of a scoping standard in its 1991 Edition.

The ADA's new construction provisions also exempt from compliance those new projects where it is "structurally impracticable" to comply. The Senate report makes it clear that structural impracticability does not pertain to conditions involving a "hilly" site but only to those conditions that would prevent accessibility or destroy the physical integrity of a structure. It is meant to be a very limited exemption involving such buildings as those built on stilts in marshland or in a floodplain. The issue of economic feasibility should not be overlooked, especially since such feasibility is inherent in the idea of structural inpractibility. The sections of the ADA dealing with readily achievable removal of architectural barriers and with alterations already acknowledge the cost of compliance and seek to ensure that the legislation's costs are not unreasonable.

The new construction requirements should do the same. The AIA supports the legislation's intent to require the incorporation of accessibility features which are not prevented by structural impracticability or economic infeasibility. The ADA should also incorporate the term "equivalent facilitation" to allow alternative access means where conventional accessibility is impracticable and an alternative means can be demonstrated to achieve an equivalent accessibility result.

Enforcement

The Senate bill also provides that courts should consider a good faith effort to comply when hearing complaints brought against a covered entity or individual. We support a stronger provision. State or local building officials should be able to certify that an architect has complied with the Act. Certification by such officials that an architect has complied should then constitute a strong defense against complaints of discrimination. This can be accomplished by permitting the Department of Justice to certify, on the application of a state or locality, that its building code complies with or exceeds the federal standard established by the ADA. When the building official of a jurisdiction with a DOJ-certified statute inspects a renovation or new construction project covered by the ADA, his or her enforcement of the state or local statute would ensure compliance with the ADA. It is only fair that if a state or local building official assures an architect that a project complies with DOJ certified handicapped access statutes, then the architect should have confidence that any liability will be sharply limited.

Technical Assistance

Finally, the Senate bill establishes a program of technical assistance for affected segments of the public to inform them about the act and its details. This is a worthwhile provision aimed at encouraging compliance through better understanding and information, rather than through the heavy hand of the courts. Specifically, in reference to architects, the AIA urges that the technical assistance program give major attention and resources to the education of architects in the new law and in design for universal accessibility.

The American with Disabilities Act is far-reaching legislation aimed at opening doors for a segment of our society shut out of the mainstream for too long. The legislation's significance demands that its crafting advance rather than impede achievement of its objectives. We hope that our suggestions will help this bill become what it deserves to be.

Mr. Chairman, I would close by saying that we architects, the designers, and builders of the environment of man must broaden our spectrum of design paramehters to help improve the quality of life for those of us who cannot walk or talk, see or hear.

Our creative skills must be applied, as well, to design for the small and the tall, those who are frail or spastic and those who are head-injured or mentally challenged. It is a modern day and unique challenge we should engage with enthusiasm and vigor.

Mr. **Edwards**. Mr. Roth, I want to assure you that we want more communication with theater people because these problems can be resolved and we are going to write our legislative history very carefully, which will help to resolve some of your concerns.

Now, Mr. Roth, what about removable seats as one way to accommodate the disabled? Do you have any history of that? Are you acquainted with that procedure?

Mr. **Roth**. Yes, sir, I am. I think it is an excellent way to accommodate varieties of handicaps. However, if we are talking about 9:10 and we have 250 people leaving an auditorium and 250 people trying to get in and I arrive in a wheelchair and ask, can you take out those two removable seats, that is a pretty good sized problem.

Mr. **Edwards**. Well, what do you do when a disabled person arrives?

Mr. **Roth**. In every auditorium, when we have removable seats, we have open spaces for wheelchair seating.

Mr. **Edwards**. Have you ever turned one away?

Mr. **Roth**. No, sir.

Mr. **Edwards**. So you feel you accommodate the people in wheelchairs now?

Mr. **Roth**. What would happen was, you would call and say "I am coming to the 9:20 show and I am bringing my wife and my sister who is confined to a chair. We have been in your theater before and we know in a certain area you have the removable chairs. Is it possible that you can have them taken out before this evening so when we get there they would be available?"

By all means we would do that. If we could do it without any prior notice, we would try, but it poses the problem of discomforting 300, 400, or 500 people while two ushers are trying to dismantle the chair and carry it out.

But, yes, it is a real good way when combined with other good ways to accommodate people with various handicaps.

Mr. **Edwards**. Mr. Roth, you feel that the bill as written with appropriate legislative history that specifically addresses your concerns can assuage your fears as to the effects of this legislation?

Mr. **Roth**. Well, sir, the more legislative history, the better, but when you get to the local level and somebody is arguing with you, whether you complied with the act or you don't, those local people whether they be the building inspector, the fire inspector or whoever, they don't have the legislative history readily at hand and the average theater operator does not have the legislative histories in his file cabinet.

So what will happen, somebody will whip out the act which makes it critically important that the act itself be as clear as possible because by the time we research, investigate and adjudicate the legislative history, the lease may have expired.

Mr. **Edwards**. Do you have any specific recommendations for amendments to this legislation?

You don't want to be exempted from it.

Mr. **Roth**. No, sir, we don't want to be exempted from it. We have in several instances submitted specific language. If the committee or the subcommittee would like further submissions, we would be delighted to offer them.

Mr. **Edwards**. We would welcome any specific language that you have in mind and we will give it very careful consideration. I only have a question or two for Mr. Lynch. Then I will yield to Mr. Sensenbrenner.

The Pennsylvania experience appears to be of great advantage to us in that you have a prior track record, isn't that correct, and generally speaking you think that the legislation that we have written here can work satisfactorily?

Mr. **Lynch**. Well, sir, we feel that there is some clarification in the language that needs to be made. We have gone through an awful lot of the thought process that you are going through now in Pennsylvania and I think one of the beauties of our legislative process that we choose to take was to try to get as many of the groups such as theater owners, small businessmen, restaurant owners, multifamily housing managers involved in the legislative process early so they did for us what we are hoping to offer to you today, they offered us areas of concern that needed to be clarified.

We felt that we had the bill pretty well ironed out by the time it did get to enactment. I think we may have had a few less fuzzy areas of terminology than you present have today.

Mr. **Edwards**. Does your full statement include all of your recommendations or do you have in mind sending us some more?

Mr. **Lynch**. We have basically put it into our full statement. There are some elaborations that if we had the opportunity would probably be of benefit. I think just to further elaborate on some of them would show the rationale on why we picked things, for instance, to talk about, levels of renovation which I think might better solve the problem here than the terminology which I think S. 933 talks about, alterations and then major structural alterations.

There are some problems with architectural terminology that would mislead architects, I am sure, if they read it. We found in the Pennsylvania experience—I felt one of my conclusions made to Senator Rhodes' task force in Pennsylvania was that I was able to show where architectural and construction terminology was applicable and would be better interpreted by those people who needed to know it, like building officials, architects, engineers and contractors.

Mr. **Edwards**. Thank you.

Mr. Lynch, we welcome over the next few days, and perhaps even few weeks, any communication with our staff, minority and majority staff, so that we can work out any of these problems that we find mutually agreeable.

Mr. Sensenbrenner.

Mr. **Sensenbrenner**. Thank you, Mr. Chairman.

Mr. Lynch, I would like to pick up on what the chairman said, could you please send us a letter for inclusion into the record where you believe there is terminology in the Senate-passed bill which would be misleading to architects and also what type of language that you would recommend that would accomplish the same thing that the Senate authors wanted in the inclusion of that language and how we could write something differently that would tell architects what to do and accomplish the same thing as the Senate's intent.

Mr. **Lynch**. Mr. Sensenbrenner, we would be pleased to do that. I am glad you are giving us the opportunity to do. We have the language and we would love to share our experience with it.

Mr. **Sensenbrenner**. I can tell you we would not know what to do on this subject so we need some direction from you.

Mr. **Lynch**. You have it.

Mr. **Edwards**. I would suggest you might be a very good first professor at one of our great Pennsylvania universities. It is shocking that there are no courses on this subject.

Mr. **Lynch**. Unbelievable.

Mr. **Edwards**. Thank you, gentlemen.

Our final panel will be Ms. Jo Holzer, executive director of the Council for Disability Rights in Chicago. She has been involved in the disability movement for many years. After Ms. Holzer has testified, we will hear from Prof. Robert Burgdorf. I will introduce him in more detail at the proper time.

Because we have some problems with votes today, we are going to ask unanimous consent that both of your excellent statements be made part of the record in full and if you possibly can limit your remarks to about 10 minutes apiece.

Thank you.

Ms. Holzer.

STATEMENT OF JO HOLZER, EXECUTIVE DIRECTOR, COUNCIL FOR DISABILITY RIGHTS

Ms. **Holzer**. Thank you. My name is Jo Holzer and I am speaking to you today as an advocate for the rights of all people with disabilities and as a parent of a young adult with a physical disability. I began my volunteer activities in the disability rights movement in 1973 when, as the parent of a child with a disability, I was asked to be a founding member of Advocates for the Handicapped, in Chicago. A few years later I decided to devote all of my time to the cause of disability rights and in 1981 I was a cofounder of the Council for Disabilities Rights. I am its executive director.

The council provides information and referral on disability-related requests; we provide training for parents, for consumers, or for professionals on disability-related topics including self-advocacy, disability awareness, disability rights and special education rights. Our monthly newsletter, CDR Reports, is sent out to nearly 40 States as well as several provinces in Canada. We have just begun the second year of a State-funded project for job preparation and placement.

Let me tell you why I became a full-time advocate for disability rights for all people with disabilities: My youngest daughter Margaret, who is 23 years old and a senior at University of Wisconsin at Whitewater, has a very rare condition called fibrodysplasia ossificans progressiva or f.o.p. that she shares with approximately 70 other people in this country; it is an inborn biochemical error that affects their muscles, but has no negative impact on their intelligence.

Her condition was diagnosed when she was 3 weeks old. Very early in the grieving process, I realized that the only way I could ever really help our child was to help all people with disabilities;

that as a member of a tiny minority within a vast minority, she could never be heard, but that as a member of that larger minority, she could be heard and could also be benefited.

It was one of the very best decisions I have ever made. I am proud to be a disability rights advocate and to share in the pursuit of our common goal—independence with dignity and equal participation in all aspects of society.

Every parent tries to look ahead and help their children prepare for their futures. Our major concern for Margaret has always been her long-term future. Our hopes and expectations for Margaret are no different than for her two sisters.

The general public, as well as many professionals, do not, however, share our high expectations for most people with disabilities. As she grew up, we all constantly encountered the "great myth," that people with disabilities are not quite human, that they cannot function adequately or appropriately by themselves, and more or less learned to live with it, mostly by ignoring it. Her friends, however, who only encountered the attitude when with Margaret, were often angered by the general public attitude toward her.

Through the years Margaret has been the object of discrimination in many ways and venues, but perhaps the most despised have been the low—even absent—expectations of some of her teachers, the very people society has charged with the development of our children. Too often her presence was simply tolerated because the law required that she be served.

I do not mean to condemn the teaching profession for poor attitudes, but their attitudes toward students have been proven to be vital to the success of their students. They are reflective of society at large, but have a far more serious impact on children. Many teachers simply told me not to worry about her, that she was very smart and "got everything." They failed to understand that we were at odds with their stereotypical thinking, that we had great expectations for all of our children.

The inevitable result of these side effects of mainstreaming, the downside, was a perfectly dismal performance her first 2 years at the university. Now that she understands these dynamics herself, she is doing well and fully expects to graduate this June.

Margaret is among the earliest graduates to have benefited from Public Law 94-142, the Education for All Handicapped Children Act, which became effective when she was in grade school. Soon she will be seeking employment and she expects to find access and accommodation in the adult world at least to the degree that she has experienced it during her education.

Millions of children with disabilities have benefited directly from the services, therapies and transportation provided to them and their families by Public Law 94-142. These kids have been integrated into the school with their nondisabled peers, as the act intended; they will, of course, expect to be integrated into the community and the adult world in the same nondiscriminatory manner.

Now they expect to become employed, to work as hard as everyone else, to benefit from being employed, and to pursue their own independent lifestyle—just as you and I do—in the community.

As her parents, we also have the same expectations, that with her good talents and skills, she will be able to find and keep a good job and enjoy all that her community has to offer.

However, barriers do exist. There is enormous need for barrier-free public accommodations. These are the barriers that impact most heavily on the family unit and prevent families from participating in normal public events, civic activities, voting, community affairs, and other regular activities like shopping, movies, entertainment, and sports.

Our family has fared better than most in many ways because we live in a State with strong laws on the books. Margaret was able to get a summer job when she was 16; she was well-accommodated on the job. Many businesses, both small and large, have made these simple infrequent accommodations without going bankrupt. In addition, many public accommodations have removed architectural barriers without great cost. As an advocate, however, I am aware that in too many other States, families do not share our experiences. The ADA would cure this inequity for families across the country.

Margaret has been extremely fortunate in many, many ways, not the least of which is her father's financial success. But our family is by no means typical. According to "Toward Independence," the Census Bureau reports that a household/family that includes a person with a disability is twice as likely to fall at or below the poverty level as a household/family without a person with a disability.

Margaret has been fortunate to survive. Although the condition itself is nonfatal, its complications often are. Margaret is fortunate to have a superior intelligence and excellent communications skills, both written and oral. Margaret is fortunate to have grown up in a stable family unit with siblings and two parents.

Indeed, Margaret is uniquely fortunate to have been born with so many advantages, with or without the disability. Even so, she still must endure the physical and attitudinal barriers of our society. She may always be stared at, rebuffed, ignored, and otherwise mistreated by the general public. We cannot legislate good manners or sensitivity to others, but we can ensure that she and all other people with disabilities are given equal treatment and the opportunity to participate in the workday world.

On behalf of all parents, I implore you to consider the future of our children: Give them an equal chance to succeed; remove those barriers to their success.

On behalf of my daughter and all those individuals with disabilities who do not have her advantages, I urge you to pass the Americans with Disabilities Act of 1989, so that they may each have a better chance to achieve equal participation in society and independence with dignity.

Thank you for this opportunity to present these views on behalf of our community who seek their own empowerment, their equal opportunity to participate, their own place in the sun, to contribute to a better future for all of us.

Mr. **Edwards**. Thank you. That is very helpful testimony. We do appreciate it.

[The prepared statement of Ms. Holzer follows:]

PREPARED STATEMENT OF JO HOLZER, EXECUTIVE DIRECTOR, COUNCIL FOR DISABILITY RIGHTS

My name is Jo Holzer and I am speaking to you today as an advocate for the rights of all people with disabilities and as a parent of a young adult with a physical disability. I began my volunteer activities in the disability rights movement in 1973 when, as the parent of a child with a disability, I was asked to be a founding member of Advocates for the Handicapped, in Chicago. A few years later I decided to devote all of my time to the cause of disability rights and in 1981 I was a co-founder of the Council for Disability Rights; I am its Executive Director.

The Council provides information and referral on disability-related requests; we provide training for parents, for consumers, or for professionals on disability-related topics including self-advocacy, disability awareness, disability rights, special education rights, etc. Our monthly newsletter, CDR Reports, is sent out to nearly forty states as well as several provinces in Canada. We have just begun the second year of a state-funded project for job preparation and placement.

Let me tell you why I became a full-time advocate for disability rights for all people with disabilities: my youngest daughter Margaret, who is 23 years old and a senior at University of Wisconsin at Whitewater, has a very rare condition called fibrodysplasia ossificans progressiva or f.o.p. that she shares with approximately 70 other people in this country; it is an inborn biochemical error that affects their muscles, but has no negative impact on their intelligence. Her condition was diagnosed when she was three weeks old. Very early in the grieving process, I realized that the only way I could ever really help our child was to help all people with disabilities; that as a member of a tiny minority within a vast minority, she could never be heard, but that as a member of that larger minority, she could be heard and could also be benefitted. It was one of the very best decisions I have ever made. I am proud to be a disability rights advocate and to share in the pursuit of our common goal -- independence with dignity and equal participation in all aspects of society.

Every parent tries to look ahead and help their children prepare for their futures. Our major concern for Margaret has always been her long-term future. Our hopes and expectations for Margaret are no different than for her two sisters. The general public, as well as many professionals, do not however, share our high expectations for most people with disabilities. As she grew up, we all constantly encountered the "great myth" -- that people with disabilities are not quite human, that they cannot function adequately or appropriately by themselves, etc. -- and more or less learned to live with it, mostly by ignoring it. Her friends, however, who only encountered it when with Margaret, were often angered by the general public attitude toward her.

Through the years Margaret has been the object of discrimination in many ways and venues, but perhaps the most despised have been the low -- even absent! -- expectations of some of her teachers, the very people society has charged with the development of our children. Too often her presence was simply tolerated -- because the law required that she be served. I do not mean to condemn the teaching profession for poor attitudes, but their attitudes toward students have been proven to be vital to the success of their students. They are reflective of society at large, but have a far more serious impact on children. Many teachers simply told me not to worry about her, that she was very smart and "got everything." They failed to understand that we were at odds with their stereotypical thinking, that we had great expectations for all of our children.

The inevitable result of these side effects of mainstreaming, the downside, was a perfectly dismal performance her first two years at the University. Now that she understands these dynamics herself, she is doing well and fully expects to graduate this June.

Margaret is among the earliest graduates to have benefitted from Public Law 94-142, the Education for All Handicapped Children Act, which became effective when she was in grade school. Soon she will be seeking employment and she expects to find access and accommodation in the adult world at least to the degree that she has experienced it during her education. Millions of children with disabilities have benefitted directly from the services, therapies, transportation, etc., provided to them and their families by PL 94-142. These kids have been integrated into the school with their nondisabled peers, as the Act intended; they will of course expect to be integrated into the community and the adult world in the same nondiscriminatory manner. Now they expect to become employed, to work as hard as everyone else, to benefit from being employed, and to pursue their own independent lifestyle -- just as you and I do -- in the community. As her parents, we also have the same expectations -- that with her talents and skills, she will be able to find and keep a good job and enjoy all that her community has to offer.

However, barriers do exist. There is an enormous need for barrier-free public accommodations; these are the barriers that impact most heavily on the family unit and prevent families from participating in normal public events, civic activities, voting, community affairs, and other regular activities like shopping, movies, entertainment, sports, etc. Our family has fared better than most, in many ways because we live in a state with strong laws on the books. Margaret was able to get a summer job when she was 16; she was well accommodated on the job. Many businesses, both small and large, have made these simple accommodations without going bankrupt! In addition, many public accommodations have removed architectural barriers without great cost. As an advocate, however, I am aware that in too many other states families do not share our experiences. The ADA would cure this inequity for families.

Margaret has been extremely fortunate in many, many ways -- not the least of which is her father's financial success, but our family is by no means typical. According to "Toward Independence", the Census Bureau reports that a household/family that includes a person with a disability is twice as likely to fall at or below the poverty level as a household/family without a person with a disability. Margaret has been fortunate to survive. Although the condition itself is nonfatal, its complications often are. Margaret is fortunate to have a superior intelligence and excellent communications skills both written and oral. Margaret is fortunate to have grown up in a stable family unit with siblings and two parents. Indeed, Margaret is uniquely fortunate to have been born with so many advantages -- with or without the disability. Even so, she still must endure the physical and attitudinal barriers of our society. She may always be stared at, rebuffed, ignored, and otherwise mistreated by the general public. We cannot legislate good manners or sensitivity to others, but we can insure that she and all other people with disabilities are given equal treatment and the opportunity to participate in the workaday world.

On behalf of all parents, I implore you to consider the future of our children: give them an equal chance to succeed; remove these barriers to their success. On behalf of my daughter and of all those individuals with disabilities who do not have her advantages, I urge you to pass the Americans with Disabilities Act of 1989 so that they may each have a better chance to achieve equal participation in society and independence with dignity.

Thank you for this opportunity to present these views on behalf of our community who seek their own empowerment, their equal opportunity to participate, their own place in the sun -- to contribute to a better future for all of us.

Mr. **Edwards**. Now we will hear from Prof. Robert Burgdorf of the District of Columbia School of Law. Professor Burgdorf formerly served on the staff of the National Council on Disability and while there drafted the original version of ADA introduced last year. We look forward to hearing more from him and learning from his expertise.

We welcome you, Professor Burgdorf.

STATEMENT OF ROBERT L. BURGDORF, JR., ASSOCIATE PROFESSOR OF LAW, DISTRICT OF COLUMBIA SCHOOL OF LAW

Mr. **Burgdorf**. Thank you, Mr. Chairman.

Mr. Chairman, Representative Sensenbrenner, I am honored to be here. Let me begin by saying that as the drafter of the original version of the Americans with Disabilities Act, as it was introduced last year, I have no hesitation in endorsing this year's bill as achieving the goal of the National Council on Disability which set out to enact a clear and comprehensive law to prohibit discrimination against people with disabilities.

I wanted to begin by talking a little bit about the scope of the problem, particularly in the area of accommodations that we are addressing. In 1986, the Louis Harris organization conducted a poll, a nationwide poll of people with disabilities and the pollsters discovered that people with disability were an extremely isolated segment of the population.

The National Council on Disability took a look at the results of the Louis Harris Poll and stated the following: The survey results dealing with social life and leisure experiences paint a sobering picture of an isolated and excluded population of individuals with disabilities. The large majority of people with disabilities do not go to movies, do not go to the theater, to musical performances and do not go to sports events. A substantial minority of persons with disabilities never go to a restaurant, a grocery store and never go to a church or synagogue.

Specifically, the Harris Poll found that nearly two-thirds of all disabled Americans never went to a movie in the last year, that is compared to 22 percent of the general population. Three-fourths of all people with disabilities did not see live theater or live music performances in the past year as opposed to only 40 percent of the general population.

Disabled people are three times more likely than nondisabled people to never eat in restaurants. They are also much less likely to go to grocery stores. Thirteen percent of disabled persons never shop in a grocery store compared with only 2 percent of people without disabilities.

Why is this true? Why do we have an isolated and excluded population?

The Harris Poll went further and asked these people why aren't you getting out, why aren't you doing things. The two major reasons were fear and barriers, fear of how people were going to be treated. Six out of 10 of the people whose activities were limited said that is one of the major reasons why they are limited.

Forty percent said physical barriers kept them from going places and doing things as often as the rest of the population. We have unfortunately in America erected an unwelcome sign to people with disabilities. They are afraid to go to places.

They don't know how they are going to be treated there and they don't know if they are physically going to be able to get into the buildings.

This bill would be a major step forward in addressing this discrimination and putting up a welcome sign for people with disabilities. I heard the earlier witnesses in the previous panel, particularly Mr. Roth, talk about the loose language of the bill, talk about its vagueness and ambiguity.

We have heard concerns expressed by other members of the small business community that this is somehow an attack upon small businesses. I wanted to say to the subcommittee that I have no hesitancy whatever in saying that this particular bill takes into account and gives deference to the needs of businesses, and in particular small businesses more than any other civil rights bill that has ever been before the Congress.

At every juncture in the bill, there is deference paid to the size and to the difficulties faced by smaller businesses. For example, the bill does not call for existing buildings to be made totally accessible to people with disabilities. It requires only that easy things be done, readily achievable.

Barrier removal is called for. Readily achievable is defined as easily accomplishable and able to be carried out without much difficulty or expense. The bill describes factors to be considered in determining what is readily achievable.

Those factors include the size of covered entity, number and type of facilities, size of the budget. So, the size and the money available to a business is particularly, specifically required to be considered.

A mom-and-pop store is clearly held to a much lower standard than is a highly financed big national concern. A struggling small business will be required to do much, much less than a bigger, more well to do establishment.

Likewise, there is a requirement for the provision of auxiliary aids. The auxiliary aids are not required if to do so would be an undue burden. Once again, in determining what is an undue burden, the size and budget of the entity affected are clearly required to be examined.

A struggling small business will be excused from providing an auxiliary aid or service in circumstances where a larger, more prosperous business might be required to provide it. But what is the big, scary requirement? The new construction requirement, is that onerous to small businesses? I don't believe it ever was.

In working out a compromise bill to make absolutely certain this could not be onerous, there is an exemption put in specifically saying that small buildings do not have to have elevators put in them. The bill excepts small buildings from the elevator requirements, for facilities less than three stories or having less than 3,000 square feet per story.

That is the big, scary one. It is specifically not required either for new construction or major structural alterations. Likewise, the bill sets a standard of readily accessible to and usable by as its accessibility standard. That is not a total accessibility requirement.

It is a term of art. It has been used for years. It is specifically tailored to the type and use of each particular facility. The Senate bill shows it does not require the accessibility of every part of every area of a facility.

Further, the term is not intended to require that all parking spaces, bathrooms, stalls within bathrooms, et cetera, are accessible, only a reasonable number must be accessible, depending on such factors as location and number.

Again, it is a bowing to small businesses that may have fewer facilities and fewer areas and therefore have fewer areas and facilities to make accessible. I can go on, and I did in my testimony address five or six additional ways in which this bill tries to take into account and give deference to the needs of small businesses.

I would like to respond briefly to some of the comments of the previous panel. The testimony of Mr. Lynch and Mr. Roth was very enjoyable to me in that they endorsed the basic goal and the coverage of the American with Disabilities Act. I had some disagreements about specifics.

In terms of Mr. Lynch's testimony, the question of major structural alterations and whether this is or is not clearly defined in the bill, he took the example of a dropped ceiling, and that perhaps that would trigger a path of travel requirement under the bill.

The bill talks about alterations that affect usability of a facility. I would find it hard to argue that replacing tiles in a dropped ceiling affects the usability of a building.

Second, it has to be a major alteration and a structural alteration. The Senate report defines structural to mean changes in the walls, ceilings or floors. It is changing one of the physical components of a structure.

Third, it has to be major. The report says that major refers to only those changes that occur in a major area, a major part of the building. So, for example, a change in a broom closet is not a major structural change, no matter how extensive it is, and a change in a bank lobby would be, a change in a major area of a bank.

With that said I look forward to your questions. Thank you for this opportunity to testify on the bill.

Mr. EDWARDS. Thank you very much, Professor Burgdorf.

[The prepared statement of Mr. Burgdorf follows:]

PREPARED STATEMENT OF ROBERT L. BURGDORF, JR., ASSOCIATE PROFESSOR OF LAW, DISTRICT OF COLUMBIA SCHOOL OF LAW

My name is Robert L. Burgdorf Jr. I am an Associate Professor of Law at the District of Columbia School of Law, where I teach Constitutional Law and will be supervising a clinical legal education program dealing with the rights of people with disabilities. From March, 1985, to December, 1988, I worked for the National Council on Disability, where I had the honor of drafting the original version of the Americans with Disabilities Act (ADA) as it was introduced last year. For me this bill represents the culmination of more than fifteen years of work as a legal advocate for the rights of citizens with disabilities. I appreciate this opportunity to appear before the Subcommittee to discuss the issue of discrimination against individuals with disabilities in public accommodations.

At the outset, let me say that as the author of last year's version of the bill I have no hesitation in endorsing this year's bill. I believe the 1989 model of the ADA is fully consistent with the spirit and intent of the original proposal of the National Council on Disability that called for enactment of "a comprehensive law requiring equal opportunity for individuals with disabilities, with broad coverage and setting, clear, consistent and enforceable standards prohibiting discrimination on the basis of handicap" (Toward Independence, p. 18 (1986)). The version of the bill (S. 933) that was passed by the Senate by a 76 to 8 vote on September 7, 1989, was the product of extensive negotiation and compromise; as such, it does not completely satisfy any of the interest groups affected. In my opinion, however, the revised bill represents a strong vehicle for prohibiting discrimination against people with disabilities, with provisions that, on balance, are prudent and well-crafted. The passage of this bill will represent an unprecedented advance -- a milestone in the struggle by people with disabilities to secure a legal status of equality in American society.

EXTENT AND EFFECTS OF DISCRIMINATION IN PUBLIC ACCOMMODATIONS

In the first ever nationwide poll of people with disabilities conducted in 1986, the Louis Harris organization asked a number of questions regarding the social integration and activities of Americans with disabilities. The pollsters discovered that people with disabilities are an extremely isolated segment of the population. As the National Council on Disability summarized the poll's results:

> The survey results dealing with social life and leisure experiences paint a sobering picture of an isolated and secluded population of individuals with disabilities. The large majority of people with disabilities do not go to movies, do not go to the theater, do not go to see musical performances, and do not go to sports events. A substantial minority of persons with disabilities never go to a restaurant, never go to a grocery store, and never go to a church or synagogue.... While a decided majority of other Americans report that they are not active in religious, volunteer, and recreation groups, most persons with disabilities are not active in such groups. The extent of non-participation of individuals with disabilities in social and recreational activities is alarming.
> (Implications for Federal Policy of the 1986 Harris Survey of Americans with Disabilities, p. 35 (1988))

Specific findings of the poll included the following:

> - Nearly two-thirds of all disabled Americans never went to a movie in the past year. In the full adult population, only 22% said that they had not gone to a movie in the past year.
> - Three-fourths of all disabled persons did not see live theater or a live music performance in the past year. Among all adults, about 4 out of 10 had not done so.
> - Two-thirds of all disabled persons never went to a sports event in the past year, compared to 50% of all adults.
> - Disabled people are three times more likely than are nondisabled people to never eat in restaurants. Seventeen percent of disabled people never eat in restaurants, compared to 5% of nondisabled people. Only 34% of disabled people eat at a restaurant once a week or more, compared to a 58% majority of nondisabled people.
>
> (Louis Harris and Associates, The ICD Survey of Disabled Americans: Bringing Disabled Americans into the Mainstream, p. 3 (1986))

Another specific finding of the poll had to do with grocery shopping and similar activities:

> Disability also has a negative impact on vital daily activities, like shopping for food. A much higher proportion of disabled persons than nondisabled persons never shop in a grocery store. Thirteen percent of disabled persons never shop in a grocery store, compared to only 2% of nondisabled persons. About 6 out of 10 disabled persons visit a grocery store at least once a week, while 90% of nondisabled adults shop for food this often.
> (Id., p. 3)

Why don't people with disabilities frequent places of public accommodation and stores as often as other Americans? The Harris poll sheds some light on the reasons for this isolation and nonparticipation by persons with disabilities in the ordinary activities of life. Two of the major reasons have to do with not feeling welcome and inaccessibility.

The preeminent reason why people with disabilities do not participate in various aspects of commercial, social, and recreation activities that are a routine part of ordinary life for most other Americans is that they do not feel that they are welcome and can participate safely. Two of the major reasons most commonly identified by the Harris poll why the activities of people with disabilities are limited are fear and self-consciousness about their disability. The Harris organization reported that "Fear is the barrier mentioned most frequently by disabled people as an important reason why their activities are limited," with nearly six out of ten (59%) of those reporting activity limitations listing fear as an important reason (Id., p. 63). And self-consciousness about their disability was reported as an important factor by forty percent (Id., p. 64). To a disturbing degree, people with disabilities do not feel safe or welcome to attend or visit ordinary places open to the public for socializing, doing business, or engaging in recreation and other major activities in our society.

Another way in which people with disabilities are prevented from visiting social, commercial, and recreational establishments (and in which the lesson of not being welcome is underscored) is by the presence of physical barriers. Many people with mobility impairments, including in particular those who use wheelchairs, cannot get into or use a facility that has steps, narrow doorways, inaccessible bathrooms, and other architectural barriers that keep them out. People having visual and hearing impairments are often unable to make effective use or to participate safely in activities and services if the facility in which they occur has included no features for communication accessibility. According to the Harris poll, forty percent of individuals with disabilities reporting limitations on their activities say that an important reason why they are limited is inaccessibility of buildings and restrooms (Id., p. 64).

The Harris poll documents the social isolation of people with disabilities that results, in large part, from discrimination they encounter when they try to engage in the ordinary social and commercial transactions of daily life.

NEED FOR TITLE II-LIKE PROTECTION

Nearly three decades ago, four black students sat down at a lunch counter at a Woolworth's store in Greensboro, North Carolina, ordered a cup of coffee, and refused to move until they were served. Unknown to the four young men at the time, their act of courage would precipitate a series of sit-ins and other forms of civil disobedience challenging the racial segregation of lunch counters, restaurants, hotels, motels, parks, and other facilities. The segregation of such places was a principal target of civil rights protests, lawsuits, and proposals for legislative reform during the early sixties.

These efforts culminated in a major section of the Civil Rights Act of 1964 -- title II, which prohibits discrimination on the basis of race, color, religion, or national origin in places of public accommodation. Title II (42 USC 2000a) defines the phrase "place of public accommodation" to include a range of establishments that had generated serious problems of segregation. These include inns, hotels, motels, and other lodging establishments; restaurants, cafeterias, lunchrooms, lunch counters, soda fountains, and other facilities selling food for consumption on the premises; gasoline stations; and motion picture houses, theaters, concert halls, sports arenas, stadiums, and other places of exhibition or entertainment. Since 1964 it has been illegal for any of these establishments to discriminate on the basis of race, color, religion, or national origin. Unfortunately, it is not unlawful today for these same establishments to exclude, segregate, mistreat, insult, or otherwise discriminate against people because of their disabilities.

People with various disabilities are turned away from restaurants because proprietors say that their presence will disturb or upset other customers. Steps, narrow doorways, curbs, and other physical barriers block people who use wheelchairs from entering many arenas, stadiums, theaters, and other public buildings. People with visual or hearing impairments find that no arrangements have been made for their attendance or effective participation.

At the height of civil rights confrontations in the early sixties, some parks and zoos were closed by entrenched authorities rather than permit these facilities to be integrated.

Nearly thirty years later, people with disabilities are still having trouble gaining admission to many such establishments. Last year, the Washington Post reported that a New Jersey zookeeper refused children with Down syndrome admission to his zoo because he was afraid they would upset his chimpanzees.

In 1985, I wrote an article for the Washington Post concerning the lack of accessibility at Ford's Theatre and other Washington performing arts facilities. Since that article was written, some substantial improvements have been made to improve access at Ford's. A major factor in the change for the positive was that the Ford's Theatre is subject to federal laws and regulations governing federally owned, leased, and federally assisted buildings, and a complaint of discrimination was filed on account of the inaccessibility of the theatre. In resolving the formal discrimination complaint, the National Park Service concluded that accessibility features were necessary and could be achieved without compromising the historic character of the Ford's building, and has worked diligently to have such changes implemented.

Had the Theatre not had a federal nexus, however, it would not be prohibited from discriminating against people with disabilities even though it is an important public accommodation. If such a facility were privately owned and operated, the improvements that have been made to increase accessibility would not have been required, and it could persist in discriminating, by practice and through architectural barriers, against people with disabilities. A place of public accommodation that is prohibited by federal law from discriminating against people because of their race or religion or national origin, is perfectly free to engage in blatant and invidious discrimination against people with disabilities. Indeed, under existing law, there is no federal statute that would prevent a private operator from constructing a new, totally inaccessible public accommodation.

The ADA seeks to correct this inequity. It addresses the two major ways in which discrimination keeps people with disabilities from making equal use of public accommodations. It prohibits discriminatory practices -- rules and attitudinal barriers that bar people with disabilities from participating or participating equally. And, in certain circumstances, it prohibits architectural and communication barriers that can keep people from even getting into a facility.

SCOPE OF COVERAGE OF PUBLIC ACCOMMODATIONS UNDER THE ADA

Title III of the ADA deals with "Public Accommodations and Services Operated by Private Entities" (my references are to the compromise version of the bill as it was passed by the Senate). Under the ADA a public accommodation means any privately operated establishment that affects commerce and is included in any of the twelve categories of establishments listed in the bill -- places of lodging, establishments serving food or drink, places of exhibition or entertainment, places of assembly, retail sales establishments, service establishments, transportation terminals, places of public display or collection, parks or zoos, schools, social service establishments, and places of exercise or recreation (sec. 301(3)). As the Senate Report notes (at p. 59), the legislation lists a few examples in each of these classes and then, in most cases, adds the phrase "other similar" to broaden the coverage to include a wide array of related types (construed liberally) of establishments. In effect, the definition of public accommodation in the ADA includes almost all establishments used by the general public as customers, clients, or visitors. The broad definition of public accommodation in the ADA is consistent with public accommodation anti-discrimination statutes in effect in some states, and incorporates broad notions of accessibility to the public that are features of the Architectural Barriers Act of 1968 (42 USC 4151).

The definition of public accommodations used in the ADA is not identical to the definition used in Title II of the Civil Rights Act of 1964. Like Title II, the ADA covers hotels, motels, restaurants, cafeterias, theaters, concert halls, sports arenas, stadiums and other places of exhibition or entertainment. When the 1964 Civil Rights Act was passed, these were the public accommodations which posed pervasive problems of discrimination to racial minorities. As in Title II, the ADA focuses on those aspects of society which pose problems of discrimination; for people with disabilities, these include, in addition to those establishments covered in Title II, others such as doctors' offices, grocery and other retail stores, and parks. This reflects a realistic approach to the problems faced by persons with disabilities as did Title II in 1964 for other minorities. It simply makes no sense to bar discrimination against people with disabilities by theaters and not by parks, or by restaurants but not stores, or by places of entertainment but not in regard to such critical services as doctors' offices.

It is important to note that Title II has been interpreted to cover entities not specifically mentioned, Org. of Minority Vendors, Inc. v. Illinois Central Gulf R.R., 579 F. Supp. 574 (D.C. Ill. 1983), and that Section 1981 operates to ban many additional public accommodations from discriminating on the basis of race and national origin. The approach underlying these developments is an attempt to broaden antidiscrimination coverage to address existing discriminatory practices without being hemmed in by a narrow construction of the term "public accommodations."

Likewise, the approach taken in the definition of public accommodation in ADA is to define the term to encompass all those places in which people with disabilities have been denied or limited in their access to facilities, services, programs, and opportunities that are routinely made available to other members of the general public. Such is surely the essence of the words "public accommodations."

While the definition of public accommodations in the ADA is broad, it certainly does not include every new building in the U.S. Private homes, apartments, condominiums, cooperatives, and other private housing facilities and residences are not included (many multifamily residences are subject to the accessibility requirements of the Fair Housing Amendments Act). Buildings owned by the federal government are not included (these are already subject to accessibility requirements under the Architectural Barriers Act and Section 504). Buildings owned by state and local governments are not within the definition of public accommodation, but most will be covered by the "public service" provisions in Title II. Specifically exempted from the coverage of this Title of the bill are private clubs, and religious organizations and entities controlled by religious organizations (Sec. 307).

Another important concept in regard to the ADA's coverage of places of public accommodation is the term "facility." The Senate Report indicates that the term "facility" should be interpreted to refer to "all or any portion of buildings, structures, sites, complexes, equipment, roads, walks, passageways, parking lots, or other real or personal property or interest in such property, including the site where the building, property, structure, or equipment is located" (Id. at p. 67). This definition is based upon the definition of the term "facility" in Section 504 regulations (45 CFR 84.3(i)), and is similar to definitions of this term in UFAS (3.5) and in the ANSI standards (3.5). (UFAS and ANSI are discussed subsequently in this testimony.)

This definition of the term "facility" applies to both indoor areas and all outdoor areas where human-constructed improvements or items have been added to the natural environment. It includes buildings and other erected structures, as well as vehicles, equipment, apparatus, and parking lots, walkways, sidewalks, roadways, and passageways, plus the sites, areas, or settings in which such things are located.

FORMS OF DISCRIMINATION PROHIBITED

Subsection 302(a) of the bill establishes the general rule that makes it illegal to discriminate against an individual on the basis of disability in regard to "the full and equal enjoyment of the goods, services, facilities, privileges, advantages, and accommodations of any place of public accommodation." Subsection 302(b)(1) provides five priciples of construction for applying the nondiscrimination mandate. These include provisions prohibiting: (1) denials of opportunities, unequal opportunities, and unnecessarily separate opportunities; (2) segregation; (3) denial of opportunity to particpate in nonseparate opportunity; (4) discriminatory standards, criteria, or methods of administration; and (5) discrimination because of association or relationship with a person with a disability.

Subsection 302(b)(2)(A) describes six types of discriminatory acts that are specifically prohibited; these include:

(1) discriminatory eligibility criteria;

(2) failure to make necessary reasonable modifications in rules, policies, practices, procedures, protocols, or services, unless to do so would involve a fundamental alteration of the nature of the privileges, advantages, or accommodations being provided;
(3) failure to ensure the provision of auxiliary aids and services, unless doing so would involve a fundamental alteration or would result in an undue burden;
(4) failure to remove architectural, transportation, and communication barriers in existing facilities and vehicles where such barrier removal is readily achievable;
(5) where such barrier removal is not readily achievable, failure to take alternative readily achievable steps to provide access; and
(6) failure to incorporate, to the maximum extent feasible, accessibility into alterations of facilities or parts of facilities (with an exception regarding elevators in certain small buildings).

Subsections 302(b)(2)(B) and (C) establish specific prohibitions of discrimination in regard to (respectively) fixed route transportation systems and demand responsive transportation systems.

Section 303 deals with new construction requirements in public accommodations and potential places of employment. It provides that it is discrimination for such establishments to fail to make new facilities constructed for first occupancy more than 30 months after the date of enactment of the Act accessible, except where it is structurally impracticable to do so.

The forms of discrimination listed in sections 302 and 303 are generally based upon existing concepts of nondiscrimination in law and regulations, particularly under Section 504 of the Rehabilitation Act of 1973. Thus, the requirements of reasonable modifications, of providing auxiliary aids and services, and of removing architectural, transportation, and communication barriers to make facilities and vehicles readily accessible to and usable by individuals with disabilities, are well-established principles of disability nondiscrimination law. Likewise, limits upon nondiscrimination requirements, such as "fundamental alteration in the nature," "undue burden," "to the maximum extent feasible," and "structurally impracticable," are all drawn from existing regulatory language under Section 504, the Architectural Barriers Act of 1968, and UFAS. In applying new construction accessibility requirements to "potential places of employment," in addition to places of public accommodation, the bill adopts an approach that had previously been applied in the Architectural Barriers Act.

An important distinction is made between providing an auxiliary aid or service and removing an architectural or communication barrier:

Removal of architectural and communication barriers are structural solutions, for example:

- audio loops (assistive listening systems in places of assembly like auditoriums to assist hearing-impaired people)

- signage (with Braille, raised letter, and/or color-contrasting features to assist visually-impaired people)
- emergency flashing lights or alarms (to assist hearing or visually-impaired people)
- permanently-installed ramps to assist mobility-impaired people

A permanently-installed public telephone which is equipped with a T.D.D. could be classified as structural, and therefore as the removal of a communication barrier.

Auxiliary aids and services are features of a program or service provided to an individual with a disability to enhance or permit participation; they address methods in which the program or service is operated, rather than how the building housing the services is erected. Providing sign language interpreters is an auxiliary service. Providing a portable T.D.D. can be an auxiliary service. Generally, a feature is a structural item (and therefore constitutes removal of an architectural or communication barrier) if it can be found in commonly-accepted accessibility standards such as ANSI and UFAS (to be described below).

ACCESSIBILITY STANDARDS UNDER THE ADA

The bill gives the Attorney General the authority to issue regulations and the Architectural and Transportation Barriers Compliance Board (ATBCB) the obligation to establish minimum guidelines regarding accessibility. ATBCB has already established such minimum guidelines for accessibility under section 504 of the Rehabilitation Act of 1973 -- the Minimum Guidelines and Requirements for Accessible Design (MGRAD), and these guidelines, along with similar, existing, widely accepted standards, such as the ANSI standards (promulgated by the American National Standards Institute) and the UFAS (Uniform Federal Accessibility Standards) will be used as models, with necessary modification to establish standards that apply to particular types of facilities.

- ANSI Standards

ANSI is a well-recognized standards-setting organization which has promulgated codes covering many aspects of the built environment which are used in most parts of the country. The large majority of states already have some form of accessibility requirements, and ANSI's accessibility standards are the standards most-often referenced by existing local and state accessibility laws.

- UFAS

UFAS are a set of standards similar in many respects to ANSI, but which have been carefully reworked by the four principal standard-setting federal departments (HUD, GSA, DOT, and the Postal Service) for use in enforcing existing federal rules requiring non-discrimination on the basis of handicap. UFAS is particularly pertinent for standards pursuant to the ADA, because UFAS includes thorough scoping requirements which make clear exactly what standards apply in what situations. UFAS affords designers a great deal of clarity by specifying exactly what is required, and eliminates potential confusion that might be engendered by a less-specific set of standards.

The ADA provides that the Department of Justice will issue standards, consistent with minimum guidelines developed by the ATBCB, to extrapolate upon existing UFAS requirements (including scoping) and apply them to the various types of facilities and places of public accommodation covered by the bill.

- Industry familiarity with standards

It is not foreseen that local establishments will have any difficulty in learning about the standards established pursuant to the ADA. Such accessibility requirements as those in UFAS and ANSI are already widely known and recognized by planners, architects, and builders. The building industry's organizations and associations have disseminated information and conducted training on standards affecting their members in the past and can be expected to continue to do so. Also, as a part of their rulemaking authority, appropriate federal agencies can undertake training for private entities affected by the ADA.

- Limits upon accessibility requirements

Provisions in sections 302 and 303 of the ADA explicitly set limits upon the obligation of achieving full accessibility.

Thus, the ADA does not require full accessibility when (1) in the case of new facilities, access would be "structurally impracticable;" (2) in the case of existing facilities, access is not "readily achievable;" or (3) in the case of altered facilities, access would be beyond the "maximum extent feasible." In such circumstances, a place of public accommodation would not be required to exceed these limits in order to achieve full accessibility. Such an agency would, however, be required to take less extensive steps, less than the limits stated in the above limits, to achieve accessibility. And even where full architectural and communication accessibility is not required, there is still a requirement of "program access," such as arranging for services or goods to be delivered at a portion of a facility that is accessible.

The bill also provides an exception regarding the obligation to install elevators in certain small buildings. Pursuant to section 302(b)(2)(A)(vi) (alterations) and section 303(b) (new construction), elevators are not required to be installed in facilities that are less than three stories or that have less than 3,000 square feet per story, unless the facility is a shopping center, shopping mall, professional health care office, or is in a category determined by the Attorney General to require the installation of elevators.

- Impact on state and local standards

The ADA does not establish any direct mandate for the inclusion of its minimum accessibility standards in state and local building codes and ordinances. As a practical matter, however, since entities which fail to comply with the minimum accessibility requirements of ADA may be subject to legal liability under the ADA, it is likely that state and local regulatory agencies will begin to make their requirements consistent with the accessibility provisions of the ADA. State and local governments can continue to select and/or develop their own codes, but they will probably not want their standards to fall below the minimum guidelines established by the ADA.

The ADA establishes certain minimum accessibility requirements that are necessary to avoid discriminating against people with disabilities. Entities covered by ADA will be required to comply with these federal nondiscrimination requirements regardless of the provisions of State and local laws. State and local provisions that set lesser standards of accessibility will be overridden in the sense that compliance with them will not protect entities covered by the ADA from complaints of violating the Act. State and local provisions that set equivalent or higher standards of accessibility than under the ADA would be unaffected by the ADA and would remain fully enforceable through normal state and local enforcement processes.

The ADA's approach to accessibility requirements is consistent with other kinds of federal requirements for nondiscrimination, which have sometimes established uniform federal policies that differ from existing local or state practices. For example, in the past, state laws and local ordinances traditionally contained restrictive covenants requiring leases to bar blacks, Jews, and Catholics from housing in portions of a community. Congress decided, as a matter of public policy, to undercut such state and local policies by permitting federal courts to intervene to bar discrimination in housing. As society has come to recognize and understand that severe discrimination also exists against people with disabilities, Congress has mandated various measures to bar this kind of discrimination as well.

- Prior federal regulation of accessibility

On a number of occasions, the federal government has demonstrated its recognition that protecting people with disabilities from discrimination requires regulation of the built environment. Regulations promulgated pursuant to Section 504 of the Rehabilitation Act of 1973 provided that all new buildings constructed by or for the use of a recipient of federal assistance must be readily accessible to and usable by handicapped persons. These regulations incorporate by reference standards issued by the American National Standards Institute and specify that such standards constitute compliance with the "readily accessible and usable by" standard. See 34 CFR 104.23. In 1984, the federal government published its Uniform Federal Accessibility Standards (UFAS) for the design, construction, and alteration of buildings and residential structures covered by the

Architectural Barriers Act, so that handicapped persons will have ready access to and use of such buildings and structures.

- Fair Housing Amendments Act precedent

When large majorities of both houses of Congress acted in 1988 to pass the Fair Housing Amendments Act, which included requirements for accessibility in all new multi-family housing, they demonstrated their recognition of the need for some kind of structural regulation in carrying out a broad nondiscrimination policy. That Act expressly directed the Secretary of HUD to encourage but not require state and local governments to issue accessibility requirements consistent with the minimum access requirements set out in the Act. The ADA continues the policy direction of that very popular legislation, and incorporates many of its provisions. The approach in the Fair Housing legislation of encouraging but not requiring state and local authorities to establish and enforce accessibility standards consistent with minimum statutory requirements for accessibility has provided a particularly useful model for the ADA.

- Readily achievable.

The standards applicable to public accommodations operated by private entities under the ADA are less, in certain circumstances, than those applicable to entities which receive federal financial assistance. Entities which receive federal financial assistance and public accommodations subject to the ADA are both required to provide program access to existing buildings. For recipients of federal financial assistance, if program access cannot be accomplished through other means, structural changes are required (34 CFR Section 104.22(b)). The only exemption is for recipients with fewer than 15 employees that provide health, welfare, or other social services. These recipients are exempted from making "significant alterations" if program access cannot be achieved in any other way (34 CFR Section 104.22(c)).

Under the ADA, existing facilities are only required to make structural changes that are "readily achievable." The phrase "readily achievable" is defined to mean "easily accomplishable and able to be carried out without much difficulty or expense" (Sec. 301(5)(A)). This requires physical access that can be achieved without extensive restructuring or burdensome expense. For example, a public accommodation which has one or two steps may be required to install a simple ramp. A public accommodation would generally not be required to provide access if there is a flight of steps which would require extensive ramping or an elevator. The agency or business would still have to take other "readily achievable" steps to provide program access. For example, a real estate agency doing business to the general public at a three story walk-up office would not be required to install an elevator to provide access to the upper floors. But the agency might be required to install a simple ramp over the one step to its entrance, and to provide its services to customers with mobility impairments in the first floor accessible offices.

- Topological problems

The ADA recognizes that sometimes accessibility poses topological problems by allowing for exceptional cases where access would be impracticable, unachievable, or infeasible. Thus, the ADA does not require full accessibility when (1) in the case of new facilities, access would be "structurally impracticable;" or (2) in the case of altered facilities, access would be beyond the "maximum extent feasible." Such limitations will apply only in rare and unusual circumstances where unique characteristics of terrain make full accessibility unusually difficult. Such limitations for topological problems are analogous to an acknowledged limitation in the application of the accessibility requirements of the Fair Housing Amendments Act of 1988. In the House Committee Report accompanying the Act, the House Committee on the Judiciary noted

> certain natural terrain may pose unique building problems. For example, in areas which flood frequently, such as waterfronts or marshlands, housing may traditionally be built on stilts. The Committee does not intend to require that the accessibility requirements of this Act override the need to protect the physical integrity of multifamily housing that may be built on such sites.

Likewise, provisions in the existing Uniform Federal Accessibility Standards contain special requirements for alterations in cases where meeting the general standards would be impracticable or infeasible.

Delineation of the narrow circumstances in which such topological limitations can be invoked in the context of public accommodations will occur in regulations implementing the Act. In such circumstances, a place of public accommodation would not be required to exceed these limits in order to achieve full accessibility. Such an agency would, however, be required to take less extensive steps, less than the limits quoted above, to achieve accessibility. And even where full architectural accessibility is not required, there is still a requirement of "program access," such as arranging for services or goods to be delivered at a portion of a facility that is accessible.

ENVIRONMENTAL IMPACT OF ACCESSIBILITY

Pursuant to the limitations noted above, ADA would not require facilities to be made accessible if doing so would have a significant adverse impact on the environment. It is, however, a misconception to assume that making facilities accessible, even in environmentally sensitive areas, is likely to have an adverse effect on the environment. Proper planning and design, and proper construction and renovation of facilities should protect and maintain the integrity of the natural environment.

- National Park Service experience

An agency with considerable experience at providing access to people with disabilities while protecting environmental interests is the National Park Service. In implementing the requirements of Section 504 of the Rehabilitation Act of 1973, the National Park Service (NPS) has spent the last decade-and-a-half developing ways to make parks and recreation areas accessible to all persons with disabilities. At first blush, park and recreation facilities seem to pose challenging design questions, such as: How can we make the Grand Canyon, Rocky Mountains, Cape Cod National Seashore, or Hawaiian Volcanoes accessible? In fact, through the application of a few simple principles, the National Park Service has found that it is feasible to provide an effective level of accessibility at almost all of its parks and facilities without undercutting environmental integrity.

NPS has stated as one of its guiding principles that "The degree of accessibility provided will be proportionately related to the degree of man-made modifications made to the area or facility and to the significance of the facility." (Special Directive 83-3) Visitors' centers, for example, have a high degree of importance and are highly man-made, so accessibility should be optimal. In areas such as campgrounds which have some man-made modifications, it may be appropriate to only make a few campsites accessible. In certain natural areas with extreme slopes, rugged terrain, and no man-made modifications, accessibility features required will be minimal. But even in such areas, park staff ought to take steps to assist visitors with disabilities to experience, as nearly as is feasible, the type of recreation experience available at the site.

- ADA requirements

The common-sense accessibility policies of the National Park Service are consistent with the ADA. Full access is not required when (1) in the case of new facilities, access would be "structurally impracticable;" (2) in the case of existing facilities, access is not "readily achievable;" or (3) in the case of altered facilities, access would be beyond the "maximum extent feasible."

- Program access

When full accessibility is not possible, the bill requires alternative methods of providing access. The Statue of Liberty is a good example of this requirement. When the Statue was being renovated, it was determined that it was structurally impossible to provide an elevator to the lookout area in the crown. Yet, the experience of the crown area and the view from it are one of the major experiences available to visitors at the park. To compensate for the inaccessibility of that area for persons unable to climb the stairs to the top, a full-scale model of the crown was developed and displayed in the museum at the site, so that people can enter it and get an idea of its size. A video presentation of the view from the top is also provided. Of course, such alternative methods must be used with some caution to avoid superficial, unequal solutions -- seeing a picture of a wild and scenic river is no substitute for rafting the river.

People with disabilities should have the opportunity for the first-hand experience whenever possible.

- Other agencies

In addition to the National Park Service, other federal agencies such as the U.S. Forest Service, the Fish and Wildlife Service, and the U.S. Army Corps of Engineers have also had experience in developing accessible facilities. A number of states have passed legislation mandating accessibility in their park and recreation facilities. The experiences of all these agencies have demonstrated that making facilities accessible can be accomplished through means that are in harmony with the environment.

STANDARDS, GUIDELINES, AND TECHNICAL ASSISTANCE REGARDING ACCESSIBILITY OF PUBLIC ACCOMMODATIONS

A variety of standards, guidelines, technical assistance documents, and how-to guides are already available regarding access for people with disabilities to various types of public accommodations.

A. Public Accommodations Generally

- Standards

Existing accessibility standards, such as UFAS and ANSI, currently provide standards for accessibility of a wide variety of facilities. The scoping provisions of UFAS make it applicable to a whole spectrum of accommodations. Thus, hotels, motels, and boarding houses are addressed by UFAS 4.1.4(11); kindergartens and schools by UFAS 4.1.4(6); institutional uses, such as hospitals and child care facilities, by UFAS 4.1.4(9); businesses, such as banks, barber shops, etc., by UFAS 4.1.4(5); and mercantile facilities, such as markets, department stores, etc., by UFAS 4.1.4(10). A category of places of assembly are covered by UFAS 4.1.4(4) and these include a number of civic, social, recreation, and religious facilities; the list includes: amusement parks and arcades, arenas, armories, art galleries, auditoriums, auditoriums, banquet halls, bleachers, bowling alleys, carnivals, churches, clubs, community halls, courtrooms, dance halls, drive-in theaters, exhibition halls, fairs, funeral parlors, grandstands, gymnasiums, motion picture theaters, swimming pools, tennis courts, lecture halls, libraries, museums, night clubs, passenger stations, pool and billiard halls, restaurants, skating rinks, stadiums, taverns and bars, studios, and theaters.

For facilities covered by the scoping provisions, the general requirements and particular specifications of UFAS can be applied. To comply with UFAS, new construction of covered facilities will have to apply with substantive requirements and specifications regarding parking, an accessible route to the facility, an accessible entrance, usable bathrooms and water fountains, and access to the service or program and other common use areas of the facility.

For certain categories of facilities, UFAS sets out some more specific requirements. Part 5 of UFAS describes the special application of the standards to restaurants and cafeterias; Part 6 to health care facilities; Part 7 to mercantile establishments; Part 8 to libraries; and Part 9 to postal facilities. Moreover, regarding the category of places of assembly, as described above, sub-part 4.33 gives more specific guidance regarding the location of wheelchair seating locations, access to performance areas, placement and types of listening systems, and other issues pertinent to assembly areas within a facility.

- How-to Guides

In addition to formal standards such as UFAS that apply to places of public accommodation, there are a variety of technical assistance manuals and how-to guides that give nuts-and-bolts descriptions of how to achieve accessibility. The hotel and motel business has been blessed with two fine resources, the American Hotel and Motel Association's publication, Handicap Accessibility in Newly Constructed Hotels & Motels: An Interpretation of ANSI A117.1 (1986), and a book by Thomas Davies and Kim Beasley, Design for Hospitality: Planning for Accessible Hotels and Motels, published by the Paralyzed Veterans of America with assistance from the American Hotel and Motel Association. Both of these publications include schematic drawings, guidelines, and practical advice for designing and constructing accessible facilities.

In other areas of public accommodations there are similar publications. Examples include: Accessibility Guidelines for Meeting and Lodging Facilities (1981), published by the University of Arkansas in cooperation with the federal Rehabilitation Services Administration; Curb Cuts (1984), produced and published by the Eastern Paralyzed Veterans Association; Barrier-Free Meetings: A Guide for Professional Associations (1976), written By Martha Ross Redden, Wayne Fortunato-Schwandt, and Janet Welsh Brown, and published by the American Association for the Advancement of Science.

B. Parks and Recreation Facilities

There is a wide range of standards and how-to guides regarding access for people with disabilities to park and recreation facilities.

- Standards

Existing accessibility standards, UFAS and ANSI, are applicable to the majority of such facilities either directly or indirectly. Both UFAS and ANSI include standards for buildings, bathrooms, parking lots, entrances, etc. Nature centers, visitors' centers, and many other park and recreation facilities are buildings, and as such are subject to accessibility standards applicable to other buildings. Requirements regarding bathroom and parking facilities are the same. UFAS has standards for certain special uses, such as restaurants, housing, assembly areas, and mercantile. These standards can be applied to recreation facilities.

Even where existing accessibility standards do not apply directly, they may provide substantial guidance indirectly. For facilities such as fishing piers, campgrounds, and nature trails, UFAS and ANSI can lend significant wisdom. Major elements of accessible design under UFAS, including parking, accessible route, entrance and egress, bathrooms, and water fountains, can be applied or adapted to such facilities. Specifications for access to a pier, for example, can be extrapolated from UFAS simply by considering the pier as an extension of the pathway, and applying appropriate criteria for making a pathway accessible.

- Guidelines and technical assistance manuals

Since accessibility was required by Section 504 of the Rehabilitation Act of 1973, guidelines for federally assisted and federally conducted programs in the areas of parks and recreation have been available since the mid-1970s. For example, the Department of Housing and Urban Development published a technical assistance guide to making parks accessible in 1976. Barrier Free Site Design recommended specific technical requirements for construction of trails, campgrounds, swimming pools, etc. In 1983, the National Park Service issued a "General Statement of Policy on Accessibility for Disabled Persons" (Directive 83-3), outlining both basic principles and the application of accessibility policy to specific National Park Service operations. In 1986, the Park Service published Interpretation for Disabled Visitors in the National Park System, providing guidelines and resource information to assist park personnel in working with visitors with disabilities. The National Park Service has also produced two informative videotapes on accessibility: "Access to Parks and Recreation: Disabled People Speak" (1988), and "Access to Park and Recreation Facilities" (1989).

In 1985, the Federal Government Working Group on Access to Recreation prepared for the ATBCB a technical paper titled "Access to Outdoor Recreation Planning and Design." This publication delineates certain underlying principles in providing accessible recreation facilities, and provides specific guidelines and technical requirements regarding accessible picnic areas, campgrounds, and trails.

A variety of other documents provide how-to guidance in regard to accessibility as it applies to particular types of park and recreation activities. For example, the New Mexico Natural Resources Department has published Accessible Fishing: A Planning Handbook (1984), that provides comprehensive guidelines and technical requirements to improve access to fishing for people with disabilities. A number of other government and private agencies, such as the National Endowment for the Arts, the Smithsonian Institution, and the Disney Corporation have produced documents discussing accessibility in the context of their particular areas of interest. In 1988, Northern Cartographic published Access America: An Atlas and Guide to the National Parks for Visitors with Disabilities, which presents comprehensive accessibility information, including maps, diagrams, access ratings, lists of accessible features and facilities, information about weather and elevations, and a wealth of other information and data about 37 National Parks, along with essays about park use by individuals with disabilities and full-color photos of scenic views in the parks.

APPLICATION OF ACCESSIBILITY STANDARDS TO EXISTING BUILDINGS

The ADA provides that no individual shall be discriminated against in the full and equal enjoyment of goods, services, facilities, privileges, advantages, and accommodations of any place of public accommodations on the basis of disability, and provides that "discriminated against" includes a failure to remove architectural and communication barriers that are structural in existing facilities, where such removal is readily achievable. If the removal is not readily achievable, the goods, services, accommodations, etc. must be provided via alternative methods. In this way, the ADA provides a reasonable standard by which existing facilities will be required to remove the barriers that can be removed without great difficulty, the sum total of which will greatly increase the architectural and communication accessibility of the existing public accommodations for people

2179

with disabilities.

The readily achievable standard is lower than the ADA's standard applicable to auxiliary aids and services, which are required unless the entity can demonstrate that provision would result in an undue burden. Here, access is not required unless it can be achieved readily.

The "readily achievable" standard was preceded by the earlier (1988) version of the ADA which required structural barriers to removed within two years if doing so did not fundamentally alter the nature of the activity engaged in by a place of public accommodations. It was felt by the current sponsors of the ADA that it is more practical and inexpensive for the private sector to be held to a "readily achievable" standard.

- Existing Historic Buildings

If an existing historic building is not being otherwise altered or renovated, it is required to remove barriers when doing so is "readily achievable." This standard leaves considerable room for balancing the need for accessibility with maintaining the integrity of the building's historically significant features. Under existing law, providing access to historic properties has generally been found to be achievable without destroying a property's historic significance. The National Park Service has established the following policy for addressing accessibility in regard to historic buildings:

> The National Park Service will provide the highest feasible level of physical access for disabled persons to historic

> modifications for disabled persons will be designed and installed to least affect the features of a property that contribute to its significance. Some impairment of some features will be accepted in providing access. If it is determined that modifications of particular features would destroy a property's significance, however, such modifications will not be made.
> (NPS Memorandum H42 (Jan. 13, 1989)).

In summary, the Park Service notes, "The issue is not *if* we should make historic properties accessible but *how* to provide the *highest* level of access with the *lowest* level of impact." (Id.)

In cases where full access is not readily achievable, the ADA requires "alternative methods of making such ... accommodations available." The "alternative methods" requirement can generally be accomplished in historic buildings through a combination of alternative access features (ramps that are slightly steeper than code, usage of non-primary entrances, etc.) along with video presentations and other representational displays of inaccessible features of the building.

If any public service is offered in an existing historic building, the building is covered under the ADA's requirement for nondiscrimination in activities of state and local governments. Section 204 of the bill requires the Attorney General to develop standards for public services which are consistent with regulations under part 41 of title 28, Code of Federal Regulations (as in existence on January 13, 1978), applicable to recipients of Federal financial assistance under Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794). Therefore, the standards to be developed would be consistent with the historic standards to be developed would be consistent with the historic building standards in the Uniform Federal Accessibility Standards (or UFAS). UFAS contains provisions that allow access to be provided to certified historic buildings in alternative ways (Sec. 4.1.7). For example, if it would impair the historic facade of a building to make the primary entrance accessible, another entrance can be made accessible.

COSTS OF ACCESSIBILITY

A. Making New Facilities Accessible

The regulatory impact statement issued in connection with the Section 504 rule by HEW in 1977 estimated that a new building could be made accessible at an additional cost of one half of one percent (.5%) of the total cost of construction (41 Fed. Reg. 20,333). Offsetting this cost, of course, is the savings to taxpayers of permitting employment for millions of persons with disabilities, by reducing public assistance payments and increasing tax revenues.

Other studies, prior and subsequent to the 1977 estimate, have supported the conclusion that accessibility costs in the construction of new buildings are extremely low. In the mid 60s the National League of Cities studied costs of access for people with disabilities for a national commission on architectural barriers; the study showed that when planned into the initial design, accessibility features usually cost less than one-half of one percent. A Syracuse University study conducted for HUD reached the same conclusion. In 1975, the General Accounting Office estimated that accessibility in a new building can be accomplished for less than one-tenth of one percent of overall costs.

Other authorities have concurred with these estimates that accessibility in a new building should not cost more than one-tenth to one-half of one percent of construction costs: ATBCB, About Barriers, p. 5 (1982); National Council on Disability, Toward Independence, Appendix, pp. F-28 & F-29 (1986); U.S. Commission on Civil Rights, Accommodating the Spectrum of Individual Abilities, pp.81-82 (1983); Congressional Record, April 29, 1988 (Remarks of Representative Owens).

In 1981 the ATBCB prepared for the Office of Management and Budget a report of cost information based upon data provided by the federal accessibility standard-setting agencies. It stated:

> The Board staff reviewed cost studies and cost data compiled by states, architects, the General Accounting Office, HUD, manufacturers, and other members of the public and incorporated this information into papers which were presented to Board members and which were made a part of the public docket. Experience and research demonstrated that accessibility can be achieved at minimal cost -- usually 1/2 to 1% of the construction cost. This percentage would be even lower if total cost were considered (i.e., architectural and engineering fees, cost of land, landscaping, and the like).
> (ATBCB, "ATBCB Minimum Guidelines and Requirements -- Cost Information," Memorandum to James C. Miller III (March 20, 1981)

All of these studies and authorities agree that the costs of accessibility in new construction is very, very low.

B. Costs of Making Existing Inaccessible Buildings Accessible

The costs of alterations to render existing buildings accessible vary widely, depending upon the type and age of the building, the extent of architectural and communication barriers present, and other factors. Generally, renovations to make buildings accessible are estimated to vary between one-half to three percent of construction costs of an overall renovation or of a building's underlying value. (ATBCB, "ATBCB Minimum Guidelines and Requirements -- Cost Information," Memorandum to James C. Miller III (March 20, 1981, pp. 5 & 9; U.S. Commission on Civil Rights, Accommodating the Spectrum of Individual Abilities, p. 81 (1983); Senator Paul Simon, "Defending the Handicapped," National Journal, p. 468 (Mar. 14, 1981)).

- ADA limits on access to existing buildings

In regard to existing buildings, ADA requires the removal of existing barriers only where they are "readily achievable," or, where renovations or alterations are otherwise being undertaken, to the "maximum extent feasible." If barrier removal would exceed these modest limits, it is not required under the ADA. In many cases, however, access for people with disabilities can be significantly enhanced within the statutory limits.

- Resources and tax deduction

The question of what is readily achievable or feasible is affected by the nature of a building, overall renovation plans, and resources available. For existing buildings, a significant portion of the cost of providing access is tax deductible. Currently, private businesses can deduct up to $35,000 in access expenditures yearly from federal taxes. Section 190 of the Internal Revenue Code permits businesses to deduct up to $35,000 for costs incurred in removing architectural or transportation barriers to persons with disabilities or elderly people in any facility or public transportation vehicle owned or leased for use in a trade or business.

C. Justification for Requiring Expenditures for Accessibility

It is appropriate for government to guarantee equal opportunity for its citizens, to prohibit discrimination, and to regulate facilities in the public interest. Accessibility for people with disabilities is a legitimate public and governmental interest which is rapidly gaining recognition. Given that a significant portion of our populace has a disability or will experience one at some point, such requirements do not represent a fiscal sacrifice for a select few, but a basic insurance policy provided by our entire society on behalf of our entire society.

At this point in the development of our society, we have enough understanding of the significant life limitations posed by architectural and communications barriers on millions of our citizens, that it is folly to continue to build in such barriers. To continue to erect newly-built but inaccessible public facilities, for example, when access can be provided so cheaply, is to continue a form of discrimination that can be characterized as ignorant, at best, or, at worst, as intentional.

Rather than continue the misguided and uninformed policies of the past, we must design a public policy for the '90s and beyond that takes cognizance of the increasing age of our society, of the many groups of disabled people whose talents are needed by our culture and economy, and of the need to decrease the percentage of our citizenry surviving on benefits and entitlements because of discrimination and an inaccessible environment. We now have the opportunity to prevent significant future discrimination against a large and rapidly growing group.

- Expenses minor

A public policy of accessibility such as the one described by the ADA can generally be implemented economically. In new facilities, the cost is usually under 1/2 of 1% of the building cost. In existing facilities, the "readily achievable" standard (often requiring only such things as small ramps and grab bars) will also be inexpensive, and frequently tax-deductible, with the potential return of additional profits.

The Architectural and Transportation Barriers Compliance Board has noted that accessibility costs are very small, especially when compared with the relatively high costs of incidental routine maintenance:

> The U.S. General Accounting Office notes that in constructing a new building, accessibility features may cost less than one-tenth of one percent of overall costs. By contrast, the cost to clean and polish most office floors is about 13 cents per square foot. Thus recurring cleaning costs far exceed fixed access costs.
> (ATBCB, About Barriers, p. 5)

Even though they may entail some minor costs, access requirements are comparable to many other federally imposed obligations (such as environmental and health/safety regulations and other civil rights protections) which are levied in the public interest. In the current situation, the public interest cries out loudly for people with disabilities to be afforded the equal opportunity to participate in all facets of American society.

DEFERENCE TO NEEDS OF SMALL BUSINESSES

A great deal of concern has surfaced among the small business community that the requirements of the ADA will impose serious hardships upon small businesses. Lack of familiarity with existing measures that prohibit discrimination against people with disabilities, serious misinformation about the actual requirements of this bill, and a great deal of misunderstanding about the needs and rights of people with disabilities have combined to whip up sentiments that the bill does not take into account the needs of small businesses and that it will be disastrous for them.

Actually, the bill has been very carefully crafted to take into account the needs and situation of small businesses at every juncture. I have no hesitancy whatever in stating that this bill is the most responsive to the particular situations and characteristics of small businesses of any federal civil rights law that has ever been considered by the Congress. Each of the major requirements of the bill has been tailored in some way to consider and make allowance for the important and unique needs of the small business operator. It is true that small businesses have not been wholly exempted from the coverage of the public accommodations provisions of the bill; small businesses are too important a source of goods and services for the American public to have them totally exempted and told that it is okay to go ahead and discriminate against people with disabilities. Small businesses make up a large percentage of the establishments that provide services and goods on a daily basis; to cut them out of the ADA would seriously undermine the bill's goal of opening up our society to people with disabilities on an equal basis. In many contexts, small business is business in America today. The approach of the ADA is not to eliminate small businesses from the requirements of the bill, but rather to tailor the requirements of the Act to take into account the needs and resources of small businesses -- to require what is reasonable to require and not to impose obligations that are unrealistic or debilitating to businesses.

Not creating a total exemption for small public accommodations is consistent with Title II of the Civil Rights Act of 1964, which covers all such public accommodations regardless of size. There, as here, it would defeat a major purpose of the Act to permit small restaurants, lunchrooms, theaters, service stations, etc., to continue to discriminate. If nondiscrimination is to have any real meaning, it is essential that local neighborhood businesses be prohibited from engaging in such discrimination.

Each of the major sections and requirements of the ADA takes into account the fact that some businesses are very small local enterprises that may have very limited resources. In each area, either the size and resources of establishments are explicitly required to be taken into account in determining what is required, or some amelioration for small businesses is built into the substantive requirement itself. My testimony is focusing upon the public accommodations requirements of the ADA, but I will mention in passing that small business concerns are well-accounted for in other parts of the bill as well, as for example, in the employment Title and various requirements regarding transportation.

The following are some of the ways in which the public accommodations provisions of the ADA provide great deference for the characteristics and needs of small businesses:

- The readily achievable limitation

As noted previously in my testimony, the ADA places a very modest requirement for removing architectural and communication barriers in existing public accommodations -- such barriers need not be removed unless doing so is "readily achievable," i.e., is "easily accomplishable and able to be carried out without much difficulty or expense." In determining whether an action is readily achievable, the ADA lists as the first two factors to be considered: "the overall size of the covered entity with respect to number of employees, number and type of facilities, and the size of budget," and "the type of operation of the covered entity, including the composition and structure of the entity" (Sec. 301(5)(B)). (The "nature and cost of the action needed" is the other factor listed.)

The size and budget of a business are, therefore, explicitly considered in determining what is readily achievable. A Mom-and-

Pop store is clearly held to a much lower standard than is a highly financed, big national concern. A struggling small business will be required to do much less than a bigger, more well-to-do establishment. The readily achievable standard takes into account the particular physical and financial realities of each individual establishment and requires more of those realistically able to do more and less of those who are only able to do less.

- Undue Burden Limitation Regarding Auxiliary Aids and Services

The requirement that places of public accommodation make available "auxiliary aids and services" under section 302(b)(2)(A)(iii) of the bill does not apply in circumstances where the provisions of such aids and services would "fundamentally alter" or would "result in undue burden." The Senate Report notes that the term "undue burden" is analogous to the phrase "undue hardship" in the employment section of the ADA, and that "The determination of whether the provision of an auxiliary aid or service imposes an undue burden on a business will be made on a case-by-case basis, taking into account the same factors used for purposes of determining 'undue hardship'" (Id., p. 63). The factors to be taken into account (see section 101(9)(B)) are nearly identical to the factors I have discussed just above in connection with the readily achievable standard. In determining whether providing an auxiliary aid or service amounts to an undue burden, the size, budget, and circumstances of a business are expressly relevant. A struggling small business will be excused from providing an auxiliary aid or service in circumstances where a larger, more prosperous business might be required to provide it.

- The Elevator Exception for New Construction and Alterations

As noted above, the inclusion of accessibility features in the design and construction of new facilities and in renovation projects can usually be accomplished at relatively little expense. To further protect small businesses, however, the Senate compromise bill incorporated a specific exception to accessibility requirements with regard to elevators in small buildings. While the previous version of the bill would have required elevators where necessary for accessibility of upper floors in new construction and certain major renovations, the Senate compromise specifically provides that elevators are not required "for facilities that are less than three stories or that have less than 3,000 square feet per story." Arguably, elevators in such circumstances might make up only a small and manageable percentage of overall building and renovation costs, but to make absolutely sure that small building owners and builders would not be unduly burdened, the bill excepts small buildings from the elevator requirement -- the only potentially significantly costly accessibility feature.

- The Readily Accessible to and Usable by Accessibility Standard

The ADA does not require total or universal accessibility, even in regard to newly constructed buildings subject to its requirements. The bill incorporates a standard of accessibility developed under federal statutes and regulations -- "readily accessible to and usable by." This standard imposes accessibility obligations that are tailored to the type and use of each particular facility. The Senate report notes that "the term does not necessarily require the accessibility of every part of every area of a facility" (Id., p. 69), and further:

> The term is not intended to require that all parking spaces, bathrooms, stalls within bathrooms, etc. are accessible; only a reasonable number must be accessible, depending on such factors as their location and number.
> (Ibid.)

The term is intended to enable people with disabilities "to get to, enter, and use a facility."

Making facilities readily accessible to and usable by persons with disabilities is a facility-by-facility process that involves consideration of the physical structure and of the nature of the activities that take place or will take place there. A small facility may have fewer areas and services and therefore will have fewer areas and services to make accessible.

Complying with the readily accessible to and usable by requirement of the ADA will require a business to make its services and facilities accessible to persons with disabilities, but will not require it to add additional features not made available to persons without disabilities. For example, a business that does not provide drinking fountains or restroom facilities for the use of its customers will not be forced to add accessible fountains or toilets for customers with disabilities. Under this standard, small businesses with the fewest "frills" will have fewer such services and conveniences to make accessible.

- Allowing Alternative Means to Serve Customers When Readily Achievable Changes Are Not Sufficient to Provide Accessibility

Where the removal of an access barrier is not required under the ADA because such removal is not readily achievable, the ADA permits businesses to make goods, services, etc., available "through alternative methods" (Sec. 302(b)(2)(A)(v)). The Senate Report cites examples of such alternative methods:

> coming to the door to receive or return drycleaning; allowing a disabled patron to be served beverages at a table even though nondisabled persons having only drinks are required to drink at the inaccessible bar; providing assistance to retrieve items in an inaccessible location; and rotating movies between the first floor accessible theater and a comparable second floor inaccessible theater. (Id., p. 66)

These are examples of means by which small businesses can accommodate the needs of customers with disabilities without hurting their businesses or incurring extensive expenses. In no event do the readily achievable and alternative methods requirements require a small business to make structural changes to existing buildings to achieve accessibility beyond what is readily achievable.

- Telecommunications Relay Services

Title IV of the bill provides for the establishment of a system of telecommunications relay services for individuals with speech or hearing impairments. While it may not be apparent on its face, the development of this relay service is an accommodation to the interests of small businesses. In prior versions of the ADA where there was no relay service requirement, one of the potential obligations upon places of public accommodation was the purchase and operation of a Telecommunications Device for the Deaf (TDD) so that customers and potential customers could call on their TDDs to make reservations, purchase tickets, inquire about products and prices, check on store hours, etc. While portable TDDs are relatively inexpensive (a good unit can usually be purchased for around $200), there was some concern that it was too burdensome on small businesses to require that all such businesses must have TDDs. As an alternative, the relay service provisions were developed. Under the requirements of Title IV, each area and locality of the country will be served by a telecommunications relay service, and individuals using TDDs will be able to call the relay service and have their inquiries, reservations, etc. passed on by voice to the business. In this way, small businesses were spared the requirement that all of them incur the modest costs of obtaining TDDs.

- **Absence of Compensatory and Punitive Damages**

Previous versions of the ADA would have permitted successful complainants to have recovered monetary damages, both compensatory and punitive, from public accommodations found to have discriminated against a person with a disability. Members of the business community expressed strong objections to such damages provisions in regard to public accommodations. It was felt that these monetary remedies were too harsh, and that some small businesses would not be able to afford legal counsel to advise them and so would risk serious financial liability. In negotiations with the Administration, these damages provisions were removed.

The compromise bill allows monetary damages and civil fines only in cases where the Attorney General successfully proves a case of "pattern or practice" discrimination. Such a remedial scheme is highly advantageous to small businesses. The most that they risk in situations where they are unclear about their duties under the Act or otherwise engage in prohibited discrimination is that if they are successfully sued they could be subjected to an injunction ordering that they stop discriminating. It would be a rare case indeed where a Ma-and-Pa operation or other small business would engage in a "pattern or practice" of discrimination egregious enough to catch the attention and merit the litigative might of the Attorney General of the United States. For all practical purposes, an injunction ordering that discriminatory conduct cease is the worst risk that a small business faces under the bill.

For all of these reasons it is clear that the ADA has been carefully crafted with an eye toward protecting (perhaps overprotecting) the interests of small businesses. The passage of this bill will have no dire consequences for America's small businesses, and yet it would provide an important advance toward assuring that these and other places of public accommodation will begin to include people with disabilities as full and equal parts of the "public" they serve.

Thank you for your consideration of my testimony. I look forward to your deliberations, and am hopeful that you will take positive action to make the Americans with Disabilities Act of 1989 the law of the land.

Mr. **Edwards**. Mr. Sensenbrenner.

Mr. **Sensenbrenner**. I have no questions, Mr. Chairman.

Mr. **Edwards**. Well, you think it is a pretty good bill then, Professor?

Mr. **Burgdorf**. I think on balance, it is an excellent bill. I probably would have drawn some lines in different places. I think perhaps it leans over a little too far in trying to accommodate to the needs of small businesses.

I would like to have seen a bit more required, but on balance, as a compromise, I think it is a fine piece of legislation.

Mr. **Edwards**. Do you know anything about the Pennsylvania law that Mr. Lynch described?

Mr. **Burgdorf**. There are lots of good things about the Pennsylvania law. I am not an expert on it, but let me respond to what I think is the major point of AIA's suggestion about that law. It is the ratio that is established to determine what is a major alteration.

It compares the overall cost of an alteration with the value of the building. We think that is problematic. We think it defeats one of the basic purposes of this bill, which is that over time, as buildings are renovated, they should become accessible.

Let me give you an example: If a building was originally built for $50,000 some years ago, it may today be worth $1 million. The major alteration, major structural alterations language, if it were to adopt the Pennsylvania approach, would have to be $500,000 before it triggered any requirement to make paths of travel accessible in such a building.

The percentage requirement creates a motive for those who are doing alterations to keep it just below that level, so they do a $499,000 alteration, do not make changes in the path of travel, and then the building now is worth $1,499,000.

So, next year, if they do another renovation project, it can cost $700,000 and still not trigger the path of alterations requirement. We don't think that is what they are intending or what the bill is intending. We would rather see it done in terms of what the bill does, to talk about what is major, what is structural. We are not talking about painting a wall.

We are talking about moving a wall. I think the bill and the Senate report language does a nice job of spelling out what is intended. If it does not affect usability, it does not trigger that requirement anyway.

Mr. **Edwards**. Thank you. I think where we are going to have a problem is explaining to members what we mean in the bill by terms such as "readily achievable," "reasonable accommodation," "undue burden," "auxiliary aids," et cetera.

I wonder if you think these terms soften the bill too much, give loopholes?

Mr. **Burgdorf**. That is a good question. One example that I raised before is the readily achievable standard. It requires in existing facilities, already constructed, only easy changes to be made.

Last year's bill would have called for retrofitting of buildings to make them accessible. This would threaten the existence of the business itself. That was a high standard, and the business community objected to that. I think this is a very low cut, a very low, modest standard.

I don't see how anybody could object to doing what is easy to do. I think that is the minimum that a Federal statute trying to require equality of access ought to require.

Mr. **Edwards**. Ms. Holzer, are these terms so loose that only judicial decisions will finally interpret them, or do you think that they are definable accurately enough so that this law can work without unnecessarily litigation?

Ms. **Holzer**. It seems to me from the Senate report there is a tremendous amount of explanation of these terms. I think anyone who is active in the disability community is familiar with some of these terms from past usage and other references.

I am the daughter of a small businessman. I think perhaps that it is a natural reaction to an unknown. If somehow they could educate themselves more on the issues and the particulars, they would not feel so threatened.

I would like to comment on the need for spontaneity in a lifestyle. I think the request to have a person with a disability call ahead for anything is really unreasonable on the part of a provider of services. That really kills any kind of spontaneity that everyone else enjoys.

Mr. **Edwards**. Thank you. That is very helpful.

Professor Burgdorf, some persons with disabilities have expressed a concern that ADA will force them into using separate or different programs that were designed to accommodate disabled persons. Should persons with disabilities be allowed to choose a regular program? What safeguards are there in the bill for that?

Mr. **Burgdorf**. Fortunately, that is one that was thought about not even for the first time in this bill, but under existing section 504 regulations. A provision was specifically incorporated into ADA to address that. Section 302(b)(1)(c) of the bill says that "notwithstanding the existence of separate or different programs or activities provided in accordance with this section, an individual with a disability shall not be denied the opportunity to participate in such programs or activities that are not separate or different."

That is a very important and very clear provision. People, for example, who have a visual impairment do not want to be told they have to go only on the trail for visually impaired people. They would like to go with their friends and go on the same trail that anybody else goes on.

I think this is fairly covered in the legislation.

Mr. **Edwards**. Thank you.

The committee might have more questions to ask you expert witnesses, but we must move along. We thank you very, very much for your testimony today. It has been very useful to us.

The subcommittee is adjourned.

[Whereupon, at 1:40 p.m., the subcommittee adjourned, to reconvene subject to the call of the Chair.]

Miss Chai Feldbloom
Legislative Counsel
American Civil Liberties Union
122 Maryland Avenue, N.E.
Washington, D.C. 20002

Dear Miss Feldbloom:

I want to thank you for your testimony before the Subcommittee on Civil and Constitutional Rights concerning the Americans with Disabilities Act, H.R. 2273. Your knowledge of the bill, as well as your command of the other civil rights laws, is extremely helpful to the Subcommittee.

I do have some additional questions concerning this bill, and would appreciate your help in answering them for me. If you could respond in writing to the attached questions by August 18, 1989, it would be quite useful to me.

Thank you for your help with this valuable legislation.

Sincerely,

F. James Sensenbrenner, Jr.
Member of Congress

CDR:aw

GENERAL

1. **Why does neither the Section 101(b) "Defenses," nor the Section 202(b)(2), "Denial of equal employment opportunities," provision contain an "undue hardship" defense? What defenses are there to these provisions?**

2. How are employee benefits treated under this bill? Would an employer be able to continue insurance coverage with a carrier that excluded preexisting conditions?

3. In the employment context, do you view the ADA as, in effect, simply extending 504 of the Rehabilitation Act to employers not now covered by that provision or are we even broadening coverage for the disabled? If we are broadening the coverage, can you please explain what the specific differences are? If not, why not just extend 504 and add no further language?

4. Is this bill going to mandate quotas for the disabled if they are underrepresented? If not, how will the Title VII regulations, policies and court decisions concerning "effects" be changed to insure this does not occur? If not, would you be willing to put a specific exemption in the bill to prevent quotas from being required?

Doesn't the broad definition of disability in the ADA in effect repeal the provision in Title 18 of the U.S. Code, Section 922(g) prohibiting a person who has been "adjudicated as a mental defective or who has been committed to a mental institution" from receiving or possessing a firearm?

TITLE I

1. Section 101(a)(5) prohibits an employer from "aiding or perpetuating discrimination by providing significant assistance to the agency, organization or individual that discriminates." "What is significant assistance" -- a bank loan? A purchase agreement for goods? International trade contract? (Example: If Boeing holds contracts on all the Japanese airlines, which foreign companies are obviously not in compliance with ADA, would Boeing be open for suit under Section 101(a)(1)(E) by providing significant assistance to an organization that discriminates?)

2. How do you see Title I interacting with Title II and the other Titles? Don't you see some potential for confusion here? Why not put the provisions in the appropriate Title to which they relate, even if some redundancy is necessary?

3. Please explain the purpose and coverage of 101(a)(5) which would prohibit discrimination based on "association". Is this concept in the 504 regulations? If not, please tell me from where it was derived and how would it be applied and interpreted? Is there a body of case law interpreting such a concept? If so, please give citations to appropriate cases.

4. What exactly is the purpose of Section 101(b)(2)(A) and (B)? How would this wording affect the current definition of "handicapped" in the Fair Housing Act amendments?

5. Under 101(b)(2)(A), who defines "alcoholic" or "drug abuser"? By the way that is worded, it appears that it is o.k. for an individual to use drugs as long as they do not pose a direct threat to property or safety of others? If that is the case, wouldn't you say that totally contradicts the drug free workplace concept?

6. Again, with respect to the drug abuser exemption, what relationship will this section have with the current drug testing programs that are being instituted in many of the agencies. For instance, if an individual came back with a negative drug test or a drug test that indicated he had been using drugs, is there any way

11. Section 101(b)(1) "Defenses" is almost the most complicated sentence in the bill. Can you please break that sentence down and explain what it means?

12. In Section 101(a)(1)(B) what does the term "equal" mean when used in that context? Who determines what is "equal?" Again, under Section 101(a)(1)(C), who determines what is "less effective" than that provided to others? Who makes that determination? Is there some sort of notice requirement to employers or to public accommodations that what the disabled is receiving is "less effective" before an owner can be sued for punitive damages?

13. What would you say to the private doctor who desires not to hire as a nurse an individual who tests positive for HIV AIDS virus? Must that doctor hire him or be in violation of ADA? If that is true, what assistance is provided for the loss of business which might then occur to the doctor?

14. Similarly, what if a child care center does not want to take a child who tests positive for AIDS virus. Must that child be accepted? If so, what compensation could be given to the business which finds itself bankrupt because of raised insurance rates?

that person could be fired from his position if he did not, at that point, pose a "direct threat" to property or the safety of others in the workplace?

7. In your opinion, doesn't this legislation require employers to make difficult, if not impossible, determinations regarding the immediate dangers posed by an individual's drug use, in the face of overwhelming evidence that drug use in the workplace is inherently dangerous?

8. Under Section 202(b)(3), the ADA places restrictions on tests that "tend to identify" qualified individuals with disabilities. Doesn't this language, taken together with the language in Section 101(b), restrict the practice of many employers to use drug screening of employees or prospective employees? An individual screened out by such testing could challenge the exclusion unless the employer could prove that the exclusion is necessary and substantially related the ability of an individual to perform the essential functions of a particular job.

9. I am concerned by the ability of government to end the demand for illegal drugs in the workplace, in schools, in public housing, and elsewhere. Doesn't existing law -- i.e., the Rehabilitation Act of 1973, under Section 504, which outlaws discrimination by federal grantees against "handicapped individuals" -- pose a problem because the law has been interpreted to include drug and alcohol abusers among the "handicapped," so that it impairs the ability of local school boards who try to expel drug-abusing students or public housing authorities who try to evict tenants who are drug offenders? Wouldn't the language of the ADA make the problem even worse?

10. In Title I(a)(2) the bill states that "for purposes of this act, aides, benefits, and services to be equally effective, must afford an individual with a disability an equal opportunity to obtain the same result, to gain the same benefit, or to reach the same level of achievement, in the most integrated setting appropriate to the individuals needs." Who decides what is "appropriate to the individuals needs?" Who has the burden of proof in this regard? How are the needs determined?

15. What about a person with a history of mental disease, including violence and child abuse, yet the person's doctor certifies him as healed and he is otherwise extremely well-qualified for the job. Can a child care center, nevertheless, refuse to take him on that basis alone? For that matter, would it even be appropriate under ADA to ask on an application form whether the person had a past history of mental disease or would that run afoul of Section 202 (b)(3)?

TITLE II

1. Section 205 provides for a private right of action for "any individual who believes that he or she is being or is about to be subjected to discrimination on the basis of disability ... (emphasis supplied)." This provision for anticipatory suits is unprecedented with respect to employment matters. Won't this result in clogging the federal courts with vague claims of anticipated discrimination? What effect will this have on the case backlog? Why include this in the employment Title?

2. Can you articulate definite guidelines for the concepts of "reasonable accommodation" and "undue hardship"? You state in your testimony that those terms have been used before and that criteria is listed under

§84.12 regulations. Please specify which leading cases (with citations) have defined these terms, including the "cost" or "nature" of accommodation required. Has the 'safety of others' been considered under the umbrella of "undue hardship"?

a) If an individual has a typing business in her home, must that person include, at a minimum, a ramp and large bathrooms to accommodate wheelchairs, if any other repair work is being contemplated on the house? If not, where is the exemption?

TITLE IV

1. Example: I am an owner of a restaurant in Wisconsin and I want to be in compliance with ADA now that it is law. Please tell me what I need to do to put myself in compliance with the law?

(a) Will I have to build ramps?

(b) What if I had intended to put a new balcony eating area on second floor next year? Under Section 402(b)(5) do I have to enlarge all my bathrooms at the same time and put in an elevator?

(c) Do I have to have my menus in braille?

(d) Do I have to have room for wheelchairs at all locations in my restaurant?

2. What is your understanding of the intent and effect of the inclusion of the phrase "potential places of employment" in Title IV of the ADA? Why is it needed, given the scope and construction of the employment Title in the ADA?

   (a) With that in mind, what about the woman who has a typing business in her home? This appears to be a "personal business" under the 402(2)(B) definition of establishment and is also a "potential place of employment whose operations affect commerce." Without a small business exception, couldn't that person be liable for punitive damages if a disabled person were not able to utilize those services?

   (b) If your answer suggests that it would probably fall within the "undue hardship", provision, how would that person prove undue hardship?" Costs spent? Is there case law? If so, please cite specific case examples.

   (c) If the "readily achievable" language is cited, how would that person prove "not readily achievable?" Please reference case citations defining this term.

3. Section 402(b) defines, "discrimination against" as "a failure to remove architectural and communication barriers that are structural in nature and existing facilities where such removal is "readily achievable; and (B) where an entity can demonstrate that the removal of a barrier...is not readily achievable, a failure to make such good services, facilities, privileges, advantages and accommodations available through alternative methods, if such methods are readily achievable."

   (a) Could you give examples of what would and would not be required under this section; for example, doctor's office; a video store; a dry cleaners; a church?

   (b) I understand that the term "readily achievable" has been used as synonym for "easily accomplished with little difficulty and at little expense". Is "little difficulty in expense" a relative concept? If so, how are the threshold/cutoff points measured -- in time, in money, disruption of current practice? Please refer to case citations, where applicable.

(c) Are there not grounds for exemptions, especially for small businesses, even if we develop a common understanding of the term?

4. Assuming that a common understanding of the term "readily achievable" is possible and that such an understanding includes relative dimensions, should not the remedies available reflect a distinction for intentional versus unintentional acts of discrimination?

The Honorable F. James Sensenbrenner
2444 Rayburn House Office Building
Washington, D.C. 20515

Dear Congressman Sensenbrenner:

As you requested, I am responding to the questions that you raised in your letter regarding H.R. 2273, the "Americans with Disabilities Act of 1989" (ADA). I will answer the questions by reference to the House bill, H.R. 2273. However, in cases in which the compromise ADA bill, which was passed by the Senate on September 7th and which reflects compromises requested by the Bush Administration and the business community, directly addresses and resolves a concern that you raise, I note that fact in my response. I hope you will find that all of your concerns have been adequately met.

GENERAL

Q #1. Why does neither the Section 101(b) "Defenses" nor the Section 202(b)(2), "Denial of equal employment opportunities," provision contain an "undue hardship" defense? What defenses are there to these provisions?

A. The defense that a reasonable accommodations is not required if it would impose an undue hardship is applicable in both provisions to which you refer. Under the substantive provisions of the bill, an employer does not have to provide a reasonable accommodation if "such entity can demonstrate that the accommodation would impose an undue hardship on the operation of its business." See Sec. 202(b)(1). This substantive requirement of "undue hardship" applies in every situation in which the provision of a reasonable accommodation by the employer is at issue. Thus, for example, when the defenses section refers to "applicable reasonable accommodation," the accommodation being referred to is one which would not create an undue hardship. (That is, the "applicable" reasonable accommodation is the accommodation which appears in the substantive section of the bill, section 202(b)(2), in which the requirement of undue hardship is clearly incorporated.)

BEST COPY AVAILABLE

The same is true for the other provision to which you refer, section 202(b)(2). That provision directly tracks a section 504 regulation, 42 C.F.R. 84.12(d), which states: "A recipient may not deny any employment opportunity to a qualified handicapped employee or applicant if the basis for the denial is the need to make reasonable accommodation to the physical or mental limitations of the employee or applicant." As in the ADA, the section 504 regulation does not state "which does not impose an undue hardship" after the term "reasonable accommodation," because that is understood from the rest of the regulation, which clearly states that an accommodation need not be provided if it would impose an undue hardship. See 42 CFR 84.12(a). The point of this provision, in both the ADA and section 504, is that an employer may not deny an employment opportunity to an individual because of that individual's need for a reasonable accommodation, if that accommodation could be provided without an undue hardship.

Q #2. How are employee benefits treated under this bill? Would an employer be able to continue insurance coverage with a carrier that excluded preexisting conditions?

A. The Senate compromise ADA bill (henceforth "compromise bill") directly addressed this issue. It was never the intent of the ADA to prohibit traditional insurance underwriting policies, such as the inclusion of pre-existing condition clauses in health insurance policies. In order to make that clear, however, the compromise bill includes a new section on insurance which explicitly states that nothing in the ADA is to be construed to prohibit or restrict insurance companies or employers from sponsoring, establishing, observing or administering benefit plans that are based on underwriting risks or classifying risks. See S. 933, sec. 501(c). This would include allowing employers to contract for benefit plans that incorporate preexisting condition exclusions.

Q #3. In the employment context, do you view the ADA as, in effect, simply extending 504 of the Rehabilitation Act to employers not now covered by that provision or are we even broadening coverage for the disabled? If we are broadening coverage, can you please explain what the specific differences are? If not, why not just extend 504 and add no further language?

A. You are correct in stating that, in the employment section, the ADA basically extends the provisions of section 504 of the Rehabilitation Act to private entities. However, a thoughtful and deliberate decision was made on the part of the drafters of this legislation not to simply add "and private entities" to the approximately 50 words which currently make up section 504. Section 504 is a very brief provision, which has been explicated by regulations and caselaw over the past years. The sponsors of the ADA wished to draw upon those regulations and caselaw to create a clear and comprehensive statute that would set forth all of the relevant non-discrimination provisions in one place. The intent is still to track section 504 -- but, at the same time, to create a statute that can stand on its own and not be dependent on incorporation by reference to regulations issued under section 504.

Q #4. Is this bill going to mandate quotas for the disabled if they are underrepresented? If not, how will the Title VII regulations, policies and court decisions concerning "effects" be changed to insure this does not occur? If not, would you be willing to put a specific exemption in the bill to prevent quotas from being required?

A. The ADA specifically does not mandate quotas for people with disabilities. Section 503 of the Rehabilitation Act, which governs federal contractors, does require that contractors engage in "affirmative action" for people with disabilities. By contrast, both section 504, and the ADA, do not include such a requirement. Thus, even if affirmative action under section 503 could be understood to include the concept of quotas (it has not, in the past), that requirement does not appear in the ADA. The Title VII concept of discriminatory "effects," which has its parallel in ADA, is a separate legal issue from that of quotas. The ADA's "effects" provision, which directly tracks the provision under section 504, prohibits standards, criteria, or methods of administration that have the effect of discrimination on the basis of disability. This provision does not, in any way, mandate quotas, even if people with disabilities may be underrepresented in a particular employment setting.

Q. #5. Doesn't the broad definition of disability in the ADA in effect repeal the provision in Title 18 of the U.S. Code, Section 922(g) prohibiting a person who has been "adjudicated as a mental defective" from receiving or possessing a firearm?

A. No. The public accommodations title of the ADA provides that a covered entity may apply eligibility criteria that screen out people with disabilities if such criteria are necessary to the provision of the goods or services. It would be a valid eligibility criterion for purchase of a firearm that an individual not be "mentally defective" and unable to understand the consequences of owning a firearm. In addition, it is worth noting that, under the firearms law, anyone who has been denied a firearm because they are in a category that prohibits that person from owning a firearm (e.g., a person who has been adjudicated as "mentally defective"), may apply to the Secretary of the Treasury for a waiver, which may be granted if the person can prove that he or she is no longer dangerous and that granting the waiver is in the public interest. This too is consistent with the ADA.

TITLE I

Q. #1. Section 101(a)(5) prohibits an employer from "aiding or perpetuating discrimination by providing significant assistance to the agency, organization or individual that discriminates." "What is significant assistance" -- a bank loan? A purchase agreement for goods? International trade contract? (Example: If Boeing holds contracts on all the Japanese airlines, which foreign companies are obviously not in compliance with ADA, would Boeing be open for suit under Section 101(a)(1)(E) by providing significant assistance to an organization that discriminates?)

A. In H.R. 2273, section 101(a)(1)(E) provided that it was discriminatory for entities to aid or perpetuate discrimination "by providing significant assistance to an agency, organization or individual that discriminates." That provision was based on section 504 regulations, 42 C.F.R. §84.4, which provided that a recipient under section 504 could not "aid or perpetuate discrimination against a qualified handicapped person by providing significant assistance to an agency, organization or person that discriminates on the basis of handicap in providing any aid, benefit or service to beneficiaries of the recipient's program." That provision had worked without difficulty under section 504.

During negotiations with the Administration and the business community, however, concerns were raised that it might be more difficult to apply this provision with regard to private entities which engage in all forms of assistance. In addition, it was noted that, unlike section 504, the ADA would itself cover most entities directly, without any "assistance provision." In the compromise bill, therefore, the assistance provision was dropped and the bill includes the clearer provision that covered entities may not utilize methods of administration that "perpetuate the discrimination of others who are subject to common administrative control." See S. 933, section 102(b)(3)(B).

Q. #2. How do you see Title I interacting with Title II and the other Titles? Don't you see some potential for confusion here? Why not put the provisions in the appropriate Title to which they relate, even if some redundancy is necessary?

A. H.R. 2273 was based on the format used in the section 504 regulations issued by the Department of Health and Human Services. In those regulations, there was an opening, general section that set forth the forms of discrimination prohibited (42 C.F.R. §84.4), which was followed by specific sections dealing with employment, social services, and education (42 C.F.R. Subparts B-D). H.R. 2273, with its overall title I and its specific titles following, was based directly on that format.

There was never any intention, however, to create conflicting or confusing requirements. Indeed, no conflicts or confusion had ever arisen under the section 504 regulations. In light of the concern raised by the business community, however, the approach you suggest was, in fact, adopted in the compromise bill. Title I was dropped completely from that bill and the relevant provisions of that title were incorporated into the other titles. Although, as you point out, that does create a certain amount of redundancy in the legislation, we felt that is was more than offset by the greater confidence covered entities would feel in the clarity of the legislation.

Q. #3. Please explain the purpose and coverage of 101(a)(5) which would prohibit discrimination based on "association." Is this concept in the 504 regulations? If not, please tell me from where it was derived and how it would be applied and interpreted? Is there a body of case law interpreting such a concept. If so, please give citations to appropriate cases.

A. The prohibition against discrimination against those who associate with people with disabilities is based on an identical provision included in H.R.1158, the Fair Housing Amendments Act of 1988 (currently codified at 42 U.S.C. secs. 3601-3619). The Fair Housing Act, as amended, makes it illegal to:

"discriminate in the sale or rental of a dwelling, or to otherwise make unavailable or deny, a dwelling to any buyer or renter because of a handicap of--

(A) that buyer or renter;

(B) a person residing in, or intending to reside in that dwelling after it is so sold, rented, or made available; or

(C) any person associated with the buyer or renter." (emphasis added)

Sec. 804(f)(1), as amended.

Although the disability provisions in the Fair Housing Amendments Act were essentially patterned after Section 504, this new provision was specifically added to address the fact that discrimination often occurs against non-disabled people because of their association with people with disabilities. The provision was added in the ADA for the same reason. Because of concerns raised by the business community, however, two changes were made in the ADA provision which do not appear in the Fair Housing Act provision. Based on business requests, the ADA provision now provides that discrimination includes --"excluding or otherwise denying equal jobs or benefits to a qualified individual because of the known disability of an individual with whom the qualified individual is known to have a relationship or association." (The underlined words are new.) Business owners were concerned that lawsuits could be filed by individuals whom they never even knew had associations with people with disabilities. The additional statutory words make it clear that this provision extends only to situations in which the covered entity knows that the non-disabled person has an association with a person with a known disability, and in which discrimination has occurred on that basis.

Q. #4. What exactly is the purpose of Section 101(b)(2)(A) and (B)? How would this wording affect the current definition of "handicapped" in the Fair Housing Act amendments?

A. Section 101(b)(2)(A) of H.R. 2273 provided that a valid qualification standard under the ADA could include requiring that "the current use of alcohol or drugs by an alcoholic or drug abuser not pose a direct threat to the property or safety of others." This provision directly tracks the provision that exists under Section 504 with regard to alcoholics and drug addicts. With regard to current users of illegal drugs, this provision is different from that which appears in the Fair Housing Amendments Act, in which such individuals are excluded from coverage.

We believe that the provision which appears in H.R. 2273 is the appropriate policy approach to drug addicts. It does not require an employer to hire any drug addict unless he or she is completely qualified to do the job, and specifically notes threat to the property or safety of others as one, although certainly not the exclusive, example of a qualification standard that such individuals may perhaps not meet.

In any event, however, this provision was substantially changed in the compromise bill. The bill that was brought up on the Senate floor included a list of actions that an employer is allowed to take against employees, including prohibiting use of alcohol and illegal drugs in the workplace and requiring that employees not be under the influence of alcohol or illegal drugs in the workplace. On the Senate floor, three additional amendments regarding current drug addicts were accepted. Two of these amendments explicitly excluded individuals who currently use illegal drugs from coverage under the Act. The third amendment did the same with regard to coverage under Section 504. The compromise bill, therefore, is now consistent with the Fair Housing Amendments Act with regard to exclusion of current users of illegal drugs.

Section 101(b)(2)(B) of H.R. 2273 provides that a qualification standard may include requiring that "an individual with a currently contagious disease or infection not pose a direct threat to the health or safety of other individuals." This provision is identical to one that was included in the Democratic version of the Civil Rights Restoration Act amending section 504, as well as in the Administration version of the Civil Rights Restoration Act which you sponsored. It also appears in the Fair Housing Amendments Act. The provision is designed to address any concerns that covered entities may have regarding individuals with contagious diseases or infections.

Q. #5. Under 101(b)(2)(A), who defines "alcoholic or "drug abuser"? By the way that [it] is worded, it appears that it is o.k. for an individual who uses drugs as long as they do not pose a direct threat to the property or safety of others? If that is the case, wouldn't you say that totally contradicts the drug free workplace concept?

A. Under the ADA, as under Section 504, an individual must have a medical disability in order to be covered. Thus, an individual who simply uses alcohol or drugs, and does not have the medically disabling condition of drug or alcohol abuse, was never covered under either Section 504 or the ADA. As noted in my previous answer, however, under the compromise bill, an individual who either uses or is addicted to illegal drugs is now excluded from coverage under the Act.

Q. #6. Again, with respect to the drug abuser exemption, what relationship will this section have with the current drug testing programs that are being instituted in many of the agencies? For instance, if an individual came back with a negative drug test or a drug test that indicated he had been using drugs, is there any way that person could be fired from his position if he did not, at that point, pose a "direct threat" to property or the safety of others in the workplace?

A. The compromise bill expressly addresses this concern. First, as noted above, the "direct threat" provision has been removed from the compromise bill and, in its place, the bill explicitly excludes people who currently use illegal drugs from coverage. In addition, the bill includes a new section which specifically states that the ADA does not prohibit drug testing of either applicants or employees and does not prohibit making employment decisions on the basis of such test results. See S. 933, sec. 104(c).

Q. #7. In your opinion, doesn't this legislation require employers to make difficult, if not impossible, determinations regarding the immediate dangers posed by an individual's drug use, in the face of overwhelming evidence that drug use in the workplace is inherently dangerous?

A. The compromise bill ensures that employers will never have to make those determinations, because the bill excludes coverage for current illegal drug users. I would like to point out, however, that even under the original H.R.2273, employers were significantly protected by being allowed to fire workers who were unqualified, in any fashion, for the job.

Q. #8. Under Section 202(b)(3), the ADA places restrictions on tests that "tend to identify" qualified individuals with disabilities. Doesn't this language, taken together with the language in Section 101(b), restrict the practice of many employers to use drug screening of employees or prospective employees? An individual screened out by such testing could challenge the exclusion unless the employer could prove that the exclusion is necessary and substantially related the ability of an individual to perform the essential functions of a particular job.

A. In the compromise bill, the phrase "identify ... or tend to identify" has been dropped from section 202(b)(3). In its place, the compromise bill tracks section 504 regulations, 42 C.F.R. §84.14, regarding medical examinations and inquiries. In addition, the compromise bill specifically allows for drug testing of applicants and employees. A new section has been added regarding drug testing, which states that "a test to determine the use of illegal drugs shall not be considered a medical examination," and which further provides that nothing in the bill shall be construed to "prohibit ... the conducting of drug testing of job applicants or employees or making employment decisions based on such test results." S. 933, sec. 104(c).

Q. #9. I am concerned about the ability of the government to end the demand for illegal drugs in the workplace, in schools, in public housing, and elsewhere. Doesn't existing law--i.e., the Rehabilitation Act of 1973, under Section 504, which outlaws discrimination by federal grantees against "handicapped individuals" -- pose a problem because the law has been interpreted to include drug and alcohol abusers among the "handicapped," so that it impairs the ability of local school boards who try to expel drug-abusing students or public housing authorities who try to evict tenants who are drug offenders? Wouldn't the language of the ADA make the problem even worse?

A. The compromise bill addresses this concern. On the Senate floor, an amendment was added which excluded current users of illegal drugs from Section 504 of the Rehabilitation Act of 1973. The concerns you raise are the ones which motivated that amendment. In addition, as noted above, current users of illegal drugs are excluded from coverage under the ADA.

Q. #10. In Title I(a)(2) the bill states that "for purposes of this Act, aides, benefits, and services to be equally effective, must afford an individual with a disability an equal opportunity to obtain the same result, to gain the same benefit, or to reach the same level of achievement, in the most integrated setting appropriate to the individual's needs". Who decides what is "appropriate to the individual's needs?" Who has the burden of proof in this regard? How are the needs determined?

A. In the compromise bill, Title I, including this provision, has been deleted from the bill. This particular provision has not been carried over into the employment section, because there are other provisions which deal more directly with the requirements of non-discrimination and reasonable accommodation. A version of the provision appears in the public accommodations section, which provides that: "Goods, facilities, privileges, advantages, accommodations and services shall be afforded to an individual with a disability in the most integrated setting appropriate to the needs of the individual." This requirement is straightforward. When a covered entity provides services and goods to the public, including people with disabilities, that entity may not provide the goods and services in a separate or different manner for people with disabilities. See S. 933, sec. 302(b)(1)(A)(iii). At times, however, because of the particular disability of the individual, a modification of the provision may be required. In those circumstances, the entity must provide the services or goods "in the most integrated setting" appropriate to the individual. In other words, to the extent that the goods or services can be provided in a more integrated setting with non-disabled individuals, that effort should be made. In addition, the policy behind this provision is that every effort should be made initially to provide goods and services to people with disabilities in the same setting in which non-disabled individuals receive their goods and services.

Q. #11. Section 101(b)(1) "Defenses" is almost the most complicated sentence in the bill. Can you please break that sentence down and explain what it means?

A. You are certainly correct regarding the length of this sentence. The point, however, was to codify in law the "otherwise qualified" requirement that had been developed under section 504. In the compromise bill, the provision has been modified and shortened. It now reads as follows:

> "It may be a defense to a charge of discrimination under this Act that an alleged application of qualification standards, tests, or selection criteria that screen out or tend to screen out or otherwise deny a job or benefit to an individual with a disability, has been shown to be job-related and consistent with business necessity, and such performance cannot be accomplished by reasonable accommodation." S. 933, sec. 103(a).

As I noted, the point was to codify the "otherwise qualified" requirement of Section 504, in order to assure businesses that they are not required to hire unqualified individuals with disabilities. The provision states, therefore, that a covered entity may have a qualification standard or a criterion that actually denies a job or benefit to an individual with a disability, or that simply tends to screen out such individuals, if the standard or criteria is "job-related and consistent with business necessity," and the performance of the individual on the job cannot be otherwise accomplished through some reasonable accommodation. The standard and terms in this provision come directly from the regulations under sections 503 and 504 and are intended to codify that approach.

Q. #12. In Section 101(a)(1)(B) what does the term "equal" mean when used in that context? Who determines what is "equal?" Again, under Section 101(a)(1)(C), who determines what is "less effective" than that provided to others? Who makes that determination? Is there some sort of notice requirement to employers or to public accommodations that what the disabled is receiving is "less effective" before an owner can be sued for punitive damages?

A. In the compromise bill, Title I, including the provisions you refer to, have been dropped. They have not been included in the employment title, because there are other provisions in that title which deal more directly with the requirements of non-discrimination. One of the provisions has been carried over, in a modified form, to the public accommodations title. S. 933, sec. 302(b)(1)(A)ii) provides that:

> "It shall be discriminatory to afford an individual or class of individuals, on the basis of a disability or disabilities of such individual or class, directly, or through contractual, licensing or other arrangements with the opportunity to participate in or benefit from a good, service, facility, privilege, advantage or accommodation that is not equal to that afforded to other individuals."

This is a basic provision in the sphere of public accommodations. It simply means that people with disabilities have to be offered goods and services that are equal to those offered to people without disabilities. For example, a restaurant owner could not decide to seat people with disabilities only in the less expensive or less attractive sections of the restaurant because he or she did not want people with disabilities seen by the better-paying customers.

Q. #13. What would you say to the private doctor who desires not to hire as a nurse an individual who tests positive for HIV AIDS virus? Must that doctor hire him or be in violation of ADA? If that is true, what assistance is provided for the loss of business which might then occur to the doctor?

A. The ADA is patterned directly after Section 504 with regard to coverage of individuals with contagious diseases, including coverage of people with AIDS and HIV infection. Under Section 504, and under the ADA, a person must be qualified for a particular employment position. For a person with a contagious disease or infection, this means that the person cannot pose a significant risk of transmitting the infection to others in the workplace. This was the requirement enunciated by the Supreme Court in School Board of Nassau County v. Arline, 480 U.S. 273 (1987), and established clearly both in an amendment to Section 504 and in an explicit provision of the ADA.

In the context of your example, therefore, the question would be whether the nurse with HIV infection was otherwise qualified to do the functions required of the job. If the individual was not qualified--that is, if there was a significant risk of the nurse transmitting the infection to others while performing the job--the doctor would not be in violation of the ADA by refusing to hire the person. Conversely, if the person was qualified, the doctor could not use the person's HIV infection as a reason for not hiring the person. The determination as to whether the person was qualified would be based on the particular functions of the job expected of the individual and an assessment as to whether there was a significant risk of transmission in having the person perform those functions. This is the same analysis that applies to all other disabilities under the Act.

With regard to possible loss of business, the ADA draws the proper line. If the applicant is not qualified--that is, if there are objective, rational reasons for rejecting the individual--the law allows the applicant to be rejected. By contrast, if the applicant is qualified and the only reasons for an adverse decision are fears and stereotypes, the law does not allow the applicant to be rejected. Fears and stereotypes on the part of others is precisely one type of discrimination that the law is designed to forbid. Indeed, the law in this area has long been settled in the sphere of race and sex discrimination. Courts have held that the prejudices of the public may not be allowed to define the acceptable limits of non-discrimination. See. e.g., Diaz v. Pan American World Airways, 442 F.2d 385 (5th Cir.), cert. denied, 404 U.S. 950 (1971) (fact that customers prefer women stewardesses cannot justify sex discrimination despite possible financial consequences). Any other approach would undermine the basic, underlining premise of anti-discrimination protection. Moreover, one should note that because a comprehensive anti-discrimination law covers all businesses, no one business can gain a competitive advantage by not hiring blacks, women, or people with certain disabilities.

Q. #14. Similarly, what if a child care center does not want to take a child who test positive for AIDS virus. Must that child be accepted? If so, what compensation could be given to the business which finds itself bankrupt because of raised insurance rates?

A. The same analysis described above applies in this case. A child with a contagious disease who posed a significant risk of transmitting the disease to others could be excluded under the standards of the child care center. Under current medical evidence, there is no reason to assume that a child who is HIV-infected would pose such a risk in a child care setting. All of the major medical, social service and child care organizations, including the American Medical Association, the American Nurses' Association, the American Association of Pediatrics and the Child Welfare League, agree that children with HIV infection can be safely cared for in child care settings. Thus, if a child meets the eligibility criteria of the center--e.g., payment of funds, age requirements, and not posing a significant risk to others--it would not be permissible to deny entry because the child is HIV-infected. Moreover, there is no basis for believing that a business who accepts HIV-infected children will go "bankrupt" because of raised insurance rates. There is no evidence that insurance companies have raised liability insurance to child care centers because some children attending the center are HIV-infected.

Q. 15. What about a person with a history of mental disease, including violence and child abuse, yet the person's doctor certifies him as healed and he is otherwise extremely well-qualified for the job. Can a child care center, nevertheless, refuse to take him on that basis alone? For that matter, would it even be appropriate under ADA to ask on an application form whether the person had a past history of mental disease or would that run afoul of Section 202 (b)(3)?

A. Under the compromise bill, as it passed the Senate, individuals who are pedophiliacs or who have sexual behavior disorders are excluded from coverage under the Act. Thus, such individuals could be denied employment on that basis and employers could ask, at any point, whether they have such disorders. In addition, it would be a legitimate job-related inquiry to ask an applicant for a child care job whether the person has a history of child abuse.

TITLE II

Q. #1. Section 205 provides for a private right of action for "any individual who believes that he or she is being or is about to be subjected to discrimination on the basis of disability... (emphasis supplied)." This provision for anticipatory suits is unprecedented with respect to employment matters. Won't this result in clogging the federal courts with vague claims of anticipated discrimination? What effect will this have on the case backlog? Why include this in the employment Title?

A. I believe there was often significant misunderstanding regarding the "about to be discriminated against" provision of the ADA. This provision was never intended to allow plaintiffs to present completely speculative complaints for which there was no basis. To the contrary, this provision was derived from case law under Title VII, which incorporates the basic concept of anticipatory discrimination and which establishes specific, strict standards that plaintiffs must meet to prove such discrimination.

In any event, in order to address this misunderstanding, the compromise bill deleted the term "about to be discriminated against" in the employment section. The accompanying Senate Committee Report explained that, because the case law under Title VII already provided protection against the type of discrimination with which the ADA was concerned (without including any specific statutory provision to that effect), there was no need to include such a specific provision in the employment section. See Senate Committee Report, 101-116, at p. 43.

Q. #2. Can you articulate definite guidelines for the concepts of "reasonable accommodation" and "undue hardship"? You state in your testimony that those terms have been used before and that criteria is listed under §84.12 regulations. Please specify which leading cases (with citations) have defined these terms, including the "cost" or "nature" of accommodation required. Has the 'safety of others' been considered under the umbrella of "undue hardship"?

A. As you note, the terms "reasonable accommodation" and "undue hardship" appear in the section 504 regulations, 42 C.F.R. §84.12. They have been applied in numerous cases brought under section 504 since its passage. Some of the leading cases are:

* Strathie v. Department of Transportation, 716 F.2d 227 (3rd Cir. 1983) (Plaintiff, who was hearing impaired and wore a hearing aid, challenged regulations denying licenses to school bus drivers who wore hearing aids. The court analyzed reasonable accommodation requirements at length, held that there were sufficient facts to conclude that drivers with hearing aids might be reasonably accommodated and remanded for that determination.)

* Nelson v. Thornburgh, 567 F.Supp. 369 (E.D.Pa. 1983) (Blind income maintenance workers for the Pennsylvania Department of Public Welfare sought reasonable accommodations. The court analyzed at length the type and nature of accommodations sought, the nature of the business and the nature of the jobs and determined that certain accommodations would be required.)

* Prewitt v. United States Postal Service, 662 F.2d 292 (5th Cir. 1981) (Plaintiff was a disabled Vietnam veteran with limited mobility in his left arm and shoulder who was denied a job as a

distribution clerk for the Postal Service. The court held that some reasonable accommodation, such as lowering a shelf, might be required of the defendant. The court used the EEOC regulations implementing section 501.)

In the compromise bill, the applicable section 504 regulation, 42 C.F.R. §84.12 has been incorporated almost in full in the statute, to ensure that the factors that have been used in these, and other, section 504 cases continue to apply. Under this standard, as both the regulations and case law make clear, a reasonable accommodation is an action or modification that enables the disabled person to perform the essential functions of the job. If an accommodation would not achieve this desired effect (that is, the person could still not do the job), it is not reasonable to require the accommodation. In addition, the accommodation may not place an undue hardship on the operation of the employer's business. In other words, it may not constitute a significant expense for the employer or require significant difficulty for implementation--an analysis which takes into account the size and nature of the business. Consideration for the safety of others has been explicitly included in the determination of "otherwise qualified" in section 504 cases. Indeed, the most recent Supreme Court case on section 504, School Board of Nassau County v. Arline, 480 U.S. 273 (1987) held that a person with a contagious disease would not be otherwise qualified if the person posed a significant risk to the safety of others, that is, by transmitting the disease to others in the workplace.

Q. #2a) If an individual has a typing business in her home, must that person include, at a minimum, a ramp and large bathrooms to accommodate wheelchairs, if any other repair work is being contemplated on the house? If not, where is the exemption?

A. If the individual employed more than 15 employees in her business at her home (that is, if she were basically operating a substantial business out of her home), she would be covered under the employment title of the bill. The only physical changes she would then have to make are those that would be considered "reasonable accommodations" for an employee who used a wheelchair. If it were a small business (e.g., 16 employees), it is doubtful that she would be required to expend large amounts of money on renovations, because that would be considered an undue hardship.

It seems to me, however, that you are actually talking about a person who simply runs a typing business, by herself, out of her home. That person is exempted from the employment title because she has fewer than 15 employees. In addition, with regard to public accommodations, the compromise bill clarifies that "potential places of employment" do not include facilities that are covered, or expressly exempted from coverage, under the Fair Housing Act. A residential home would fall into that category.

TITLE IV

Q. #1. Example: I am an owner of a restaurant in Wisconsin and I want to be in compliance with ADA now that it is law. Please tell me what I need to do to put myself in compliance with the law?

(a) Will I have to build ramps?

A. You will not have to build a ramp unless doing so would be "readily achievable"--that is, able to be carried out without much difficulty or expense. In practical terms, that means that if there were one step into the restaurant that could be easily ramped without much expense or difficultly, that would be required.

(b) What if I had intended to put a new balcony eating area on second floor next year? Under Section 402(b)(5) do I have to enlarge all my bathrooms at the same time and put in an elevator?

Under the compromise bill, the path of travel to a renovated portion of the facility, and the bathrooms serving that portion, need to be made accessible only if the entity is engaging in "major structural alterations." The statute specifically provides that what is to be considered a "major structural alteration" will be defined by criteria established by the Attorney General. S. 933, sec. 302(b)(2)(A)(vi). The Senate Committee Report notes that the term "structural" means "elements that are a permanent or fixed part of the building, such as walls, suspended ceilings, floors or doorways." Committee Report, p. 67. It is likely that renovating a balcony eating area would be considered structural. As noted, however, the Attorney General will have statutory responsibility for establishing the criteria for determining what are structural alterations. With regard to the elevator, the compromise bill includes an explicit provision which exempts entities from putting in elevators during major renovations in buildings less than three stories. An elevator, therefore, would not be required in this example, regardless of the nature of the alterations.

(c) Do I have to have my menus in braille?

No. The Senate Committee Report used this as a specific example, noting that a restaurant would not be required to have its menus in braille if it provided a waiter or other person who was willing to read the menu.

(d) Do I have to have room for wheelchairs at all locations in my restaurant?

According to individuals who have first-hand experience with maneuvering in restaurants, this is not really an issue. Access to restaurants is an issue with regard to entry, restrooms and getting to each level where there is seating, or where there may be a bar or a dance floor. Once a wheelchair user is on an appropriate level, however, seating is accessible without any special consideration being given to access. The owner need do nothing special to the seating to ensure satisfactory access to tables.

2. What is your understanding of the intent and effect of the inclusion of the phrase "potential places of employment" in Title IV of the ADA? Why is it needed, given the scope and construction of the employment Title in the ADA?

   (a) With that in mind, what about the woman who has a typing business in her home? This appears to be a "personal business" under the 402(2)(B) definition of establishment and is also a "potential place of employment whose operations affect commerce." Without a small business exception, couldn't that person be liable for punitive damages if a disabled person were not able to utilize those service?

   (b) If your answer suggests that it would probably fall within the "undue hardship", provision, how would that person prove undue hardship?" Costs spent? Is there case law? If so, please cite specific case examples.

   (c) If the "readily achievable" language is cited, how would that person prove "not readily achievable?" Please reference case citations defining this term.

A. The term "potential places of employment" in the public accommodations title of the ADA was never intended to cover employment actions of businesses. Those actions were covered under the employment title of the bill, in which there is an exemption for employers with less than fifteen employees.

"Potential places of employment" was designed to cover new construction requirements, in situations in which there were not yet identified tenants in a building that was being constructed, but which was understood to be designed for commercial (i.e., employment) and not residential use. In order to avoid any misunderstandings, the compromise bill now makes this clear. The definition of "public accommodations" no longer includes the term "potential places of employment." That term appears only in the section regarding new construction, and explicitly defines such places as those that are not covered or exempted under the Fair Housing Amendments Act (i.e., residential buildings.)

To answer your specific question, therefore, a woman who has a personal typing business, in a home which is already built, would not be covered as a "place of potential employment" under the public accommodations title. As noted above, she would also be exempted under the employment title because she has fewer than fifteen employees.

Q. #3. Section 402(b) defines, "discrimination against" as "a failure to remove architectural and communication barriers that are structural in nature and existing facilities where such removal is "readily achievable; and (B) where an entity can demonstrate that the removal of a barrier...is not readily achievable, a failure to make such good services, facilities, privileges, advantages and accommodations available through alternative methods, if such methods are readily achievable."

(a) Could you give examples of what would and would not be required under this section; for example, doctor's office; a video store; a dry cleaners; a church?

A. As an initial matter, under the compromise bill, churches have been exempted completely from the public accommodations title of the ADA.

For the entities that are covered, "readily achievable" means that such entities must remove small architectural barriers that are inexpensive and not difficult to remove. This would include, for example, placing a small ramp over one or two steps or adding grab bars to a restroom stall. If the barrier removal is not readily achievable (for example, there are numerous steps going into a store at a steep incline or the store is on the second floor), the "alternative methods" requirement means that measures must be taken to offer the services of the entity--to the extent those measures can be taken simply. For example, if there are five steps into the dry cleaners store, and therefore building a ramp is not readily achievable, the "alternative methods" provision would require that the staff take a wheelchair user's clothes from the person at the foot of the stairs and bring them out for pick-up, if called beforehand. In the same manner, the staff of a video store would be required to bring a specific requested video tape to the bottom step and collect it there when it is returned.

(b) I understand that the term "readily achievable" has been used as synonym for "easily accomplished with little difficulty and at little expense". Is "little difficulty in expense" a relative concept? If so, how are the threshold/cutoff points measured -- in time, in money, disruption of current practice? Please refer to case citations, where applicable.

A. The term "able to be carried out without much difficulty or expense," is, in fact, under the compromise bill, the statutory definition of "readily achievable." The term is relative in the sense that the size and nature of the business, and the cost of the removal or action, is taken into account in determining whether an action is readily achievable. This is essentially a form of a "small business exemption, " by allowing the size of the business to be taken into account, even in the "readily achievable" analysis. There are no case citations that one can give in this area. Because of negotiations and compromises that were made even before the ADA was introduced, the term "readily achievable" was adopted as a new term, not found in Section 504, designed to denote a standard which is lower than any existing section 504 standard. Because it is a new term, designed to establish a more flexible standard, there are no cases interpreting the term. While we would be happy to adopt the established section 504 standard of "undue burden" for the removal of barriers in existing facilities, for which there are various cases citations, I doubt the business community would be pleased with this higher standard.

(c) Are there not grounds for exemption, especially for small businesses, even if we develop a common understanding of the term?

A. As you can see from the previous discussion, there is already a type of exemption already built in for small businesses. No small business will have to make any changes that cannot be accomplished easily and without much difficulty or expense -- in an analysis that takes into account the size of the business. Similarly, the "undue burden" standard takes into account the size of the business. Finally, in the area of new construction and renovations, an part of the compromise with the Administration, the concerns of small businesses were taken into account by providing an exemption for installing elevators in facilities that are less than three stories high or have less than 3,000 square feet per story. See S.933, sec. 302(b)(2)(A), 302(b)(2)(A)(vi) and 303(b).

4. Assuming that a common understanding of the term "readily achievable" is possible and that such an understanding includes relative dimensions, should not the remedies available reflect a distinction for intentional versus unintentional acts of discrimination?

A. It is not necessary that there be a distinction between "intentional" versus "unintentional" discrimination. As an initial matter, section 504 never drew such a distinction between "intentional and unintentional discrimination." Indeed, one of the Supreme Court cases dealing with Section 504 (Alexander v. Choate, 469 U.S. 287 (1985)) expressly noted that discrimination against people with disabilities often did not derive from a "wilful" or "malicious" desire to discriminate, but rather was derived from "thoughtlessness" and "benign neglect." The Court noted that, in order to ensure that the protections of Section 504 did not "ring hollow," Congress intended to cover more than just intentional discrimination. Limiting the ADA to cases in which there is "intentional" discrimination, or a "wilful failure" to act would remove basic substantive protections that have long been in place under Section 504.

In addition, the compromise bill has removed any possible concern regarding remedies. The major compromise sought and achieved by the Bush Administration before it lent its support to the ADA was a change in the available remedies. Under that compromise, the right of individual plaintiffs to bring damage actions against covered entities was removed from the bill. In its place, authority is given to the Attorney General to bring suits where there is a pattern or practice of discrimination. In those cases, limited damages are available: a court may assess defined civil penalties of up to $50,000 for the first violation and up to $100,00 for subsequent violations, if the court concludes that it would "vindicate the public interest." In addition, *if* the Attorney General requests it, monetary damages may be given to the aggrieved person. See S. 933, sec. 308. If lyou would like to recommend that compensatory and punitive damages be reinserted in the ADA for individual plaintiffs in cases of intentional discrimination, we would be open to that suggestion.

I hope these answers are useful to you as you continue your consideration of the Americans with Disabilities Act. I apologize sincerely for my delay in transmitting these answers to you. Please do not hesitate to let me know if I can be of further assistance.

I look forward to your support and leadership in making this historic piece of legislation a reality for all individuals in this country.

Sincerely,

Chai R. Feldblum

SUBCOMMITTEE ON CIVIL AND CONSTITUTIONAL RIGHTS

TESTIMONY OF JAMES W. ELLIS
PRESIDENT, AMERICAN ASSOCIATION ON MENTAL RETARDATION

PROFESSOR OF LAW, UNIVERSITY OF NEW MEXICO
VISITING PROFESSOR, AMERICAN UNIVERSITY

AMERICANS WITH DISABILITIES ACT

Mr. Chairman and members of the subcommittee: I appreciate the opportunity to present testimony on behalf of the American Association on Mental Retardation on the important subject of preventing discrimination against citizens on the basis of disability.

My name is James W. Ellis, and I am the President of the American Association on Mental Retardation (AAMR). I am a Professor of Law at the University of New Mexico, where I specialize in constitutional law and legal issues affecting people with mental disabilities. During this academic year, I am a Visiting Professor at the Washington College of Law of the American University here in Washington, D.C. I have had the privilege of representing AAMR and a consortium of disability organizations in the Supreme Court of the United States in City of Cleburne v. Cleburne Living Center, Bowen v. American Hospital Association (the so-called "Baby Doe" case), and, this last Term, Penry v. Lynaugh.

The American Association on Mental Retardation is the nation's oldest and largest interdisciplinary organization of professionals in the field of mental retardation. Founded in 1876, AAMR has long been interested in legal issues involving people with mental retardation. AAMR members are organized in a number of professional divisions, including psychology, education, administration, medicine, nursing, social work, community services, nutrition and dietetics, communication disorders, occupational and physical therapy, religion, vocational rehabilitation, and legal process and advocacy. Our members serve individuals with mental retardation in a variety of residential and nonresidential settings.

The American Association on Mental Retardation strongly supports the passage of the Americans with Disabilities Act. We believe that our nation's civil rights laws must be extended to reach discrimination on the basis of mental or physical disability.

People with disabilities have been subjected to invidious discrimination throughout history. In the case of individuals who have mental retardation, this history of discrimination has been described by five members of the Supreme Court of the United States as "grotesque." City of Cleburne v. Cleburne Living Center, 473 U.S. 432, 454, 461 (1985). This discrimination has been pervasive and has reached almost every aspect of the lives of people with disabilities and has denied them the most basic and fundamental rights of American citizenship.

Because of their disability, people with mental retardation have been denied the right to marry, the right to have children, the right to vote, the right to attend public school, and the right to live in their own community, with their own families and friends. Through the discriminatory withholding of medical care and nutrition and hydration, they have even been deprived of the right to life itself, solely because of their disability.

The rationalizations for discriminating on the basis of disability have been varied. Sometimes it is argued that the discrimination is necessary to "protect" the disabled persons themselves. But more careful scrutiny often reveals that the real purpose is very different. For example, early laws prohibiting people with mental retardation and other disabilities from marrying are sometimes thought to be designed to insure that unscrupulous nondisabled individuals do not take advantage of people with handicaps. But the real purpose in enacting these laws was eugenic -- making it a crime to enter into such a marriage, even for the person with a disability. See Linn & Bowers, The Historical Fallacies Behind Legal Prohibitions of Marriages Involving Mentally Retarded Persons -- The Eternal Child Grows Up, 13 Gonzaga Law Review 625 (1978).

Similarly, eugenic sterilization laws were not an attempt to address the problems of informed consent by persons with mental disabilities, but rather were a part of a larger scheme to remove people with handicaps from society. As one proponent of such laws wrote at the time of their enactment,

> "What shall we do with the feeble-minded and epileptic already existing? One school says vasectomy, another castration, and still another segregation. None of these is correct in whole but in part only. To reach the proper solution of this question both sterilization, in some form or other, and segregation must be carried out, castration or vasectomy being used as adjuncts to segregation, and going hand in hand with it."

H. Carey, A Plea for the Sterilization of Certain Defectives, Particularly the Feeble-Minded and Epileptic 4-5 (1912).

The notion that nondisabled citizens should be spared from any contact with people with disabilities was also made explicit in rationalizing the exclusion of people with handicaps from public schools. For example, the Supreme Court of Wisconsin approved the exclusion of a boy with cerebral palsy because he "produces a depressing and nauseating effect upon the teachers and school children." State ex rel. Beattie v. Board of Education, 169 Wis. 231, 172 N.W. 153, 154 (1919).

Another feature of discrimination against people with disabilities is the denial that they are really citizens, or even that they are human. This has been true throughout our history. For example, the Mississippi statute creating eugenic segregation gave chancery courts "jurisdiction in all cases of legal inquiry in regard to feeblemindedness, including idiocy, imbecility, and the higher grades and varieties of mental inferiority which renders the subjects unfit for citizenship." 1920 Miss. Laws 288, 294.

Particularly odious are references in modern policy debates to people with disabilities as subhuman. For example, it has been argued that there is

> "no reason to feel guilty about putting a Down's Syndrome baby away, whether it's 'put away' in the sense of hidden in a sanitarium or in a more responsible lethal sense . . . . True guilt arises only from an offense against a person, and a Down's is not a person."

Bard & Fletcher, The Right to Die, The Atlantic Monthly 59, 64 (April 1968). Another writer attempts to justify discrimination in this way:

> "If we compare a severely defective human infant with a nonhuman animal, a dog or a pig, for example, we will often find the nonhuman to have superior capacities, both actual and potential, for . . . anything . . . that can plausibly be considered morally significant."

Singer, Sanctity of Life or Quality of Life?, 72 Pediatrics 128, 129 (1983). Contemporary debate also contains frequent references to people with disabilities, particularly mental disabilities, as "vegetables." For eloquent criticism of this usage, see Hentoff, The Awful Privacy of Baby Doe, The Atlantic Monthly 54, 57 (January 1985).

The tone of these attempts to justify discrimination against citizens with disabilities is more offensive than anything encountered by any group in American society since the days of slavery.

The impact of this discrimination on the lives of people with mental disabilities has been as devastating as has the discrimination encountered by racial minorities and women in our society. But unlike those other groups, people with disabilities have lacked legal protection against private and public discrimination.

The piecemeal statutory laws now in place do not address the problem adequately. Section 504 of the Rehabilitation Act was an important first step, but it only reaches discriminatory conduct by recipients of government funding, and thus leaves most harmful discrimination untouched. Similarly, Public Law 94-142, The Education of All Handicapped Children Act, has worked a revolution in the lives of people with disabilities by making it possible for them to receive an education. But 94-142 reaches discrimination only in the field of education, and does nothing to prevent it in other areas of a disabled person's life.

The inadequacy of current Federal statutory protections is all the more important because state laws have not provided substantial protection to people with disabilities. Only two states, Connecticut and Massachusetts, prohibit discrimination on the basis of handicap in their state constitutions, and even these provisions have received little judicial enforcement. And few state statutes provide the kind of protection against discrimination on the basis of disability that they typically afford in the areas of race and gender.

Even more crucial is the lack of judicial enforcement of the protections of the United States Constitution. The Fourteenth Amendment guarantees to all persons the equal protection of the laws. There can be no doubt that this applies to citizens with disabilities just as it does to all others. But the Supreme Court of the United States has declined to provide the same level of protection that it does in the areas of race and gender. Instead, it consigned cases involving disability discrimination to the level or "tier" of judicial scrutiny least favorable to the individual who suffers the discrimination -- the so-called "rational basis" test. City of Cleburne v. Cleburne Living Center, 473 U.S. 432 (1985). What this means in practical terms is that any halfway plausible rationalization for governmental discrimination against people with mental or physical disabilities will be enough to satisfy the Federal courts.

Conclusion. The inadequacy and limited scope of existing laws on discrimination against people with handicaps makes prompt Congressional action essential. The American Association on Mental Retardation urges the House of Representatives to join the Senate and President Bush in approving the Americans with Disabilities Act.

The U.S. Chamber of Commerce is the world's largest federation of business companies and associations and is the principal spokesman for the American business community. It represents nearly 180,000 businesses and organizations, such as local/state chambers of commerce and trade/professional associations.

More than 93 percent of the Chamber's members are small business firms with fewer than 100 employees, 45 percent with fewer than 10 employees. Yet, virtually all of the nation's largest companies are also active members. We are particularly cognizant of the problems of smaller businesses, as well as issues facing the business community at large.

Besides representing a cross section of the American business community in terms of number of employees, the Chamber represents a wide management spectrum by type of business and location. Each major classification of American business—manufacturing, retailing, services, construction, wholesaling, and finance—numbers more than 10,000 members. Yet no one group constitutes as much as 32 percent of the total membership. Further, the Chamber has substantial membership in all 50 states.

The Chamber's international reach is substantial as well. It believes that global interdependence provides an opportunity, not a threat. In addition to the 59 American Chambers of Commerce Abroad, an increasing number of members are engaged in the export and import of both goods and services and have ongoing investment activities. The Chamber favors strengthened international competitiveness and opposes artificial U.S. and foreign barriers to international business.

Positions on national issues are developed by a cross section of its members serving on committees, subcommittees and task forces. Currently, some 1,800 business people participate in this process.

The U.S. Chamber of Commerce appreciates this opportunity to express its concerns about H.R. 2273, the Americans with Disabilities Act (ADA), legislation designed to expand rights for the disabled. (As requested by the Subcommittee, the Chamber's comments are based on S. 933, the Senate's companion bill as passed by the Senate on September 7.) Although the Chamber shares the goal of the bill's proponents — opportunity for individuals to participate fully in society — the Chamber opposes H.R. 2273 because of its lack of guidance and parameters to help businesses to comply and the resulting reliance on the court system to define precise rights and obligations; its enforcement scheme (specifically in Title III); and its lack of sensitivity to the special needs of small businesses.

The following comments will focus primarily on Titles I and III, the employment and public accommodations titles of the ADA, respectively.

PROTECTIONS FOR USERS OF ILLEGAL DRUGS

The ADA continues to protect users of illegal drugs who are also disabled. The specific language states:

> Section 104. Illegal Drugs & Alcohol
>
> (a) Qualified Individual with a Disability -- For purposes of this title, the term "qualified individual with a disability" shall not include any employee or applicant who is a current user of illegal drugs, except that any individual who is otherwise handicapped shall not be excluded from the protection of this Act if such individual also uses or is also addicted to drugs (emphasis added).

---

*Human Resources Attorney, Employee Relations Policy Center

This language can be interpreted to mean that it is acceptable for disabled people to use illegal drugs but not able-bodied individuals. Although this was not intended, the problem remains. The underlined language should be deleted. Employers must have the ability to refuse to hire or to discharge an employee for illegal drug use, regardless of the presence of a disability.

PARAMETERS AND GUIDANCE FOR BUSINESS COMPLIANCE

The ADA is replete with affirmative obligations required of the private sector, yet many of these obligations are unclear or lack guidance of any sort. The result will be businesse having to play a guessing game as to what is required or even whether or not they are in compliance. The stakes of this game are high because businesses will face the threat of lawsuits over whether their guesses were correct. The attached editorial from The New York Times and article from the National Journal provide eloquent analyses of this problem.

Title I

The employment provisions of the ADA, generally, reflect a fair balance between the legitimate yet competing interests of the disability and business communities. Nevertheless, several areas need clarification:

- Individuals with disabilities must be able to perform the "essential functions" of the jobs they hold or want. The "essential functions" of a given job will vary from business to business and among different segments of the same business. At a minimum, it should be made clear that employers have the discretion to decide what constitutes the "essential functions" of a job.

- The definition of discrimination is very broad, and the proponents of the ADA claim that it is intended to cover 900 types of disabilities. A list of covered disabilities is appropriate so that businesses know when their obligations are triggered. Additionally, such a list would reduce the threat of litigation that will result if employers are forced to guess at what is covered.

Title III

The public accommodations provision of the ADA is the most sweeping of its kind. As a result, the private sector faces new and unknown obligations. Therefore, it is essential that the ADA provide as much specific guidance as possible. In particular:

- Affirmative obligations are placed on public accommodations. However, the ADA does not address, in a landlord/tenant situation, who bears the responsibilities. Clarification here is necessary so that landlords and tenants know the rules. Otherwise, the ADA will become a vehicle that fosters unnecessary litigation between landlords and tenants.

- When a facility is "altered" or when a "major structural alteration" is undertaken, the facility must make the altered area accessible to the "maximum extent feasible." The ADA fails to define what must be undertaken to establish an alteration, makes no distinction between "altered" and a "major structural alteration," and gives no guidance as to the meaning of "maximum extent feasible." This ambiguity could be easily eliminated by following the example of Pennsylvania. Under state law, an alteration is deemed to trigger the accessibility requirements if the alteration affects 50% or more of the value of the building.

- Title III provides that accommodations need not be made if they would "fundamentally alter" the nature of the good, service, etc. being provided. No meaning is given to the phrase "fundamentally alter." It would be appropriate to leave this discretion within the purview of the employer.

Without clarity, the court system will determine many of the obligations. Unfortunately, this will be done at the expense of the business community — particularly small businesses, which can least afford this expense.

ENFORCEMENT

There are times when the enforcement scheme for ensuring compliance with a law needs to be punitive, and other times when it merely needs to be corrective. The ADA fails to make this distinction. To be truly effective, the ADA should shift its focus from confrontation to conciliation.

Title I

Disputes surrounding the employment relationship and discrimination historically have focused on making the aggrieved individual whole, e.g., back pay, front pay, and reinstatement. Although Title I of the ADA embraces this concept, a few disturbing questions remain:

- o The original version of S.933, the Senate's ADA bill, and the current version of H.R. 2273 allow individuals to bring suit if they believe they are "about to be" discriminated against (anticipatory discrimination). Although this language was excluded from S. 933 as passed, the concept was left in the Senate committee report language. In practical terms, this means that what one person thinks another is thinking becomes actionable in court. Any reference to this idea should be eliminated.

- o The ADA does not preempt any civil rights protections for the disabled at any level — federal, state, or local. Many employers are already covered by the antidiscrimination/reasonable accommodation provisions of the Vocational Rehabilitation Act of 1973. Laws at the federal, state, and local levels are not uniform; and in many instances, there are additional and/or conflicting obligations. An employer could be faced with multiple lawsuits at the same time on the same set of facts. At a minimum, a provision should be included in the ADA providing that compliance with the ADA is deemed compliance with the Rehabilitation Act.

Title III

The public accommodations provision requires any entity used by customers, clients, or visitors to be accessible. Despite the best intentions, there will be businesses that fail to do so either through a misinterpretation of their obligations or through a lack of knowledge. The enforcement scheme for this section, however, is punitive, even though one course of action is the appropriate "make-whole" process discussed above. Specific concerns in this area include:

- The lack of definition of what constitutes a "pattern and practice" of discrimination. For example, does it apply in cases of intentional and/or unintentional acts of discrimination? Is the finding based on site-specific instances or full company instances, e.g., a company with approximately 3,000 stores nationwide? The answers to these questions, respectively, should be "only in intentional situations" and only on a "site-specific basis."

- In these "pattern and practice" cases, monetary damages and civil penalties are available at the discretion of the Attorney General and the court. First, monetary damage should be defined as actual, out-of-pocket expenses only. Second, a distinction should be made between intentional and unintentional violations of the ADA. Third, it should be made clear that civil penalties may be imposed in cases of intentional violations only.

- A cause of action for anticipatory discrimination is expressly included in Title III. In the situation where new construction is taking, or is about to take place that is not in compliance with the ADA, it is appropriate that injuctive relief be available. In all other situations, however, this cause of action is inappropriate -- it will be frivolous -- and reference to anticipatory discrimination should be deleted.

For those entities that willfully and intentionally violate the provisions of the ADA, punitive sanctions are appropriate. But to punish those who commit errors unintentionally in the same way as willful violators is not only inappropriate but also unfair.

SMALL BUSINESS NEEDS

Any time the federal government imposes a mandate on businesses, the unique needs of small businesses should be addressed. Small businesses, generally, do not have extra money available for the financial obligations of new mandates and often operate on a very narrow profit margin. These special needs were adequately addressed in the employment section of the ADA through the small business exemption yet were not appropriately recognized in the public accommodations provision.

There was an attempt to provide some relief for small businesses in Title III through limitations on obligations, such as requiring only what is "readily achievable." Definitions of terms, however, remain unclear and subjective and, therefore, do not provide the necessary relief. Lawsuits will arise over what is required; and the cost of these lawsuits, both direct and indirect, will be very burdensome to small businesses. It would be appropriate to provide a small business exemption in Title III similar to that in Title I.

Additionally, financial incentives would go far in helping small businesses to comply with the ADA, and perhaps even encourage compliance where a small business might not otherwise be required to comply, i.e., because a particular accommodation is beyond what would be considered to be "readily achievable." Section 190 of the Internal Revenue Code should be expanded to allow deductions for all expenditures made to accommodate the disabled. Currently, this section permits a business to deduct a maximum of $35,000 annually for structural alterations.

CONCLUSION

Ensuring that all individuals have the opportunity to participate fully in society is a laudable and necessary goal -- one that the Chamber supports. Indeed, integration into this country's economic life of people with disabilities is essential in preserving their dignity and in facing the nation's global economic challenges.

Despite this positive goal, the complexity of the ADA has not been considered adequately. The importance of this issue necessitates taking the time to resolve its problems to ensure that the bill is the best that it can be. Parameters and guidance should be provided so that businesses know what their obligations are and so that courts are not thrust into the role of legislator. Businesses should be helped to comply, rather than having to face punishment if they inadvertently fail to do what is required; and small businesses will need financial relief to assist them in complying with the ADA. In short, the focus of the ADA should be on opening opportunities for the disabled, not on imposing unreasonable and unworkable demands on the business community.

Thank you for the opportunity to submit the Chamber's views on this important legislation.

THE NEW YORK TIMES, WEDNESDAY, SEPTEMBER 6, 1989

Blank Check for the Disabled?

With surprisingly narrow public scrutiny, Congress is moving swiftly to extend broad civil rights protection to the nation's 43 million disabled citizens. The sentiment is laudable: to bring the disabled closer to the mainstream of American society. But the legislation is vague; not even its defenders are able to calculate its benefits and costs. Those costs could be monumental. The proposal thus requires patient, unemotional examination.

That won't be easy. The bill was unanimously approved by the Senate Labor and Human Resources Committee last month, and though it still awaits hearings in four separate House committees, it commands strong bipartisan support in both House and Senate and the endorsement of President Bush. As one skeptic put it, "No politician can vote against this bill and survive."

•

The bill would ban discrimination in employment in all businesses with more than 15 workers. That's caused no controversy. What has is a provision requiring nearly every retail establishment, large or small, old and new — barber shops, banks, restaurants, movie theaters — to be accessible to the disabled. The legislation does not spell out how. But in many cases it would mean building ramps, widening doorways, modifying restrooms. Elevators would be required in all new buildings of more than two stories.

The bill would also require bus companies to include lifts, specially designed restrooms and other facilities on all new buses built five to six years after enactment. The bill calls for a study — after the bill is passed, not before — to determine how much this would cost the companies.

The bus companies are angry. Most businessmen are simply fretful and confused. That's partly because the bill's language is so vague. It says that existing facilities must make only "readily achievable" changes that won't involve "burdensome expense." Yet what do these words mean in practice? Obviously, no bill can give precise instructions to thousands of individual businesses. But several states already have laws on the books that provide business more useful guidance than the Senate bill does.

Senator Tom Harkin, Iowa Democrat, argues that "costs do not provide a basis for exemption from the basic principles in a civil rights statute." Mr. Harkin has a hearing-impaired brother and a quadriplegic nephew. He's fought honorably for the bill, and has already made compromises.

He also points out that the Federal Government now spends nearly $60 billion a year on benefits for the disabled — a sum that could shrink if the disabled had easier access to jobs and could move from welfare rolls to tax rolls. The Census Bureau reported last month that less than 25 percent of all disabled men and only 13 percent of disabled women hold full-time jobs. And the earnings of those who do work average only two-thirds that of all workers.

Predictions about the bill's projected benefits are obviously speculative. Worse, nobody has even tried to speculate about its costs. But it shouldn't be impossible to provide estimates. The Office of Management and Budget has done so before in tough instances, like the costs of air bags.

Congress and the Administration now have a similar responsibility to stand back, to weigh, to calculate. No one wishes to stint on helping the disabled. It requires little legislative skill, however, to write blank checks for worthy causes with other people's money.

It Sounds Great, but What's It Mean?

CONGRESSIONAL CHRONICLE

By Richard E. Cohen

Congress is writing bills that few people—least of all, its Members—understand or can explain.

The latest example is the 1989 Americans with Disabilities Act, which the Senate passed by a 76-8 vote on Sept. 7 and which the House is expected to approve before lawmakers complete business this year. The bill is well-intended, addresses a legitimate and serious national problem and sets goals with which few people can disagree. But its broad prescriptions are so ambiguous and potentially overreaching that federal judges quite likely will struggle for years to define what the law means and how to enforce it.

The problem is not unique to the disabilities bill, which is this year's top priority of the civil rights lobby. Nor is vague or sloppy draftsmanship confined to one party, one chamber or one set of issues.

In the month since enactment of the savings and loan bailout bill, for example, federal officials charged with enforcing that law have disagreed over the intent of key sections. A reason for the modest press and public reaction to the child care bill passed by the Senate in June has been that few persons can decipher its wide-ranging provisions. And Congress lately has been torn by constituent unhappiness over last year's law expanding medicare coverage for catastrophic illnesses; one cause evidently has been that few beneficiaries understood the law's scope or what it would cost them.

In seeking to bar discrimination against disabled Americans—and there are as many as 43 million, it's estimated—backers of the bill have assembled a powerful coalition. The enthusiasts include President Bush, who has had a long-standing interest in the disabled; Senate Minority Leader Robert Dole, R-Kan., whose crippling wartime injury led to his creation of a foundation to help the disabled; Senate Labor and Human Resources Committee chairman Edward M. Kennedy, D-Mass., whose family has long supported related causes; and former House Majority Whip Tony Coelho, D-Calif., an epileptic who has continued his advocacy of these issues since resigning his post in June.

After Kennedy's panel unanimously approved the bill on Aug. 2, staff aides spent several weeks drafting a revised version. The committee formally filed its report with the Senate on Aug. 30, while most Senators and their aides were completing their August vacation. Once they ended their recess on Sept. 6, few Senators spent much time reviewing the measure.

Senate debate of the bill, which lasted most of an afternoon and evening, addressed several questions—some of them esoteric. Conservatives, for example, made sure that its protections do not cover such groups as drug users, pedophiliacs, transvestites and kleptomaniacs. Charles E. Grassley, R-Iowa, despite reservations by the bill's sponsors, won approval of an amendment extending the bill's coverage to Congress—but not to the rest of the federal government. (State and local governments are covered, however.) And intercity bus companies, which say the law will cost them at least $200 million, won a year's extension before having to install wheelchair lifts and special toilet facilities on their vehicles.

Fundamental issues were barely addressed or explained by the committee. The bill, for example, would require that existing facilities in public accommodations be made accessible to the disabled if such steps would be "readily achievable." According to Kennedy, that means "easily accomplishable and not involving much difficulty or expense."

Another provision would bar an employer from discriminating against a job applicant who is disabled. The bill would require firms to make "reasonable accommodations" for disabled employees, unless that obligation would place an "undue hardship" on a business. Asked during the debate whether this would require a firm to provide a full-time reader for a new employee who is blind, Tom Harkin, D-Iowa, who chairs the Labor Subcommittee on the Handicapped, said: "If it is IBM, perhaps that is not a big deal. But if it is a small pharmacy, . . . that's a different story."

The bill's standards appear more sweeping than those in earlier civil rights statutes or in laws protecting the disabled. And, although the bill would exempt businesses with 15 or fewer workers from its provisions on employment, it has drawn opposition from small-business groups. But the measure has moved so quickly that lobbyists have had little time to mobilize their members. "I am concerned about what I think may put some people out of business," said Senate Small Business Committee chairman Dale Bumpers, D-Ark., who raised questions about the bill but voted for it.

The limited opposition to the bill can be explained partly by its label as a civil rights measure. By contrast, when Bumpers raised comparable questions last year about a worker protection bill backed chiefly by organized labor, the fact that the bill had a union label was enough for Republicans and southern Democrats to stop the bill in its tracks. But few lawmakers want to oppose a bill that seemingly has the appeal of apple pie and bears little cost to the federal government.

"The problem was the lack of professional examination of issues at the staff level," said Robert M. Guttman, who was the chief aide for Dan Quayle both at the Labor Committee and in the Vice President's office. "The bill resulted more from the political forces all pointing in one direction."

Even though sponsors did little to hype their victory—which they attained with greased lightning speed—passage of the bill bolsters this year's slim legislative record. It also sends a symbolic message that restores some of the faded bipartisanship Bush has urged. But the glow may fade if the proposal proves to be an empty vessel or raises endless questions. ☐

American
Dental
Association

ADA

1111 14th Street, N.W.
Suite 1200
Washington, D.C. 20005
(202) 898-2400

October 24, 1989

The Honorable Jack Brooks
Chairman
Committee on the Judiciary
2138 Rayburn House Office Building
Washington, D.C. 20415-6216

Dear Mr. Chairman:

I am writing to express the views of the American Dental Association with regard to H.R. 2273, the Americans with Disabilities Act.

The Association finds commendable this legislation to provide a clear and comprehensive national mandate for the elimination of discrimination against individuals with disabilities. At the same time, we urge the Committees to examine the language throughout for the purpose of improving the specificity of its several sections. By so doing, we believe the bill will serve the intent of the Congress and will avoid the confusions, misunderstandings and litigious results that have been predicted in the general and business media.

We note the efforts in this regard in the Senate, particularly the amendment addressing the concept of the separate benefit in public accommodations. This is a matter of critical concern to the dental profession, inasmuch as, traditionally, certain dental patients with disabilities -- persons suffering from diseases of the central nervous system are a prominent example -- are treated by certain dentists with experience and demonstrated capability in the management of these patients. From our reading of the amended Senate bill, the separate benefit provision would allow for this quite effective approach to dental care to continue.

Further, we appreciate the difficulty of adequately defining the operative terms in the legislation. We urge the Committee, nevertheless, to address itself to this task, so that the obligations of all proprietors of public accommodations will be readily understood. In our opinion, the discussion in Senate Committee Report 101-116 of the meaning of "readily achievable," for example, might be included in Section 3 of H.R. 2273.

Finally, the Association recommends that the bill be amended to specifically prohibit discrimination against individuals in all stages of HIV infection. We believe such amendment would respond directly and unambiguously to the recommendations of the Presidential Commission on the Human Immunodeficiency Virus Epidemic in this regard.

We request that this letter be included in the official record of the Committee's hearings on H.R. 2273.

Sincerely,

October 27, 1989

Honorable Don Edwards
Chairman, Subcommittee on Civil and
  Constitutional Rights
2307 Rayburn House Office Building
Washington, D.C. 20515

Dear Mr. Chairman:

I recently discussed with Ms. Colleen Kiko, Minority Counsel for the Subcommittee on Civil and Constitutional Rights, my concerns about the Americans with Disabilities Act (H.R. 2273). She suggested that I submit to you a statement expressing my concerns.

I am a disabled individual who is opposed to the Act. Although I am employed by the U.S. Department of Education, my views are my own and do not reflect the views of this agency or the Federal government in any way. In addition, my opinions were not formed as a result of working in the Department.

Enclosed is my written statement. I would appreciate it being included in the Hearing Record. Thank you for considering my views.

Sincerely,

Kathy Hogancamp

Enclosure

TESTIMONY
SUBMITTED TO
THE
COMMITTEE ON THE JUDICIARY
U. S. HOUSE OF REPRESENTATIVES
OCTOBER 27, 1989

I am Kathy J. Hogancamp and I am a quadriplegic--paralyzed from the shoulders down. When I was 17 years old, I broke my neck in an automobile accident, damaging my spinal cord. Despite my severe disability--and despite only limited use of my hands--I have learned to work around my limitations. I earned a Master's degree in Guidance and Educational Psychology and am presently employed by the Federal government as a program specialist. I am also a 1989 recipient of the Presidential Awards Program for Outstanding Federal Employees With Disabilities.

I would like to share with you my concerns about the Americans With Disabilities Act (ADA). The following statement from a disabled person may surprise many of you. My view of this bill does not reflect the position of the Administration or the Federal government on this issue. In addition, my opinions were not formed as a result of working for a Federal agency. Thank you for the opportunity to share this statement with you.

Under the ADA (H.R. 2273), the term "disability" is broadly defined to include "a physical or mental impairment that substantially limits one or more . . . major life activities; [has] a record of such impairment; or [is] regarded as having such an impairment." This broad definition of "disability" in the current House bill also covers self-imposed conditions such as drug abuse and alcoholism. (See section 101, "Forms of Discrimination Prohibited" (a)(5)(b)(2)(A).) As a truly, severely disabled person, I am offended at being put in the same category as those whose only disability is a self-imposed one. (None of us who are recipients this year of the "Outstanding Federal Employees with Disabilities" are disabled by reason of addiction to an illegal substance.) In Senate hearings on the issue it was reported that the term in this legislation is so broadly interpreted that it would include persons with various sexual behaviors. A sexual orientation should not be interpreted to be a "disability."

Similarly, "discrimination" is broadly described in the ADA. It is used to refer not only to "outright intentional exclusion," but also to "the discriminatory effects of architectural, transportation, and communication barriers, overprotective rules and policies, failure to make modifications to existing facilities and practices. . . ." From a Civil Rights perspective, "discrimination" has historically denoted a person acting on the basis of prejudice or bias. In the ADA, the term has been redefined to include unintentional effects.

For example, under the legislation a business owner would be "discriminating" against wheelchair users like myself if the business is located up a flight of steps. To make private businesses guilty of discrimination by unintentional omission is unfair. Granted, a business does not have to make "reasonable accommodations" if it can demonstrate "undo hardship." Yet the burden of proof that a business is not discriminating lies with the business.

Yes, it can be frustrating as a disabled consumer not to be able to go to a movie or restaurant because of a lack of accessibility. But what about the rights of the private sector, of private, small business owners? The private sector does not owe me--or any other disabled person--a frustration free life.

The "reasonable accommodations" requirements under ADA would be extremely expensive for the private sector. A Federal requirement of accommodating disabled individuals will cause many small companies to go out of business. In some cases, businesses would be required to hire two employees to fill one vacancy. For instance, in addition to hiring a professional who is blind, an employer may also need to hire a reader as a "reasonable accommodation." Similarly, in order to fill one vacancy, an employer may need to hire both a physically disabled professional and an attendant for job-related assistance. Businesses that survive the ADA will show less profit because of the costs of accommodations. As a result, it is likely that businesses will begin to see us--the disabled--as a threat; and consequently, a discriminatory attitude may develop.

Another aspect of ADA that could precipitate a discriminatory attitude is the ADA's broad extension of the Federal role into the private sector. The bill states that one of the purposes of ADA is "to ensure that the Federal Government plays a central role in enforcing the standards established in this Act on behalf of individuals with disabilities." (See section 2, "Findings and Purposes" (b)(3).) To enforce the ADA, four executive agencies are required to promulgate new regulations: the Equal Employment Opportunity Commission, the Attorney General, the Secretary of Transportation, and the Federal Communications Commission. Moreover, regulations that are currently in existence will be extended to cover private entities. This would include the enforcement provisions of the Rehabilitation Act of 1973. Without question, regulatory burden on the private sector will increase.

Additionally, under the ADA, individuals with disabilities or even individuals associated with disabled individuals can initiate litigation against an employer, a prospective employer, or a business or agency where they are a client or customer if they believe they have been discriminated against. Individuals may even initiate litigation if they believe they are going to be discriminated against. Because we live in an age of litigation, there can be no doubt that lawsuits will abound after the passage of ADA. Businesses could begin to view disabled persons as adversaries looking for a lawsuit.

From my own personal experience as a disabled person, I would rather businesses and agencies accommodate my disability voluntarily--even if I have to wait awhile for them to become sensitized and begin to take positive action. The private sector and State and local agencies should not be coerced into making expensive modifications. If businesses and agencies voluntarily make changes, those of us with disabilities will not be perceived as a threat.

To remedy many of these concerns, I ask that an amendment such as the Armstrong amendment which was adopted by the Senate be added to the ADA. It places some common sense restrictions on the definition of "disability." It states that the following lifestyles or conditions would not be included in the term "disability": "homosexuality, bisexuality, transvestism, pedophilia, transsexualism, pyromania, gender identity disorders, current psychoactive organic mental disorders . . . or other sexual behavior disorders."

Additionally, the ADA should be amended to prohibit a private cause of action. Encouraging litigation will very likely result in a discriminatory attitude. A prejudicial attitude--not barriers--is true discrimination. A more sensitive attitude toward the needs of the disabled cannot be legislated.

Although the suggested amendments would make the ADA more tolerable, it is my final conviction that the ADA should not be passed. The premise of the ADA is wrong. It is based on the presupposition that little advancement has been made over the years, that the disabled population is segregated from the rest of society, and that "discrimination against individuals with disabilities continues to be a serious and pervasive social problem." (See section 2 "Findings and Purposes," (a)(2).) I disagree totally with this premise.

It has been my experience that with determination and hard word--and with the support of family, church, friends, and voluntary associations--disabled individuals can succeed and have succeeded in today's society in such areas as education, professional achievement, emotional fulfillment, etc. Attitudes have changed and sensitivity has been developed toward the disabled. There are more opportunities than there have ever been and disabled individuals are enjoying the mainstream of society to a great degree.

I believe that the supporters of the ADA are sincere in their desire to afford disabled individuals the opportunity to participate in all aspects of society. Supporters believe that to ensure the disabled their "rights," the Federal government must implement sweeping reforms and legislate change. Instead, the bill will create administrative and regulatory burdens on the private sector, will encroach on free enterprise, and will expand an already swollen Federal bureaucracy.

Sure, it's not easy for me sometimes. And sometimes I have to wait patiently for the doors of opportunity to open. But the doors are opening and they are opening without such a broad-sweeping Federal law.

Private businesses should not be required to make my life easier at their own expense. Even though advances have been made, the needs of the disabled in assimilating with an able-bodied society are still great. And the ADA is a response to this need. However, it is still wrong to sacrifice the legitimate rights of others to meet this apparent need. The ends do not justify the means. Moreover, with time, much of the need will be addressed by businesses choosing to provide accommodations.

This "quick fix" may provide a surface cure for the problem, but it could result in a discriminatory attitude--and more importantly, it will undermine the constitutional rights of many.

I would love to wave a magic wand and make my life and the lives of fellow disabled individuals easier. But not if it means requiring others to sacrifice their constitutional freedom. And the one tie that binds both disabled and able-bodied alike in this country . . . is this freedom.

Thank you.

THE AMERICAN INSTITUTE OF ARCHITECTS

OCT 30 1989

October 26, 1989

[illegible]

The Honorable Don Edwards
U.S. House of Representative
Washington, DC 20515

Dear Representative Edwards:

On behalf of The American Institute of Architects, the professional association representing the nation's architects, I would like to suggest improvements to the Americans with Disabilities Act, S.933/H.R.2273 (the ADA bill), specifically to the alterations section of Title II concerning public services, and to Title III, the public accommodations title.

The AIA supports the legislation's intent, and believes that Congress should act to accomplish it. We are concerned, however, that it needs clarification and revision to facilitate compliance and to reduce unnecessary liability for architects.

1. Readily Achievable Removal of Architectural Barriers

The legislation requires existing buildings and facilities to remove architectural barriers, upon enactment, if the removals are "readily achievable" which means that they would not cost very much and would not be difficult to do. The AIA is concerned that whereas many barriers singly are easy and inexpensive to remove, many facilities may have a combination of barriers or multiple barriers of the same type, for which removal could impose a significant cost. The legislation could clear up this problem by requiring that removals of combinations of barriers or of multiple barriers of the same type within a single facility could be phased over time or handled as an alteration.

2. Alterations vs. Major Structural Alterations

The ADA bill requires that 12 months after enactment, alterations to a building or facility must make the altered area readily accessible and usable, and that major structural alterations in addition must include an accessible path of travel to the altered area. The reason for setting forth the differences in types of alterations was so that a small renovation would not by itself trigger a much more costly project to make the path of travel accessible. Unfortunately, the legislation fails to accomplish its purpose.

The legislation provides no way of determining when an alteration becomes a major structural alteration, although the report language attempts to make a distinction by describing the structural elements that would be considered to fall under the provisions for major structural alterations. The ADA fails to distinguish between structural elements (load-bearing walls, beams, etc.) and architectural elements (doors and windows), and thus it is possible that a small scale, inexpensive alteration that consists of dropping a ceiling or replacing windows, could trigger a much more complex and costly project to make the route to the altered area accessible.

BEST COPY AVAILABLE

The legislation should refer to "major alterations" not "major structural alterations" and base the difference between a minor and a major alteration on the cost and scope of the alteration, and the degree to which it affects a facility's usability and accessibility.

Historic Preservation

The ADA bill makes no provision for historic properties. The Uniform Federal Accessibility Standards (UFAS) provides that when an alteration is undertaken for an historic property, certain accessibility features should be incorporated, unless to do so would threaten or destroy its historical integrity. Other accessibility alternatives must then be substituted. The ADA bill should apply such a standard for historic properties it covers, if they are listed on or eligible for the National Register of Historic Places, or designated historic pursuant to state or local law. A reference to UFAS or an equivalent standard should suffice.

Transition Rule

When the ADA becomes law, it will apply to many projects already under design, but not yet constructed. These projects may be required to comply, and thus undergo costly and complicated redesign. Because the regulations will not yet be promulgated, the projects' architects will be unclear as to what must be done to make the projects comply. The AIA proposes that all projects currently under design should be exempt from requirements of the act, but those receiving a design contract after the date of enactment should comply by the effective dates established in the bill for new construction and alteration. In addition, to provide a safe harbor for architects designing projects after enactment of the bill but before issuance of final regulations, the bill should provide that conformance to the standards of the American National Standards Institute A117.1 1986 or the Uniform Federal Accessibility Standard (UFAS) should be deemed sufficient, though not necessary, for compliance with the legislation. These standards for handicapped access design are well-understood and accepted within the design profession.

Enforcement/Liability

The ADA bill passed by the Senate permits courts to consider good faith efforts to comply with the legislation, in hearing complaints brought against individuals under the measure. This is not enough. Architects should have some official determination that they have complied with the legislation, and this determination should constitute a defense against charges of discrimination. This protection can be easily accomplished. The Department of Justice, on the application of a state or locality, could certify that the state or local ordinance meets the minimum standards of the legislation.

Page Three
October 26, 1989

The legislation should also provide that architects and others who receive state or local certification that their projects have complied with a DOJ-certified state or local handicapped access law should have a strong defense against complaints of discrimination.

The AIA believes that the above revisions are important to the successful achievement of the ADA's objectives. I appreciate your consideration of our suggestions.

Sincerely,

Jim Cramer

James P. Cramer, Hon. AIA

AMERICANS WITH DISABILITIES: TELECOMMUNICATIONS RELAY SERVICES

WEDNESDAY, SEPTEMBER 27, 1989

House of Representatives,
Committee on Energy and Commerce,
Subcommittee on Telecommunications and Finance,
Washington, DC.

The subcommittee met, pursuant to notice, at 9:37 a.m., in room 2322, Rayburn House Office Building, Hon. Edward J. Markey (chairman) presiding.

Mr. **Markey**. Good morning. The subcommittee will come to order. Today we will hold a hearing on Title V of H.R. 2273, the "Americans with Disabilities Act of 1989." This landmark legislation will extend civil rights protection to those Americans with disabilities, and help tear down the barriers that have prevented the disabled from becoming full and equal members of society.

Today the subcommittee will examine legislation designed to bridge the gaps in our Nation's telecommunications system that have been unwillingly created by an insensitive and unsympathetic society.

This bill will guarantee communications for impaired Americans and for those people with speech or hearing disabilities, equal access to the Nation's telecommunications networks.

At present, there are many times, often when it matters the most, that a hearing-impaired person simply cannot use the telephone. Imagine not being able to call home from a friend's house, or use the phone in someone else's office, or even call 911 outside your home in an emergency.

Well, for many of the Nation's 26 million hearing-impaired persons, this is not some far fetched nightmare. It is a daily reality.

The enactment of the Communications Act of 1934, with the goal of universal service for all Americans, we in the Congress have been trying to ensure that all Americans have access to the phone. Today this goal is more important than ever because information and communications drive our society. The telephone is no more a luxury item, but an essential part of our everyday lives. Our link to the rest of the world.

The legislation that we are considering today will bring the communications impaired much closer to the realization of the universal service goal, and open up an entire new market of consumers. In essence, this bill will enable the communications impaired to use the telephone for the same purposes the rest of the population has come to take for granted.

Title V of H.R. 2273 establishes a seamless, interstate, and intrastate relay system for the use of telecommunications devices for the deaf, TDD's. That will be the vital link through which communications-impaired individuals will have access to the outside world.

This device, connected to an operator relay system, will allow a communications-impaired caller to communicate with anyone who has a telephone anywhere in the country. The relay operator, acting as an intermediary between the two parties, will translate typed TDD messages by voice and vice versa.

A few States already have relay systems in place, and have seen how the access they provide benefits segments of the communications-impaired population. In California, for example, the call volume has reached approximately 245,000 calls a month.

An entire segment of the population now has an opportunity to escape from a world of virtual silence, and into one of modern communication, and information services, but more needs to be done to open an escape route for the many States that have not progressed as rapidly as others.

Last year, the enactment of the Hearing Aid Compatibility Act of 1988, a bill which originated in this subcommittee, was a great step forward in improving the access of the communications-impaired to telephone services. We are now poised to take the next step, providing the communications tools and services needed for them to become more productive in society, and thereby benefiting all of us.

As chairman of the subcommittee, one of my highest priorities has been to ensure that the wonders of modern telecommunications are available to all Americans at affordable rates. I am certain that all of us in Congress agree that achieving the goal of universal service in an ever expanding telephone network is not possible without providing equal access to the communications-impaired.

With that, time for a statement by the Chair has expired, and I now turn and recognize the ranking minority member, the gentleman from New Jersey, Mr. Rinaldo.

Mr. Rinaldo. Thank you, Mr. Chairman. I want to commend you for calling a hearing on this important legislation. The basic purpose of the "Americans with Disabilities Act of 1989" is to remove barriers that prevent disabled citizens from leading productive lives, and contributing fully to their communities.

Nowhere is this bill more important to achieve than in the world of telecommunications. More and more, telecommunications provide the essential link with our fellow man. It has become the glue, you might say, that holds society together.

Unfortunately, very little progress has been made in providing our hearing- and speech-impaired citizens with full and equal access to the telephone network. Just last July the FCC concluded that interstate TDD relays are virtually nonexistent.

I am proud that this subcommittee has been the most active body in Congress in trying to correct that situation. Last year we passed two important bills to close the gap. The Hearing Aid Compatibility Act requires all telephones to be able to use with hearing aid.

The Telecommunications Accessibility and Enhancement Act requires the Government to provide ATDD relay systems so that hearing and speech-impaired citizens can talk to and be answered by their Government officials, including Members of Congress.

When we approved those bills, we stated that they represented the beginning of the subcommittee's work and not an end. Today we consider a bill which in part represents the logical extension of our efforts, the "Americans with Disabilities Act."

The purpose of the telecommunications title or section of the bill is to extend a public TDD relay network throughout the United States. This is a worthy and laudable goal, that will ensure that the full benefits of the telephone network are shared equally by all of our citizens.

I don't believe those who suggest that a national relay system won't be cost effective because most of the TDD goals made now are local. It sounds somewhat like the old saying, "You can't miss what you never had."

This situation is certainly an exception. There isn't an interstate TDD relay system now, so it is nearly impossible to make those kinds of calls. I am sure that when the interstate relay system is in effect it will be used more heavily than anyone ever imagined.

Telephone usage continues to increase dramatically every year. It is illogical to assume that one significant part of our population won't choose to take advantage of our telephone network if given the opportunity.

The goals of the "Americans with Disabilities Act" are certainly ones that all members of this subcommittee share. Of course, we must not only agree on the goals, but we must also agree on how telephone companies must reach those goals, and we must expedite the passage of this legislation. Thank you, Mr. Chairman. I yield back the balance of my time.

[Testimony resumes on p. 16.]

101st CONGRESS
1st Session

H. R. 2273

To establish a clear and comprehensive prohibition of discrimination on the basis of disability.

IN THE HOUSE OF REPRESENTATIVES

May 9, 1989

Mr. Coelho (for himself, Mr. Fish, Mr. Hawkins, Mr. Conte, Mr. Owens of New York, Mr. Ackerman, Mr. Atkins, Mr. Beilenson, Mr. Bennett, Mr. Borski, Mr. Bosco, Mrs. Boxer, Mr. Campbell of California, Mr. Cardin, Mr. Clay, Mr. Crockett, Mr. de Lugo, Mr. Donnelly, Mr. Dwyer of New Jersey, Mr. Dymally, Mr. Edwards of California, Mr. Fazio, Mr. Feighan, Mr. Frank, Mr. Frost, Mr. Fuster, Mr. Gejdenson, Mr. Gordon, Mr. Hayes of Illinois, Mr. Hoyer, Mr. Hutto, Mr. Jacobs, Mr. Jontz, Mr. Kastenmeier, Mr. Kleczka, Mr. Levin of Michigan, Mr. Lewis of Georgia, Mr. Manton, Mr. Matsui, Mr. McCloskey, Mr. McDermott, Mr. McHugh, Mr. Mfume, Mr. Miller of California, Mr. Mineta, Mrs. Morella, Mr. Oberstar, Mr. Pallone, Ms. Pelosi, Mr. Richardson, Mr. Rowland of Connecticut, Ms. Schneider, Mr. Shays, Mr. Smith of Vermont, Mr. Solarz, Mr. Studds, Mr. Traxler, Mr. Udall, Mr. Vento, Mr. Waxman, Mr. Weiss, Mr. Wise, Mr. Wolpe, Mr. Florio, Mr. Williams, Mr. Roybal, Mr. Morrison of Connecticut, Mr. Brown of California, Mr. Dellums, Mr. Sabo, Mr. Espy, Mr. Dixon, Mr. Miller of Washington, Mr. Young of Alaska, Mr. Foglietta, Mr. Rangel, Mr. Garcia, Mrs. Saiki, Mr. Martinez, Mr. Mavroules, Mr. Conyers, Mr. Markey, Mr. Visclosky, Mr. Kildee, and Mrs. Collins) introduced the following bill; which was referred jointly to the Committees on Education and Labor, Energy and Commerce, Public Works and Transportation, and the Judiciary

---

A BILL

To establish a clear and comprehensive prohibition of discrimination on the basis of disability.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the "Americans with Disabilities Act of 1989".

(b) TABLE OF CONTENTS.—The table of contents is as follows:

Sec. 1. Short title; table of contents.
Sec. 2. Findings and purposes.
Sec. 3. Definitions.

TITLE I—GENERAL PROHIBITION AGAINST DISCRIMINATION

Sec. 101. Forms of discrimination prohibited.

TITLE II—EMPLOYMENT

Sec. 201. Definitions.
Sec. 202. Discrimination.
Sec. 203. Posting notices.
Sec. 204. Regulations.
Sec. 205. Enforcement.

TITLE III—PUBLIC SERVICES

Sec. 301. Definition of qualified individual with a disability.
Sec. 302. Discrimination.
Sec. 303. Actions applicable to public transportation considered discriminatory.
Sec. 304. Regulations.
Sec. 305. Enforcement.

TITLE IV—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

Sec. 401. Definitions.
Sec. 402. Prohibition of discrimination by public accommodations.
Sec. 403. Prohibition of discrimination in public transportation services provided by private entities.
Sec. 404. Regulations.
Sec. 405. Enforcement.

TITLE V—TELECOMMUNICATIONS RELAY SERVICES

Sec. 501. Definitions.
Sec. 502. Telecommunications relay services.
Sec. 503. Regulations.
Sec. 504. Enforcement.

TITLE VI—MISCELLANEOUS PROVISIONS

Sec. 601. Construction.
Sec. 602. Prohibition against retaliation.
Sec. 603. State immunity.
Sec. 604. Regulations by the Architectural and Transportation Barriers Compliance Board.
Sec. 605. Attorney's fees.
Sec. 606. Effective date.

SEC. 2. FINDINGS AND PURPOSES.

(a) FINDINGS.—Congress finds that—

(1) some 43,000,000 Americans have one or more physical or mental disabilities, and this number is increasing as the population as a whole is growing older;

(2) historically, society has tended to isolate and segregate individuals with disabilities, and, despite some improvements, such forms of discrimination against individuals with disabilities continue to be a serious and pervasive social problem;

(3) discrimination against individuals with disabilities persists in such critical areas as employment, housing, public accommodations, education, transportation, communication, recreation, institutionalization, health services, voting, and access to public services;

(4) unlike individuals who have experienced discrimination on the basis of race, sex, national origin, religion, or age, individuals who have experienced discrimination on the basis of disability have often had no legal recourse to redress such discrimination;

(5) individuals with disabilities continually encounter various forms of discrimination, including outright intentional exclusion, the discriminatory effects of architectural, transportation, and communication barriers, overprotective rules and policies, failure to make modifications to existing facilities and practices, exclusionary qualification standards and criteria, segregation, and relegation to lesser services, programs, activities, benefits, jobs, or other opportunities;

(6) census data, national polls, and other studies have documented that people with disabilities, as a group, occupy an inferior status in our society, and are severely disadvantaged socially, vocationally, economically, and educationally;

(7) individuals with disabilities are a discrete and insular minority who have been faced with restrictions and limitations, subjected to a history of purposeful unequal treatment, and relegated to a position of political powerlessness in our society, based on characteristics that are beyond the control of such individuals and resulting from stereotypic assumptions not truly indicative of the individual ability of such individuals to participate in, and contribute to, society;

(8) the Nation's proper goals regarding individuals with disabilities are to assure equality of opportunity,

full participation, independent living, and economic self-sufficiency for such individuals; and

(9) the continuing existence of unfair and unnecessary discrimination and prejudice denies people with disabilities the opportunity to compete on an equal basis and to pursue those opportunities for which our free society is justifiably famous, and costs the United State billions of dollars in unnecessary expenses resulting from dependency and nonproductivity.

(b) PURPOSE.—It is the purpose of this Act—

(1) to provide a clear and comprehensive National mandate for the elimination of discrimination against individuals with disabilities;

(2) to provide clear, strong, consistent, enforceable standards addressing discrimination against individuals with disabilities;

(3) to ensure that the Federal Government plays a central role in enforcing the standards established in this Act on behalf of individuals with disabilities; and

(4) to invoke the sweep of congressional authority, including its power to enforce the fourteenth amendment and to regulate commerce in order to address the major areas of discrimination faced day-to-day by people with disabilities.

SEC. 3. DEFINITIONS.

As used in this Act:

(1) AUXILIARY AIDS AND SERVICES.—The term "auxiliary aids and services" shall include—

(A) qualified interpreters or other effective methods of making aurally delivered materials available to individuals with hearing impairments;

(B) qualified readers, taped texts, or other effective methods of making visually delivered materials available to individuals with visual impairments;

(C) acquisition or modification of equipment or devices; and

(D) other similar services and actions.

(2) DISABILITY.—The term "disability" means, with respect to an individual—

(A) a physical or mental impairment that substantially limits one or more of the major life activities of such individual;

(B) a record of such an impairment; or

(C) being regarded as having such an impairment.

(3) REASONABLE ACCOMMODATION.—The term "reasonable accommodation" shall include—

(A) making existing facilities used by employees readily accessible to and usable by individuals with disabilities; and

(B) job restructuring, part-time or modified work schedules, reassignment, acquisition or modification of equipment or devices, appropriate adjustment or modifications of examinations and training materials, adoption or modification of procedures or protocols, the provision of qualified readers or interpreters, and other similar accommodations.

(4) STATE.—The term "State" means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, the Canal Zone, the Trust Territory of the Pacific Islands, and the Commonwealth of the Northern Mariana Islands.

* * * * * * *

TITLE V—TELECOMMUNICATIONS RELAY SERVICES

SEC. 501. DEFINITIONS.

As used in this title:

(1) COMMISSION.—The term "Commission" means the Federal Communications Commission.

(2) TELECOMMUNICATIONS RELAY SERVICES.—The term "telecommunications relay services" means services that enable simultaneous communication to take place between individuals who use TDDs or other nonvoice terminal devices and individuals who do not use such devices.

(3) TDD.—The term "TDD" means a Telecommunication Device for the Deaf, a machine that employs graphic communications in the transmission of

coded signals through the nationwide telecommunications system.

SEC. 502. TELECOMMUNICATIONS RELAY SERVICES.

(a) GENERAL RULE.—It shall be considered discrimination for purposes of this Act for any common carrier, as defined in section 3(h) of the Communications Act of 1934 (47 U.S.C. 153(h)), that offers telephone services to the general public, to fail to provide, not later than 1 year after the date of enactment of this Act, interstate or intrastate telecommunication relay services so that such services provide individuals who use nonvoice terminal devices because of disabilities with opportunities for communications that are equal to those provided to their customers who are able to use voice telephone services, except that it shall not be considered discrimination for such a common carrier to fail to provide such services in any State to which subsection (b) applies if such services are provided under subsection (b).

(b) STATE DISCRIMINATION.—It shall be considered discrimination by a State, that designates an entity to provide interstate or intrastate telecommunication relay services to individuals throughout the entire State in a manner consistent with regulations issued by the Commission, for purposes of this Act, for such State, through the designated entity, to fail to provide, not later than 1 year after the date of enactment of this Act, interstate or intrastate telecommunication relay services so that such services provide individuals who use nonvoice terminal devices because of disabilities with opportunities for communications that are equal to those provided to their customers who are able to use voice telephone services.

(c) CONSTRUCTION.—Nothing in this title shall be construed to discourage or impair the development of improved or future technology designed to improve access to telecommunications services for individuals with disabilities.

SEC. 503. REGULATIONS.

Not later than 180 days after the date of enactment of this Act, the Commission shall issue regulations to carry out this title, and such regulations shall establish minimum standards and guidelines for telecommunications relay services.

SEC. 504. ENFORCEMENT.

(a) CIVIL ACTIONS.—Section 802(i), 813, and 814 (a) and (d) of the Fair Housing Act (42 U.S.C. 3602(i), 3613, and 3614 (a) and (d)) shall be available with respect to any aggrieved individual, except that—

(1) any reference to a discriminatory housing practice or breach of a conciliation agreement shall be considered to be a reference to a practice that is discriminatory under this title concerning the provision of an appropriate interstate or intrastate telecommunication relay service; and

(2) subparagraph (B) of paragraph (1) and paragraphs (2) and (3) of subsection (a) and subsection (d) of section 813 shall not apply.

(b) ADMINISTRATIVE ENFORCEMENT.—

(1) IN GENERAL.—The Commission shall enforce the provisions of this title.

(2) APPLICABLE ENFORCEMENT PROVISIONS.—The remedies, procedures, and rights set forth in sections 206, 207, 208, and 209 of the Communications Act of 1934 (47 U.S.C. 206, 207, 208, and 209) and in title IV of the Communications Act of 1934 (47 U.S.C. 401 et seq.) shall apply with respect to the enforcement of this title, except that nothing in this subsection shall be construed to limit or restrict in any manner the remedies, procedures, or rights set forth in subsection (a).

(3) CEASE AND DESIST ORDERS.—Whenever, after full opportunity for hearing, on a complaint or under an order for investigation and hearing made by the Commission on the initiative of the Commission, the Commission shall be of the opinion that any carrier, or any State as described in section 502(b), is or will be in violation of this title or of any regulation issued under this title, the Commission shall—

(A) order that the carrier or State cease and desist from such violation to the extent that the Commission finds that such violation exists or will exist; and

(B) take other actions as it finds appropriate and necessary.

(4) PENALTIES.—

(A) IN GENERAL.—Any carrier or State to which section 502(b) applies that knowingly fails or neglects to comply with this title or of any regulation or order made by the Commission in carrying out this title shall forfeit to the United States the sum of $10,000 for each such offense.

(B) SEPARATE OFFENSES.—Each distinct violation of the provisions of this title shall be a separate offense under subparagraph (A). In case of a continuing violation, each day shall be considered a separate offense.

(C) RECOVERING FORFEITURES.—Such forfeitures shall be payable and recoverable in the same manner as prescribed in section 504 of the Communications Act of 1934 (47 U.S.C. 504).

Mr. **Markey**. The gentleman's time has expired. I note the arrival of the gentleman from Maryland, Mr. Hoyer; and does the gentleman from Maryland wish to make any comments? I know that he is very busy this morning doing the—would you like to sit down there, or come up here, or——

Mr. **Hoyer**. I will stand. I apologize——

Mr. **Markey**. As the Chairman of the Democratic Caucus, I have to respect that.

STATEMENT OF HON. STENY H. HOYER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MARYLAND

Mr. **Hoyer**. I apologize for my lateness. As you know, Mr. Chairman, I am chairing the Democratic Caucus now on the Capital Gains issue, but I wanted to be here, and I thank you for inviting me to join you at this mornings hearing on the telecommunications provisions of the "Americans with Disabilities Act."

Although I can only stay briefly because of that caucus, I would like to commend you, Chairman Markey, and Chairman Dingell, and the minority members, Mr. Rinaldo, for moving ahead with this subcommittee hearing.

As you know, the "Americans with Disabilities Act" would provide civil rights protection to 45 million disabled Americans, by prohibiting discrimination against individuals with disabilities to employment, and public service, and public accommodations, transportation, and telecommunications.

Title V of the legislation, which deals with telecommunications, is a key provision of the legislation which will finally conquer a major communication barrier between hearing and hearing disabled Americans.

There was a glaring need, Mr. Chairman, to establish relay systems which will enable the 23 million hearing and speech-impaired Americans to make and receive calls from individuals who use voice telephones.

Title V will require that the telephone companies provide hearing and speech-impaired individuals with the same level of service as provided to all other Americans. Members of Congress, like most Americans, rely on the phone perhaps as much as any other device to complete so much of our business.

It is hard to imagine not being able to pick up the phone to reason with colleagues, talk with a daughter who lives in Arizona as I have one, or arrange a dinner with my wife. Yet, that inability is a daily fact of life for hearing-impaired Americans.

The committee is fortunate today, Mr. Chairman, to have someone who can address these issues more eloquently and more knowledgeably than I. Last year, the world watched in wonder and in growing understanding as the students at Gallaudet University brought the need for change into America's living rooms.

I am pleased to have the opportunity and the privilege to introduce a good friend of mine, a leading educator in America, and one of America's most articulate and eloquent, and compelling speakers for those who have challenges that perhaps some of the rest of us do not have, and I speak, of course, of the first deaf president of Gallaudet University, my friend, Dr. King Jordan.

I urge the members of the committee to heed his words, for he speaks not only for the hearing impaired, but for millions, and millions, and millions of Americans who daily see themselves discriminated against, in large part because of insensitivity.

Perhaps in a smaller part, and we hope much lesser part, because of indifference, Dr. Jordan's appointment has shown millions of disabled Americans that the opportunities that America offers are offered to them as well.

The enactment of the "Americans with Disabilities Act" will ensure that their dreams of opportunity and equal access become a reality.

Mr. Chairman, this is the major civil rights bill of this Congress. It ought to be passed, and it ought to be passed quickly. I again applaud you, Mr. Chairman, for scheduling these early hearings, and for your strong support of this legislation, and I appreciate the opportunity to be here with you, and with the members of your subcommittee, and my friend, Dr. Jordan.

Mr. **Markey**. Thank you very much, Steny, for coming over, and I know you have a heavy schedule with the capital gains question and all, and the Democratic Party, and I would just like to show you what this subcommittee is going to be working on.

This is called a telecommunications device for some, and what it will do if we can universalize its service across the country, because it is basically a typewriter, and what it will do is that it will allow people who are communications-impaired to be able to type in their message.

The relay operator then for the telephone company will then have a printout of the message, which they can then read to the person who the communications-impaired person is trying to communicate with.

And then in turn, the message which the person who is being called or wants to call a communications-impaired person, can then be typed back through the communications relay person at the telephone company, and read back, or type back, in the instance of a message going back to a communications-impaired person.

And this is something which we—I believe—can include as part of this comprehensive package which we hope to go through, break down enormous barriers which have been existent in communications and a world that is just so dependent now on communications and the telephone on relaying messages.

And this is what—this is at the heart of what the legislation that we are doing right now.

Mr. **Hoyer**. Mr. Chairman, I am glad that you brought that to our attention, because as I said in my opening remarks I think that there has been an insensitivity, and there is really a lot of technological capability available to overcome these barriers that exist.

And, very frankly, I failed to mention, but want to mention that this legislation, as you know, is strongly supported by the President. President Bush has endorsed this legislation, and is working this legislation.

I have met with representatives of the White House yesterday, and they again reiterated—Dr. Roper—the strong support of the President, and of the White House for this legislation, and their hopes that it will see early passage.

Because they, like you, know of the importance of overcoming these barriers, not only in terms of the appropriateness of reaching out to Americans who have been discriminated against, as we are doing, whether they be black, or if they are women, or other minority groups.

This is a group that is being equally discriminated against, and it is costing America billions of dollars annually to effect that discrimination. To the extent that they are shut out of the workplace, and shut out of the ability to communicate, and shut out of the ability to get from place to place, America loses, and not just the individuals.

It is certainly those individuals that you want to protect, but it will be to the great benefit of all of the advantaged Americans as well. So, I thank the chairman for this ability to be with you.

Mr. MARKEY. Thank you very much, Steny. So, now we will turn to our panel, which consists of Dr. I. King Jordan, President of Gallaudet University, the Honorable Gail Garfield Schwartz, who is the Deputy Chairwoman of the New York Public Service Commission; Ms. Karen Strauss, who is from the National Center for Law and Deaf, at Gallaudet University; Mr. Merrill Tutton, who is the vice president of Consumer Services, AT&T; and Ms. Linda Hershman, general manager, Government Relations, of the United States Telephone Association.

Dr. Jordan, it is an honor to have here this morning, and we welcome your testimony.

STATEMENTS OF I. KING JORDAN, PRESIDENT, GALLAUDET UNIVERSITY; GAIL GARFIELD SCHWARTZ, DEPUTY CHAIRMAN, NEW YORK STATE PUBLIC SERVICE COMMISSION; MERRILL R. TUTTON, VICE PRESIDENT, CONSUMER SERVICES, AMERICAN TELEPHONE AND TELEGRAPH CO.; KAREN PELTZ STRAUSS, ATTORNEY, NATIONAL CENTER FOR LAW AND THE DEAF, GALLAUDET UNIVERSITY; AND LINDA D. HERSHMAN, GENERAL MANAGER, GOVERNMENT RELATIONS, SOUTHERN NEW ENGLAND TELEPHONE CO., ON BEHALF OF UNITED STATES TELEPHONE ASSOCIATION

Mr. JORDAN. Good morning, Mr. Chairman. Thank you very much, Mr. Chairman, and Mr. Moorhead, it is a pleasure to be here this morning to testify before your subcommittee. I appreciate the opportunity, and I thank Congressman Hoyer for his very kind remarks on my behalf, and on behalf of this bill.

I am very happy to be able to testify for the Americans with Disabilities Act, and, in particular, for Title IV of that Act, requiring telecommunications relay services for the deaf, and speech-impaired.

This is landmark legislation for disabled people, and it is long, long overdue. In fact, it is no less than our emancipation proclamation to lead independent lives in all aspects of America.

Congress mandated in 1934, as you know, that communication services be made available as far as possible to all the people of the United States. But today, 55 years later, more than 55 years later, I and 24 other—24 million other Americans, deaf, hearing impaired, and nearly 3 million speech-impaired Americans, still don't have full access to telephone service.

As a deaf person, I know very well the frustrations and inconveniences of not being able to use the telephone. The simplest task often becomes a major burden when we don't have access to the telephone.

Easy examples, like when a sick person needs to call a doctor, or a worker who has to inform his boss that he can't show up for work that day, or a homeowner who needs a plumber fast. Any example like this that is routine, simple, and something you don't think twice about, becomes very, very difficult when you don't have access to the telephone.

What should take no more than 5 minutes, often becomes an hour's drive around the city to get the same services. Try to imagine yourself without the use of a telephone for a day for the tasks that you have to do. Just imagine showing up in your office and not using a telephone all day. That is what I confront every day.

I know how important the telephone is, and in fact, it is so important to me that I have installed a TDD in my car. I actually may have the only TDD in this country that is installed in a car, but with my schedule the way it is, when I am held up at one meeting and will be late for another, I need to use that telephone, and I use the telephone in my car regularly.

But I have a very severe limitation on that telephone. I can only call other people with TDD's. I can't call someone who doesn't have a TDD, and that is not acceptable to me. It is not acceptable to 24 million other hearing-impaired Americans.

Last year, I testified on the Telecommunications Accessibility Enhancement Act of 1988. That Act set up a wonderful national relay service, and it is really the first step in our goal to full telephone access. However, it is just that, a first step.

The ADA will complete the task at hand. By requiring a national relay system, it will help deaf and speech-impaired people achieve independence in their lives.

The Senate by floor amendment has given telephone companies or the Federal Communications Commission a 1 year waiver to any company that could show undue burden to meet the 3-year deadline. The deadline was 2 years before it was amended to 3 years on the Senate floor.

This means that we may have to wait for up to 4 years from the enactment of the Act to benefit from the law's telephone relay services. I strongly believe that this 1 year waiver is not necessary.

We have waited more than 55 years already, and the technology is there, and there is no reason to have to wait 1 more year after that. In your remarks this morning your talked about communication impaired individuals, and related to telecommunications we are communication impaired, but there is no reason for us to be communication impaired.

We have the technology, and all we need is this law to ensure that it happens. Thank you very much.

Mr. MARKEY. Thank you very much, Dr. Jordan. I will recognize Gail Garfield Schwartz, the Deputy Chairwoman of the New York Public Service Commission.

STATEMENT OF GAIL GARFIELD SCHWARTZ

Ms. SCHWARTZ. Thank you, Mr. Chairman. Mr. Chairman, and distinguished members of the committee, I am very honored to be here today to testify on this very important piece of legislation.

As you know, New York has been working on a deaf relay hearing-impaired and speech-impaired relay system for about 3 years now, and although our experience is recent, it has been very successful, and we are eager to see it duplicated across the Nation.

I hardily commend your effort here, and that of your counterparts in the Senate, because until now the main problem with the New York plan is that hearing and speech-impaired persons have not been able to communicate with nonhearing and speech-impaired persons nationwide.

Let me just say a couple of words about the New York experience, so that I can move directly to comments on the proposed legislation. Since its inauguration in December 1988, the usage of our system has increased steadily.

As an indication the substantial increase in demand for services, the number of communication assistants, that is, the personnel who the chairman mentioned, who actually handle the relay calls in the statewide Relay System Center, has more than doubled, from 58 at the beginning, to over 132 presently.

We are gratified by the increasing use made of the system, and attribute the success to the concerted efforts of many parties, including our own staff at the New York Public Service Commission, members of the hearing-impaired and speech-impaired community themselves, AT&T, and the local exchange carriers in the State.

A very significant component of this joint effort has involved informing and educating both the hearing and speech-impaired and non-hearing and speech-impaired communities to the tremendous advantages and potential of the system. I believe that similar efforts would contribute greatly to the success of a nationwide system.

The operating parameters of New York's system have been good and also steadily improving. For example, the average percentage of calls answered over the first 6 months of this year was 93.7 percent, and by the end of June, the percentage of calls answered within 10 seconds, a very short time indeed, was nearly 86 percent.

It is testimony to the performance of the system that the majority of the few consumer complaints received, and I emphasize that they are few indeed, that we have received concerning the inability of the New York system to complete interstate calls.

I believe our success also confirms the soundness of some fundamental decisions made by the New York Public Service Commission concerning operations which are relevant to this proposed legislation. We determined that provision of this service is a basic service obligation of the local exchange carriers in the State. We also determined that the relay system should be operated by one entity with experience in telecommunications.

AT&T Communications of New York, is actually operating the system on behalf of all the local exchange carriers. The funding mechanism is a monthly surcharge on the bills of residence and business customers, although we do exempt Lifeline customers, that is, those customers who get special rates because of income based eligibility for them. This surcharge amounts to 11 or 12 cents, depending on the type of customer and location.

Now, moving directly to the legislation before you. I am sure that you all are aware that it does represent an extension of FCC jurisdiction over intrastate telecommunications services. Nowhere else, to my knowledge, is the FCC authorized to certify the manner in which intrastate communications services are provided. Regulation of the telecommunications industry historically has been exercised pursuant to a joint Federal and State framework, with regulators in each jurisdiction free to pursue their preferred regulatory approaches in their respective jurisdictions.

It is this framework that has allowed and encouraged States to serve as experimental laboratories for the development of new ideas, services, and technologies, and indeed, this is precisely what has happened in the case of relay services for the hearing and speech impaired.

California and New York were able to serve as laboratories for the development of the service; lessons learned in California, which started before New York, and elsewhere, were applied in New York, and with one exception, we have a phenomenally successful service today.

So, therefore, I can endorse the general approach taken in the legislation, because it will overcome the obstacle prevented by the one exception; the inability to complete interstate calls.

The approach, which is FCC certification of States that meet minimal standards, appears to be minimally intrusive as a means of making interstate relay services a reality, but I do have some concerns with the details of the certification process, and this is the meat of my comments today.

I believe the scope of the FCC's certification review is unnecessarily broad. That review should be limited explicitly to ensuring that relay systems developed in the various States and by the FCC are compatible, just as the various networks available across the country today to the non-impaired community are compatible.

The more detailed standard setting by the FCC called for in section 225(d) is unnecessary, at least insofar as it pertains to the intrastate portions of this service. The requirements specified here relate to matters traditionally regulated by the States, such as terms of access to the local network, operator practices, and so forth.

These are matters with which the States have tremendous experience and expertise. Therefore, aside from the compatibility issue, we believe that the criteria specified in this section should be limited to the interstate functions of a relay service over which the FCC must exercise primary jurisdiction.

Therefore, I would urge you to amend section 225(d) in two particular ways. In particular, section 225(d)(1)(D) specifies that users of relay services should not pay rates greater than those paid for functionally equivalent voice communication services.

It is important for States to have the option of providing these services at discounted rates to compensate for the generally longer transmission times involved in completing a relay-assisted call.

While the report language of the Senate Compromise Package indicates an intent to permit this pricing flexibility, some ambiguity remains, as well as ambiguity in the meaning of the term "functionally equivalent".

Therefore, I believe that this language should be clarified to ensure retention of States' ability to provide such discounts. In addition, section 225(d)(1)(E) should be modified I would propose to allow for justifiable restrictions on relay system calls.

For example, the exclusion of coin sent-paid calls to the system is necessitated by the technical inability to collect coins. Another instance where the service in New York cannot guarantee call completion is calls placed in a language other than English.

Such calls can be relayed only if there is an operator on duty who can speak and understand the other language that the caller wants to make the call in.

And, finally, calls to some information services cannot be successfully completed given the current state of technology. One example is the simultaneous conversation conducted on a group bridged line, which is popularly known as gab lines.

States' ability to make such judgments concerning allowable call restrictions should be preserved under the legislation. In sum, Mr. Chairman, I appreciate the opportunity to testify here today, and I again commend your effort, and I look forward to helping in any way that I can to shape a bill that will make interstate relay services a reality.

Mr. MARKEY. And we would like to work with you on that as well. Any questions? If not, our next witness will be Mr. Merrill Tutton, who is the vice president of Consumer Services of AT&T. Mr. Tutton.

STATEMENT OF MERRILL R. TUTTON

Mr. TUTTON. Thank you, Mr. Chairman. AT&T and myself appreciate very much the opportunity to present our comments on Title IV of the "Americans with Disabilities Act of 1989." AT&T supports very much the efforts to establish universal telecommunications rely service.

And we feel that Title IV provides a very unique opportunity to bring about a nationwide relay service that establishes a new communications structure for a whole segment of the population that has not existed before.

As you know, AT&T, through its Bell Laboratories and our manufacturing arm, has researched and developed new technologies and designed new products to serve the disabled persons for a long time. As well, AT&T has provided telecommunications services and products to those with hearing disabilities through Operator Services for the deaf, and our National Special Needs Center.

We have a fair amount of experience in this area. For that reason, I think we provide a very unique and a valuable perspective on the requirements for a successful relay system, because we have been at it.

We have learned a number of things over the past few years from operating relay systems in three different States. Two specific lessons that we have learned I would like to share with you that I think that have a valuable insight in shaping this bill.

First, the dual party relay benefits the entire community, and just not the speech and hearing impaired. Now, in recognition of these benefits, many States have structured the service so that users pay only the costs that otherwise would have been paid for the telephone call, but have spread the remaining costs over the entire population, recognizing that the entire population receives the benefit of this infrastructure and these people being able to communicate.

Second, States have placed the responsibility for the implementation and administration on a central agency, one entity that provides functions, such as selecting who the service provider ought to be, and collaborating on the development of outreach programs to market the service to the speech and hearing-impaired community, so that they understand what is available, and the education on how to use it.

As well as a very valuable aspect of managing the administration and the other financial tasks that go along with a successful operation.

Now, based on the lessons that we have learned and the experience that we have had over the years, as well as the three States that we are currently operating in, where we have been selected as the provider of the dual party relay—California, New York, and Alabama—and that we have been selected in the State of Illinois, and are currently in contract negotiations on how to make that exactly meet the needs of the citizens of Illinois, I strongly suggest that the ADA bill can be strengthened in two critical areas.

One, the bill places a direct obligation to provide the dual party relay on over the 1,500 carriers around the United States. Now, although Title IV recognizes the benefits of centralization, it does not specifically authorize nor direct the Federal Communications Commission to select individual service providers.

Now, we believe that unless the FCC is mandated to structure a nationwide system in the most efficient manner, there will result an unnecessary confusion, duplication of effort, cost inefficiency, and potentially incompatible systems. We think that is a severe problem.

Second, an area that needs to be strengthened is that the bill places restrictions on interstate funding that threaten the creation of a successful interstate relay service. Now, while preserving the State flexibility in funding the relay service, Title IV denies such flexibility to the FCC, by prohibiting the Commission from permitting carriers to: "Propose a fixed monthly charge on residential customers to cover the cost of providing interstate telecommunications service."

We believe that is a restriction that needs to be removed, and that the Federal Communications Commission should be given the flexibility to tailor the appropriate funding mechanism that puts the proper economic incentives to deliver the high quality service that I believe you all envision with this bill.

I summarize my recommendations by saying that, one, the FCC should have flexibility, similarly to what has been accorded the States to exercise its authority and to determine the appropriate funding vehicle, and this probably ought to be done in cooperation with the States, as was suggested by Commissioner Thorpe.

Proper planning should be similar to that which has been adopted in those States that have implemented successful relay services. We should take a lesson from those who have had success, and apply a broad based funding mechanism across the general population, recognizing that everyone receives a benefit.

And, last, the primary incentive for efficiency and innovation in the provision of the relay service is clearly a requirement that the service provider must satisfy the end user through some sort of central agency that is selecting and administrating the service, or administering the service so that the best possible service is provided to the users.

In closing, I want you to clearly know that AT&T supports very strongly the goal of a nationwide relay system, and wants to ensure that such a system will provide the quality service that the hearing and speech-impaired people expect and deserve. Thank you for the opportunity to make a comment.

STATEMENT OF MERRILL R. TUTTON, ON BEHALF OF AMERICAN TELEPHONE AND TELEGRAPH COMPANY

AT&T welcomes the opportunity to present these comments on Title IV of the "Americans with Disabilities Act of 1989." AT&T has a long history of providing services to persons with disabilities. As you may be aware, it was during his efforts to help people with hearing disabilities that Alexander Graham Bell invented the telephone in 1876. Over the years since then AT&T, through Bell Laboratories and our manufacturing arm, has researched and developed new technologies and designed many new products to serve disabled persons. In addition, AT&T has provided telecommunications services and products to those with hearing disabilities through our Operator Services for the Deaf and our National Special Needs Center, including Telecommunication Devices for the Deaf ("TDDs").

AT&T strongly supports efforts to establish universal telecommunications relay services, and has filed comments supporting such a system with the Senate Subcommittee on the Handicapped and the FCC. We believe Title IV presents a unique opportunity to ensure an efficient, innovative telecommunications relay system that will truly meet the needs and expectations of those with hearing disabilities. Because of our experience in providing relay service at the State level, we believe we provide a unique and valuable perspective on the requirements of a successful relay system.

AT&T currently provides state-wide telecommunications relay services in three States—Alabama, California and New York. In California alone, AT&T regularly processes more than 250,000 calls each month. AT&T also has been awarded via competitive bid the contract to provide relay service in Illinois, and is in the process of negotiating a contract there. In each of these States, we have observed certain characteristics that are critical to the successful implementation of relay service.

First, these four States have recognized that provision of relay service benefits the entire community, and not just the hearing or speech impaired. Relay service permits those without disabilities to communicate with those who heretofore may have been inaccessible as a practical matter via the telephone. It permits businesses to market more easily to those with disabilities. It makes available to the hearing and speech impaired a greater array of products and services so they may have greater control over their lives. Relay service also offers disabled persons employment opportunities that would not be available without telephone access to the hearing population.

In recognition of these benefits to the community at large, all States providing relay service have structured the service so that the relay service user pays only the costs he or she would otherwise have incurred for the telephone call. The States have spread the remaining costs of the service across the entire population of the State. Alabama, for example, funds relay service via a 20cts per month charge included in the local telephone rate for basic exchange service. California imposes a surcharge (presently 0.3 percent of intrastate telephone charges). Illinois will fund its relay service by a 30 per month surcharge per local telephone line. And in New

York, relay service costs are spread across the community by allowing the local exchanges companies ("LECs") to recover such costs in their non-competitive revenue requirements.

Other States funding relay service using a monthly surcharge on local exchange lines include: Arizona (6cts); Louisiana (5cts); Minnesota (10cts); Oklahoma (5cts); Oregon (10cts); South Dakota (10cts); Utah (10cts); and Washington (10cts). Recently enacted legislation calls for funding of State relay service via a monthly surcharge in Colorado (10cts), Montana (10cts), and North Carolina (unspecified). Other States that have proposed funding by use of a surcharge are: Georgia (unspecified); Michigan (10cts); and Nebraska (10cts). In several States, these surcharges also fund TDD distribution programs.

Second, these States have placed responsibility for relay service implementation and administration on a central agency or entity. In California, the Deaf Equipment Acquisition Fund Trust (the "D.E.A.F. Trust") and its administration committee are responsible for administering the service, and are in the process of negotiating a contract with AT&T. In Illinois, the Illinois Telecommunications Access for the Deaf and Severely Hearing-Impaired Corporation, a not-for-profit corporation, issued a Request for Proposal, evaluated AT&T's response, recommended awarding of the contract to AT&T, and currently is negotiating a contract with AT&T. In Alabama, a Fund Administration Committee authorized by the Alabama Public Service Commission administers the relay system and the funds received as a result of the 20cts monthly charge. Even in New York, where the Public Service Commission requires each LEC to provide relay service, the LECs and the Commission recognized the need to centralize the provision of such service and, at the Commission's urging, each LEC contracted with AT&T to provide the service.

Based on our experience with successful State relay service, we believe that an efficient, innovative, nationwide relay service should be based on funding by the general public and should be implemented and administered by a central organization. This organization should select a provider or providers for the service via competitive bidding so that end users can realize the efficiencies and innovation which competition promotes. Title IV reflects Congressional recognition of the importance of these two requirements, broad-based funding and centralized implementation and standard setting, by vesting in the FCC the responsibility to set standards for a nationwide relay service and giving the States the discretion to continue spreading the costs of State relay service across the entire community. Yet, in two critical areas, Title IV contains shortcomings that could very well destroy its promise of effective access to telecommunications for disabled Americans.

First, while providing the FCC the authority and responsibility to establish "functional requirements" and "standards" for the provision of relay services by common carriers, the bill does not explicitly direct the Commission to select specific relay service providers via a competitive process. Instead, the bill places a direct obligation on over 1,500 intrastate and interstate common carriers to provide relay service. Although Title IV recognizes the benefits of centralization by providing that such carriers can provide the required services "through designees, or in concert with other carriers," it does not specifically authorize nor direct the FCC to select individual service providers. We believe that unless the Commission is mandated to structure a nationwide system in the most efficient manner and select the service providers necessary to provide such service, unnecessary confusion, duplication of effort, inefficiency, and potentially incompatible systems will result.

In this regard, we note that the FCC recently has proposed centralized administration of interstate relay service with the National Exchange Carrier Association ("NECA") administering the funding and operation of the system, including the selection of service providers via competitive bidding. CC Docket No. 87-124,, Order Completing Inquiry and Further Notice of Proposed Rulemaking, July 21, 1989. While AT&T has serious reservations regarding this proposal, especially the FCC's proposed funding vehicles, the Commission has properly recognized the importance of centralized administration of any relay system.

Second, the restrictions placed on interstate funding threaten the creation of a successful interstate relay service. Title IV implicitly recognizes that those States that have successfully implemented relay service have done so by spreading the cost of such service across the entire community, either by a monthly surcharge on telephone bills or by recovery in rates for non-competitive LEC services. Thus, Title IV provides for certification by the FCC of State systems that meet minimum service standards, and specifically provides that the Commission "shall not refuse to certify a State plan based solely on the method such State will implement for funding intrastate telecommunication relay services." Yet, while preserving State flexibility in funding relay service, Title IV denies such flexibility to the FCC by prohibiting the Commission from permitting carriers "to impose a fixed monthly charge on residential customers to recover the costs of providing interstate telecommunications relay services." We believe this restriction on FCC flexibility is ill-advised.

We believe that the primary incentive for efficiency and innovation in the provision of relay service is the requirement that the service provider satisfy the end user through a central agency implementing and administering the service—both initially through a competitive bidding process and periodically as contracts expire and are re-bid, that the best relay service possible is being provided consistent with the funding that is available. If, however, each interstate carrier is required to provide relay service and is unable, as a practical matter, to recover its full cost of providing the service, economic incentives will pressure the carrier to shift its focus from one of providing quality service to one of providing the minimum service possible in order to cut costs.

As the subcommittee is aware, the long distance business today is highly competitive. Any carrier that undertook the additional costs of providing relay service in such a market would find its self at a cost disadvantage with its competitors. Moreover, many of AT&T's competitors have chosen not to market their services to those they deem less profitable. As a result, about 90 percent of zero and low long distance users are AT&T customers, because AT&T's competitors do not promote their services to such customers. If these carriers cannot fully recover the costs of mandated relay service, they will have every incentive to discourage disabled persons from using their networks, thereby shifting such costs to AT&T, the carrier which is committed to serving all Americans.

It is unrealistic to assume that interstate carriers can recover the cost of providing relay service in their charges for other competitive services. The competition for all interstate services will not permit a carrier to increase arbitrarily the prices of its services. Moreover, because AT&T has chosen to serve all telephone users and serves a disproportionate share of disabled customers, AT&T would incur the overwhelming proportion of such costs.

We believe the proper funding approach should be similar to that adopted in those States that have implemented successful relay services, i.e., broad-based funding across the general population. Such funding ensures that those that benefit from the implementation of telecommunications relay service, e.g., all potential users of telephone service, share in its costs, and that no one party is forced to shoulder a disproportionate burden.

For these reasons, AT&T recommends that the FCC be accorded flexibility similar to that accorded the States to exercise its authority and determine the appropriate funding vehicle for the interstate portion of a nationwide relay system. Such flexibility was recommended by Attorney General Richard Thornburgh when he testified before the Senate Committee on Labor and Human Resources:

> Establishment of a telecommunications relay service is clearly a vital step toward full integration of deaf persons into the mainstream. Legislation addressing this issue, though, should take into account the ongoing Federal Communications Commission inquiry mandated by the Telecommunications Accessibility Act, and preserve the degree of freedom for the FCC to use its expertise in determining which specific requirements will result in the most efficient and cost-effective system. (Testimony of June 22, 1989 (emphasis added).)

The FCC has pending a rulemaking proceeding in which it is evaluating methods of providing and funding telecommunications relay services. AT&T agrees with the Attorney General that the Commission should be granted the maximum degree of freedom to design, fund, and implement an efficient, cost-effective and innovative relay system, and recommends that language restricting such freedom be removed from Title IV.

In closing, AT&T strongly supports the goal of a nationwide relay system, and wants to ensure that such a system will provide the quality service which the hearing and speech impaired expect and deserve.

Mr. MARKEY. Thank you. Thank you very much. Our next witness is Ms. Karen Strauss, here from the National Center for Law and the Deaf.

STATEMENT OF KAREN PELTZ STRAUSS

Ms. STRAUSS. Thank you, Mr. Chairman. The National Center for Law and the Deaf is a public service of Gallaudet University. We have provided legal services for deaf and hearing-impaired people throughout the country since 1975.

Earlier, Dr. Jordan pointed out the critical need for nationwide relay services. Without relay services, deaf and speech-impaired people have been forced to depend on others in order to make simple telephone calls that you and I consider a part—a regular part of our daily lives.

No close telephone access for these individuals can be so burdensome, and lack of such access as caused these individuals social and economic isolation from their community.

The need for federally mandated relay services becomes clear when one takes a look at the State relay programs that now exist. There was a lot mentioned today about the State programs, and I would like to show you that most of these programs are understaffed and underfunded.

As a consequence, many of the programs impose severe restrictions on telephone use by their users. To date, there are only 17 States, far fewer than half of all States, with formal relay programs are actually up and running.

Relay systems are hopefully scheduled to begin in approximately 10 more States within the next few years; and still other States, including Florida, Michigan, Rhode Island, are considering legislative or regulatory measures to develop statewide relay services.

Unfortunately, as I said, most of the State programs that exist fall short of meeting the basic telephone needs of their hearing-impaired residents. Many of the State programs, including New York, California, Illinois, and Louisiana, and Alabama, do not allow interstate calls through relays.

One can imagine the hardship that this imposes on deaf people. Many other relay programs have imposed restrictions on the number of lanes and types of calls that can be relayed in their States.

For example, the relay program in Arkansas limits users to a period of 15 minutes per call, and disallows personal telephone calls. In Kansas, calls are only accepted for relaying Monday through Friday, from 8 a.m. to 5 p.m., and are not accepted at all on State holidays.

Massachusetts places a 10 minute limit on personal calls, and a 20 minute limit on business calls; and New Hampshire limits the number of calls that may be relayed by any one person to five per day, with a limit of 15 minutes per call.

Even those relay programs that don't impose specific restrictions on their residents, suffer from delays and blockage rates far in excess of that to which voice users are accustomed.

In many of these States, it is not uncommon for a relay user to call the relay line and either get a busy signal, or have a long delay before they can actually make a call.

Other sections of the ADA will not mean very much for deaf people if they do not have equal access to the telephone. For example, Title I proposes to prohibit discrimination on the basis of employment. This section offers hope to deaf people that they can one day receive equal opportunity in the business world.

Yet, this promise of equality is meaningless for a deaf entrepreneur who is told that he can only use the telephone a few times a day during certain hours of the day. The economic hardship that such an individual would face would put into serious question his ability to run a business as successfully as his hearing colleague.

Another section of the ADA promises equality in a provision of State and local government services, yet we all know what it is like to try and call a local city office and be put on hold for an indeterminate amount of time.

What happens when the relay operator tells the deaf relay user that they must hang up, because their 15 minutes is up. In effect, that individual has been cut off from that city service that is otherwise guaranteed by the ADA.

The same situation could occur when there are times to purchase theatre tickets for a desirable showing. A person can call up, and be put on hold, and be told by the relay operator to hang up before she has gotten any tickets

Yet, the ADA again promises equality of access to theatres and other public accommodations. Despite the many shortcomings of all of these State programs, there has been an overwhelming response to the relay services where they can be available.

As you pointed out earlier, the numbers in California are approaching 245,000 calls per month. In New York, the figures are projected at 100,000 calls per month, and in Minnesota, 20,000 to 30,000 calls per month are typically relayed.

The relay section of the ADA will ensure that nationwide relay services truly provide equal access to the telephone network. I disagree in part with some statements made earlier by Gail Garfield Schwartz that FCC standards are not necessary.

I think that the past experience that we have seen with State programs, showing how inadequate they have been, demonstrate the need for detailed standards to ensure minimum guidelines for all relay systems.

Under the legislation, relay services would be made available 24 hours a day, 7 days a week, without any restriction on the type, length, or number of calls made by any relay users.

As I said, the FCC will issue minimum standards and guidelines under the ADA, and it is critical that deaf and speech-impaired relay users partake in this decisionmaking process.

At the same time that the ADA mandates these minimum requirements, the act gives telephone companies a great deal of flexibility in determining how to establish and fund their systems. In addition, States that already have systems or plans to begin a system in the near future, can continue to operate and govern those systems as long as they meet minimum FCC guidelines and standards.

In conclusion, this is not the first occasion on which this subcommittee has considered the issue of telecommunications access for disabled people. On at least two prior occasions, the Telecommunications for the Disabled Act of 1982, and the Hearing Aid Compatibility Act of 1988, this subcommittee has acted to expand telephone accessibility for hearing-impaired persons.

In passing the 1982 Act, this committee explained that one of the most frustrating aspects of hearing impairments and deafness is the inability to use the telecommunications media on which modern life has grown so dependent.

At that time, the committee declared a national policy, that all persons, including the disabled, should have available the best telecommunications service that is feasible.

The establishment of nationwide relay services will finally take the giant step towards achieving this goal. The access to full telephone service that the ADA guaranteed will give deaf and speech-impaired individuals a fair chance to enjoy the opportunities created by other sections of the ADA.

Thank you for this opportunity to testify on behalf of the relay provision. I encourage this subcommittee to do whatever is necessary to ensure that this dream for equal telephone access comes true. Thank you.

[Testimony resumes on p. 42.]

[The prepared statement of Ms. Strauss follows:]

Statement of Gallaudet University and The National Center for Law and the Deaf[1]

Before the House Subcommittee on Telecommunications and Finance of the House Committee on Energy and Commerce

INTRODUCTION

Mr. Chairman, thank you for this opportunity to express our views on The Americans with Disabilities Act. Gallaudet University and the National Center for Law and the Deaf[2] wish to express our overwhelming support for this legislation. We believe that this legislation, and, in particular, Title IV of the Act, requiring intra- and interstate relay services, is long overdue and will vastly improve the lives of deaf, hearing impaired, and speech impaired Americans.

In 1934, the Communications Act set forth a mandate that access to telecommunication services at reasonable charges be made available "so far as possible to all the people of the United States. . . " 49 U.S.C. § 151. However, this promise of universal service has excluded hearing impaired citizens for the past five decades. Without equal access to the telephone, individuals with hearing and speech impairments have been denied the opportunity to fully participate in the mainstream of society. Without access to telephone service, these individuals have been unable to enjoy other civil rights guaranteed by the Constitution and Federal statutes. Forced to depend on others in order to engage in basic telephone communication, hearing impaired and speech impaired persons have been isolated from the social and economic lives of their communities.

---

[1] Prepared by Karen Peltz Strauss, Supervising Attorney of the National Center for Law and the Deaf, with the assistance of Bob Richardson and Angela Campbell, Attorneys with the Institute for Public Representation.

[2] Gallaudet University is the only four year liberal arts university for deaf students in the world. The National Center for Law and the Deaf is a public service of Gallaudet University that has provided legal services to hearing impaired individuals throughout the country since 1975.

The nationwide relay services that will be required by the ADA will break down barriers in employment, businesses, and recreation for deaf persons. Without relay services, the simplest task over the telephone becomes a major excursion through a town. For example, voice telephone users take for granted being able to make or cancel a doctor's appointment, inquire about a job opening or call a repairperson. Yet all of these things become burdensome to the hearing impaired or speech impaired individual who does not have access to relay services.

The ADA will require all common carriers to provide telecommunications relay services for phone calls made between users of TDDs and users of voice telephones. A TDD - a telecommunication device for the deaf - is a machine that can be used to send and receive coded signals over telephone lines to other TDDs. The signals are received on paper and/or a screen or display terminal. However, even with TDDs, persons with speech and hearing impairments cannot talk over the telephone with friends, family, or business establishments that do not have TDDs. Telecommunications relay services are services that enable persons who use TDDs or other nonvoice terminal devices to carry on real-time telephone conversations with persons who do not use such devices. In other words, relay services enable TDD users to communicate with anyone who has a telephone, rather than only with those individuals who have TDDs. In providing this service, relay systems provide a basic tool for independence and mobility for hearing impaired and speech impaired individuals.

To use a relay service, a caller who uses a TDD dials the relay service's number and types her message on the TDD. Relay service personnel receive this message and then place a voice call to the called party. Relay service personnel then receive a voice message from the called party and transmit it to the caller via TDD. This process continues until the call is completed, with relay personnel converting all voice messages into typed text and all TDD messages into voice.

STATE RELAY PROGRAMS

State relay programs that now exist plainly demonstrate the need for federal legislation mandating relay services. Underfunded and understaffed, more often than not, these programs impose severe restrictions on their users.

Currently, there are seventeen states with formal relay programs now in operation.[3] In ten additional states, relay systems are scheduled to begin operation within the next one to two years.[4] In at least three other states, legislative or regulatory changes have been proposed to establish statewide relay systems.[5] Finally, in other states, organized efforts are under way to study the means by which to establish and maintain a relay system or to propose legislation requiring a system for those states. For example, in Maine, legislation was recently enacted which assesses a small fee on the intrastate revenues of telephone utilities to provide funding for a study on a Maine relay system. Similarly, a study is under way to consider introduction of relay legislation by the Georgia Senate.[6]

---

[3] Alabama, Arizona, Arkansas, California, Connecticut, Kansas, Massachusetts, Minnesota, New Hampshire, New York, Oklahoma, Oregon, South Dakota, Utah, Vermont, Virginia, and Wisconsin.

Notwithstanding the relay activity of the various states mentioned, to date, most states still do not have relay systems up and operating. More importantly, even those systems which have begun relay operations typically fall short of meeting the basic telephone access needs of hearing impaired residents. Many of the state relay programs, including those in New York, California, Illinois, Louisiana, and Alabama, do not permit their residents to relay interstate telephone calls. This has caused a severe hardship on individuals with speech and hearing impairments wishing to call individuals across the states.

As mentioned, most of the relay programs also suffer from funding and staff shortages. As a consequence, they have imposed restrictions on the number, length, and types of calls that can be relayed in their states. For example, the relay program in Arkansas limits its users to a period of fifteen minutes per call, and disallows personal telephone calls. In Kansas, calls are only accepted for relay Monday through Friday, from 8 A.M. to 5 P.M. and are not accepted at all on state holidays. Massachusetts places a ten minute limit on personal calls and a twenty minute limit on business calls. Calls that are not made for emergency purposes in Massachusetts may only be made between 7 A.M. and 11 P.M.[7] Finally, New Hampshire limits the number of calls that may be relayed by any one person to five per day, with a limit of fifteen minutes per call.

---

[4] Colorado, Delaware, Hawaii, Illinois, Louisiana, Maryland, North Carolina, Tennessee, Texas, and Washington. Many of these states are now in the process of promulgating regulations and guidelines to govern their relay services.

[5] Florida, Michigan, and Rhode Island.

[6] Other states considering relay systems are Nevada, New Jersey, New Mexico, Ohio, and Pennsylvania.

Even those relay programs that do not impose specific restrictions on their residents suffer from delays and blockage rates far in excess of that to which voice users are accustomed. In many of these states, it is not uncommon for a relay user to confront repeated busy signals or interminable waiting periods when trying to access a relay line.

We are sure that most people cannot begin to imagine the consequences of having similar restrictions imposed on their use of the telephone. Consider the economic hardship imposed on the deaf entrepreneur who needs to use the relay system to successfully run a business, but who can only make a few telephone calls each day. Or imagine the frustration of a consumer who must wait "on hold" to clear up a mistake on a utility bill, only to be told that his fifteen minute time limit has ended, and he must hang up and call again. In one particular situation that we learned of, a deaf woman was required to pay excessively high legal fees because of the fifteen minute policy in one state. It seems that her law firm charged clients a set amount for telephone calls lasting one hour or less, rather than prorate the charge according to the length of the call. Because the woman was required to call back the firm each fifteen minutes, her telephone calls to the firm cost more than those made by the hearing clients of that firm.

---

[7] Vermont, Virginia, and Wisconsin are among other states that limit the times of day that their relay services operate.

Although the shortcomings of several of the existing relay programs have been many, the response to the availability of these services has been overwhelming. In New York alone, the projected volume of relayed calls is expected to be 100,000 per month this year. Moreover, as the relay programs increase in popularity, the number of calls relayed multiplies. In California, for example, 1.8 million calls were relayed in 1987, 2.6 million were relayed in 1988, and AT&T projects that 2.75 million calls will be relayed in 1990.[8] These figures serve to illustrate the critical need for these communication services.

Title IV of the ADA will ensure access to telephone service for TDD users which is equal to that available to users of voice telephones. By requiring all carriers to offer relay services, the legislation will ensure uniformity of service across the states. In addition, because some states may have smaller populations of persons with severe speech or hearing impairments, they may not have had sufficient incentive to begin their own relay programs. The coordinated, nationwide system envisioned by the ADA would allow for regionally based relay centers to handle calls from more than one state, thus reducing overall costs. Operational costs could be shared, including costs associated with facilities, labor, administration, publicity, and research.

---

[8] Call volume in other states with relay programs are: Massachusetts - 20,000/month; Minnesota - 20,000-30,000/month; Oklahoma - 13,000/month; Utah - 12,000/month; Vermont - 1,800/month.

MINIMUM STANDARDS

Under the pending legislation, relay services will be available twenty four hours each day, seven days a week, without restrictions on the type, length, or number of calls made by any relay user. Moreover, under the Act, relay users are assured confidentiality of their calls. They are also given the promise that the rates they pay for any relayed call will be no greater than the rates charged for a direct dial call with the same points of origination and termination. Although the legislation pending does not so specify, the Senate Report also makes clear that the blockage rate for relayed calls should be no higher than the blockage rate for voice telephone users under industry standards. We urge as well the inclusion of language in the Conference Report that requires relay systems to accept and relay calls originating from TDDs that use either the ASCII or Baudot format.

The Senate Report to the ADA emphasizes that relay service centers are to be staffed by professional operators. These operators must be thoroughly familiar with the culture and language of the hearing impaired community. Moreover, operators should be sufficiently skilled in typing, spelling, and grammar in order to facilitate the flow of communication between the relay users.

The Senate Report also discusses "the unique and specialized needs of the population that will be utilizing telecommunications relay services", and recommends that the FCC obtain input from these populations in a formal manner. Specifically, the Senate recommends the establishment of an advisory committee made up of relay service consumers and telephone carriers that would advise the FCC on the development and continued operation of the relay systems. We cannot state strongly enough the need for such a committee. Deaf and speech impaired users of relay systems have first hand knowledge of their relay needs. Any system approved or designed by the FCC must incorporate the opinions and advice of these individuals.

MAXIMUM FLEXIBILITY

At the same time that the ADA mandates these minimum requirements, the Act affords considerable flexibility to both common carriers and states that set up their own relay systems. For example, under the Act, states that already have relay programs may continue operating those programs. The state need only meet the standards and guidelines promulgated by the FCC pursuant to this law, in order to receive certification permitting it to maintain and oversee its own relay system.

Moreover, the ADA grants common carriers sufficient flexibility to provide relay services in the most efficient and effective manner they see possible. For example, it allows state regulators to designate an entity to provide relay service to customers in their states. Thus all the companies in a given state might contract with a single entity to provide relay services on a statewide basis. This approach was adopted in New York, where all local telephone companies are required by the New York Public Service Commission to provide relay services. Those companies contracted with AT&T for the provision of relay services on a statewide basis.

In addition, the Act leaves to the discretion of the common carriers the means by which relay systems may be funded. Financing for state systems which are already in place has been obtained through a variety of methods. Many states have chosen to add a nominal surcharge to the monthly telephone bills of their telephone subscribers.[9] Other states, such as Arkansas, Kansas, Massachusetts, New Hampshire, Vermont, Virginia, and Wisconsin, appropriate money to finance their programs through general revenues. Still other states assess the relay costs to the telephone companies, who treat them as normal operating expenses and recover them in their general rates. Two such states that finance relay systems in this way are New York and Delaware.

---

[9] Alabama - $.20, with a $.25 cap; Colorado - $.10 cap; Hawaii - $.18; Illinois - $.03; Connecticut - $.05; Louisiana - $.05; Michigan - $.10; North Carolina - $.25; Oklahoma - $.05; Oregon - $.10; South Dakota - $.10; Utah - $.03-.07; Washington, - $.08. In Arizona, telephone bills are increased .6%, and in California, .5% each month to pay for their relay systems.

It is important to remember that relay services are beneficial to all members of our society, not just those with hearing or speech impairments. Relay communication is a two-way process between both TDD and voice telephone users. In any event, telecommunications relay services are much less expensive than available alternatives. Unless relay services are provided, society must incur the costs associated with isolating people with disabilities from the rest of the population. These costs include the costs of lost productivity, unemployment and underemployment, and diminished markets for certain goods and services.

By not restricting the type of relay services that may be provided to those that rely on TDDs, the ADA also leaves the door open to new technologies that might further facilitate telephone communication for individuals with hearing and speech impairments. Indeed, technological advances are likely to lower the costs of relay services in the future. As technology develops to automate relay functions through, for example, voice synthesis and speech-to-text conversion, costs can be expected to decrease significantly. The advent of these technologies may allow calls to be relayed without human intervention.

TIME FOR COMPLIANCE

As originally passed by the Senate Committee on Labor and Human Resources, the ADA would have required telephone companies to begin relay operations within two years after enactment of the ADA. As passed by the Senate Committee, the ADA would also allow the Federal Communications Commission (FCC) to grant an extension of up to one additional year to any telephone company that could prove it would suffer an undue burden if required to meet the two year deadline.

By floor amendment, the Senate extended the time for carrier compliance from two to three years. Given the fact that the Senate has provided all carriers with an additional year by which to begin operations, we see no purpose in also leaving in the ADA the one year waiver provision. The technology needed to begin relay operations already exists. In comments to an earlier proceeding before the FCC, AT&T made clear that the carrier industry already has the technical equipment, standards, and knowhow necessary to begin a nationwide relay system. Moreover, our experiences with the various state programs illustrate that a relay system can be set up - from start to finish - within a period of one to two years. The FCC is required to issue regulations setting forth minimum standards and guidelines for relay services within one year; this leaves more than enough time for all carriers to start up relay operations under the new Senate floor amendment.

For the above reasons, we urge the committee to delete that section of the legislation which would permit a one year extension for those carriers alleging undue burden. Failure to delete this waiver provision may result in denying telephone access to individuals with hearing and speech impairments for as much as four years after the ADA is enacted. This may spell four more years of isolation and dependence on others for these populations.

CONCLUSION

This is not the first occasion on which this Subcommittee has considered the issue of telecommunications access for disabled people. In 1982, this Subcommittee facilitated the passage of the Telecommunications for the Disabled Act of 1982. In report language to that Act, the House Committee on Energy and Commerce explained that "[o]ne of the most frustrating aspects of hearing impairment and deafness is the inability to use telecommunications media on which modern life has grown so dependent." H.Rep. No. 97-888, 97th Cong., 2d Sess., 4 (1982). At that time, the Committee declared a national policy, that "all persons, including the disabled, should have available the best telecommunications service that is technologically and economically feasible." H. Rep. No. 97-888 at 7-8. The establishment of nationwide relay services will finally take a giant step toward achieving this goal. The access to full telephone service that the ADA guarantees will create new opportunities so that all persons - including those with hearing and speech impairments - will have a fair chance to participate and succeed in the mainstream of society.

We wish to thank you for the opportunity to submit this testimony in support of the relay section of the Americans with Disabilities Act. We encourage this Subcommittee to do whatever is necessary to ensure that our dream for equal telephone access comes true.

Mr. MARKEY. Thank you very much. And our final witness will be Linda Hershman, who is the general manager of Government Relations for the United States Telephone Association.

STATEMENT OF LINDA D. HERSHMAN

Ms. HERSHMAN. Thank you, Mr. Chairman. I am here today to testify on behalf of the United States Telephone Association, and its 1,100 member companies and SNET. I would like to mention that with me is Margaret Gerard, an attorney at our company, who has been directly involved in this issue in Connecticut.

We are pleased to have the opportunity to testify in support of congressional action, establishing the availability of message relay service to all Americans as national policy.

Implementation of this policy will not be simple, but we do believe that it is both feasible and necessary. We have had considerable experience in Connecticut in addressing the issues surrounding the provision of message relay service. Statewide message relay service for both interstate and intrastate calls has been available in Connecticut since 1974.

The service is provided by a nonprofit corporation, Converse Communications Center, and there are approximately 1,500 TDD users in Connecticut, and the monthly volume currently averages 10,000 calls. This is expected to grow to 14,000 calls per month. Until July of this year, funding for the service was obtained from a mix of private contributions and State grants. Growth in demand and constraints in funding resulted in a minimum number of hours of operation, and difficulty for users in obtaining an available operator.

In response to this situation, Governor O'Neil of Connecticut directed the Connecticut Commission on the Deaf and Hearing Impaired to work with SNET, the Connecticut utility regulatory agency, and Connecticut's consumer council, to come up with a plan to provide full-message relay service. We were all committed to the task, but it wasn't easy.

Because we had a system in place, funding was the critical issue. Despite efforts to contain costs, the annual budget for service is almost $1 million per year. The issue was resolved by an agreement, under which SNET accepted responsibility for funding this service as part of its franchise obligation, in return for the ability to increase local rates to raise the additional money. After a public hearing on the agreement, the Department of Public Utility Control approved a 5 cent increase in SNET's local rates to provide the necessary funding.

Based on our experience in Connecticut, we believe that it is possible to provide for a nationally available message relay service. In applying our experience to the national scene, we have the following observations.

One, policy direction is necessary. Despite our national commitment to universal service, millions of Americans are not able to use the telephone to communicate unless the person they are calling has specialized equipment.

Message relay service provides the bridge that makes communication possible. Federal policy should support nationally available message relay service.

Two, someone needs to be in charge of implementation. We believe that the FCC should be given flexible authority to implement this policy. There are difficult issues that must be resolved if a cost efficient and readily accessible means of providing the service is to be developed. We believe that the FCC should have the authority and flexibility to address these.

Three, all of the players need to be involved. The States should be given a meaningful role in the planning and implementation of this service. Specific provision for their participation should be made. The FCC joint board mechanism would be one means to accomplish this.

Four, existing systems must be taken into consideration. Integration of existing systems into the national scheme should be provided for, and States which have provided for intrastate message relay systems, should be permitted to retain jurisdiction.

And, five, the funding of the service is a critical issue, and probably the most difficult. Carriers must be permitted to recover the costs incurred to provide message relay service. To assure quality service, care must be taken to provide for adequate initial funding, and frequent review to accommodate growth and upgrade requirements.

In conclusion, I would like to thank you, Mr. Chairman, for the opportunity to testify today in support of congressional action to make message relay services available nationally. We are supportive of Title IV of S.933 as a basis for action in the House, and look forward to a continuing partnership with Congress and the FCC in our efforts to ensure that the full benefits of telecommunications services are available to all Americans. Thank you.

[The prepared statement of Ms. Hershman follows:]

STATEMENT OF LINDA D. HERSHMAN

Mr. Chairman, members of the subcommittee, I am Linda D. Hershman, General Manager, Government Relations of the Southern New England Telephone Company (SNET). With me is Attorney Margaret F. Girard, also of SNET who has been directly involved in establishing an agreement providing for the funding of message relay service in Connecticut. We are here to testify on behalf of the United States Telephone Association, (USTA) and the Southern New England Telephone Company. USTA is the primary trade association of the local exchange carrier industry, representing over 1,100 members which provide in excess of 98 percent of this country's local telephone access lines. SNET is a local exchange carrier, providing service to virtually all of the State of Connecticut. I am pleased to testify in support of congressional action to further the goal of universal service, mandated in the Communications Act of 1934, by providing for a nationally available message relay service for the speech and hearing impaired.

The legislation currently before this subcommittee is Title V of H.R. 2273, The Americans With Disabilities Act of 1989. However, the compromise recently passed by the Senate (Title IV of S.B. 933), resolves many of the numerous concerns raised with H.R. 2273 as currently drafted. We would recommend, therefore, that section V of the House bill be amended to incorporate in full the Senate compromise and that it be used as the basis for further action and debate in the House.

As requested by Chairman Markey, our testimony will address four specific issues that are critical to the implementation of a nationwide message relay service, namely: (1) the need for an interstate relay system, (2) the technical feasibility of implementing an interstate relay system, 93) what would be the best funding mechanism, and (4) which entity, or entities would be best suited to implement and oversee such a system. I would like to add that a statewide message relay service which handles both intra- and interstate calls is currently in operation in Connecticut. The service has been provided since 1974 by a nonprofit corporation and funded through a combination of private and State funding. When a funding crisis occurred in 1987, Governor O'Neil requested that the Connecticut Commission on the Deaf and Hearing Impaired work with SNET, the Connecticut Department of Public Utility Control and the State's Consumer Counsel to find a way to provide and fund adequately a full time message relay service in Connecticut. it took considerable effort and commitment, but we were successful. We had to resolve for Connecticut each of the issues identified by Chairman Markey, and we would be pleased to answer questions that members of the subcommittee may have concerning Connecticut's experience.

In the Communications Act of 1934, Congress established universal service as a national communications goal. It mandated the Federal Communications Commission (FCC) to make communications service available "so far as possible, to all of the people of the United States." USTA and its members have worked cooperatively with the FCC in its efforts to further the Nation's commitment to universal telecommunications service and we support efforts to extend this commitment to members of the speech and hearing-impaired community. Many of our members are already participating in the provision and establishment of relay systems within their service areas. Such systems are not readily available from many systems. Without such systems, the ability of speech or hearing-impaired persons to use the telecommunications network is limited to communication with other persons who have specialized equipment.

The economic and social costs which result from of the isolation of the millions of Americans who are speech or hearing impaired are substantial. Imagine being unable to call a doctor because it is the middle of the night and there is no one to speak or hear for you. Imagine being unable to communicate on the telephone with your child's teacher, unless someone else is available to speak or hear for you. Imagine being unable to take a job that requires you to communicate using the telephone? A message relay service allows someone who is speech or hearing impaired to make that call themselves and expands their employment opportunities. As we consider what universal telecommunications service in the year 2000 should include and as we debate the nature of the telecommunications infrastructure that will be needed in the year 2000, we should include the nationwide availability of message relay service among our priorities.

In addition to Connecticut, statewide message relay systems are now in operation or in the process of being established in a number of States, including California and New York. Less extensive systems are in place in many States. Some of these systems, including Connecticut's handle both intra and interstate calls. While a nationally available interstate system would be more complex because of its size, we are aware of no technical reason why an interstate system cannot be implemented.

The impediments to the implementation of an interstate system, or additional intrastate systems for that matter, lie, not in its technical feasibility, but in the complex policy issues that must be resolved. Principally, these are: How will it be funded and what is the appropriate level of funding; Who will provide the service; Who will oversee the provision of service?

It is our experience in Connecticut, that if there is a commitment to find a resolution, all of the appropriate parties are involved, and a thorough analysis of alternatives is undertaken, these policy decisions can be made and a system implemented that provides the necessary service without creating an unmanageable financial burden for those who use the service, the provider(s) of the service, or consumers of telecommunications services in general. Clearly, resolution of these issues becomes more complicated where the system is national in scope and the number of parties involved and the costs are substantially increased. However, we believe that with the appropriate legislation and a national commitment similar to the commitment to universal service, a national interstate message relay service can be implemented.

As we indicated above, determining the most appropriate funding mechanism and selecting the best way to provide the service and maintain the appropriate oversight are difficult decisions. We do not have the solutions to these questions at this time. Further, we are not convinced that a record has been developed that contains the necessary information and analysis. Based on our experience, we strongly urge that the House adopt legislation that establishes nationwide message relay service as a national goal and also that they direct the FCC, in concert with the States, to implement it. To accomplish this we recommend that the legislation be adopted that meets the following guidelines:

—Expands the FCC's mandate to implement universal service to include the nationwide availability of intra- and interstate message relay service for the speech and hearing impaired.

—Provides a meaningful role for the States in the initial planning and implementation of the service.

—Recognizes that many States have taken the lead in supporting the establishment of message relay service within their boundaries and permits States to choose to retain jurisdiction over the provision of instate message relay service, provided Federal standards are met, and in this way permits the integration of existing relay systems into the anticipated national relay scheme.

—Assures that costs incurred by carriers to provide message relay service are recognized as costs of providing telecommunications service and are fully recoverable from customers.

—Constrains as little as possible the options available for cost recovery.

The difficult balancing of costs and obligations needed to maximize the public benefit to be obtained from the provision of message relay service requires that the FCC play a central role in the implementation and oversight of the service. Congress has placed with the FCC the authority and responsibility to implement measures designed to support the goal of universal service. It is appropriate that the Congress look to the FCC to play a central role in determining the most efficient and effective means of assuring universal access to message relay service for the speech and hearing impaired.

The role of the FCC should include responsibility for establishing the national relay system contemplated by the act and for defining a framework for efficient, cost-effective operation. While funding is clearly a concern, so is the manner in which the service should be provided. Should each carrier establish and operate a message relay center? Would it be preferable to establish a jointly planned or integrated system? These are issues that require the development of a full record to be optimally resolved. The FCC has already spent considerable effort investigating the manner in which message relay service optimally should be provided an on July 27, of this year issued a Further Notice of Proposed Rulemaking (FNPRM) to establish an interstate relay system. In that notice, the FCC identified specific alternatives and requested comments from interested parties. This process should be specifically authorized in the legislation. Both H.R. 2273 and S.B. 933 require that carriers provide the service and provide for the FCC to establish standards for service. By not providing for involvement by the FCC in the planning and design of a plan for providing the service, both bills leave the role of the FCC in the process rather vague.

The placement of the responsibility on individual carriers to provide message relay service to their customers is a concern for all USTA member companies. For some of these companies, the cost of compliance could drive up prices for all of their services to unreasonable levels. This would not be in the public interest. As an alternative, the FCC could be authorized to provide for the establishment of a nationwide relay system to which access could be provided through systematic connection to national or regional operators. Also, carriers could be allowed to develop an independent or cooperative organization which would accept responsibility for relay operation. This would foster the development of efficient, coordinated service and help to control costs.

The States have an interest in the manner in which message relay service is to be provided and funded. It is conceivable that the most efficient manner of providing the service is to establish a system that provides message relay service for both interstate and intrastate calls.

Congressional approval of a joint program between the FCC and the States would ensure that the system is comprehensive, uniform, and smoothly integrated among interstate and intrastate systems. It would also permit the experience of the States in establishing intrastate systems to be utilized. The FCC should have the authority to explore this option in concert with the States. The legislation could specifically provide that a Federal-State Joint Board be established to recommend minimum standards of service, define cost requirements and recovery mechanisms, and set necessary guidelines for relay service implementation. In the alternative, the legislation could be drafted so as to encourage the States to participate in the creation of a nationwide network.

In addition, this legislation will not be implemented in a vacuum. In the absence of a national program, many States have encouraged the development of message relay service within their States. In many cases, including Connecticut, the service is not provided by a common carrier. These efforts should not be preempted. While SB 933 would permit States to retain jurisdiction over intrastate service if the FCC certifies that Federal standards have been met, the language should be amended to clarify that the direct provider of the service need not be a common carrier.

Determining the appropriate mechanisms to fund the service is the most difficult issue to resolve. It was the "show-stopper" in Connecticut for some time before a resolution was reached. Congress should not constrain the options available to the FCC for cost recovery, but provide simply that cost recovery should balance economic pricing with any identified need that requires special cost recovery alternatives.

In addition, the problem addressed by the legislation is a broad societal concern. Therefore, while common carriers may be charged with providing the required service, the costs of doing so must be recognized as legitimate costs of doing business and therefore recoverable from customers. The Senate specifically states that this is its intention in its Report language and we request that the House do the same.

In Connecticut we found that it was unrealistic to expect that the users of the service would be able to cover its costs. Private contributions and government funding were not sufficient to meet the need. The issue was resolved by SNET accepting responsibility for covering the costs of the service as art of its franchise obligations, in return for inclusion of those costs in the expenses associated with local service. This was possible in Connecticut because the existence of the local franchise has been reaffirmed by the legislature. We would be remiss, however, if we did not point out that this might not have been possible in Connecticut if the franchise structure did not exist and that we are concerned that changing national and State policies may erode our continued ability to fund such programs through rates.

In conclusion, USTA and SNET support Congressional action to assure that message relay service is available to all Americans who need it, so that they may have full access to the public switched network. There are many difficult policy issues involved in the implementation of nationally available message relay service however, and we strongly recommend that the FCC be given the authority and the responsibility to resolve these issues, with participation by the States.

We appreciate the opportunity to share our comments and our experience with the subcommittee and look forward to a continuing partnership with Congress and the FCC in our efforts to assure that the full benefits of telecommunications service are available to all Americans.

Mr. MARKEY. Thank you very, very much for your testimony as well. And what we would like to do is to enlist our panelists here today in the effort to resolve some of these questions that have arisen during the course of your testimony here this morning.

And I think we can begin the effort and perhaps get through it this morning, but what I would like to do is just to ask each of you if you would make yourself available to the subcommittee, because we would like to just as quickly as possible, with some intensive efforts, to try and work out something that makes some sense and get the results that all parties are looking to, and I think rather than debate over what is common interest that is shared on how we solve the problem, let's do it from a technical aspect if possible.

Let's turn to you, first, Dr. Jordan, with regard to some of these questions of technically how the FCC should handle the key issues, where interstate and intrastate levels of the FCC should now be a party to solve some of the questions. Do you have any guidance for us, Dr. Jordan, on this?

Mr. JORDAN. I would defer to Ms. Strauss on that.

Ms. STRAUSS. OK. I have a few answers to that. First, probably it is most important for the FCC in developing any guidelines to contact the people that are going to be using the relay system. In other words, it is one of the items that we have requested—and we had originally actually requested it to be in the bill, and now it is in the Senate report, is to require the FCC to develop a formal Federal advisory committee.

And this committee would be made up of deaf, and speech-impaired, and hard of hearing people, that would offer guidance to the FCC in developing its regulations.

Without such participation, there is no way that the FCC would have knowledge of the unique and specialized needs of relay users. It is clear that the FCC does have jurisdiction and authority to issue regulations over both intra and interstate systems.

However, let me just back up. In addition to having the hearing-impaired population on the Federal advisory committee, it is essential that there be participation from industry as well, so that the FCC does have the full balance of interest represented.

In addition, many of the States have done a fine job at providing relay systems. Like I said, there are severe restrictions imposed by many of the States, but to begin input from the various States that have established systems, in particular New York, California, and Alabama, that have the most comprehensive systems, and are really just missing the intrastate component, their input to the FCC as well would be helpful.

And we would not be adverse to what was mentioned earlier, some sort of joint Federal/State board, where State PUC Commissioners, and the FCC, would gather together to determine the proper guidelines.

The only problem with that board is that it does not by Federal statute now include hearing-impaired people on it, and as I said, that is critical that there be a voice from them.

Mr. MARKEY. As I understand it, California has an advisory board which they put in place and trying to think through the issues, and do you like that composition?

Ms. STRAUSS. Yes. Most of the States that do have systems do have advisory boards, and they have found that those are essential. The only thing that we do ask though is that whatever board the FCC establish that it be on a formal basis, and that it not be an ad hoc type of committee.

That it have ongoing—that there be ongoing consultation, both in the development of the regulation before they are issued and in the continuing operation of the relay system.

Mr. MARKEY. Ms. Schwartz, if we could have your comments on this and how you would define what the State role would be, and what role that the advisory board would be assigned.

Ms. SCHWARTZ. Well, Mr. Chairman, I certainly concur that it is very, very important to have as the primary inputters so to speak the representatives of the hearing-impaired and speech-impaired community, and we have done that as I said in my formal comments in New York, and continue to do that.

The National Association of Regulatory Utility Commissioners, on whose communications committee I serve, has adopted a resolution of severing the establishment of a joint board, and I would not depart from that, except to say that sometimes the more formal the establishment of the administrative recognizism, the longer it takes to get things done.

And it would appear to me that possibly the area of problem solving that would remain before us is, as you suggested, Mr. Chairman, limited to technical questions that could be solved in a less formal environment. That would be my hope, because my greatest fear is that the beneficiaries of this interstate system, a natural system, be held hostage to the bureaucratic maneuverings that sometimes occur from legitimate differences of opinion, of course.

Mr. **Markey**. We have seen that.

Ms. **Schwartz**. Yes, you have seen that from time to time.

So, that would be my only fear. I think we could do something informally. May I comment, Mr. Chairman, on the funding issue very briefly while I have the floor?

Mr. **Markey**. Sure. Please.

Ms. **Schwartz**. Mr. Tutton's testimony was very interesting, but it left out one important fact, and that is the numbers. I always like to know what the numbers are when people tell me that they have a funding problem.

I haven't the faintest clue as to what the price tag, or the cost for the interstate——

Mr. **Markey**. Do you have a ball park figure?

Ms. **Schwartz**. I beg your pardon?

Mr. **Markey**. Do you have an estimate, or a ball park figure?

Ms. **Schwartz**. No, I don't, and I would respectfully request that the chairman request that number, because if we are going to debate who is going to pay it, and how it is going to be paid, and whether there will be a surcharge on this set of customers, or that set of customers, we have to know what we are talking about.

Mr. **Markey**. Mr. Tutton, do you have a number, a ball park number? Is it Yellowstone Park, or make it as broad as you have to, but——

Mr. **Tutton**. Well, the number that I would quote was the number that the Federal Communications Commission used in their request for comments on various proposals for funding; and the number that they used as I recall was $300 million to provide the service, both on an intra and interstate basis nationwide.

When some analysis was done to pull that number apart, since our discussions are now on interstate service, it is my understanding it is between $30 and $50 million on an annual basis.

Now, if that figure was spread over all of the users in America, that would amount to about 3 cents per month per customer in the broad base funding notion that I suggested as something that ought to be considered.

Mr. **Markey**. Well, who has the goal of raising whatever number we might finally come up with? Do you think that Mr. Tutton's formula makes some sense as to how we would——

Ms. **Schwartz**. I think that the interstate costs should be recovered in interstate jurisdictions, and that is my preliminary position on that matter, but I do think it is very important that the FCC, as I said in my testimony, not be permitted to mandate recovery in essentially subscriber lines and surcharging the intrastate jurisdiction. Three hundred million dollars is not a heck of a lot of money. I should think that the interstate charges could recover that almost without talking about it.

I don't mean to be facetious, but——

Mr. **Markey**. Dr. Jordan, did you ever think that we would be talking about $300 million for the deaf, and people saying that is not a lot of money to us?

Mr. **Jordan**. I am concerned when we talk about costs that the burden of the costs not be applied directly to just the hearing and speech impaired, and that is my concern.

Mr. **Markey**. No, that is exactly the point that we are dealing with.

Ms. **Schwartz**. I surely concur with that.

Mr. **Markey**. That is exactly the point that we are getting to and trying to nail down here, you know. Mr. Tutton stated that it ought to be shared by all of the users, and that would basically put it down to 2 cents per month.

Mr. **Tutton**. Two to three, yes.

Mr. **Markey**. A 2 to 3 cents per month burden for all telephone users across the country, and for the interstate market, I guess, we have some agreement that ought to be a way that ought to be levied.

Now, as we move to the intrastate marketplace, the——

Mr. **Tutton**. I don't know if there is an agreement. I heard Commissioner Schwartz suggest that the interchange carrier should bear that burden, as contrasted to some other approach, and that is not what I was suggesting.

I was suggesting that be spread across the American public, or all the lines in America, which is the arithmetic that I used to come up with the 2 to 3 cents. That's different than having the inter exchange carriers in the United States bear that cost, and I just wanted to point that out.

Mr. **Markey**. Theoretically, though, the distinction that you are making is a fine one, and I just want to understand it.

Mr. **Tutton**. OK.

Mr. **Markey**. All American telephone users are also part of this long distance network.

Mr. **Tutton**. That is correct.

Mr. **Markey**. So that they are all theoretically part of the universe that would then be assessed this 2 to 3 cents levy?

Mr. **Tutton**. Right.

Mr. **Markey**. But where would that break then, and how Ms. Schwartz would——

Mr. **Tutton**. Maybe I had better ask her, but I am under the impression that the suggestion was that the inter exchange carriers, through their costs, could recover this through a rate somehow, and I disagree with that premise.

And that the inter exchange carriers are, as you well know, in a very competitive marketplace, and do not have the luxury of being able to raise prices to pass on costs that are not related to the services that they provide, as contrasted to a little different approach. That is my point.

Mr. **Markey**. So—and just so we have this correct, what you want is to set aside, like a special item, or a special line item; is that what you mean?

Mr. **Tutton**. Well, as far as setting aside, I am not trying to debate that issue at all. The point is that it needs to be collected somehow through everybody, as everybody derives the benefit of it.

Some sort of a fund established that people compete and is administered by some central group, which is the other part of my suggestion, and that various providers compete to use those funds to provide the service for all of the people, and the price that the speech and hearing-impaired community pays is the price of the call, or slightly less, but this fund pays for the additional costs in handling the call, which is——

Mr. **Markey**. Well, let me then walk through what AT&T does right now in Alabama, and in California, and in New York, and the relay systems which you have set up there. How are those systems funded?

Mr. **Tutton**. Well, those systems are funded essentially by a fee that is collected one way or the other from either—either through a monthly charge, or the local exchange carrier recovers the money through——

Mr. **Markey**. Well, let me understand.

Mr. **Tutton**. All of the public in those States; and then a fund is established, that the carriers were asked to bid to provide service in that State. The user of the service pays a price for the actual call itself, which is not unlike anybody else that would pay for a telephone call.

And the carrier receives back through the fund, as well as from the actual user of the service, the moneys to cover their costs for providing the service.

Mr. **Markey**. And what system would you——

Mr. **Tutton**. I think that works fine.

Mr. **Markey**. You think that works fine. Commissioner Schwartz.

Ms. **Schwartz**. Mr. Chairman, I think that the part of Mr. Tutton's argument is that he doesn't wish to see the competitive services of the interstate provider burdened with the extra costs of this relay service, and that he would like to have the costs imposed on the rate payers who are paying for noncompetitive services, which by definition is going to mean the intrastate local exchange carrier services.

And his goal, I believe, is to do it through a surcharge on the subscriber line charge, which I think you will recall engendered when slick was under debate, quite a lot of dissention between the FCC and the States.

Mr. **Markey**. Dr. Jordan, just one thing I would like to know is the difference between slick and slew in this whole debate.

If you never learn anything about this you will be a better man.

Ms. **Schwartz**. Amen. That is true, and that is why I say about not seeing the beneficiaries of the service held hostage to that kind of a debate. The question, I think, can be turned around and I know that we don't want to do this, to decide this today, but I think that this issue is one of the many issues that are going to come before this committee, and all of this involved in this new environment, about what this universal service really is.

And if the notion is that any extension of universal service, or any maintenance of universal service in this technological evolution is to be all passed along to the intrastate jurisdiction, eventually we will be in trouble.

That does not necessarily preclude the possibility of an agreement to agree on this, but either it should be recovered in the prices charged by the interstate services, or in an extension of the FCC's universal service fund, off the Lifeline Customer's concept. One or the other.

But it should not be mandated to be imposed on the intra rate subscribers.

Mr. **Markey**. Ms. Hershman. Could you enlighten us on Connecticut's experience?

Ms. **Hershman**. Well, as I mentioned, Mr. Chairman, in Connecticut we are charging customers now 5 cents a month, and that is funding both intrastate and interstate, because we have no choice, and we felt that it was so important to make the service available.

However, I think our preference would be to separate the jurisdictions so that our local exchange customers are paying for the local piece, and there is an interstate assessment or cost on the interstate.

Mr. **Markey**. Again, let's get some numbers. Mr. Tutton, how do you think that this will break down, in terms of local calls versus long distance calls, and interstate versus intrastate. What do you think the numbers are?

Ms. **Schwartz**. If I may, Mr. Chairman. In Connecticut right now we find that approximately 10 percent of our calls are interstate.

Mr. **Markey**. Interstate.

Ms. **Schwartz**. Yes.

Mr. **Markey**. So, does that sound right to you, Mr. Tutton?

Mr. **Tutton**. It doesn't sound unreasonable. I mean, the——

Ms. **Strauss**. Well, we have no way of knowing.

Mr. **Markey**. I just want to narrow it down. So, then we don't have any problem then with regard to how intrastate will be levied; is that correct?

Ms. **Strauss**. As long as there is no mandate for recovery of slick, and each State may recover it in the way that each State chooses, and that is no problem at all.

Mr. **Markey**. But when we move to the interstate, we have an issue that——

Ms. **Hershman**. Well, I think we would feel comfortable if it were feared that this cost could be recovered on an interstate basis, and reviewed periodically as there is the need to update the equipment. I do want to say that about interstate.

Mr. **Markey**. Well, I think that is probably—that this particular discussion now is being narrowed down, and is probably something that should be discussed in a back room here.

But I am very confident that we will be able to resolve it, and come up with a resolution. Can I ask you, Mr. Tutton, what kind of a program do you have in place to train operators so that they can handle the calls?

Mr. **Tutton**. In the locations where we have set up the dual-party relay service, we have discovered through working with people in the hearing and speech-impaired communities, that there is a significant amount of sensitivity training, and other things to be able to understand this very special need culture that many people don't even realize exists.

So, there is a training program for the people who will be the attendants for the dual-party relay system, to help them understand the needs and the sensitivities of the situation, as well as the imperatives of privacy, and respect for the individuals who are communicating.

That they are really performing a transparent translation service, and we go to great pains to make sure that the sensitivity, the speed and the quality of the service that they provide are covered in the training, as well as the requirement for total privacy.

This is the only service that I am aware of where the carrier, and in this case AT&T, is involved in the actual communication itself, and an individual hears that, and so the privacy issues are utmost of importance in our mind.

Mr. **Markey**. Do we need some type of minimal standards that should be established for the carrier because of the special sensitivity of the responsibility that the operators are going to be performing?

Mr. **Tutton**. I would prefer if I could think about that a little further. From what we have found so far, the things in the Communications Act, and the other kinds of things that govern our behavior and our responsibilities to the American public are seemingly working very, very well.

But I would like to think about that a little bit, and write you a letter that contains our thoughts if that would be acceptable to you.

Mr. **Markey**. All right. That would be very helpful. Dr. Jordan.

Mr. **Jordan**. May I speak briefly to that, to about his concerns about sensitivity, and I just want to raise the point that it is very important that members of the community being served be involved in the training programs that we are talking about.

In order to ensure that sensitivity, you have to have the people who will be served provide the training.

Mr. **Markey**. Ms. Strauss, do you have any guidance you can give us?

Ms. **Strauss**. Sure. I would just like to add that as you are probably aware of, American sign language has its own grammatical structure, and syntax, and grammar. It is imperative that operators have minimal training in interpreting calls that come in, in ASL American Sign Language to English.

So, we do believe that there is some minimal training involved, and also, there should be minimum standards for typing, and grammar. If an individual types with one finger, a call would be very burdensome.

Mr. **Markey**. So, you do believe that some type of special category has to be set up if someone is going to be given this type of job in the telephone system?

Ms. **Strauss**. We do, yes.

Mr. **Markey**. Mr. Tutton, your statement also recommends a centrally implemented and administered nationwide relay service contractor that would be tentatively awarded by the FCC.

Would you specifically recommend that the National Exchange Carriers Association, or an NECA type entity as the FCC recommended in its July 27 proposal for an interstate relay service, and do other carriers support your centralized proposal?

Mr. **Tutton**. I am not sure that I would want to comment for the other carriers, since sometimes we do disagree on a few items, but I think conceptually, yes.

First, I am not so sure that I would be so bold to say there ought to be one single nationwide provider. I would like that to be us, obviously, but the notion of, yes, a central administrative agency is most appropriate.

And NECA—I think NECA Life would be a better term, because the composition of NECA, I think, needs to be supplemented a bit to get the appropriate stakeholders represented in the central group to be able to provide the kinds of leadership that the central group ought to have, but that is the notion.

Mr. MARKEY. Commissioner Schwartz.

Ms. SCHWARTZ. I think that is a possibility, Mr. Chairman. I don't think there is clarity at this point as to what the model would be, and of course some of the funding questions will depend on what type of model there is. In Connecticut, we use a nonprofit corporation.

Mr. MARKEY. We will ask you for a recommendation before we pass it on the Hill. Commissioner Schwartz, maybe you could give us some guidance on how you feel it should be constructed?

Ms. SCHWARTZ. I always think that competitive bidding is a good idea, except in the situation where one potential bidder has clearly a lead track on both the technology and the administrative experience.

Although I would not want to speak against opening it up to a bid, and I think that should be something which the legislation leaves in the hands of the FCC. I wouldn't be surprised if the winning bidder would turn out to be that organization that has the experience.

NECA doesn't strike me as the type of organization that has the expertise to be the central brain, and that has the technological and administrative experience for this system, and be the technological clearing house of the system.

So, at this time I wouldn't want to be on record as saying that I think that NECA is a proper organization to be that central brain.

Mr. MARKEY. Using a relay system, and being communications impaired, clearly leads to much longer telephone calls for the person who is trying to communicate. What is the billing rate for someone who is using such a system? Almost by definition, the call is going to be at a minimum twice as it would be for someone who is not communications impaired.

Ms. SCHWARTZ. Yes, that is absolutely right, Mr. Chairman. I don't have the actual rate with me, although I will be happy to provide it to the committee, but that is the reason why we said that it should be left to the States to determine whether they want to discount the rates for TDD users.

The question of whether the Congress would want to mandate that the rates for TDD users interstate also be discounted is one which I deliberately avoided, because I think that is a very thorny issue, but——

Mr. MARKEY. And as you can imagine, we would not want to pass a law and then have the majority of the States then construct a system that discourages its use, and have to continue to revisit this issue.

We would like to deal with it once and for all, and be fairly confident that even if we didn't put in the specific way in which it could be billed, that we would have a fairly consistent response across the country, that would encourage rather than discourage usage.

Ms. Schwartz. One thing that I could offer is that it would be very easy to quickly poll the members, the State members of the NERU, as to what they can do——

Mr. Markey. Can you do that for us?

Ms. Schwartz. I would be glad to do that.

Mr. Markey. OK. That would be very helpful to us. Mr. Tutton, how do you handle this now, in terms of what the rate would be?

Mr. Markey. Well, there is no interstate service per se today, and so we don't, but the way it is handled in the States, you know, that typically there is a modest discount on the actual message that is provided to the actual end user, and then the fund is paying the difference.

It is paying the difference in the actual transport of the call, as well—recognizing its added length, and as well as paying the difference in the labor intensive aspect of actually handling it. So, that is the purpose for the fund.

Mr. Markey. Does that make sense to you?

Mr. Tutton. That makes sense, yes.

Mr. Markey. Ms. Schwartz.

Ms. Schwartz. I beg your pardon. I had a lapse, because I was thinking of how I could poll the people.

Mr. Markey. Let me ask Mr. Tutton another question and let's see if we can wrap this up. Regarding the TDD technology, Mr. Tutton, what can we expect to see developed which will automate the relay function in the future?

Mr. Tutton. I think that there are a number of things. AT&T is investing for a variety of reasons, this being one, in some technologies on voice to text, and text to voice, and this clearly is a beautiful application that serves a fundamental need in our society for that type of service.

And so I would see on the horizon, and I would not want to predict a date, but I would see on the horizon the application of that technology, either in the network, or in the terminal, both of which could work, the capability of being able to do this translation capability in the network or in the terminal.

So, that would, one, it would make it more avouches in nature, as well as drive the costs down, because it removes the labor intensive element, which is essentially the price today, is that we are paying for a human being to do that translation.

Mr. Markey. Can you give us some estimate of the time that it might take for us to reach that point?

Mr. Tutton. Well, there are things today, you know, that do speech to text, and text to speech.

Mr. Markey. But I am talking about automated, and also cost effective.

Mr. Tutton. Right. May I please write you on that also?

Mr. Markey. Certainly. Also, as they are developing this are they conscious on an ongoing basis of the needs of the deaf and hearing impaired as they are developing this?

Mr. Tutton. Yes. Yes, and that has been input into what we are doing; but, yes, I will write you on that also.

Mr. **Markey**. And how quickly after we pass this legislation and it is signed by the President and passed by the President could we expect the telephone companies to be able to implement this mandate?

Mr. **Tutton**. I would say on an interstate basis, if AT&T were selected, I know what we can do, and the responsibility would lie within my organization, and——

Mr. **Markey**. Think of this as your first sales presentation.

Mr. **Tutton**. I think we could do it in much less than a year.

Mr. **Markey**. Very good. Let me——

Mr. **Tutton**. And I would accept that as a challenge.

Mr. **Markey**. I like it.

Mr. **Tutton**. Right now. I have my pen.

Mr. **Markey**. If you could have this thing done in 6 months——

Mr. **Tutton**. If we can resolve the funding issues, and the central administration.

Mr. **Markey**. Let me wrap up the hearing this way. Let me ask each of you to give me a 1 minute, and no more, summary of what it is that you want us to retain from your testimony as we are now moving forth to resolve the questions which are—that are still remaining in this legislation and for markup. We will begin in reverse order to the opening statements. We will begin with Ms. Hershman.

Ms. **Hershman**. I would say, Mr. Chairman, very briefly that there are issues that need to be resolved, and that all of the players have to be involved in the resolution of those issues.

And that we have to have someone responsible for implementing the legislation, and making sure that technology does keep up with the needs.

Mr. **Markey**. Thank you. Ms. Strauss.

Ms. **Strauss**. I would just say that our goal is to provide nationwide relay services that finally do achieve equality in telephone access, and that means blockage rates in turn, and no greater than that for voice users.

And systems that will be consistent with one another throughout the country, and meet certain minimum standards to ensure quality of service.

Mr. **Markey**. Mr. Tutton.

Mr. **Tutton**. AT&T and myself clearly think that this is a unique opportunity. We want to see this service brought to the public, and we support it. I think there is a funding issue that I think can be solved.

I think the Federal Communications Commission should be given the power and the authority to be able to solve this problem with grants and suggestions, and I think that the issue of some sort of central administration control needs to be addressed.

We debated on that, and I am very confident that this committee in its wisdom will come up with the appropriate solutions, and we, and I personally, and AT&T stand ready to help in any way we can.

Mr. **Markey**. Thank you. Ms. Strauss.

Ms. **Strauss**. This is obviously long overdue and a very timely extension of universal service. The funding problem ought to be able to be solved, because it is not an extremely high price tag that we are talking about.

Clearly, the costs should not be imposed upon the hearing impaired and the speech impaired, and speaking for New York, and I am sure for those fellow State Commissioners, we will be happy to work with the Congress and the FCC to resolve the matters that remain outstanding.

Mr. **Markey**. Before we conclude, I would like to ask you one other comment, and that is on the subject of mandating a federally funded public service announcement to be close-captioned, or open-captioned.

We are aware that although many prime time television shows are close-captioned, that public health announcements are not available. Can you give us some guidance or a comment on that?

Mr. **Jordan**. Let me say, first, to the Federal relay. The national relay system, I think, I can sum up very easily by saying that it needs to be a national system that provides full and equal accessibility and does not place a cost burden on the hearing-impaired users, and has no restrictions, such as length of call, or number of calls.

And that in training programs and so forth that deaf people are involved in making the plan. The public service announcements are a very, very important area. Captioning is another accessibility. We now have accessibility to the television that we didn't have just a few years ago.

And public service announcements often provide emergency information that it is essential people see and understand. So, I would very strongly support open captioning on PSA's.

There are millions and millions of older hearing-impaired people who don't have captioners for their televisions, because either they can't afford to buy them, or they won't buy them because of the stigma of having something that is meant for hearing-impaired people.

So, I would strongly support open captioning. If I may be so bold, I would like to add a third area of communication accessibility. We talked about telecommunications accessibility, and we talked briefly about captioning for television communication accessibility.

I want to mention that the accessibility to this conference, this hearing, has been provided for me by sign language interpreting, and Mr. Adams came with me from Gallaudet University. He is one sign language interpreter who has stayed for 1½ hours, which really goes beyond what the physical limitations of his ability are.

And I think it relates to the issue of sensitivity. I would ask that the next time the committee holds hearings that other sign language interpreters be provided to make it accessible for us. Thank you.

Mr. **Markey**. Thank you, Dr. Jordan, very much; and your comments are well taken. We very much appreciate your participation here today. We would like to work towards reaching a closure on this part of the Disabilities Act as quickly as possible.

What I would like to do is to ask each of you and the interests that you represent to work very closely with us to produce a final product in a relatively brief period.

And, we, as well, would like to note our gratitude to the signer from Gallaudet University. Thank you very much. Thank you all very much. The hearing is adjourned.

[Whereupon, the hearing was adjourned.]

[The following statements were submitted for the record:]

STATEMENT OF HON. STEVE CUNDERSON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WISCONSIN

Chairman Markey, Vice Chairman Rinaldo, members of the subcommittee, it is indeed a privilege to be with you today as you open hearings on the Americans with Disabilities Act. This bill has been called the most significant piece of legislation ever to affect the disabled community of our country, and I sincerely believe we can work within ADA to truly empower all handicapped individuals.

In the Education and Labor Committee, of which I am a member, we heard testimony attesting to discrimination in the workplace and the need for the employment and accommodation provisions of this bill. And yet, Mr. Chairman, there is a quieter and far less apparent form of discrimination impeding the full participation of some 26 million Americans in our society. These 26 million Americans are the hearing and speech impaired, and for them discrimination comes in the form of denied access, access previously assured in the Communications Act of 1934.

Franky Ramont, an employee in my office, is deaf. She is a bright and lively individual, a full participant in our society and in her workplace in every sense, except when it comes to communicating with others. Although she is fluent in sign and can read lips very well, Franky is restricted to calling only those individuals proficient with and possessing a TDD device.

Calling the local pizza parlor or the child care center where her son Elijah is cared for, is a difficult and sometimes impossible task. Deafness does not discriminate and yet our communication system, largely because of insensitivity, has created a two-tiered communication society between the hearing and the hearing and speech impaired. Clearly this must come to an end.

Last year many Members of Congress indeed, many members of this subcommittee joined me in supporting the Telecommunications Enhancement Act of 1988, a bill which provided the hearing and speech-impaired community full access to the Federal Government. Today the House begins its journey to provide these individuals with universal telecommunications access to society at large.

Mr. Chairman, members of the committee, I need not dwell on the difficulties of Title V as it exists in H.R. 2273. The penalty provisions in H.R. 2273 are enormous, $10,000 a day for those who fail to offer services. Imagine what this would do to the smaller mom and pop operations, who traditionally have been the slowest to comply with Federal law.

Furthermore, I would offer that civil rights law is not the proper vehicle for communication enhancement, there is little or no precedent. The Communications Act of 1934 is the appropriate vehicle. Thus, the communications provisions in H.R. 2273 are not the proper bridge to ensure access for the hearing impaired. The Senate provisions as amended are the necessary bridge.

I introduced, in H.R. 3171, the same provisions Senator McCain successfully incorporated into the Senate's ADA bill as Title IV of Senate 933. In essence, H.R. 3171 builds on various State initiatives directing common carriers to provide improved access for the hearing impaired and speech impaired by providing relay services individually, through designees, or in concert with other carriers. This service would allow a deaf person to call your office, a business or a restaurant even if the destination of that person's call did not have a TDD on site. The relay service would translate the impulses of the TDD into voice automation and the voice of the respondent into TDD impulses.

I would urge you to seriously consider incorporating H.R. 3171 into the ADA. In so doing, you will provide the communications industry with a feasible formula for implementation, and you will provide the hearing and speech-impaired community with universal access.

Thank you.

MINNESOTA
RELAY
SERVICE

419 North Robert St., Suite 300, St. Paul, MN 55101 (612) 297-5328 Voice & TDD

Written Testimony for
the Americans with Disabilities Act of 1989
House Subcommittee on Telecommunication and Finance
Robert B. Yeager
September 27, 1989

My name is Robert Yeager and I am the Unit Manager of the Direct Connect Minnesota Relay Service (a program of Deafness, Education and Advocacy Inc.), one of the newest and the most technologically advanced of the eight state-wide relay services in the country. I was previously the coordinator and one of the original operators with the Massachusetts Relay Service, the third state-wide relay service in the U.S.

I am writing in support of the Americans with Disabilities Act of 1989, specifically to address the desperate need for comprehensive intrastate and interstate, Deaf Consumer controlled TDD/telephone relay services across our country.

Each day we think nothing of phoning to make a doctor's appointment, do business with a person or company in another city, state or country, chat with a friend or relative, do our banking or investing, contact a parent whose child is sick at school, make travel arrangements or just order a pizza. How many times do you pick up the phone to make or answer a call everyday? Can you imagine having to leave your home or office and physically travel to handle the business for each of those calls?

Millions of Americans are denied the freedom and convenience of this device, the telephone, which sits on our desk and with the touch of a button connects hearing people to the largest telecommunication system on the planet.

As a former Relay Operator myself I have witnessed the difference these services can make in people's lives. Consumers have written to say the service has opened doors for them, provided a tool for independence, a means to live their own life. A woman calls an ambulance when her husband has a heart attack. Someone sets up an interview and gets their first job. A teenager gets their first date.

A hearing father who never learned sign language has the first complete, genuine conversation of his life with his adult deaf daughter.

The need for TDD/telephone relay service has been proven in eight states across the country. Now hundreds of thousands of calls are made each day by deaf, hearing impaired and speech impaired people who previously had to wait and depend on a hearing friend or relative (or sometimes a stranger) to make their business and personal phone calls for them. This includes numerous people who were denied jobs on the age-old pretext that "you might have to make a phone call in the course of your job so a deaf person could not handle this position." Millions of people have been denied the right to live their own lives independently because major telephone corporations have not taken the extra steps to provide simple phone service to that segment of the population until relay legislation is passed in their state. The technology necessary to provide relay service has existed for at least a decade.

A TDD/telephone relay service provides a vital link between people, hearing and deaf, who could not otherwise communicate over the telephone. A deaf, hearing impaired or speech impaired caller who uses a TDD (Telecommunication Device for the Deaf) calls into the service and types to a Relay Operator over the operator's computer terminal. (In Minnesota, an IBM PS2 Model 50-Z is used with an Ultratech Intelemodem as a large screen TDD and for intrastate long distance information. No record of a caller's conversation is kept on paper or disk to insure confidentiality.) The operator calls the voice user on a separate phone line. When both parties are on line, the operator reads the deaf caller's words aloud to the hearing person and types the hearing caller's words to the deaf person. The Relay Operator is only responsible to pass the conversation from one person to the other and acts as a "human telephone wire". Like a telephone they do not censor, edit, correct, protect, advise, counsel or otherwise interfere with the business of the call. All calls and information are kept completely confidential. Often the operator needs to translate the grammar of American Sign Language to spoken English and back again. This requires a knowledge not only of ASL grammar but also of the culture of Deaf people and the Deaf Community.

These services are more than just telephones and computer terminals. A relay service is comprised of both telecommuncations equipment and human beings. Neither functions without the other. Certainly it is important to have the best up to date equipment, but that's not enough. It's not only phone lines and fiber optics, it's about ethics, responsibility and cultural understanding. Just passing words is not sufficient. A Relay Operator must facilitate communication. That is a task which requires human intervention. Some Deaf callers type standard English, some type ASL grammar. Some callers feel they should try to use English, even if their English skills are not strong. Occasionally a caller has had no formal training in ASL or English and invents their own grammatical structure. Here are some examples of relay conversations:

- "Avoid of me to pick on you for smoking?" (Have you been avoiding me because I picked on you for smoking?)
- "Touch finish New York you ?" (Have you returned from visiting New York?)
- "I ask you question must my something mean prove or not have only interview?" (Do I need written proof, resume, references, or just an interview?)
- "Thats well I very hope wait for open job that you will be much hard work doing that well I am good record that show it that too patience." (I hope you have a job opening. I will wait for it. I work hard and have a good record and I have patience.)

- "Time yesterday I called you but was not there I message someone but I waited for no answer on the phone but now I just calling you that is why." (I called yesterday but you were not in so I left a message with someone. Nobody returned my call so I'm calling now.)

- A Deaf Caller wants to phone the auto body shop where his car is being painted. The manager says to the deaf caller (through the Relay Operator) "We are behind schedule so your car isn't ready. Things have been hectic here." Then the manager uses a common English idiom hearing people use all the time. "We'll have all the pieces together by Friday." The Deaf caller, typing in ASL grammer, is unfamiliar with this common spoken English expression. He explodes, typing furiously on his TDD "Why pieces? Why you take apart my car? You must paint it only!" The Operator needs to translate the idiom and type in "Friday all finish ready".

- A Deaf caller gives the operator a number to dial to call a friend. The Relay Operator dials and gets a phone company recording saying that number is temporarily disconnected. When informed that the number is disconnected, the Deaf caller types "Check the other phone in the living room. Maybe that's still plugged in." Hearing people are familiar with these recordings. We have heard them all our lives. A Deaf caller will not be that familiar with the ins and outs of the phone system.

- After five o'clock a Deaf caller wants to phone their doctor. The office is closed and the answering service answers, saying "Dr. Smith's office". The Deaf caller is not familiar with answering services and begins to ask medical questions, assuming the live person at the doctor's office must be a doctor or nurse.

These are typical examples of relay conversations. The callers are not using bad English. They are not ignorant people. They are using their own language, ASL, and encountering aspects of telephone use with which they are unfamiliar, aspects and events we take for granted. At the Minnesota Relay Service, operators are trained by a number of deaf consumers and interpreting experts in Deaf Culture, Language and ethics.

The "common carriers" and interstate phone companies mentioned in the bill are phone companies which have the technological capabilities but may not have the humanistic capabilities and cross-cultural understanding necessary to provide quality relay service. It is a natural assumption to see "TDD/Telephone Relay Service" and think that a telephone company is the right choice. But the telephone/telecommunications aspect comprises perhaps 30% of the components of a relay service. It is far easier and more cost effective to put the 30% telecommunications aspect where the 70% Deaf Culture and Language expertise already reside.

At AT&T's California Relay Service (CRS), already operating for several years, an advisory commitee with a majority of deaf and hearing impaired consumers is currently "in the works" to provide the CRS with input and feedback from the community it serves. In Minnesota, the state board which contracts for the Minnesota Relay Service (MRS) as well as the Board of Directors of D.E.A.F. Inc. both have a majority of Deaf and hearing impaired members. The other Services in this country which are run by non-profit agencies are similarly Deaf controlled. We do not need to set up a separate committee for feedback from the Deaf Community because we are the community. The people who control these services also use it every day. To leave the daily decisions and policy implementation of a TDD/telephone relay service in the hands of a hearing-controlled corporation is as absurd as running the National Organization for Women with an all-male board of directors.

Within the first three sentences of it's testimony for this hearing, AT&T demonstrates it's "sensitivity" to Deaf people and Deaf culture by invoking the name of Alexander Graham Bell. It is true that Bell invented the telephone while trying to design a hearing amplification device for the Deaf, largely because his wife and mother were deaf. Bell also considered Deaf people to be aberrations of nature and felt they looked "freakish" if they used sign language. He forbade his wife to sign and supported such educational measures as tying deaf schoolchildren's hands so they could not use their own language. He attempted to pass legislation which would prohibit two deaf people from marrying because they might produce deaf children Bell's name is considered a curse word in much of the Deaf Community. Do they feel this person is an appropriate representation of their commitment to persons with disabilities?

AT&T's California Relay Service claims to process 250,000 calls per month In an article in the August edition of Silent News, Bill White reports this figure includes those incoming calls put on hold that give a recording informing the caller that all operators are busy, please wait, etc. These are counted as calls handled even though a percentage of these callers hang up and never reach a Relay Operator. At the same time, because the call has been picked up by the phone system, it generates cost on the incoming WATS line. The cost of this time on the incoming WATS lines is paid for by the CRS from the revenues generated by the legislated surcharge. The money is paid to the company which provides the WATS lines. AT&T provides those lines. If the service is insufficiently staffed or operator speed and quality of service is low, callers must wait before they get through to a Relay Operator. This is the equivalent of you or I picking up our phone receiver and staring at it for ten minutes before we dial the number However, income is generated for the company whenever callers are put on hold for these very reasons.

Mr. White also reports that many of the California Relay Service's problems were anticipated by user groups during the planning stages, but deaf consumer representatives were shut out of key meetings. CRS is currently being sued by the California Deaf Community through an organization named Greater Los Angeles Deaf.

I would like to clearly state that I do not question the motivation, dedication or personal commitment of individuals such as Merril Tutton or any of the AT&T Relay managers across the country. In our testimonies we have agreed on a number of important points. I merely wish to point out that a large, hearing-controlled telecommunications corporation is not necessarily the best provider of relay service. These services work best when they are created and controlled by and constantly accept input and feedback from the consumers they were designed to serve.

I also wish to express my alarm that the Federal Communication Commission is using the AT&T California Relay Service as it's sole model for the development of policies, procedures, guidelines and regulations to cover all relay services across the country. The FCC has no intention, as of our last contact, to actively seek input from deaf and hearing impaired consumers, interpreters, linguists or persons with experience in relaying. This is somewhat akin to writing a medical manual on a surgical technique without seeking the input of qualified medical experts or even an experienced surgeon who has actually cut into a patient.

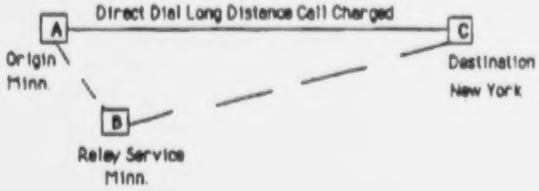
One of the worst problems facing any relay service is the lack of legal or bureaucratic precedent. As relay services are so unique and different from anything that has been done before, there are no existing laws, rules, regulations or bureaucratic systems designed to fit our unusual purpose and policies. Many problems arise as a direct result of people trying to cram the Relay Service into preexisting categories that don't apply to us.

We are not an answering service, we are not a long distance service and we are not an information service. We are a unique system comprised of humans and machines designed to facilitate communication between two people who could not otherwise communicate over standard telephone lines. Our "invisibility" while accomplishing this must be acknowledged by those persons in positions of authority over the services. They need to be made aware that precedents have to be set to fit the Service, instead of the Services and the Community we are here to serve being hindered and frustrated by inadequate and inappropriate laws and regulations. It is imperative that regulations be established to insure the deaf and hearing impaired community's needs and rights are respected.

The bill touches on this briefly by prohibiting Relay Operators from disclosing the content of relayed calls. This is vitally important but the measure is insufficient. The confidentiality of relayed conversations must be protected as privileged information, the same as doctor-patient or lawyer-client conversations are protected. For any police officer to be able to walk into a relay service and insist on getting information regarding a call is akin to obtaining evidence through an illegal wiretap. (Not to mention that it would rely on the memory of an operator who takes 30 to 40 calls in a six-hour shift and may have relayed the call in question weeks or months before.)

Other problems have stemmed from relay services being treated as long distance carriers or recently (with Bell Atlantic) as an information service because of the necessary translation between English and ASL.

Much of the language of the ADA deals with setting up separate intrastate and interstate relay service. Even a single nationwide system has been suggested. This is unnecessary and potentially wasteful. Currently all the services run by non-profit agencies are providing both intra and interstate service. (Using third-party billing for out-of-state calls.) Callers in states with AT&T services cannot call out of their own state. The technology exists which would allow a caller at point (A) to call through a relay service at point (B) to the destination at point (C) and only be charged for a direct-dial call from (A) to (C).



We are currently using this system in Minnasota for in-state toll calls (intrastate long distance). If interstate carriers (AT&T, MCI, Sprint, etc.) would implement this system to function whenever the Relay Operator dialed in a code after accessing the long distance company's lines, this could be done for interstate calls anywhere in the country, or anywhere in the world. However, no long distance carrier has bothered to do so as the only people with an application for this function are people calling through a relay service.

The Americans with Disabilities Act of 1989 must be passed. The millions of deaf and hearing impaired people in this country have waited long enough for access to the communication equipment that hearing people have enjoyed all their lives.

I strongly believe that the concept of consumer empowerment is integral to the spirit of the Americans with Disabilities Act. Deaf Americans and disabled Americans are not asking for "parents" or pity, they are only saying that everyone deserves an equal chance. Clearly Equal Access is every person's civil right, but until consumer controlled TDD/telephone relay services are available nationwide, the phrase Equal Access is just empty rhetoric.

AMERICANS WITH DISABILITIES ACT

THURSDAY, SEPTEMBER 28, 1989

House of Representatives,
Committee on Energy and Commerce,
Subcommittee on Transportation
and Hazardous Materials,
Washington, DC.

The subcommittee met, pursuant to notice, at 9:30 a.m., in room 2318, Rayburn House Office Building, Hon. Thomas A. Luken (chairman) presiding.

Mr. **Luken**. The Subcommittee on Transportation and Hazardous Materials will come to order, and we will proceed with a hearing on the Disabilities Act, H.R. 2273 and S. 933, properly titled the "Americans With Disabilities Act of 1989".

This bill is the most sweeping civil rights bill for the disabled that has ever been considered by the Congress. The bill seeks to end discrimination against the 43 million Americans who suffer from some disability, in such critical areas as employment, transportation, public and private accommodations, and communications.

There is no doubt that progress has been made in the past few years in many areas with regard to the disabled, but it is also clear that there is much more to be accomplished, that the full accessibility which we all desire and want to work for is not available at the present time.

The premise of the bill is unassailable. Discrimination, whether produced by overt actions or thoughtless attitudes, produces segregation, exclusion, impoverishment, and denial of equal and meaningful opportunities. By denying the benefits of equal treatment and participation to millions of disabled Americans, our country suffers as a whole.

This bill can bridge a significant gap in our current civil rights laws. While significant legislation has established the general pattern of prohibiting discrimination on the basis of race, color, national origin, gender, and age, the fact of the matter is that significant discrimination against the disabled exists in our country today. This bill, if properly crafted, will help to remove the barriers which continue to impede the disabled.

Our subcommittee's jurisdiction in this matter focuses on the transportation provisions of the bill which relate to Amtrak and commuter railroads. All of us recognize the crucial role transportation plays in our lives. It is the veritable lifeline which enables all persons to enjoy the full economic and social benefits which our country offers.

The bill prohibits discrimination against the disabled in the provision of transportation services. In the railroad area, it requires Amtrak and commuter railroads to provide accessible vehicles and stations for disabled persons.

While the ultimate goals of the legislation deserve our full support and efforts, the specifics of the legislation must be clear. Clarification of many of the provisions of this bill are needed. Our mission is to require that the legislation creates well-defined, achievable and enforceable requirements.

As we proceed with today's hearing and toward a prompt markup of this bill, we should focus on the particular obligations which the legislation creates. By assuring that clear and achievable means are spelled out in the bill, we will better serve both the interests of the disabled community and the transportation industry.

We also should be mindful of the costs of achieving compliance with the obligations imposed by the bill. For example, earlier this week, the House of Representatives passed a bill which authorizes funds for Amtrak over the next 3 years.

As the members of this subcommittee recognize, Amtrak's reliance of Federal assistance has declined dramatically in the past decade. But Amtrak's need for continuing funding for capital improvements is acute. The requirements in this bill for making equipment and facilities accessible will create an additional strain on Amtrak's budget. If funds are insufficient to meet either the accessibility requirements or Amtrak's other capital and operating expenses, neither the interests of the disabled nor Amtrak will be served.

We know this bill enjoys broad bipartisan support. President Bush has endorsed the Senate bill. The leadership of the House has indicated that this bill is a major priority of this Congress and we have assured the leadership that we will work swiftly on it.

If we are successful in crafting clear, specific and achievable objectives in this legislation, we will be furthering the goals of individual equality, dignity, and responsibility for disabled Americans. I look forward to considering this matter.

I am pleased to call upon the gentleman, the ranking minority member from Kansas, Mr. Whittaker.

[Testimony resumes on p. 109.]

101st CONGRESS
1st Session

H. R. 2273

To establish a clear and comprehensive prohibition of discrimination on the basis of disability.

IN THE HOUSE OF REPRESENTATIVES

May 9, 1989

Mr. Coelho (for himself, Mr. Fish, Mr. Hawkins, Mr. Conte, Mr. Owens of New York, Mr. Ackerman, Mr. Atkins, Mr. Beilenson, Mr. Bennett, Mr. Borski, Mr. Bosco, Mrs. Boxer, Mr. Campbell of California, Mr. Cardin, Mr. Clay, Mr. Crockett, Mr. de Lugo, Mr. Donnelly, Mr. Dwyer of New Jersey, Mr. Dymally, Mr. Edwards of California, Mr. Fazio, Mr. Feighan, Mr. Frank, Mr. Frost, Mr. Fuster, Mr. Gejdenson, Mr. Gordon, Mr. Hayes of Illinois, Mr. Hoyer, Mr. Hutto, Mr. Jacobs, Mr. Jontz, Mr. Kastenmeier, Mr. Kleczka, Mr. Levin of Michigan, Mr. Lewis of Georgia, Mr. Manton, Mr. Matsui, Mr. McCloskey, Mr. McDermott, Mr. McHugh, Mr. Mfume, Mr. Miller of California, Mr. Mineta, Mrs. Morella, Mr. Oberstar, Mr. Pallone, Ms. Pelosi, Mr. Richardson, Mr. Rowland of Connecticut, Ms. Schneider, Mr. Shays, Mr. Smith of Vermont, Mr. Solarz, Mr. Studds, Mr. Traxler, Mr. Udall, Mr. Vento, Mr. Waxman, Mr. Weiss, Mr. Wise, Mr. Wolpe, Mr. Florio, Mr. Williams, Mr. Roybal, Mr. Morrison of Connecticut, Mr. Brown of California, Mr. Dellums, Mr. Sabo, Mr. Espy, Mr. Dixon, Mr. Miller of Washington, Mr. Young of Alaska, Mr. Foglietta, Mr. Rangel, Mr. Garcia, Mrs. Saiki, Mr. Martinez, Mr. Mavroules, Mr. Conyers, Mr. Markey, Mr. Visclosky, Mr. Kildee, and Mrs. Collins) introduced the following bill; which was referred jointly to the Committees on Education and Labor, Energy and Commerce, Public Works and Transportation, and the Judiciary

---

A BILL

To establish a clear and comprehensive prohibition of discrimination on the basis of disability.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the "Americans with Disabilities Act of 1989".

(b) TABLE OF CONTENTS.—The table of contents is as follows:

Sec. 1. Short title; table of contents.
Sec. 2. Findings and purposes.
Sec. 3. Definitions.

TITLE I—GENERAL PROHIBITION AGAINST DISCRIMINATION

Sec. 101. Forms of discrimination prohibited.

TITLE II—EMPLOYMENT

Sec. 201. Definitions.
Sec. 202. Discrimination.
Sec. 203. Posting notices.
Sec. 204. Regulations.
Sec. 205. Enforcement.

TITLE III—PUBLIC SERVICES

Sec. 301. Definition of qualified individual with a disability.
Sec. 302. Discrimination.
Sec. 303. Actions applicable to public transportation considered discriminatory.
Sec. 304. Regulations.
Sec. 305. Enforcement.

TITLE IV—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

Sec. 401. Definitions.
Sec. 402. Prohibition of discrimination by public accommodations.
Sec. 403. Prohibition of discrimination in public transportation services provided by private entities.
Sec. 404. Regulations.
Sec. 405. Enforcement.

TITLE V—TELECOMMUNICATIONS RELAY SERVICES

Sec. 501. Definitions.
Sec. 502. Telecommunications relay services.
Sec. 503. Regulations.
Sec. 504. Enforcement.

2335

TITLE VI—MISCELLANEOUS PROVISIONS

Sec. 601. Construction.
Sec. 602. Prohibition against retaliation.
Sec. 603. State immunity.
Sec. 604. Regulations by the Architectural and Transportation Barriers Compliance Board.
Sec. 605. Attorney's fees.
Sec. 606. Effective date.

SEC. 2. FINDINGS AND PURPOSES.

(a) FINDINGS.—Congress finds that—

(1) some 43,000,000 Americans have one or more physical or mental disabilities, and this number is increasing as the population as a whole is growing older;

(2) historically, society has tended to isolate and segregate individuals with disabilities, and, despite some improvements, such forms of discrimination against individuals with disabilities continue to be a serious and pervasive social problem;

(3) discrimination against individuals with disabilities persists in such critical areas as employment, housing, public accommodations, education, transportation, communication, recreation, institutionalization, health services, voting, and access to public services;

(4) unlike individuals who have experienced discrimination on the basis of race, sex, national origin, religion, or age, individuals who have experienced discrimination on the basis of disability have often had no legal recourse to redress such discrimination;

(5) individuals with disabilities continually encounter various forms of discrimination, including outright intentional exclusion, the discriminatory effects of architectural, transportation, and communication barriers, overprotective rules and policies, failure to make modifications to existing facilities and practices, exclusionary qualification standards and criteria, segregation, and relegation to lesser services, programs, activities, benefits, jobs, or other opportunities;

(6) census data, national polls, and other studies have documented that people with disabilities, as a group, occupy an inferior status in our society, and are severely disadvantaged socially, vocationally, economically, and educationally;

(7) individuals with disabilities are a discrete and insular minority who have been faced with restrictions and limitations, subjected to a history of purposeful unequal treatment, and relegated to a position of political powerlessness in our society, based on characteristics that are beyond the control of such individuals and resulting from stereotypic assumptions not truly indicative of the individual ability of such individuals to participate in, and contribute to, society;

(8) the Nation's proper goals regarding individuals with disabilities are to assure equality of opportunity,

full participation, independent living, and economic self-sufficiency for such individuals; and

(9) the continuing existence of unfair and unnecessary discrimination and prejudice denies people with disabilities the opportunity to compete on an equal basis and to pursue those opportunities for which our free society is justifiably famous, and costs the United State billions of dollars in unnecessary expenses resulting from dependency and nonproductivity.

(b) PURPOSE.—It is the purpose of this Act—

(1) to provide a clear and comprehensive National mandate for the elimination of discrimination against individuals with disabilities;

(2) to provide clear, strong, consistent, enforceable standards addressing discrimination against individuals with disabilities;

(3) to ensure that the Federal Government plays a central role in enforcing the standards established in this Act on behalf of individuals with disabilities; and

(4) to invoke the sweep of congressional authority, including its power to enforce the fourteenth amendment and to regulate commerce in order to address the major areas of discrimination faced day-to-day by people with disabilities.

SEC. 3. DEFINITIONS.

As used in this Act:

(1) AUXILIARY AIDS AND SERVICES.—The term "auxiliary aids and services" shall include—

(A) qualified interpreters or other effective methods of making aurally delivered materials available to individuals with hearing impairments;

(B) qualified readers, taped texts, or other effective methods of making visually delivered materials available to individuals with visual impairments;

(C) acquisition or modification of equipment or devices; and

(D) other similar services and actions.

(2) DISABILITY.—The term "disability" means, with respect to an individual—

(A) a physical or mental impairment that substantially limits one or more of the major life activities of such individual;

(B) a record of such an impairment; or

(C) being regarded as having such an impairment.

(3) REASONABLE ACCOMMODATION.—The term "reasonable accommodation" shall include—

(A) making existing facilities used by employees readily accessible to and usable by individuals with disabilities; and

(B) job restructuring, part-time or modified work schedules, reassignment, acquisition or modification of equipment or devices, appropriate adjustment or modifications of examinations and training materials, adoption or modification of procedures or protocols, the provision of qualified readers or interpreters, and other similar accommodations.

(4) STATE.—The term "State" means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, the Canal Zone, the Trust Territory of the Pacific Islands, and the Commonwealth of the Northern Mariana Islands.

TITLE I—GENERAL PROHIBITION AGAINST DISCRIMINATION

SEC. 101. FORMS OF DISCRIMINATION PROHIBITED.

(a) IN GENERAL.—

(1) SERVICES, PROGRAMS, ACTIVITIES, BENEFITS, JOBS, OR OTHER OPPORTUNITIES.—Subject to the standards and procedures established in titles II through V, it shall be discriminatory to subject an indi-

vidual or class of individuals, directly or through contractual, licensing, or other arrangements, on the basis of disability, to any of the following:

(A) Denying the opportunity to participate in or benefit from a service, program, activity, benefit, job, or other opportunity.

(B) Affording an opportunity to participate in or benefit from a service, program, activity, benefit, job, or other opportunity that is not equal to that afforded others.

(C) Providing a service, program, activity, benefit, job, or other opportunity that is less effective than that provided to others.

(D) Providing a service, program, activity, benefit, job, or other opportunity that is different or separate, unless such action is necessary to provide the individual or class of individuals with a service, program, activity, benefit, job, or other opportunity that is as effective as that provided to others.

(E) Aiding or perpetuating discrimination by providing significant assistance to an agency, organization, or individual that discriminates.

(F) Denying the opportunity to participate as a member of boards or commissions.

(G) Otherwise limiting the enjoyment of any right, privilege, advantage, or opportunity enjoyed by others.

(2) EQUAL OPPORTUNITY.—For purposes of this Act, aids, benefits, and services to be equally effective, must afford an individual with a disability an equal opportunity to obtain the same result, to gain the same benefit, or to reach the same level of achievement, in the most integrated setting appropriate to the individual's needs.

(3) OPPORTUNITY TO PARTICIPATE.—Notwithstanding the existence of separate or different programs or activities provided in accordance with this section, an individual with a disability shall not be denied the opportunity to participate in such programs or activities that are not separate or different.

(4) ADMINISTRATIVE METHODS.—An individual or entity shall not, directly or through contractual or other arrangements, utilize standards or criteria or methods of administration—

(A) that have the effect of discrimination on the basis of disability;

(B) that have the purpose or effect of defeating or substantially impairing the accomplishment of the objectives of the services, programs, activities, benefits, jobs, or other opportunities provided with respect to an individual with a disability; or

(C) that perpetuate the discrimination of others who are subject to common administrative control or are agencies of the same State.

(5) RELATIONSHIPS OR ASSOCIATIONS.—It shall be discriminatory to exclude or otherwise deny equal services, programs, activities, benefits, jobs, or other opportunities to an individual or entity because of the relationship to, or association of, that individual or entity with another individual with a disability.

(b) DEFENSES.—

(1) IN GENERAL.—It shall be a defense to a charge of discrimination under this Act that an alleged application of qualification standards, selection criteria, performance standards or eligibility criteria that exclude or deny services, programs, activities, benefits, jobs, or other opportunities to an individual with a disability has been demonstrated by the covered entity to be both necessary and substantially related to the ability of an individual to perform or participate, or take advantage of the essential components of such particular program, activity, job, or other opportunity and such performance, participation, or taking advantage of such essential components cannot be accomplished by

applicable reasonable accommodations, modifications, or the provision of auxiliary aids or services.

(2) QUALIFICATION STANDARDS.—The term "qualification standards" may include—

(A) requiring that the current use of alcohol or drugs by an alcoholic or drug abuser not pose a direct threat to property or the safety of others in the workplace or program; and

(B) requiring that an individual with a currently contagious disease or infection not pose a direct threat to the health or safety of other individuals in the workplace or program.

TITLE II—EMPLOYMENT

SEC. 201. DEFINITIONS.

As used in this title:

(1) COMMISSION.—The term "Commission" means the Equal Employment Opportunity Commission established by section 705 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–4).

(2) EMPLOYEE.—

(A) IN GENERAL.—The term "employee" means an individual employed by an employer.

(B) EXCEPTION.—The term "employee" shall not include any individual elected to public office in any State or political subdivision of any

State by the qualified voters thereof, or any individual chosen by such officer to be on such officer's personal staff, or an appointee on the policy making level or an immediate adviser with respect to the exercise of the constitutional or legal powers of the office.

(C) LIMITATION ON EXCEPTION.—The exception contained in subparagraph (B) shall not include employees subject to the civil service laws of a State government, governmental agency or political subdivision.

(3) EMPLOYER.—

(A) IN GENERAL.—The term "employer" means a person engaged in an industry affecting commerce who has 15 or more employees for each working day in each of 20 or more calendar weeks in the current or preceding calendar year, and any agent of such a person.

(B) EXCEPTIONS.—The term "employer" does not include—

(i) the United States, a corporation wholly owned by the government of the United States, or an Indian tribe; or

(ii) a bona fide private membership club (other than a labor organization) that is exempt from taxation under section 501(c) of the Internal Revenue Code of 1986.

(4) PERSON, ETC.—The terms "person", "labor organization", "employment agency", "commerce", and "industry affecting commerce", shall have the same meaning given such terms in section 701 of the Civil Rights Act of 1964 (42 U.S.C. 2000e).

(5) QUALIFIED INDIVIDUAL WITH A DISABILITY.—The term "qualified individual with a disability" means an individual with a disability who, with or without reasonable accommodation, can perform the essential functions of the employment position that such individual holds or desires.

SEC. 202. DISCRIMINATION.

(a) GENERAL RULE.—No employer, employment agency, labor organization, or joint labor-management committee shall discriminate against any qualified individual with a disability because of such individual's disability in regard to job application procedures, the hiring or discharge of employees, employee compensation, advancement, job training, and other terms, conditions, and privileges of employment.

(b) CONSTRUCTION.—As used in subsection (a), the term "discrimination" includes—

(1) the failure by an employer, employment agency, labor organization, or joint labor-management

committee to make reasonable accommodations to the known physical or mental limitations of a qualified individual with a disability who is an applicant or employee unless such entity can demonstrate that the accommodation would impose an undue hardship on the operation of its business;

(2) the denial of employment opportunities by a covered employer, employment agency, labor organization, or joint labor-management committee to an applicant or employee who is a qualified individual with a disability if the basis for such denial is because of the need of the individual for reasonable accommodation; and

(3) the imposition or application by a covered employer, employment agency, labor organization or joint labor-management committee of qualification standards, tests, selection criteria or eligibility criteria that identify or limit, or tend to identify or limit, a qualified individual with a disability, or any class of qualified individuals with disabilities, unless such standards, tests or criteria can be shown by such entity to be necessary and substantially related to the ability of an individual to perform the essential functions of the particular employment position.

2347

SEC. 203. POSTING NOTICES.

Every employer, employment agency, labor organization, or joint labor-management committee covered under this title shall post notices in an accessible format to applicants, employees, and members describing the applicable provisions of this Act, in the manner prescribed by section 711 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–10).

SEC. 204. REGULATIONS.

Not later than 180 days after the date of enactment of this Act, the Commission shall issue regulations in an accessible format to carry out this title in accordance with subchapter II of chapter 5 of title 5, United States Code.

SEC. 205. ENFORCEMENT.

The remedies and procedures set forth in sections 706, 709, and 710 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–5, 2000e–8, and 2000e–9), and the remedies and procedures available under section 1981 of the Revised Statutes (42 U.S.C. 1981) shall be available, with respect to any individual who believes that he or she is being or about to be subjected to discrimination on the basis of disability in violation of any provisions of this Act, or regulations promulgated under section 204, concerning employment.

TITLE III—PUBLIC SERVICES

SEC. 301. DEFINITION OF QUALIFIED INDIVIDUAL WITH A DISABILITY.

As used in this title, the term "qualified individual with a disability" means an individual with a disability who, with or without reasonable modifications to rules, policies and practices, the removal of architectural, communication, and transportation barriers, or the provision of auxiliary aids and services, meets the essential eligibility requirements for the receipt of services or the participation in programs or activities provided by a State or agency or political subdivision of a State or board, commission or other instrumentality of a State and political subdivision.

SEC. 302. DISCRIMINATION.

No qualified individual with a disability shall, by reason of his or her disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination by a State, or agency or political subdivision of a State or board, commission, or other instrumentality of a State and political subdivision.

SEC. 303. ACTIONS APPLICABLE TO PUBLIC TRANSPORTATION CONSIDERED DISCRIMINATORY.

(a) DEFINITION.—As used in this title, the term "public transportation" means transportation by bus or rail, or by any other conveyance (other than air travel) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

(b) VEHICLES.—

(1) NEW BUSES, RAIL VEHICLES, AND OTHER FIXED ROUTE VEHICLES.—It shall be considered discrimination for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for an individual or entity to purchase or lease a new fixed route bus of any size, a new intercity rail vehicle, a new commuter rail vehicle, a new rapid rail vehicle, a new light rail vehicle to be used for public transportation, or any other new fixed route vehicle to be used for public transportation and for which a solicitation by such individual or entity is made later than 30 days after the date of enactment of this Act, if such bus, rail, or other vehicle is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) USED VEHICLES.—If an individual or entity purchases or leases a used vehicle after the date of enactment of this Act, such individual or entity shall make demonstrated good faith efforts to purchase or lease a used vehicle that is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(3) **REMANUFACTURED VEHICLES.**—If an individual or entity remanufactures a vehicle, or purchases or leases a remanufactured vehicle, so as to extend its usable life for 5 years or more, the vehicle shall, to the maximum extent feasible, be readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(c) **PARATRANSIT AS A SUPPLEMENT TO FIXED ROUTE PUBLIC TRANSPORTATION SYSTEM.**—If an individual or entity operates a fixed route public transportation system to provide public transportation, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to fail to provide paratransit or other special transportation services sufficient to provide a comparable level of services as is provided to individuals using fixed route public transportation to individuals with disabilities, including individuals who use wheelchairs, who cannot otherwise use fixed route public transportation and to other individuals associated with such individuals with disabilities in accordance with service criteria established under regulations promulgated by the Secretary of Transportation.

(d) **COMMUNITY OPERATING DEMAND RESPONSIVE SYSTEMS FOR THE GENERAL PUBLIC.**—If an individual or entity operates a demand responsive system that is used to provide public transportation for the general public, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to purchase or lease a new vehicle, for which a solicitation is made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs unless the entity can demonstrate that such system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to that provided to the general public.

(e) New Facilities.—For purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for an individual or entity to build a new facility that will be used to provide public transportation services, including bus service, intercity rail service, rapid rail service, commuter rail service, light rail service, and other service used for public transportation that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(f) Alterations of Existing Facilities.—With respect to a facility or any part thereof that is used for public transportation and that is altered by, on behalf of, or for the use of an individual or entity later than 1 year after the date of enactment of this Act, in a manner that affects or could affect the usability of the facility or part thereof, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to fail to make the alterations in such a manner that, to the maximum extent feasible, the altered portion of the facility, the path of travel to the altered area, and the bathrooms, telephones, and drinking fountains serving the remodeled area are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(g) EXISTING FACILITIES, INTERCITY RAIL, RAPID RAIL, LIGHT RAIL, AND COMMUTER RAIL SYSTEMS, AND KEY STATIONS.—

(1) EXISTING FACILITIES.—Except as provided in paragraph (3), with respect to existing facilities used for public transportation, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for an individual or entity to fail to operate such public transportation program or activity conducted in such facilities so that, when viewed in the entirety, it is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) INTERCITY, RAPID, LIGHT, AND COMMUTER RAIL SYSTEMS.—With respect to vehicles operated by

intercity, light, rapid and commuter rail systems, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for an individual or entity to fail to have at least one car per train that is accessible to individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in any event in no less than 5 years.

(3) KEY STATIONS.—For purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for an individual or entity to fail to make stations in intercity rail systems and key stations in rapid rail, commuter rail and light rail systems readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in no event later than 3 years after the date of enactment of this Act, except that the time limit may be extended by the Secretary of Transportation up to 20 years for extraordinarily expensive structural changes to, or replacement of, existing facilities necessary to achieve accessibility.

SEC. 304. REGULATIONS.

(a) ATTORNEY GENERAL.—Not later than 180 days after the date of enactment of this Act, the Attorney General shall promulgate regulations in an accessible format that implement this title (other than section 303), and such regulations shall be consistent with this title and with the coordination regulations under part 41 of title 28, Code of Federal Regulations (as in existence on January 13, 1978), applicable to recipients of Federal financial assistance under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794).

(b) SECRETARY OF TRANSPORTATION.—

(1) IN GENERAL.—Not later than 240 days after the date of enactment of this Act, the Secretary of Transportation shall promulgate regulations in an accessible format that include standards applicable to facilities and vehicles covered under section 303.

(2) CONFORMANCE OF STANDARDS.—Such standards shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 604(b).

SEC. 305. ENFORCEMENT.

The remedies, procedures, and rights set forth in section 505 of the Rehabilitation Act of 1973 (29 U.S.C. 794a) shall be available with respect to any individual who believes that he or she is being or about to be subjected to discrimination on the basis of disability in violation of any provisions of this

Act, or regulations promulgated under section 304, concerning public services.

TITLE IV—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

SEC. 401. DEFINITIONS.

As used in this title:

(1) COMMERCE.—The term "commerce" means travel, trade, traffic, commerce, transportation, or communication among the several States, or between the District of Columbia and any State or between any foreign country or any territory or possession and any State or the District of Columbia or between points in the same State but through another State or the District of Columbia or foreign country.

(2) PUBLIC ACCOMMODATION.—

(A) IN GENERAL.—The term "public accommodation" means privately operated establishments—

(i)(I) that are used by the general public as customers, clients, or visitors; or

(II) that are potential places of employment; and

(ii) whose operations affect commerce.

(B) INCLUSIONS.—Public accommodations referred to in clause (i)(I) include auditoriums, convention centers, stadiums, theaters, restaurants, shopping centers, inns, hotels, and motels (other than inns, hotels, and motels exempt under section 201(b)(1) of the Civil Rights Act of 1964 (42 U.S.C. 2000a(b)(1))), terminals used for public transportation, passenger vehicle service stations, professional offices of health care providers, office buildings, sales establishments, personal and public service businesses, parks, private schools, and recreation facilities.

(3) PUBLIC TRANSPORTATION.—The term "public transportation" means transportation by bus or rail, or by any other conveyance (other than by air travel) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

SEC. 402. PROHIBITION OF DISCRIMINATION BY PUBLIC ACCOMMODATIONS.

(a) GENERAL RULE.—No individual shall be discriminated against in the full and equal enjoyment of the goods, services, facilities, privileges, advantages, and accommodations of any place of public accommodation, on the basis of disability.

(b) **Construction.**—As used in subsection (a), the term "discriminated against" includes—

(1) the imposition or application of eligibility criteria that identify or limit, or tend to identify or limit, an individual with a disability or any class of individuals with disabilities from fully and equally enjoying any goods, services, facilities, privileges, advantages, and accommodations;

(2) a failure to make reasonable modifications in rules, policies, practices, procedures, protocols, or services when such modifications may be necessary to afford such privileges, advantages, and accommodations unless the entity can demonstrate that making such modifications would fundamentally alter the nature of such privileges, advantages, and accommodations;

(3) a failure to take such steps as may be necessary to ensure that no individual with a disability is excluded, denied services, segregated or otherwise treated differently than other individuals because of the absence of auxiliary aids and services, unless the entity can demonstrate that taking such steps would result in undue burden;

(4)(A) a failure to remove architectural and communication barriers that are structural in nature [illegible] existing facilities, and transportation barriers in existing vehicles used by an establishment for transporting individuals (not including barriers that can only be removed through the retrofitting of vehicles by the installation of a hydraulic or other lift), where such removal is readily achievable; and

(B) where an entity can demonstrate that removal of a barrier under subparagraph (A) is not readily achievable, a failure to make such goods, services, facilities, privileges, advantages, and accommodations available through alternative methods if such methods are readily achievable;

(5) with respect to a facility or part thereof that is altered by, on behalf of, or for the use of an establishment later than one year after the date of enactment of this Act in a manner that affects or could affect the usability of the facility or part thereof, a failure to make the alterations in such a manner that, to the maximum extent feasible, the altered portion of the facility, the path of travel to the altered area, and the bathrooms, telephones, and drinking fountains serving the remodeled area, are readily accessible to and usable by individuals with disabilities;

(6) a failure to make facilities constructed for first occupancy later than 30 months after the date of enactment of this Act readily accessible to and usable by

individuals with disabilities, except where an entity can demonstrate that it is structurally impracticable to do so, in accordance with standards set forth or incorporated by reference in regulations issued under this title; and

(7) in the case of an entity that uses a vehicle to transport individuals not covered under section 303 or 403—

(A) a failure to provide a level of transportation services to individuals with disabilities, including individuals who use wheelchairs, equivalent to that provided for the general public; and

(B) purchasing or leasing a new bus, or vehicle that can carry in excess of 12 passengers, for which solicitations are made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

SEC. 403. PROHIBITION OF DISCRIMINATION IN PUBLIC TRANSPORTATION SERVICES PROVIDED BY PRIVATE ENTITIES.

(a) GENERAL RULE.—No individual shall be discriminated against on the basis of disability in the full and equal enjoyment of public transportation services provided by a privately operated entity that is primarily engaged in the business of transporting people, but is not in the principal business of providing air transportation, and whose operations affect commerce.

(b) CONSTRUCTION.—As used in subsection (a), the term "discrimination against" includes—

(1) the imposition or application by an entity of eligibility criteria that identify or limit, or tend to identify or limit, an individual with a disability or any class of individuals with disabilities from fully enjoying the public transportation services provided by the entity;

(2) the failure of an entity to—

(A) make reasonable modifications consistent with those required under section 402(b)(2);

(B) provide auxiliary aids and services consistent with the requirements of section 402(b)(3); and

(C) remove barriers consistent with the requirements of section 402(b)(4); and

(3) the purchase or lease of a new vehicle (other than an automobile) that is to be used to provide public transportation services, and for which a solicitation is made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by

individuals with disabilities, including individuals who use wheelchairs.

SEC. 404. REGULATIONS.

(a) ACCESSIBILITY STANDARDS.—Not later than 240 days after the date of enactment of this Act, the Secretary of Transportation shall issue regulations in an accessible format that shall include standards applicable to facilities and vehicles covered under section 403.

(b) OTHER PROVISIONS.—Not later than 240 days after the date of enactment of this Act, the Attorney General shall issue regulations in an accessible format to carry out the remaining provisions of this title not referred to in subsection (a) that include standards applicable to facilities and vehicles covered under section 402.

(c) STANDARDS.—Standards included in regulations issued under subsections (a) and (b) shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 604(b).

SEC. 405. ENFORCEMENT.

Sections 802(i), 813, and 814 (a) and (d) of the Fair Housing Act (42 U.S.C. 3602(i), 3613, and 3614 (a) and (d)) shall be available with respect to any aggrieved individual, except that—

(1) any reference to a discriminatory housing practice or breach of a conciliation agreement shall be considered to be a reference to a practice that is discriminatory under this title concerning a public accommodation or public transportation service operated by a private entity; and

(2) subparagraph (B) of paragraph (1) and paragraphs (2) and (3) of subsection (a) of section 813 shall not apply.

TITLE V—TELECOMMUNICATIONS RELAY SERVICES

SEC. 501. DEFINITIONS.

As used in this title:

(1) COMMISSION.—The term "Commission" means the Federal Communications Commission.

(2) TELECOMMUNICATIONS RELAY SERVICES.—The term "telecommunications relay services" means services that enable simultaneous communication to take place between individuals who use TDDs or other nonvoice terminal devices and individuals who do not use such devices.

(3) TDD.—The term "TDD" means a Telecommunication Device for the Deaf, a machine that employs graphic communications in the transmission of

coded signals through the nationwide telecommunications system.

SEC. 502. TELECOMMUNICATIONS RELAY SERVICES.

(a) GENERAL RULE.—It shall be considered discrimination for purposes of this Act for any common carrier, as defined in section 3(h) of the Communications Act of 1934 (47 U.S.C. 153(h)), that offers telephone services to the general public, to fail to provide, not later than 1 year after the date of enactment of this Act, interstate or intrastate telecommunication relay services so that such services provide individuals who use nonvoice terminal devices because of disabilities with opportunities for communications that are equal to those provided to their customers who are able to use voice telephone services, except that it shall not be considered discrimination for such a common carrier to fail to provide such services in any State to which subsection (b) applies if such services are provided under subsection (b).

(b) STATE DISCRIMINATION.—It shall be considered discrimination by a State, that designates an entity to provide interstate or intrastate telecommunication relay services to individuals throughout the entire State in a manner consistent with regulations issued by the Commission, for purposes of this Act, for such State, through the designated entity, to fail to provide, not later than 1 year after the date of enactment of this Act, interstate or intrastate telecommunication relay services so that such services provide individuals who use nonvoice terminal devices because of disabilities with opportunities for communications that are equal to those provided to their customers who are able to use voice telephone services.

(c) CONSTRUCTION.—Nothing in this title shall be construed to discourage or impair the development of improved or future technology designed to improve access to telecommunications services for individuals with disabilities.

SEC. 503. REGULATIONS.

Not later than 180 days after the date of enactment of this Act, the Commission shall issue regulations to carry out this title, and such regulations shall establish minimum standards and guidelines for telecommunications relay services.

SEC. 504. ENFORCEMENT.

(a) CIVIL ACTIONS.—Section 802(i), 813, and 814 (a) and (d) of the Fair Housing Act (42 U.S.C. 3602(i), 3613, and 3614 (a) and (d)) shall be available with respect to any aggrieved individual, except that—

(1) any reference to a discriminatory housing practice or breach of a conciliation agreement shall be considered to be a reference to a practice that is discriminatory under this title concerning the provision of an appropriate interstate or intrastate telecommunication relay service; and

(2) subparagraph (B) of paragraph (1) and paragraphs (2) and (3) of subsection (a) and subsection (d) of section 813 shall not apply.

(b) ADMINISTRATIVE ENFORCEMENT.—

(1) IN GENERAL.—The Commission shall enforce the provisions of this title.

(2) APPLICABLE ENFORCEMENT PROVISIONS.—The remedies, procedures, and rights set forth in sections 206, 207, 208, and 209 of the Communications Act of 1934 (47 U.S.C. 206, 207, 208, and 209) and in title IV of the Communications Act of 1934 (47 U.S.C. 401 et seq.) shall apply with respect to the enforcement of this title, except that nothing in this subsection shall be construed to limit or restrict in any manner the remedies, procedures, or rights set forth in subsection (a).

(3) CEASE AND DESIST ORDERS.—Whenever, after full opportunity for hearing, on a complaint or under an order for investigation and hearing made by the Commission on the initiative of the Commission, the Commission shall be of the opinion that any carrier, or any State as described in section 502(b), is or will be in violation of this title or of any regulation issued under this title, the Commission shall—

(A) order that the carrier or State cease and desist from such violation to the extent that the Commission finds that such violation exists or will exist; and

(B) take other actions as it finds appropriate and necessary.

(4) Penalties.—

(A) In general.—Any carrier or State to which section 502(b) applies that knowingly fails or neglects to comply with this title or of any regulation or order made by the Commission in carrying out this title shall forfeit to the United States the sum of $10,000 for each such offense.

(B) Separate offenses.—Each distinct violation of the provisions of this title shall be a separate offense under subparagraph (A). In case of a continuing violation, each day shall be considered a separate offense.

(C) Recovering forfeitures.—Such forfeitures shall be payable and recoverable in the same manner as prescribed in section 504 of the Communications Act of 1934 (47 U.S.C. 504).

TITLE VI—MISCELLANEOUS PROVISIONS

SEC. 601. CONSTRUCTION.

(a) REHABILITATION ACT OF 1973.—Nothing in this Act shall be construed to reduce the scope of coverage or apply a lesser standard than the coverage required or the standards applied under title V of the Rehabilitation Act of 1973 (29 U.S.C. 790 et seq.) or the regulations issued by Federal agencies pursuant to such title.

(b) OTHER LAWS.—Nothing in this Act shall be construed to invalidate or limit any other Federal law or law of any State or political subdivision of any State or jurisdiction that provides greater protection for the rights of individuals with disabilities than are afforded by this Act.

(c) RELATIONSHIP AMONG TITLES.—The requirements contained in titles I through V shall be construed in a manner that is consistent with the other provisions of this Act, and any apparent conflict between provisions of this Act shall be resolved by reference to the title that specifically covers the type of action in question.

SEC. 602. PROHIBITION AGAINST RETALIATION.

No individual shall discriminate against any other individual because such other individual has opposed any act or practice made unlawful by this Act or because such other individual made a charge, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this Act.

SEC. 603. STATE IMMUNITY.

A State shall not be immune under the Eleventh Amendment to the Constitution of the United States from an action in Federal court for a violation of this Act. In any action against a State for a violation of the requirements of this Act, remedies (including remedies both at law and in equity) are available for such a violation to the same extent as such remedies are available for such a violation in an action against any public or private entity other than a State.

SEC. 604. REGULATIONS BY THE ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD.

(a) ISSUANCE OF GUIDELINES.—Not later than 6 months after the date of enactment of this Act, the Architectural and Transportation Barriers Compliance Board shall issue minimum guidelines that shall supplement the existing Minimum Guidelines and Requirements for Accessible Design for purposes of sections 304 and 404.

(b) CONTENTS OF GUIDELINES.—The guidelines issued under subsection (a) shall establish additional requirements, consistent with this Act, to ensure that buildings, facilities, and vehicles are accessible, in terms of architecture and design, transportation, and communication, to individuals with disabilities.

SEC. 605. ATTORNEY'S FEES.

In any action or administrative proceeding commenced pursuant to this Act, the court, or agency, in its discretion, may allow the prevailing party, other than the United States, a reasonable attorney's fee, including litigation expenses, and costs, and the United States shall be liable for the foregoing the same as a private individual.

SEC. 606. EFFECTIVE DATE.

This Act shall become effective on the date of enactment.

Printed as Passed

October 16 (legislative day, September 18), 1989

Ordered to be printed as passed

101st CONGRESS
1st Session

S. 933

AN ACT

To establish a clear and comprehensive prohibition of discrimination on the basis of disability.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the "Americans with Disabilities Act of 1989".

(b) TABLE OF CONTENTS.—The table of contents is as follows:

Sec. 1. Short title; table of contents.
Sec. 2. Findings and purposes.
Sec. 3. Definitions.

TITLE I—EMPLOYMENT

Sec. 101. Definitions.
Sec. 102. Discrimination.
Sec. 103. Defenses.
Sec. 104. Illegal drugs and alcohol.
Sec. 105. Posting notices.
Sec. 106. Regulations.
Sec. 107. Enforcement.
Sec. 108. Effective date.

TITLE II—PUBLIC SERVICES

Sec. 201. Definition.
Sec. 202. Discrimination.
Sec. 203. Actions applicable to public transportation provided by public entities considered discriminatory.
Sec. 204. Regulations.
Sec. 205. Enforcement.
Sec. 206. Effective date.

TITLE III—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

Sec. 301. Definitions.
Sec. 302. Prohibition of discrimination by public accommodations.
Sec. 303. New construction in public accommodations and potential places of employment.
Sec. 304. Prohibition of discrimination in public transportation services provided by private entities.
Sec. 305. Study.
Sec. 306. Regulations.
Sec. 307. Exemptions for private clubs and religious organizations.
Sec. 308. Enforcement.
Sec. 309. Effective date.

TITLE IV—TELECOMMUNICATIONS RELAY SERVICES

Sec. 401. Telecommunication services for hearing-impaired and speech-impaired individuals.

TITLE V—MISCELLANEOUS PROVISIONS

Sec. 501. Construction.
Sec. 502. Prohibition against retaliation and coercion.
Sec. 503. State immunity.
Sec. 504. Regulations by the Architectural and Transportation Barriers Compliance Board.
Sec. 505. Attorney's fees.
Sec. 506. Technical assistance.
Sec. 507. Federal wilderness areas.
Sec. 508. Transvestites.
Sec. 509. Congressional inclusion.
Sec. 510. Illegal drug use.
Sec. 511. Definitions.
Sec. 512. Amendments to the Rehabilitation Act.
Sec. 513. Severability.

SEC. 2. FINDINGS AND PURPOSES.

(a) FINDINGS.—Congress finds that—

(1) some 43,000,000 Americans have one or more physical or mental disabilities, and this number is increasing as the population as a whole is growing older;

(2) historically, society has tended to isolate and segregate individuals with disabilities, and, despite some improvements, such forms of discrimination against individuals with disabilities continue to be a serious and pervasive social problem;

(3) discrimination against individuals with disabilities persists in such critical areas as employment, housing, public accommodations, education, transportation, communication, recreation, institutionalization, health services, voting, and access to public services;

(4) unlike individuals who have experienced discrimination on the basis of race, sex, national origin, religion, or age, individuals who have experienced discrimination on the basis of disability have often had no legal recourse to redress such discrimination;

(5) individuals with disabilities continually encounter various forms of discrimination, including outright intentional exclusion, the discriminatory effects of architectural, transportation, and communication barriers, overprotective rules and policies, failure to make modifications to existing facilities and practices, exclusion-

ary qualification standards and criteria, segregation, and relegation to lesser services, programs, activities, benefits, jobs, or other opportunities;

(6) census data, national polls, and other studies have documented that people with disabilities, as a group, occupy an inferior status in our society, and are severely disadvantaged socially, vocationally, economically, and educationally;

(7) individuals with disabilities are a discrete and insular minority who have been faced with restrictions and limitations, subjected to a history of purposeful unequal treatment, and relegated to a position of political powerlessness in our society, based on characteristics that are beyond the control of such individuals and resulting from stereotypic assumptions not truly indicative of the individual ability of such individuals to participate in, and contribute to, society;

(8) the Nation's proper goals regarding individuals with disabilities are to assure equality of opportunity, full participation, independent living, and economic self-sufficiency for such individuals; and

(9) the continuing existence of unfair and unnecessary discrimination and prejudice denies people with disabilities the opportunity to compete on an equal basis and to pursue those opportunities for which our

free society is justifiably famous, and costs the United States billions of dollars in unnecessary expenses resulting from dependency and nonproductivity.

(b) PURPOSE.—It is the purpose of this Act—

(1) to provide a clear and comprehensive national mandate for the elimination of discrimination against individuals with disabilities;

(2) to provide clear, strong, consistent, enforceable standards addressing discrimination against individuals with disabilities;

(3) to ensure that the Federal Government plays a central role in enforcing the standards established in this Act on behalf of individuals with disabilities; and

(4) to invoke the sweep of congressional authority, including its power to enforce the fourteenth amendment and to regulate commerce, in order to address the major areas of discrimination faced day-to-day by people with disabilities.

SEC. 3. DEFINITIONS.

As used in this Act:

(1) AUXILIARY AIDS AND SERVICES.—The term "auxiliary aids and services" includes—

(A) qualified interpreters or other effective methods of making aurally delivered materials available to individuals with hearing impairments;

(B) qualified readers, taped texts, or other effective methods of making visually delivered materials available to individuals with visual impairments;

(C) acquisition or modification of equipment or devices; and

(D) other similar services and actions.

(2) DISABILITY.—The term "disability" means, with respect to an individual—

(A) a physical or mental impairment that substantially limits one or more of the major life activities of such individual;

(B) a record of such an impairment; or

(C) being regarded as having such an impairment.

(3) STATE.—The term "State" means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, the Trust Territory of the Pacific Islands, and the Commonwealth of the Northern Mariana Islands.

TITLE I—EMPLOYMENT

SEC. 101. DEFINITIONS.

As used in this title:

(1) COMMISSION.—The term "Commission" means the Equal Employment Opportunity Commission established by section 705 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–4).

(2) COVERED ENTITY.—The term "covered entity" means an employer, employment agency, labor organization, or joint labor-management committee.

(3) EMPLOYEE.—The term "employee" means an individual employed by an employer.

(4) EMPLOYER.—

(A) The term "employer" means a person engaged in an industry affecting commerce who has 15 or more employees for each working day in each of 20 or more calendar weeks in the current or preceding calendar year, and any agent of such person, except that, for two years following the effective date of this title, an employer means a person engaged in an industry affecting commerce who has 25 or more employees for each working day in each of 20 or more calendar weeks in the current or preceding year, and any agent of such person.

(B) EXCEPTIONS.—The term "employer" does not include—

(i) the United States, a corporation wholly owned by the government of the United States, or an Indian tribe; or

(ii) a bona fide private membership club (other than a labor organization) that is exempt from taxation under section 501(c) of the Internal Revenue Code of 1986.

(5) ILLEGAL DRUG.—The term "illegal drug" means a controlled substance, as defined in schedules I through V of section 202 of the Controlled Substances Act (21 U.S.C. 812), the possession or distribution of which is unlawful under such Act. The term "illegal drug" does not mean the use of a controlled substance pursuant to a valid prescription or other uses authorized by this Act.

(6) PERSON, ETC.—The terms "person", "labor organization", "employment agency", "commerce", and "industry affecting commerce", shall have the same meaning given such terms in section 701 of the Civil Rights Act of 1964 (42 U.S.C. 2000e).

(7) QUALIFIED INDIVIDUAL WITH A DISABILITY.—The term "qualified individual with a disability" means an individual with a disability who, with or without reasonable accommodation, can perform the

essential functions of the employment position that such individual holds or desires.

(8) REASONABLE ACCOMMODATION.—The term "reasonable accommodation" may include—

(A) making existing facilities used by employees readily accessible to and usable by individuals with disabilities; and

(B) job restructuring, part-time or modified work schedules, reassignment to a vacant position, acquisition or modification of equipment or devices, appropriate adjustment or modifications of examinations, training materials or policies, the provision of qualified readers or interpreters, and other similar accommodations for individuals with disabilities.

(9) UNDUE HARDSHIP.—

(A) IN GENERAL.—The term "undue hardship" means an action requiring significant difficulty or expense.

(B) DETERMINATION.—In determining whether an accommodation would impose an undue hardship on a covered entity, factors to be considered include—

(i) the overall size of the business of a covered entity with respect to the number of employees, number and type of facilities, and the size of the budget;

(ii) the type of operation maintained by the covered entity, including the composition and structure of the workforce of such entity; and

(iii) the nature and cost of the accommodation needed under this Act.

SEC. 102. DISCRIMINATION.

(a) GENERAL RULE.—No covered entity shall discriminate against a qualified individual with a disability because of the disability of such individual in regard to job application procedures, the hiring or discharge of employees, employee compensation, advancement, job training, and other terms, conditions, and privileges of employment.

(b) CONSTRUCTION.—As used in subsection (a), the term "discrimination" includes—

(1) limiting, segregating, or classifying a job applicant or employee in a way that adversely affects the opportunities or status of such applicant or employee because of the disability of such applicant or employee;

(2) participating in a contractual or other arrangement or relationship that has the effect of subjecting a qualified applicant or employee with a disability to the discrimination prohibited by this title (such relationship

includes a relationship with an employment or referral agency, labor union, an organization providing fringe benefits to an employee of the covered entity, or an organization providing training and apprenticeship programs);

(3) utilizing standards, criteria, or methods of administration—

(A) that have the effect of discrimination on the basis of disability; or

(B) that perpetuate the discrimination of others who are subject to common administrative control;

(4) excluding or otherwise denying equal jobs or benefits to a qualified individual because of the known disability of an individual with whom the qualified individual is known to have a relationship or association;

(5) not making reasonable accommodations to the known physical or mental limitations of a qualified individual who is an applicant or employee, unless such covered entity can demonstrate that the accommodation would impose an undue hardship on the operation of the business of such covered entity;

(6) denying employment opportunities to a job applicant or employee who is a qualified individual with a disability, if such denial is based on the need of such

covered entity to make reasonable accommodation to the physical or mental impairments of the employee or applicant;

(7) using employment tests or other selection criteria that screen out or tend to screen out an individual with a disability or a class of individuals with disabilities unless the test or other selection criteria, as used by the covered entity, is shown to be job-related for the position in question and is consistent with business necessity; and

(8) failing to select and administer tests concerning employment in the most effective manner to ensure that, when such test is administered to a job applicant or employee who has a disability that impairs sensory, manual, or speaking skills, such test results accurately reflect the skills, aptitude, or whatever other factor of such applicant or employee that such test purports to measure, rather than reflecting the impaired sensory, manual, or speaking skills of such employee or applicant (except where such skills are the factors that the test purports to measure).

(c) MEDICAL EXAMINATIONS AND INQUIRIES.—

(1) IN GENERAL.—The prohibition against discrimination as referred to in subsection (a) shall include medical examinations and inquiries.

(2) PREEMPLOYMENT.—

(A) PROHIBITED EXAMINATION OR INQUIRY.—Except as provided in paragraph (3), a covered entity shall not conduct a medical examination or make inquiries of a job applicant or employee as to whether such applicant or employee is an individual with a disability or as to the nature or severity of such disability.

(B) ACCEPTABLE INQUIRY.—A covered entity may make preemployment inquiries into the ability of an applicant to perform job-related functions.

(3) EMPLOYMENT ENTRANCE EXAMINATION.—A covered entity may require a medical examination after an offer of employment has been made to a job applicant and prior to the commencement of the employment duties of such applicant, and may condition an offer of employment on the results of such examination, if—

(A) all entering employees are subjected to such an examination regardless of disability;

(B) information obtained regarding the medical condition or history of the applicant is collected and maintained on separate forms and in separate medical files and is treated as a confidential medical record, except that—

(i) supervisors and managers may be informed regarding necessary restrictions on the work or duties of the employee and necessary accommodations;

(ii) first aid and safety personnel may be informed, when appropriate, if the disability might require emergency treatment; and

(iii) government officials investigating compliance with this Act shall be provided relevant information on request; and

(C) the results of such physical examination are used only in accordance with this title.

(4) EXAMINATION AND INQUIRY.—

(A) PROHIBITED EXAMINATIONS AND INQUIRIES.—A covered entity shall not conduct or require a medical examination and shall not make inquiries of an employee as to whether such employee is an individual with a disability or as to the nature or severity of the disability, unless such examination or inquiry is shown to be job-related and consistent with business necessity.

(B) ACCEPTABLE INQUIRIES.—A covered entity may make inquiries into the ability of an employee to perform job-related functions.

SEC. 103. DEFENSES.

(a) IN GENERAL.—It may be a defense to a charge of discrimination under this Act that an alleged application of qualification standards, tests, or selection criteria that screen out or tend to screen out or otherwise deny a job or benefit to an individual with a disability has been shown to be job-related and consistent with business necessity, and such performance cannot be accomplished by reasonable accommodation.

(b) QUALIFICATION STANDARDS.—The term "qualification standards" may include a requirement that an individual with a currently contagious disease or infection shall not pose a direct threat to the health or safety of other individuals in the workplace.

(c) RELIGIOUS ENTITIES.—

(1) IN GENERAL.—This title shall not prohibit a religious corporation, association, educational institution, or society from giving preference in employment to individuals of a particular religion to perform work connected with the carrying on by such corporation, association, educational institution, or society of its activities.

(2) QUALIFICATION STANDARD.—Under this title, a religious organization may require, as a qualification standard to employment, that all applicants and employees conform to the religious tenets of such organization.

SEC. 104. ILLEGAL DRUGS AND ALCOHOL.

(a) QUALIFIED INDIVIDUAL WITH A DISABILITY.—For purposes of this title, the term "qualified individual with a disability" shall not include any employee or applicant who is a current user of illegal drugs, except that an individual who is otherwise handicapped shall not be excluded from the protections of this Act if such individual also uses or is also addicted to drugs.

(b) AUTHORITY OF COVERED ENTITY.—A covered entity—

(1) may prohibit the use of alcohol or illegal drugs at the workplace by all employees;

(2) may require that employees shall not be under the influence of alcohol or illegal drugs at the workplace;

(3) may require that employees behave in conformance with the requirements established under the Drug-Free Workplace of 1988 (41 U.S.C. 701 et seq.) and that transportation employees meet requirements

established by the Secretary of Transportation with respect to drugs and alcohol; and

(4) may hold an employee who is a drug user or alcoholic to the same qualification standards for employment or job performance and behavior that such entity holds other employees, even if any unsatisfactory performance or behavior is related to the drug use or alcoholism of such employee.

(c) DRUG TESTING.—

(1) IN GENERAL.—For purposes of this title, a test to determine the use of illegal drugs shall not be considered a medical examination.

(2) CONSTRUCTION.—Nothing in this title shall be construed to encourage, prohibit, or authorize the conducting of drug testing of job applicants or employees or making employment decisions based on such test results.

SEC. 105. POSTING NOTICES.

Every employer, employment agency, labor organization, or joint labor-management committee covered under this title shall post notices in an accessible format to applicants, employees, and members describing the applicable provisions of this Act, in the manner prescribed by section 711 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–10).

SEC. 106. REGULATIONS.

Not later than 1 year after the date of enactment of this Act, the Commission shall issue regulations in an accessible format to carry out this title in accordance with subchapter II of chapter 5 of title 5, United States Code.

SEC. 107. ENFORCEMENT.

The remedies and procedures set forth in sections 706, 707, 709, and 710 of the Civil Rights Act of 1964 (42 U.S.C. 2000e-5, 2000e-6, 2000e-8, and 2000e-9) shall be available, with respect to the Commission or any individual who believes that he or she is being subjected to discrimination on the basis of disability in violation of any provisions of this Act, or regulations promulgated under section 106, concerning employment.

SEC. 108. EFFECTIVE DATE.

This title shall become effective 24 months after the date of enactment.

TITLE II—PUBLIC SERVICES

SEC. 201. DEFINITION.

As used in this title, the term "qualified individual with a disability" means an individual with a disability who, with or without reasonable modifications to rules, policies, and practices, the removal of architectural, communication, and transportation barriers, or the provision of auxiliary aids and services, meets the essential eligibility requirements for the receipt of services or the participation in programs or activities provided by a department, agency, special purpose district, or other instrumentality of a State or a local government.

SEC. 202. DISCRIMINATION.

No qualified individual with a disability shall, by reason of such disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination by a department, agency, special purpose district, or other instrumentality of a State or a local government.

SEC. 203. ACTIONS APPLICABLE TO PUBLIC TRANSPORTATION PROVIDED BY PUBLIC ENTITIES CONSIDERED DISCRIMINATORY.

(a) DEFINITION.—As used in this title, the term "public transportation" means transportation by bus or rail, or by any other conveyance (other than air travel) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

(b) VEHICLES.—

(1) NEW BUSES, RAIL VEHICLES, AND OTHER FIXED ROUTE VEHICLES.—It shall be considered discrimination for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a public entity to purchase or lease a new fixed route bus of any size, a new intercity rail vehicle, a new commuter rail vehicle, a new rapid rail vehicle, a new light

rail vehicle to be used for public transportation, or any other new fixed route vehicle to be used for public transportation and for which a solicitation is made later than 30 days after the date of enactment of this Act, if such bus, rail, or other vehicle is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) USED VEHICLES.—If a public entity purchases or leases a used vehicle to be used for public transportation after the date of enactment of this Act, such individual or entity shall make demonstrated good faith efforts to purchase or lease such a used vehicle that is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(3) REMANUFACTURED VEHICLES.—If a public entity remanufactures a vehicle, or purchases or leases a remanufactured vehicle to be used for public transportation, so as to extend its usable life for 5 years or more, the vehicle shall, to the maximum extent feasible, be readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(c) PARATRANSIT AS A SUPPLEMENT TO FIXED ROUTE PUBLIC TRANSPORTATION SYSTEM.—

(1) IN GENERAL.—If a public entity operates a fixed route public transportation system to provide public transportation, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for a public transit entity that is responsible for providing public transportation to fail to provide paratransit or other special transportation services sufficient to provide a comparable level of services as is provided to individuals using fixed route public transportation to individuals with disabilities, including individuals who use wheelchairs, who cannot otherwise use fixed route public transportation and to other individuals associated with such individuals with disabilities in accordance with service criteria established under regulations promulgated by the Secretary of Transportation unless the public transit entity can demonstrate that the provision of paratransit or other special transportation services would impose an undue financial burden on the public transit entity.

(2) UNDUE FINANCIAL BURDEN.—If the provision of comparable paratransit or other special transportation services would impose an undue financial burden on the public transit entity, such entity must provide paratransit and other special transportation services to

the extent that providing such services would not impose an undue financial burden on such entity.

(3) REGULATIONS.—

(A) FORMULA.—Regulations promulgated by the Secretary of Transportation to determine what constitutes an undue financial burden, for purposes of this subsection, may include a flexible numerical formula that incorporates appropriate local characteristics such as population.

(B) ADDITIONAL PARATRANSIT SERVICES.—Notwithstanding paragraphs (1) and (2), the Secretary may require, at the discretion of the Secretary, a public transit authority to provide paratransit services beyond the amount determined by such formula.

(d) COMMUNITY OPERATING DEMAND RESPONSIVE SYSTEMS FOR THE GENERAL PUBLIC.—If a public entity operates a demand responsive system that is used to provide public transportation for the general public, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to purchase or lease a new vehicle, for which a solicitation is made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, unless the entity can demonstrate that such system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to that provided to the general public.

(e) TEMPORARY RELIEF WHERE LIFTS ARE UNAVAILABLE.—With respect to the purchase of new buses, a public entity may apply for, and the Secretary of Transportation may temporarily relieve such public entity from the obligation to purchase new buses of any size that are readily accessible to and usable by individuals with disabilities if such public entity demonstrates—

(1) that the initial solicitation for new buses made by the public entity specified that all new buses were to be lift-equipped and were to be otherwise accessible to and usable by individuals with disabilities;

(2) the unavailability from any qualified manufacturer of hydraulic, electro-mechanical, or other lifts for such new buses;

(3) that the public entity seeking temporary relief has made good faith efforts to locate a qualified manufacturer to supply the lifts to the manufacturer of such buses in sufficient time to comply with such solicitation; and

(4) that any further delay in purchasing new buses necessary to obtain such lifts would significantly impair

transportation services in the community served by the public entity.

(f) CONSTRUCTION.—

(1) IN GENERAL.—Any relief granted under subsection (e) shall be limited in duration by a specified date and the appropriate committees of the Congress shall be notified of any such relief granted.

(2) FRAUDULENT APPLICATION.—If, at any time, the Secretary of Transportation has reasonable cause to believe that such relief was fraudulently applied for, the Secretary of Transportation shall—

(A) cancel such relief, if such relief is still in effect; and

(B) take other steps that the Secretary of Transportation considers appropriate.

(g) NEW FACILITIES.—For purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for a public entity to build a new facility that will be used to provide public transportation services, including bus service, intercity rail service, rapid rail service, commuter rail service, light rail service, and other service used for public transportation that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(h) ALTERATIONS OF EXISTING FACILITIES.—With respect to a facility or any part thereof that is used for public transportation and that is altered by, on behalf of, or for the use of a public entity in a manner that affects or could affect the usability of the facility or part thereof, it shall be considered discrimination, for purposes of this title and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to fail to make the alterations in such a manner that, to the maximum extent feasible, the altered portions of the facility are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs. If such public entity is undertaking major structural alterations that affect or could affect the usability of the facility (as defined under criteria established by the Secretary of Transportation), such public entity shall also make the alterations in such a manner that, to the maximum extent feasible, the path of travel to the altered area, and the bathrooms, telephones, and drinking fountains serving such area, are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(i) EXISTING FACILITIES, INTERCITY RAIL, RAPID RAIL, LIGHT RAIL, AND COMMUTER RAIL SYSTEMS, AND KEY STATIONS.—

(1) EXISTING FACILITIES.—Except as provided in paragraph (3), with respect to existing facilities used

for public transportation, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for a public entity to fail to operate such public transportation program or activity conducted in such facilities so that, when viewed in the entirety, it is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) Intercity, rapid, light, and commuter rail systems.—With respect to vehicles operated by intercity, light, rapid, and commuter rail systems, for purposes of this title and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for a public entity to fail to have at least one car per train that is accessible to individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in any event in no less than 5 years.

(3) Key stations.—

(A) In general.—For purposes of this title and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for a public entity to fail to make stations in intercity rail systems and key stations in rapid rail, commuter rail, and light rail systems readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(B) RAPID RAIL, COMMUTER RAIL, AND LIGHT RAIL SYSTEMS.—Key stations in rapid rail, commuter rail, and light rail systems shall be made readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in no event later than 3 years after the date of enactment of this Act, except that the time limit may be extended by the Secretary of Transportation up to 20 years for extraordinarily expensive structural changes to, or replacement of, existing facilities necessary to achieve accessibility.

(C) INTERCITY RAIL SYSTEMS.—All stations in intercity rail systems shall be made readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as soon as practicable, but in no event later than 20 years after the date of enactment of this Act.

(D) PLANS AND MILESTONES.—The Secretary of Transportation shall require the appropriate public entity to develop a plan for compliance with this paragraph that reflects consultation with individuals with disabilities affected by such plan and that establishes milestones for achievement of the requirements of this paragraph.

SEC. 204. REGULATIONS.

(a) Attorney General.—Not later than 1 year after the date of enactment of this Act, the Attorney General shall promulgate regulations in an accessible format that implement this title (other than section 203), and such regulations shall be consistent with this title and with the coordination regulations under part 41 of title 28, Code of Federal Regulations (as promulgated by the Department of Health, Education, and Welfare on January 13, 1978), applicable to recipients of Federal financial assistance under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) except, with respect to "program accessibility, existing facilities", and "communications", such regulations shall be consistent with regulations and analysis as in part 39 of title 28 of the Code of Federal Regulations, applicable to federally conducted activities under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794).

(b) Secretary of Transportation.—

(1) In general.—Not later than 1 year after the date of enactment of this Act, the Secretary of Transportation shall promulgate regulations in an accessible

format that include standards applicable to facilities and vehicles covered under section 203 of this title.

(2) CONFORMANCE OF STANDARDS.—Such standards shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 504.

SEC. 205. ENFORCEMENT.

The remedies, procedures, and rights set forth in section 505 of the Rehabilitation Act of 1973 (29 U.S.C. 794a) shall be available with respect to any individual who believes that he or she is being subjected to discrimination on the basis of disability in violation of this Act, or regulations promulgated under section 204, concerning public services.

SEC. 206. EFFECTIVE DATE.

(a) IN GENERAL.—Except as provided in subsection (b), this title shall become effective 18 months after the date of enactment of this Act.

(b) FIXED ROUTE VEHICLES.—Section 203(b)(1), as regarding new fixed route vehicles, shall become effective on the date of enactment of this Act.

TITLE III—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

SEC. 301. DEFINITIONS.

As used in this title:

(1) COMMERCE.—The term "commerce" means travel, trade, traffic, commerce, transportation, or communication—

(A) among the several States;

(B) between any foreign country or any territory or possession and any State; or

(C) between points in the same State but through another State or foreign country.

(2) POTENTIAL PLACES OF EMPLOYMENT.—The term "potential places of employment" means facilities—

(A) that are intended for nonresidential use; and

(B) whose operations will affect commerce.

Such term shall not include facilities that are covered or expressly exempted from coverage under the Fair Housing Act of 1968 (42 U.S.C. 3601 et seq.).

(3) PUBLIC ACCOMMODATION.—The following privately operated entities are considered public accom-

modations for purposes of this title, if the operations of such entities affect commerce—

(A) an inn, hotel, motel, or other similar place of lodging, except for an establishment located within a building that contains not more than five rooms for rent or hire and that is actually occupied by the proprietor of such establishment as the residence of such proprietor;

(B) a restaurant, bar, or other establishment serving food or drink;

(C) a motion picture house, theater, concert hall, stadium, or other place of exhibition or entertainment;

(D) an auditorium, convention center, or lecture hall;

(E) a bakery, grocery store, clothing store, hardware store, shopping center, or other similar retail sales establishment;

(F) a laundromat, dry-cleaners, bank, barber shop, beauty shop, travel service, shoe repair service, funeral parlor, gas station, office of an accountant or lawyer, pharmacy, insurance office, professional office of a health care provider, hospital, or other similar service establishment;

(G) a terminal used for public transportation;

(H) a museum, library, gallery, and other similar place of public display or collection;

(I) a park or zoo;

(J) a nursery, elementary, secondary, undergraduate, or postgraduate private school;

(K) a day care center, senior citizen center, homeless shelter, food bank, adoption program, or other similar social service center; and

(L) a gymnasium, health spa, bowling alley, golf course, or other similar place of exercise or recreation.

(4) PUBLIC TRANSPORTATION.—The term "public transportation" means transportation by bus or rail, or by any other conveyance (other than by air travel) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

(5) READILY ACHIEVABLE.—

(A) IN GENERAL.—The term "readily achievable" means easily accomplishable and able to be carried out without much difficulty or expense.

(B) DETERMINATION.—In determining whether an action is readily achievable, factors to be considered include—

(i) the overall size of the covered entity with respect to number of employees, number and type of facilities, and the size of budget;

(ii) the type of operation of the covered entity, including the composition and structure of the entity; and

(iii) the nature and cost of the action needed.

SEC. 302. PROHIBITION OF DISCRIMINATION BY PUBLIC ACCOMMODATIONS.

(a) GENERAL RULE.—No individual shall be discriminated against on the basis of disability in the full and equal enjoyment of the goods, services, facilities, privileges, advantages, and accommodations of any place of public accommodation.

(b) CONSTRUCTION.—

(1) GENERAL PROHIBITION.—

(A) ACTIVITIES.—

(i) DENIAL OF PARTICIPATION.—It shall be discriminatory to subject an individual or class of individuals on the basis of a disability or disabilities of such individual or class, directly, or through contractual, licensing, or other arrangements, to a denial of the opportunity of the individual or class to participate in or benefit from the goods, services, facilities, privileges, advantages, and accommodations of an entity.

(ii) PARTICIPATION IN UNEQUAL BENEFIT.—It shall be discriminatory to afford an individual or class of individuals, on the basis of a disability or disabilities of such individual or class, directly, or through contractual, licensing, or other arrangements with the opportunity to participate in or benefit from a good, service, facility, privilege, advantage, and accommodation that is not equal to that afforded to other individuals.

(iii) SEPARATE BENEFIT.—It shall be discriminatory to provide an individual or class of individuals, on the basis of a disability or disabilities of such individual or class, directly, or through contractual, licensing, or other arrangements with a good, service, facility, privilege, advantage, or accommodation that is different or separate from that provided to other individuals, unless such action is necessary to provide the individual or class of individuals with a good, service, facility, privilege, advantage, or accommodation, or other opportunity that is as effective as that provided to others.

(B) INTEGRATED SETTINGS.—Goods, facilities, privileges, advantages, accommodations, and services shall be afforded to an individual with a disability in the most integrated setting appropriate to the needs of the individual.

(C) OPPORTUNITY TO PARTICIPATE.—Notwithstanding the existence of separate or different programs or activities provided in accordance with this section, an individual with a disability shall not be denied the opportunity to participate in such programs or activities that are not separate or different.

(D) ADMINISTRATIVE METHODS.—An individual or entity shall not, directly or through contractual or other arrangements, utilize standards or criteria or methods of administration—

(i) that have the effect of discriminating on the basis of disability; or

(ii) that perpetuate the discrimination of others who are subject to common administrative control.

(E) ASSOCIATION.—It shall be discriminatory to exclude or otherwise deny equal goods, services, facilities, privileges, advantages, and accommodations, or other opportunities to an individual or entity because of the known disability of an individual with whom the individual or entity is known to have a relationship or association.

(2) SPECIFIC PROHIBITIONS.—

(A) DISCRIMINATION.—As used in subsection (a), the term "discrimination" shall include—

(i) the imposition or application of eligibility criteria that screen out or tend to screen out an individual with a disability or any class of individuals with disabilities from fully and equally enjoying any goods, services, facilities, privileges, advantages, and accommodations, unless such criteria can be shown to be necessary for the provision of the goods, services, facilities, privileges, advantages, or accommodations being offered;

(ii) a failure to make reasonable modifications in policies, practices, procedures, when such modifications are necessary to afford such goods, services, facilities, privileges, advantages, and accommodations to individuals with disabilities, unless the entity can demonstrate that making such modifications would fundamentally alter the nature of such goods, services, facilities, privileges, advantages, and accommodations;

(iii) a failure to take such steps as may be necessary to ensure that no individual with a disability is excluded, denied services, segregated or otherwise treated differently than other individual because of the absence of auxiliary aids and services, unless the entity can demonstrate that taking such steps would fundamentally alter the nature of the good, service, facility, privilege, advantage, or accommodation being offered or would result in undue burden;

(iv) a failure to remove architectural barriers, and communication barriers that are structural in nature, in existing facilities, and transportation barriers in existing vehicles used by an establishment for transporting individuals (not including barriers that can only be removed through the retrofitting of vehicles by the installation of a hydraulic or other lift), where such removal is readily achievable;

(v) where an entity can demonstrate that the removal of a barrier under clause (iv) is not readily achievable, a failure to make such goods, services, facilities, privileges, advantages, and accommodations available through alternative methods if such methods are readily achievable;

(vi) with respect to a facility or part thereof that is altered by, on behalf of, or for the use of an establishment in a manner that affects or could affect the usability of the facility or part thereof, a failure to make alterations in such a manner that, to the maximum extent feasible, the altered portions of the facility are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, and where the entity is undertaking major structural alterations that affect or could affect the usability of the facility (as defined under criteria established by the Attorney General), the entity shall also make the alterations in such a manner that, to the maximum extent feasible, the path of travel to the altered area and the bathrooms, telephones, and drinking fountains serving the remodeled area, are readily accessible to and usable by individuals with disabilities, except that this paragraph shall not be construed to require the installation of an elevator for facilities that are less than three stories or that have less than 3,000 square feet per story unless the building is a shopping center, a shopping mall, or the professional office of a health care provider or unless the Attorney General determines that a particular category of such facilities requires the installation of elevators based on the usage of such facilities.

(B) FIXED ROUTE SYSTEM.—

(i) ACCESSIBILITY.—It shall be considered discrimination for an entity that uses a vehicle for a fixed route system to transport individuals not covered under section 203 or 304, to purchase or lease a bus or a vehicle that is capable of carrying in excess of 16 passengers, for which solicitations are made later than 30 days after the effective date of this Act, that is not readily accessible to and usable by individuals with disabilities (including individuals who use wheelchairs), except that over-the-road buses shall be subject to section 304(b)(4) and section 305.

(ii) EQUIVALENT SERVICE.—If such entity purchases or leases a vehicle carrying 16 or less passengers after the effective date of this title that is not readily accessible to or usable by individuals with disabilities, it shall be discriminatory for such entity to fail to operate a system that, when viewed in its entirety, ensures a level of service to individuals with disabilities, including individuals who use wheelchairs, equivalent to the level of service provided to the general public.

(C) DEMAND RESPONSIVE SYSTEM.—As used in subsection (a), the term "discrimination" shall include, in the case of a covered entity that uses vehicles in a demand responsive system to transport individuals not covered under section 203 or 304, an incident in which—

(i) such entity purchases or leases a vehicle carrying 16 or less passengers after the effective date of this title, a failure to operate a system that, when viewed in its entirety, ensures a level of service to individuals with disabilities, including individuals who use wheelchairs, equivalent to the level of service provided to the general public; and

(ii) such entity purchases or leases a bus or a vehicle that can carry in excess of 16 passengers for which solicitations are made later than 30 days after the effective date of this Act, that is not readily accessible to and usable by individuals with disabilities (including individuals who use wheelchairs) unless such entity can demonstrate that such system, when viewed in its entirety, already provides a level of service to individuals with disabilities equivalent to that provided to the general public, except that over-the-road buses shall be subject to section 304(b)(4) and section 305.

SEC. 303. NEW CONSTRUCTION IN PUBLIC ACCOMMODATIONS AND POTENTIAL PLACES OF EMPLOYMENT.

(a) Application of Term.—Except as provided in subsection (b), as applied to a—

(1) public accommodation; and

(2) potential place of employment;

the term "discrimination" as used in section 302(a) shall mean a failure to design and construct facilities for first occupancy later than 30 months after the date of enactment of this Act that are readily accessible to and usable by individuals with disabilities, except where an entity can demonstrate that it is structurally impracticable to meet the requirements of such subsection in accordance with standards set forth or incorporated by reference in regulations issued under this title.

(b) ELEVATOR.—Subsection (a) shall not be construed to require the installation of an elevator for facilities that are less than three stories or have less than 3,000 square feet per story unless the building is a shopping center, a shopping mall, or the professional office of a health care provider or unless the Attorney General determines that a particular category of such facilities requires the installation of elevators based on the usage of such facilities.

SEC. 304. PROHIBITION OF DISCRIMINATION IN PUBLIC TRANSPORTATION SERVICES PROVIDED BY PRIVATE ENTITIES.

(a) GENERAL RULE.—No individual shall be discriminated against on the basis of disability in the full and equal enjoyment of public transportation services provided by a privately operated entity that is primarily engaged in the business of transporting people, but is not in the principal business of providing air transportation, and whose operations affect commerce.

(b) CONSTRUCTION.—As used in subsection (a), the term "discrimination against" includes—

(1) the imposition or application by an entity of eligibility criteria that screen out or tend to screen out an individual with a disability or any class of individuals with disabilities from fully enjoying the public transportation services provided by the entity;

(2) the failure of an entity to—

(A) make reasonable modifications consistent with those required under section 302(b)(2)(A)(ii);

(B) provide auxiliary aids and services consistent with the requirements of section 302(b)(2)(A)(iii); and

(C) remove barriers consistent with the requirements of section 302(b)(2)(A) (iv), (v), and (vi);

(3) the purchase or lease of a new vehicle (other than an automobile or an over-the-road bus) that is to be used to provide public transportation services, and for which a solicitation is made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs

(except in the case of a vehicle used in a demand response system, in which case the new vehicle need not be readily accessible to and usable by individuals with disabilities if the entity can demonstrate that such system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to the level of service provided to the general public); and

(4) the purchase or lease of a new over-the-road bus that is used to provide public transportation services and for which a solicitation is made later than 7 years after the date of enactment of this Act for small providers (as defined by the Secretary of Transportation) and 6 years for other providers, except as provided in section 305(d), that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

SEC. 305. STUDY.

(a) PURPOSE.—The Office of Technology Assessment shall undertake a study to determine—

(1) the access needs of individuals with disabilities to over-the-road buses; and

(2) the most cost effective methods for making over-the-road buses readily accessible to and usable by individuals with disabilities, particularly individuals who use wheelchairs.

(b) CONTENT.—The study shall analyze issues, including—

(1) the anticipated demand by individuals with disabilities for accessible over-the-road buses;.

(2) the degree to which over-the road buses are readily accessible to and usable by individuals with disabilities;

(3) the cost of providing accessibility to over-the-road buses to individuals with disabilities, including recent technological and cost saving developments in equipment and devices providing such accessibility;

(4) possible design changes in over-the-road buses that could enhance such accessibility; and

(5) the impact of accessibility requirements on the continuation of inter-city bus service by over-the-road buses, with particular consideration of impact on rural service.

(c) ADVISORY COMMITTEE.—In conducting the study required by subsection (a), the Office of Technology Assessment shall establish an advisory committee, which shall consist of—

(1) members selected from among private operators using over-the-road buses, bus manufacturers, and lift manufacturers;

(2) members selected from among individuals with disabilities, particularly individuals who use wheelchairs, who are potential riders of such buses; and

(3) members selected for their technical expertise on issues included in the study.

The number of members selected under each of paragraphs (1) and (2) shall be equal, and the total number of members selected under paragraphs (1) and (2) shall exceed the number of members selected under paragraph (3).

(d) DEADLINE.—The study required by subsection (a), along with recommendations by the Office of Technology Assessment, including any policy options for legislative action, shall be submitted to the President and the Congress within 36 months after the date of enactment of this Act. If the President, after reviewing the study, determines that compliance with the requirements of section 304(a) on or before the applicable deadlines specified in section 304(b)(4) will result in a significant reduction in intercity bus service, each such deadline shall be extended by one additional year.

(e) REVIEW.—In developing the study required by subsection (a), the Office of Technology Assessment shall provide a preliminary draft of such study to the Architectural and Transportation Barriers Compliance Board established under section 502 of the Rehabilitation Act of 1973 (29 U.S.C. 792). The Board shall have an opportunity to comment on such draft study, and any such comments by the Board made in writing within 120 days after the Board's receipt of the draft study shall be incorporated as part of the final study required to be submitted under subsection (d).

SEC. 306. REGULATIONS.

(a) ACCESSIBILITY STANDARDS.—Not later than 1 year after the date of enactment of this Act, the Secretary of Transportation shall issue regulations in an accessible format that shall include standards applicable to facilities and vehicles covered under section 302(b)(2) (B) and (C) and section 304.

(b) OTHER PROVISIONS.—Not later than 1 year after the date of enactment of this Act, the Attorney General shall issue regulations in an accessible format to carry out the remaining provisions of this title not referred to in subsection (a) that include standards applicable to facilities and vehicles covered under section 302.

(c) STANDARDS.—Standards included in regulations issued under subsections (a) and (b) shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 504.

SEC. 307. EXEMPTIONS FOR PRIVATE CLUBS AND RELIGIOUS ORGANIZATIONS.

The provisions of this title shall not apply to private clubs or establishments exempted from coverage under title II of the Civil Rights Act of 1964 (42 U.S.C. 2000–a(e)) or to religious organizations or entities controlled by religious organizations, including places of worship.

SEC. 308. ENFORCEMENT.

(a) In General.—

(1) Availability of remedies and procedures.—The remedies and procedures set forth in section 204 of the Civil Rights Act of 1964 (42 U.S.C. sec. 2000a–3(a)) shall be available to any individual who is being or is about to be subjected to discrimination on the basis of disability in violation of this title.

(2) Injunctive relief.—In the case of violations of section 302(b)(2)(A)(iv) and (vi) and section 303(a), injunctive relief shall include an order to alter facilities to make such facilities readily accessible to and usable by individuals with disabilities to the extent required by this title. Where appropriate, injunctive relief shall also include requiring the provision of an auxiliary aid or service, modification of a policy, or provision of alternative methods, to the extent required by this title.

(b) Enforcement by the Attorney General.—

(1) DENIAL OF RIGHTS.—

(A) DUTY TO INVESTIGATE.—The Attorney General shall investigate alleged violations of this title, which shall include undertaking periodic reviews of compliance of covered entities under this title.

(B) POTENTIAL VIOLATION.—If the Attorney General has reasonable cause to believe that any person or group of persons is engaged in a pattern or practice of resistance to the full enjoyment of any of the rights granted by this title or that any person or group of persons has been denied any of the rights granted by such title, and such denial raises an issue of general public importance, the Attorney General may commence a civil action in any appropriate United States district court.

(2) AUTHORITY OF COURT.—In a civil action under paragraph (1), the court—

(A) may grant any equitable relief that such court considers to be appropriate, including granting temporary, preliminary, or permanent relief, providing an auxiliary aid or service, modification of policy or alternative method, or making facilities readily accessible to and usable by individuals with disabilities, to the extent required by this title;

(B) may award such other relief as the court considers to be appropriate, including monetary damages to persons aggrieved when requested by the Attorney General; and

(C) may, to vindicate the public interest, assess a civil penalty against the entity in an amount—

(i) not exceeding $50,000 for a first violation; and

(ii) not exceeding $100,000 for any subsequent violation.

(3) JUDICIAL CONSIDERATION.—In a civil action under paragraph (1), the court, when considering what amount of civil penalty, if any, is appropriate, shall give consideration to any good faith effort or attempt to comply with this Act by the entity.

SEC. 309. EFFECTIVE DATE.

This title shall become effective 18 months after the date of enactment of this Act.

TITLE IV—TELECOMMUNICATIONS RELAY SERVICES

SEC. 401. TELECOMMUNICATIONS SERVICES FOR HEARING-IMPAIRED AND SPEECH-IMPAIRED INDIVIDUALS.

(a) TELECOMMUNICATIONS.—Title II of the Communications Act of 1934 (47 U.S.C. 201 et seq.) is amended by adding at the end thereof the following new section:

"SEC. 225. TELECOMMUNICATIONS SERVICES FOR HEARING-IMPAIRED AND SPEECH-IMPAIRED INDIVIDUALS.

"(a) DEFINITIONS.—As used in this section—

"(1) COMMON CARRIER OR CARRIER.—The term 'common carrier' or 'carrier' includes any common carrier engaged in interstate communication by wire or radio as defined in section 3(h), any common carrier engaged in intrastate communication by wire or radio, and any common carrier engaged in both interstate and intrastate communication, notwithstanding sections 2(b) and 221(b).

"(2) TDD.—The term 'TDD' means a Telecommunications Device for the Deaf, which is a machine that employs graphic communication in the transmission of coded signals through a wire or radio communication system.

"(3) TELECOMMUNICATIONS RELAY SERVICES.—The term 'telecommunications relay services' means telephone transmission services that provide the ability for an individual who has a hearing impairment or speech impairment to engage in communication by wire or radio with a hearing individual in a manner that is functionally equivalent to the ability of an individual who does not have a hearing impairment or speech impairment to communicate using voice communication services by wire or radio. Such term includes services that enable two-way communication between an individual who uses a TDD or other nonvoice terminal device and an individual who does not use such a device.

"(b) AVAILABILITY OF TELECOMMUNICATIONS RELAY SERVICES.—

"(1) IN GENERAL.—In order to carry out the purposes established under section 1, to make available to all individuals in the United States a rapid, efficient nationwide communication service, and to increase the utility of the telephone system of the Nation, the Commission shall ensure that interstate and intrastate telecommunications relay services are available, to the extent possible and in the most efficient manner, to hearing-impaired and speech-impaired individuals in the United States.

"(2) REMEDIES.—For purposes of this section, the same remedies, procedures, rights, and obligations under this Act that are applicable to common carriers engaged in interstate communication by wire or radio are also applicable to common carriers engaged in intrastate communication by wire or radio and common carriers engaged in both interstate and intrastate communication by wire or radio.

"(c) PROVISION OF SERVICES.—Each common carrier providing telephone voice transmission services shall provide telecommunications relay services individually, through designees, or in concert with other carriers not later than 3 years after the date of enactment of this section.

"(d) REGULATIONS.—

"(1) IN GENERAL.—The Commission shall, not later than 1 year after the date of enactment of this section, prescribe regulations to implement this section, including regulations that—

"(A) establish functional requirements, guidelines, and operations procedures for telecommunications relay services;

"(B) establish minimum standards that shall be met by common carriers in carrying out subsection (c);

"(C) require that telecommunications relay services operate every day for 24 hours per day;

"(D) require that users of telecommunications relay services pay rates no greater than the rates paid for functionally equivalent voice communication services with respect to such factors as the duration of the call, the time of day, and the distance from point of origination to point of termination;

"(E) prohibit relay operators from refusing calls or limiting the length of calls that use telecommunications relay services;

"(F) prohibit relay operators from disclosing the content of any relayed conversation and from keeping records of the content of any such conversation beyond the duration of the call; and

"(G) prohibit relay operators from intentionally altering a relayed conversation.

"(2) TECHNOLOGY.—The Commission shall ensure that regulations prescribed to implement this section encourage the use of existing technology and do not discourage or impair the development of improved technology.

"(3) JURISDICTIONAL SEPARATION OF COSTS.—

"(A) IN GENERAL.—The Commission shall prescribe regulations governing the jurisdictional separation of costs for the services provided pursuant to this section.

"(B) RECOVERING COSTS.—Such regulations shall generally provide that costs caused by interstate telecommunications relay services shall be recovered from the interstate jurisdiction and costs caused by intrastate telecommunications relay services shall be recovered from the intrastate jurisdiction.

"(C) JOINT PROVISION OF SERVICES.—To the extent interstate and intrastate common carriers jointly provide telecommunications relay services, the procedures established in section 410 shall be followed, as applicable.

"(4) FIXED MONTHLY CHARGE.—The Commission shall not permit carriers to impose a fixed monthly charge on residential customers to recover the costs of providing interstate telecommunication relay services.

"(5) UNDUE BURDEN.—If the Commission finds that full compliance with the requirements of this section would unduly burden one or more common carriers, the Commission may extend the date for full compliance by such carrier for a period not to exceed 1 additional year.

"(e) ENFORCEMENT.—

"(1) IN GENERAL.—Subject to subsections (f) and (g), the Commission shall enforce this section.

"(2) COMPLAINT.—The Commission shall resolve, by final order, a complaint alleging a violation of this section within 180 days after the date such complaint is filed.

"(f) CERTIFICATION.—

"(1) STATE DOCUMENTATION.—Each State may submit documentation to the Commission that describes the program of such State for implementing intrastate telecommunications relay services.

"(2) REQUIREMENTS FOR CERTIFICATION.—After review of such documentation, the Commission shall certify the State program if the Commission determines that the program makes available to hearing-impaired and speech-impaired individuals either directly, through designees, or through regulation of intrastate common carriers, intrastate telecommunications relay services in such State in a manner that meets the requirements of regulations prescribed by the Commission under subsection (d).

"(3) METHOD OF FUNDING.—Except as provided in subsection (d), the Commission shall not refuse to certify a State program based solely on the method such State will implement for funding intrastate telecommunication relay services.

"(4) SUSPENSION OR REVOCATION OF CERTIFICATION.—The Commission may suspend or revoke such certification if, after notice and opportunity for hearing, the Commission determines that such certification is no longer warranted.

"(g) COMPLAINT.—

"(1) REFERRAL OF COMPLAINT.—If a complaint to the Commission alleges a violation of this section with respect to intrastate telecommunications relay services within a State and certification of the program of such State under subsection (f) is in effect, the Commission shall refer such complaint to such State.

"(2) JURISDICTION OF COMMISSION.—After referring a complaint to a State under paragraph (1), the Commission shall exercise jurisdiction over such complaint only if—

"(A) final action under such State program has not been taken on such complaint by such State—

"(i) within 180 days after the complaint is filed with such State; or

"(ii) within a shorter period as prescribed by the regulations of such State; or

"(B) the Commission determines that such State program is no longer qualified for certification under subsection (f).".

(b) CONFORMING AMENDMENTS.—The Communications Act of 1934 (47 U.S.C. 151 et seq.) is amended—

(1) in section 2(b) (47 U.S.C. 152(b)), by striking "section 224" and inserting "sections 224 and 225"; and

(2) in section 221(b) (47 U.S.C. 221(b)), by striking "section 301" and inserting "sections 225 and 301".

TITLE V—MISCELLANEOUS PROVISIONS

SEC. 501. CONSTRUCTION.

(a) REHABILITATION ACT OF 1973.—Nothing in this Act shall be construed to reduce the scope of coverage or apply a lesser standard than the coverage required or the standards applied under title V of the Rehabilitation Act of

1973 (29 U.S.C. 790 et seq.) or the regulations issued by Federal agencies pursuant to such title.

(b) OTHER LAWS.—Nothing in this Act shall be construed to invalidate or limit any other Federal law or law of any State or political subdivision of any State or jurisdiction that provides greater or equal protection for the rights of individuals with disabilities than are afforded by this Act.

(c) INSURANCE.—Titles I through IV of this Act shall not be construed to prohibit or restrict—

(1) an insurer, hospital or medical service company, health maintenance organization, or any agent, or entity that administers benefit plans, or similar organizations from underwriting risks, classifying risks, or administering such risks that are based on or not inconsistent with State law; or

(2) a person or organization covered by this Act from establishing, sponsoring, observing or administering the terms of a bona fide benefit plan that are based on underwriting risks, classifying risks, or administering such risks that are based on or not inconsistent with State law;

(3) a person or organization covered by this Act from establishing, sponsoring, observing or administering the terms of a bona fide benefit plan that is not subject to State laws that regulate insurance:

Provided, That paragraphs (1), (2), and (3) are not used as a subterfuge to evade the purposes of title I and III.

SEC. 502. PROHIBITION AGAINST RETALIATION AND COERCION.

(a) RETALIATION.—No individual shall discriminate against any other individual because such other individual has opposed any act or practice made unlawful by this Act or because such other individual made a charge, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this Act.

(b) INTERFERENCE, COERCION, OR INTIMIDATION.—It shall be unlawful to coerce, intimidate, threaten, or interfere with any person in the exercise or enjoyment of, or on account of his or her having exercised or enjoyed, or on account of his or her having aided or encouraged any other person in the exercise or enjoyment of, any right granted or protected by this Act.

(c) REMEDIES AND PROCEDURES.—The remedies and procedures available under sections 107, 205, and 308 of this Act shall be available to aggrieved persons for violations of subsections (a) and (b).

SEC. 503. STATE IMMUNITY.

A State shall not be immune under the eleventh amendment to the Constitution of the United States from an action in Federal court for a violation of this Act. In any action against a State for a violation of the requirements of this Act, remedies (including remedies both at law and in equity) are available for such a violation to the same extent as such remedies are available for such a violation in an action against any public or private entity other than a State.

SEC. 504. REGULATIONS BY THE ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD.

(a) ISSUANCE OF GUIDELINES.—Not later than 6 months after the date of enactment of this Act, the Architectural and Transportation Barriers Compliance Board shall issue minimum guidelines that shall supplement the existing Minimum Guidelines and Requirements for Accessible Design for purposes of titles II and III.

(b) CONTENTS OF GUIDELINES.—The guidelines issued under subsection (a) shall establish additional requirements, consistent with this Act, to ensure that buildings, facilities, and vehicles are accessible, in terms of architecture and design, transportation, and communication, to individuals with disabilities.

SEC. 505. ATTORNEY'S FEES.

In any action or administrative proceeding commenced pursuant to this Act, the court or agency, in its discretion, may allow the prevailing party, other than the United States, a reasonable attorney's fee, including litigation expenses, and costs, and the United States shall be liable for the foregoing the same as a private individual.

SEC. 506. TECHNICAL ASSISTANCE.

(a) PLAN FOR ASSISTANCE.—

(1) IN GENERAL.—Not later than 180 days after the date of enactment of this Act, the Attorney General, in consultation with the Chairman of the Equal Employment Opportunity Commission, the Secretary of Transportation, the National Council on Disability, the Chairperson of the Architectural and Transportation Barriers Compliance Board, and the Chairman of Federal Communications Commission, shall develop a plan to assist entities covered under this Act, along with other executive agencies and commissions, in understanding the responsibility of such entities, agencies, and commissions under this Act.

(2) PUBLICATION OF PLAN.—The Attorney General shall publish the plan referred to in paragraph (1) for public comment in accordance with the Administrative Procedure Act (5 U.S.C. 551 et seq.).

(b) AGENCY AND PUBLIC ASSISTANCE.—The Attorney General is authorized to obtain the assistance of other Federal agencies in carrying out subsection (a), including the National Council on Disability, the President's Committee on

Employment of People with Disabilities, the Small Business Administration, and the Department of Commerce.

(c) IMPLEMENTATION.—

(1) AUTHORITY TO CONTRACT.—Each department or agency that has responsibility for implementing this Act may render technical assistance to individuals and institutions that have rights or responsibilities under this Act.

(2) IMPLEMENTATION OF TITLES.—

(A) TITLE I.—The Equal Employment Opportunity Commission and the Attorney General shall implement the plan for assistance, as described in subsection (a), for title I.

(B) TITLE II.—

(i) IN GENERAL.—Except as provided for in clause (ii), the Attorney General shall implement such plan for assistance for title II.

(ii) EXCEPTION.—The Secretary of Transportation shall implement such plan for assistance for section 203.

(C) TITLE III.—The Attorney General, in coordination with the Secretary of Transportation and the Chairperson of the Architectural Transportation Barriers Compliance Board, shall implement such plan for assistance for title III.

(D) Title iv.—The Chairman of the Federal Communications Commission, in coordination with the Attorney General, shall implement such plan for assistance for title IV.

(d) Grants and Contracts.—

(1) In general.—Each department and agency having responsibility for implementing this Act may make grants or enter into contracts with individuals, profit institutions, and nonprofit institutions, including educational institutions and groups or associations representing individuals who have rights or duties under this Act, to effectuate the purposes of this Act.

(2) Dissemination of information.—Such grants and contracts, among other uses, may be designed to ensure wide dissemination of information about the rights and duties established by this Act and to provide information and technical assistance about techniques for effective compliance with this Act.

(e) Failure to Receive Assistance.—An employer, public accommodation, or other entity covered under this Act shall not be excused from meeting the requirements of this Act because of any failure to receive technical assistance under this section.

SEC. 507. FEDERAL WILDERNESS AREAS.

(a) Study.—The National Council on Disability shall conduct a study and report on the effect that wilderness designations and wilderness land management practices have on the ability of individuals with disabilities to use and enjoy the National Wilderness Preservation System as established under the Wilderness Act (16 U.S.C. 1131 et seq.).

(b) Submission of Report.—Not later than 1 year after the enactment of this Act, the National Council on Disability shall submit the report required under subsection (a) to Congress.

SEC. 508. TRANSVESTITES.

For the purposes of this Act, the term "disabled" or "disability" shall not apply to an individual solely because that individual is a transvestite.

SEC. 509. CONGRESSIONAL INCLUSION.

Notwithstanding any other provision of this Act or of law, the provisions of this Act shall apply in their entirety to the Senate, the House of Representatives, and all the instrumentalities of the Congress, or either House thereof.

SEC. 510. ILLEGAL DRUG USE.

(a) For purposes of this Act, an individual with a "disability" shall not include any individual who uses illegal drugs, but may include an individual who has successfully completed a supervised drug rehabilitation program, or has otherwise been rehabilitated successfully, and no longer uses illegal drugs.

(b) However, for purposes of covered entities providing medical services, an individual who uses illegal drugs shall not be denied the benefits of such services on the basis of his or her use of illegal drugs, if he or she is otherwise entitled to such services.

SEC. 511. DEFINITIONS.

Under this Act the term "disability" does not include "homosexuality", "bisexuality", "transvestism", "pedophilia", "transsexualism", "exhibitionism", "voyeurism", "compulsive gambling", "kleptomania", or "pyromania", "gender identity disorders", "current psychoactive substance use disorders", "current psychoactive substance-induced organic mental disorders", as defined by DSM-III-R which are not the result of medical treatment, or other sexual behavior disorders.

SEC. 512. AMENDMENTS TO THE REHABILITATION ACT.

(a) HANDICAPPED INDIVIDUAL.—Section 7(7)(B) of the Rehabilitation Act of 1973 (29 U.S.C. 706(8)(B)) is amended—

(1) in the first sentence, by striking out "Subject to the second sentence of this subparagraph, the" and inserting in lieu thereof "The"; and

(2) by striking out the second sentence and inserting in lieu thereof the following:

"Notwithstanding any other provision of law, but subject to subsection (C) with respect to programs and activities providing education and the last sentence of this paragraph, the term 'individual with a handicap' does not include any individual who currently uses illegal drugs, except that an individual who is otherwise handicapped shall not be excluded from the protections of this Act if such individual also uses or is also addicted to drugs. For purposes of programs and activities providing medical services, an individual who currently uses illegal drugs shall not be denied the benefits of such programs or activities on the basis of his or her current use of illegal drugs if he or she is otherwise entitled to such services.

"(C) For purposes of programs and activities providing educational services, local educational agencies may take disciplinary action pertaining to the use or possession of illegal drugs or alcohol against any handicapped student who currently uses drugs or alcohol to the same extent that such disciplinary action is taken against nonhandicapped students. Furthermore, the due process procedures at 34 CFR 104.36 shall not apply to such disciplinary actions.

"(D) For purposes of sections 503 and 504 of this Act as such sections relate to employment, the term 'individual with handicaps' does not include any individual who is an alcoholic whose current use of alcohol prevents such individual from performing the duties of the job in question or whose employment, by reason of such current alcohol abuse, would constitute a direct threat to property or the safety of others.".

(b) Section 7 of such Act (29 U.S.C. 706) is further amended by adding at the end thereof the following new paragraph:

"(22) The term 'illegal drugs' means controlled substances, as defined in schedules I through V of section 202 of the Controlled Substances Act (21 U.S.C. 812), the possession or distribution of which is unlawful under such Act. The term 'illegal drugs' does not mean the use of a controlled substance pursuant to a valid prescription or other uses authorized by the Controlled Substances Act or other provisions of Federal law.".

SEC. 513. SEVERABILITY.

Should any provision in this Act be found to be unconstitutional by a court of law, such provision shall be severed from the remainder of the Act, and such action shall not affect the enforceability of the remaining provisions of the Act.

Passed the Senate September 7 (legislative day, September 6), 1989.

Attest:

Secretary.

Mr. **Whittaker**. Thank you, Mr. Chairman.

I want to commend you for calling this hearing on pending legislation to enhance the access of disabled Americans to the mainstream of economic and cultural life in this great country. All thinking and caring Americans endorse the goal of providing the means for disabled Americans to become self-supporting and fully participating members of our society.

Under the current jurisdictional division of responsibility for the bill, our subcommittee is empowered to examine the rail transportation aspects of the bill. These address, in a nutshell, passenger access to intercity trains and stations, commuter railroads and facilities, and other rail passenger service open to the general public, notably scenic and excursion operations.

I am sure our subcommittee will benefit from the expert testimony of the public and private sector executives who are here today to give us their evaluations of the bill. Although we are all supportive of preventing discrimination against our disabled citizens, we also have a responsibility to examine the practical aspects of this legislation. In particular, we would be remiss if we did not examine the cost and the availability of resources to cover those costs that are expected to be borne by private businesses, and particularly by our public sector rail enterprises like Amtrak, in a time of fiscal stringency.

I hope that based on firm, factual information elicited at today's hearings, we will be better able to evaluate and refine the provisions of the bill that address rail transportation.

Thank you, Mr. Chairman.

Mr. **Luken**. Thank you. The gentleman from North Carolina, Mr. McMillan.

Mr. **McMillan**. Thank you, Mr. Chairman.

I am glad we have the opportunity today to explore with our witnesses the possible ramifications for the transportation industry of this country if H.R. 2273 becomes law.

I have long been supportive of efforts to encourage the handicapped and the disabled to return to work as a matter of sound public policy and of proper health policy as well, and have sponsored legislation in that context.

Studies have shown that returning to work has a substantial positive affect on the psychological and emotional health of those disabled individuals who can work, and this hearing today certainly has a direct affect on their ability to get to and from the workplace to earn a living, as well as an affect on their travel needs for every reason.

I am interested particularly as to how we can best achieve the goals of H.R. 2273 without incurring an impossible cost to the transportation sector of the economy which would forestall implementation of that act. This includes the capital investment required, the operating costs that may be associated with it, and even possibly litigation costs that might arise due to some of the ambiguity in the legislative language.

I hope this hearing will shed light on how we can reconcile some of these questions in this subcommittee and in others before it reaches the floor for a vote.

I yield back the balance of my time. Thank you, Mr. Chairman.

Mr. Luken. I thank the gentleman. The gentleman from Alabama.

Mr. Callahan. Thank you, Mr. Chairman.

I certainly will support the concept of H.R. 2273. We are going to ensure that our American disabled have access to trains. I think, though, we ought to be cautious as to how we move in this direction to ensure that, No. 1, we accomplish the goal that the disabled want and that this committee wants and this Congress wants, but at the same time we must recognize that there are some areas that we must investigate.

I have received a call, and I know it is not within our jurisdiction because it involves buses, but I think it will explain my point. I received a call last week from a charter bus company in my district in Mobile, a small company that has 20 charter buses that does not run a regular route. Its purpose is for people to either go to a football game or come to visit us in Washington here. The law as drafted would require that all 20 of his buses be modified.

In my opinion, if that is the case, we ought to find some relief. For instance, he could modify 5 of his 20 buses, and if someone were to order such a bus or to give an indication that there was a need for handicapped access, he could live with modifying 5. But if we enforce upon him the necessity to modify all 20 of his already aging buses, it is going to put him out of business, and therefore, the very citizens that are using these buses to go on these various trips at a very reasonable cost are either going to have to take up that cost factor or either they are not going to have buses available. That doesn't mean that the bill is bad. It just means that we should move very cautiously.

The same thing would apply to trains, Mr. Chairman. Are we going to require that each and every car on an Amtrak train, for example, be accessible or are we going to require that only one or two or a certain percentage of cars be modified to ensure that the disabled have accessibility?

We all are moving in the same direction. We were all moving in the same direction about this time last year when we passed catastrophic insurance. All of us wanted to do something good for our senior citizens, only to wake up and find that we had a nightmare on our hands. So let's don't get in that mode. Let's ensure that we have a goal and that goal is to provide accessibility for the handicapped on all public transportation as well as some areas of the private sector, but let's do it in a responsible manner.

Thank you.

Mr. Luken. Thank you, Mr. Callahan.

If there is nothing further in the way of preliminaries to the hearing, we will proceed with Mr. Jeffrey Shane, representing the Department of Transportation.

I believe, Mr. Shane, you wish to represent the Department in this matter; is that right?

Mr. Shane. Yes, Mr. Chairman.

Mr. Luken. We have a written statement which, without objection, will be received into the report of the subcommittee.

You may proceed in any way you think will be helpful.

STATEMENT OF JEFFREY N. SHANE, ASSISTANT SECRETARY FOR POLICY AND INTERNATIONAL AFFAIRS, DEPARTMENT OF TRANSPORTATION, ACCOMPANIED BY JOHN CLINE, ASSOCIATE ADMINISTRATOR FOR BUDGET AND POLICY, URBAN MASS TRANSIT ADMINISTRATION; AND MARK LINDSEY, CHIEF COUNSEL, FEDERAL RAILROAD ADMINISTRATION

Mr. SHANE. Thank you very much, Mr. Chairman. If I can put the full statement in the record, then I would like to summarize for the benefit of the subcommittee my remarks.

Mr. Chairman, appearing with me today are John Cline on my right, who is the associate administrator for budget and policy of the Urban Mass Transit Administration, one of the Department of Transportation's component administrations.

On my left is Mark Lindsey, the Chief Counsel of the Federal Railroad Administration, and they are here, of course, to assist in answering any questions which the subcommittee may have.

We are pleased, of course, to have this opportunity to appear before you today to present the views of the Department of Transportation on the Americans With Disabilities Act, which the Senate passed on September 7, 1989. As I am sure you know, the administration strongly supports enactment of Federal legislation extending civil rights to Americans With Disabilities.

Despite the considerable efforts of all levels of government and the private sector and the tireless efforts of concerned citizens and advocates everywhere, the fact is that many persons with disabilities in this Nation still lead their lives in a state of isolation and dependence. Although 16 years have gone by since the Rehabilitation Act was passed, persons with disabilities are still too often shut out of the economic and social mainstream of American life. The Americans With Disabilities Act would directly address that problem.

In brief, the purpose of the act is to provide a clear national mandate to end discrimination against individuals with disabilities and to bring persons with disabilities into the economic and social mainstream of American life, to provide enforceable standards addressing discrimination against individuals with disabilities; and to ensure that the Federal Government plays a central role in enforcing these standards on behalf of individuals with disabilities.

While the administration fully supports this bill, it would be useful to review the considerable progress made in improving transportation services for persons with disabilities over the last 20 years when the Department of Transportation, under congressional direction, first became involved in this activity.

For example, persons with disabilities can utilize airports today with much less difficulty than was true 20 years ago. Every federally subsidized mass transit system in the country provides some transportation services that can be utilized by persons with disabilities. While the older rapid, commuter, and light rail transit systems' stations and equipment are not as accessible as those utilized for bus transit systems, progress is being made in adding accessibility features during major alterations to these facilities. Intercity systems, and I am talking about Amtrak, are generally accessible to and usable by persons with disabilities, but some stations need major alterations to bring them into conformance with the Uniform Federal Accessibility Standards.

Highway rest area facilities either comply or are in the process of being brought into conformance with the Uniform Federal Accessibility Standards. Urban streets that are being renovated and altered with Federal financial assistance are being brought into conformance through installation of curb cuts or ramps that accommodate wheelchairs.

Let me now briefly summarize for you some of the key provisions in the Americans With Disabilities Act, as passed by the Senate, affecting transportation. Under that bill: One, public entities must purchase or lease accessible vehicles—bus, rail, and other fixed route vehicles—in any solicitation for new vehicles made 30 days of more after enactment of the act. If purchasing or leasing used vehicles, the public entity must make a good faith effort to obtain accessible vehicles. Remanufactured vehicles should, to the maximum extent feasible, be made accessible;

Two, DOT may "temporarily relieve" a public entity from purchasing a lift-equipped bus if a lift is unavailable and the public entity had made a good faith effort to locate a lift-equipped bus;

Three, a public entity providing fixed route transit service must provide comparable level paratransit service to handicapped individuals who cannot otherwise use the fixed route service. The Department would issue service criteria in this regard. If providing such service presents an "undue financial burden," the Department may allow the public entity to limit its service pursuant to a "flexible numerical formula";

Four, a public entity only providing demand responsive service must buy or lease accessible vehicles unless it can demonstrate that its system provides a level of service to disabled people equivalent to that provided to the general public;

Five, new facilities built by a public entity must be accessible. Existing facilities with major alternations will, to the maximum extent feasible, be made accessible in the altered areas;

Six, regarding rail systems—intercity, rapid, light, and commuter—at least one car per train must be accessible, as soon as practicable, but in no less than 5 years. All newly purchased cars must be accessible. Existing key rapid, communter, and light rail stations must be made accessible within 3 years except that DOT may extend that time to 20 years for "extraordinarily expensive structural changes . . ." necessary to achieve accessibility. All intercity rail systems shall be accessible, as soon as practicable, but in no less than 20 years.

Seven, The ADA also extends to public transportation provided by private entities, including terminals used for public transportation. Hotel and airport shuttle services and around-the-mall parking lot vans, when they offer demand-responsive services, would be required to provide adequate levels of service to individuals with disabilities, but they do not need to equip vehicles with lifts; and

Eight, the bill will require substantial changes in private intercity bus operations. Within 7 years, all new buses purchased by small operators must be accessible. A similar requirement will be in effect within 6 years for all other intercity bus operators.

If I may, Mr. Chairman, I would like to turn now to the specific concerns of this committee. In those areas where rail transit is available, in whatever form, it is just as important to provide access for disabled riders to that system as it is to provide access to the fixed route bus system. The ADA thus requires that with respect to new fixed route vehicles that are purchased or leased by public entities 30 days or more after enactment of the act, the vehicles must be readily accessible to and usable by disabled individuals. Provisions designed to encourage acquisition of accessible vehicles are also provided for the purchase of lease of used vehicles and for the remanufactured vehicles.

Moreover, within 5 years, all rail systems must have one car per train that is accessible to disabled riders. This provision of the legislation would apply to vehicles operated by intercity, light, rapid, and commuter rail systems. The report accompanying the Senate-passed bill notes that implementing regulations issued by the Department of Transportation should ensure that the rail car that is accessible stops at an appropriate place in the station that is level with the car and that appropriate signs are used to indicate where such cars will stop.

The Senate-passed bill also provides that new facilities used to provide transportation services must be accessible, and when major alterations are made, the altered area must be accessible to the maximum extent feasible. Further, the bill provides for retrofitting of existing key stations in light, rapid, and commuter rail systems within 3 years of enactment of the act. The transit agencies and members of the disabled community would work together to plan the strategy for key station accessibility. The Senate report accompanying the ADA emphasizes that exactly what will be determined "key" is a decision best left to the local community. The report notes that the pattern of New York and Philadelphia, which already have worked out agreements to retrofit key stations, would serve as an excellent model in this regard for other cities. The ADA, as passed by the Senate, would require no incremental effort by New York and Philadelphia.

In New York City, for example, the agreement worked out with the representatives of the disabled community identifies 38 particular stations out of 465 as key stations. A similar agreement arrived at between representatives of individuals with disabilities and SEPTA in Philadelphia identified 11 out of some 53 stations on the high speed line, and 31 out of approximately 172 commuter rail stations were determined to be key stations.

The Senate-passed bill also provides that this 3 year deadline may be extended by the Department of Transportation up to 20 years for extraordinarily expensive changes to, or replacement of existing facilities necessary to achieve accessibility. As with other provisions of the bill, the specific criteria regarding this exception would have to be detailed in regulations issued by the Department of Transportation.

Finally, the Department supports provisions adopted in the Senate-passed bill that appropriately distinguish the obligations of employers with respect to active alcoholics and drug abusers, on the one hand, and those who are no longer using illegal drugs or abusing alcohol, on the other hand. Moreover, these provisions would allow an employer to prohibit the use of illegal drugs by an employee and prohibit the use of alcohol in the workplace.

Mr. Chairman, 25 years ago Congress and the President were finalizing enactment of the Civil Rights Act of 1964, one of the most comprehensive civil rights laws ever passed. We now have the chance to extend the Nation's civil rights guarantees to the disabled community and the Department and the Administration are pleased to support this landmark legislation.

That concludes my remarks. We would be happy to answer any questions that any of you may have. Thank you.

Mr. **Luken**. Mr. Shane, with regard to that last statement that you made, current DOT regulations do not mandate alcohol tests for railroad employees; do they?

Mr. **Shane**. Let me ask Mr. Lindsey to address that.

Mr. **Lindsey**. Yes, Mr. Chairman, they do, under certain circumstances. For example, in postaccident testing, testing for alcohol is required.

Mr. **Luken**. But not random testing?

Mr. **Lindsey**. Not random testing, no, sir.

Mr. **Luken**. Not preemployment testing? So what Mr. Shane told us wouldn't be accurate then, because current DOT regulations don't provide for the significant testing for alcohol; right?

Mr. **Lindsey**. We believe this is significant testing for alcohol, Mr. Chairman.

Mr. **Luken**. Not random? You don't believe in random, Mr. Lindsey?

Mr. **Lindsey**. Yes, I do.

Mr. **Luken**. Isn't that the key, random? You don't include random testing. Everybody we talk to in the industry says random is the most important thing.

Mr. **Lindsey**. Random is an important additional element in our program, Mr. Chairman.

Mr. **Luken**. Well, maybe you ought to get around to putting random alcohol testing into your regulations. It is about time; don't you think?

Mr. **Lindsey**. It is under consideration, Mr. Chairman.

Mr. **Luken**. It has been under consideration for a long time, Mr. Lindsey.

Mr. **Lindsey**. Yes, sir, it has.

Mr. **Luken**. We have had this discourse for a long time, you and I and other representatives.

Mr. **Lindsey**. Yes, sir, we have.

Mr. **Luken**. One other little point here which maybe isn't so little on the drug testing. Title I of the Senate bill says you can't discriminate against a qualified individual with a disability; right, Mr. Shane?

Mr. **Shane**. Yes, sir.

Mr. **Luken**. But the bill only excepts users of illegal drugs from this definition. That is what you described. What about persons who use prescription drugs—legal prescriptions—and are addicts? They would be covered under the bill; wouldn't they, and would be protected? Do you intend that that would be the case?

Mr. **Shane**..I would like to turn to my colleagues for anything they would like to add to this, but my guess is that some of those kinds of details are going to have to be worked out in regulations. I think the operative concept is "qualified individual." I would think that in certain work circumstances the required use of certain prescription drugs might be inconsistent with the requirements of the workplace, such as the operator of a transportation service, but perhaps somebody else can offer enlightenment.

Mr. **Luken**. Would anybody else like to add anything?

Mr. **Lindsey**. I would like to. We have certainly cases in the railroad industry where prescription drugs or over-the-counter medicines have been misused in the workplace, but I don't think any of those uses that we have observed could fall under the definition of handicapped under the bill, whereas someone who is addicted to an illegal drug might be able to make such an argument absent something in the statute that would defeat that argument.

I believe that that is the important distinction, Mr. Chairman.

Mr. **Luken**. You mean you can't be addicted to legal drugs? Are you saying there aren't such people?

Mr. **Lindsey**. No, I am not sure there are not, Mr. Chairman. There may be. I don't think we have observed a case of that in any of the people in the railway industry where we have a problem.

Mr. **Luken**. See no evil, hear no evil; is that the administration's position?

Mr. **Lindsey**. No, sir.

Mr. **Luken**. Then we have to deal with it. We have to decide that question in order to properly frame this legislation.

Mr. **Lindsey**. Yes, we do.

Mr. **Luken**. Aren't there people who are addicted to and on legal drugs? And wouldn't that be a concern for an employer?

Mr. **Lindsey**. Yes, sir, it would.

Mr. **Luken**. The employer wouldn't be able to discriminate against such a person under the bill as drafted; is that right?

Mr. **Lindsey**. I believe it would still be possible under the qualification provision that Mr. Shane referred to say that, as employers now may, people who are using prescription drugs that might affect their performance must report that to the company and the company may bar them from service in certain areas, at least—certainly, for example, in safety-sensitive jobs in the rail industry, if prescription drug use is inconsistent with the stated performance of their job.

Mr. **Luken**. You are saying something that sounds reasonable, but it doesn't have any foundation in this bill as far as I can see.

Mr. **Lindsey**. I believe that that——

Mr. **Luken**. If the bill made an exception for persons who are users of illegal and legal drugs or, as Mr. Shane suggested, if you could adopt regulations that would so provide—then what you are saying, I think, would be correct.

Mr. **Lindsey**. I believe that certainly is the result we would like to see obtained, if I may——

Mr. **Luken**. It may not be the biggest issue in this legislation, however, I think it is important enough to try to settle it.

Mr. **Lindsey**. If I am mistaken in my view——

Mr. **Luken**. It is unsettled in my mind. I am certainly not accusing anybody of any shenanigans or anything. It is just a problem we are bringing up. Mr. Shane?

Mr. **Shane**. Mr. Chairman, perhaps I could just add that there are really two circumstances I think that you are referring to. One is where you do have habitual use of a legal drug for medicinal, maybe legitimate medicinal purposes. It would, as Mr. Lindsey says, be incumbent upon the employee to notify the employer of the use of that substance in order that there be a determination whether the use of the substance would impair the user for purposes of his or her responsibilities in the workplace. That is one situation.

Mr. **Luken**. But if I may interrupt, you say it would be incumbent. But would that requirement in itself be discrimination under this bill?

Mr. **Shane**. If, in fact, there were an impairment of the ability of——

Mr. **Luken**. I bet it would. I bet a court would so hold under this bill.

Mr. **Shane**. Would hold what, Mr. Chairman?

Mr. **Luken**. Just what I said, that the requirement to report the use of legal drugs would be discrimination under the bill.

Mr. **Shane**. I am confident that if there were any impairment of the user's ability to perform a job that was suffused with a safety responsibility because of its location in the transportation industry, that that user would not be protected by any provision of the Senate bill. I don't believe any provision of the House bill would, either.

Mr. **Luken**. If you could speak for the Supreme Court, I might be more confident of your confidence. I am not sure what you base that confidence on. However, we may be getting to a circular point in the discussion. If you want to submit anything for the record after you review this that might clarify it in any way, the record will certainly be held open.

Mr. **Shane**. It is an important point, Mr. Chairman. I would like to take a closer look.

Mr. **Luken**. It is a very difficult point. You may well be right in your interpretation. I would just like to have a better explanation.

On the issue of the obligation for Amtrak under this bill, all newly purchased, remanufactured and used vehicles must be accessible. Do you have an estimate? Does this administration currently have an estimate of how much this will cost Amtrak?

Mr. **Shane**. I think the first point to be made is that the requirement imposed by the legislation on Amtrak is not, in fact, a new requirement for Amtrak because the DOT section 504 regulation, implementing the Rehabilitation Act of 1973, as I understand it, has precisely the same effect.

I just wanted to get to some numbers in response to your question. Ignoring the difference between the section 504 regulation and the ADA, just looking at what we understand to be the real out-of-pocket cost of the requirements, and, obviously, we will want to hear from Amtrak on this question, we believe that the range is somewhere between $35 and $50 billion.

Mr. **Luken**. Mr. Claytor says in his testimony today that the cold reality of Amtrak's capital budget is that a priority must be placed on projects that keep Amtrak's operation safe and reliable:

We simply have not had nor do we presently have the appropriated capital to fund the costs of achieving station accessibility to our national system.

Do you have any comment on that?

Mr. SHANE. That requirement has been in place since 1979. I guess my comment is that I am discouraged to hear that. We had obviously intended when the section 504 regulations were first promulgated that the program be implemented immediately, that over a period of time would culminate in fully accessible stations.

That is not the case. Now we have legislation that goes to exactly the same effect. I can't talk, frankly, very effectively to Amtrak's capitalization or their revenue stream. I think we really need to hear from Amtrak's management on that.

Mr. LUKEN. You haven't heard from them? You say you have to hear from Amtrak's management on what?

Mr. SHANE. We certainly talk to Amtrak. I am talking about in the context of this hearing.

Mr. LUKEN. In the context of this bill?

Mr. SHANE. Of this hearing this morning. I am just saying that—you have asked me a question about Amtrak's costs, and I am offering you our view of those costs, but I simply defer to Amtrak on the matter.

Mr. LUKEN. Mr. Claytor goes on further to say that compliance with the act's intercity station accessibility requirements be made subject to the appropriation of funds specifically authorized for that purpose. Do you think that that addition should be made to the legislation?

Mr. SHANE. No, sir, I don't. I go back a long way in the Department of Transportation. I was there when we actually tried to implement the National Rail Passenger Act which created Amtrak, and it was our intention that Amtrak be created as a for-profit corporation, that it not be a subsidized entity.

That hasn't worked out that way, as everybody knows, and in fact we continue to subsidize it, but it is still the administration's intention that eventually they operate as a for-profit corporation.

Mr. LUKEN. That's a nice high aspiration. That would be all of our hope, like a pie in the sky, but it was never a realistic one, and only the administration entertains such illusions at various times. In fact, regularly the Reagan administration and now the Bush administration entertains that illusion, but here we now have the reality. The administration has opposed the funding levels in the authorization bill which we just passed and has in the past opposed such funding levels, so it seems to me that the position of the administration is somewhat in conflict.

How do you reconcile the administration's support of the ADA bill with its opposition to Amtrak's funding?

Mr. SHANE. Well, again, as to Amtrak, the implications of the bill are not new. The requirements that the bill would impose on Amtrak are requirements that have been in place a long time. It is, if you will, an old story for Amtrak's purposes, and we haven't seen any reason to suddenly change our view of Amtrak funding simply because we now have incorporated the old section 504 requirements.

Mr. LUKEN. If it serves as a reminder of the fact that your position is unrealistic, couldn't you deal with it?

Mr. **Shane**. If, in fact——

Mr. **Luken**. I mean, it is an irreconcilable conflict that you have in your position. The fact that it isn't new doesn't mean that it isn't still true.

Mr. **Shane**. You will have to understand, Mr. Chairman, that no one has authorized me to come here and make any different arrangements with respect to the funding of this legislation.

Mr. **Luken**. I think I am about running out of time, not out of questions, but out of time. The gentleman from Kansas is recognized.

Mr. **Whittaker**. Thank you, Mr. Chairman, Mr. Shane. Following back up on some of the aspects of the drug situation, what about the situations where—and these already exist—where drug or alcohol testing is mandated not by Federal regulation, but by employer policy and or collective bargaining agreements, and in that context, then, how can we be sure that such arrangements will continue to be legal when section 104(c)(2) says that the bill is not meant to encourage, prohibit, or authorize drug tests and says nothing at all about alcohol tests?

Mr. **Shane**. Congressman Whitaker, this is a very interesting area of inquiry, and I will be perfectly honest with you. I don't know how effectively I can respond this morning to that. What I would like to do is go back and take a harder look at that provision and see whether or not it does create a problem in terms of our obligation to keep the workplace drug free and keep the transportation system as safe as possible.

Mr. **Whittaker**. The chairman has already indicated he is going to keep the record open, so we would appreciate your submitting your opinions and thoughts.

Mr. **Shane**. Thank you, sir.

[The following material was supplied:]

It is appropriate for section 104 of the bill to protect the employer's right to take adverse action against a worker who uses illegal drugs, whether or not that use can be shown to result in impairment, unsafe behavior, or poor performance. With respect to legal drug use (e.g., under a medical prescription), however, the bill properly ties the employer's discretion to take action against an employee to job performance. Under section 103(a), an employer may establish job-related qualification standards consistent with business necessity. Even if legal use of drugs were considered to be a disability under the facts of a case (e.g., a situation in which an individual is addicted to painkillers prescribed for a medical condition), an employer may take adverse action against an employee because the employee, owing to his use of the drugs, is unable to perform job functions safely or adequately according to the employer's standards for its employees.

Mr. **Whittaker**. Mr. Shane, are you familiar with the amount of appropriated funds supported in the fiscal year 1990 budget for Amtrak and how that compares with funds Amtrak received in 1989? Let me just follow on. It is essentially the same. You are not providing Amtrak with any additional support.

In fact, we had to struggle to get what we got, but if Amtrak's not even being supported by the administration for funds that keep up with inflation, then how is Amtrak supposed to pay for implementation for all the equipment and station modifications specified in this bill?

Mr. **Shane**. Again, Congressman, we are imposing costs on transit companies and private companies and public facilities across the country. Most of those, those operators, are not in a position to come to the Federal Government and ask for some increment in the amount of money the Federal Government supplies by virtue of these new requirements—requirements which are designed to extend what the civil rights law was designed to extend to all Americans, but at last they are being extended to citizens with disabilities.

We have not seen any policy justification for suddenly saying, well, we now are extending civil rights to another classification of Americans, and therefore it is important to change our budgetary approach to the subsidy of some of these systems. It is an obligation that is inherent in the common carrier requirements of the companies that we are talking about, and it has not been seen as a justification for increasing Federal subsidy.

If anything, of course, the administration has been looking for ways to shrink Federal subsidy and impose a greater share of the financial burden on the local areas, State governments to some extent, and on the users, in order that we keep these systems as up to date as possible without recourse to the Federal Government year after year.

Mr. **Whittaker**. That places you in an ideal situation, I might suggest where you mandate, but then don't appropriate to help them out. It is a common problem we have with the Federal Government doing that to either the cities or States or municipalities.

It is, say, to recommend something, but if we don't fund it, it puts the burden on somebody else. That is all the questions I have, Mr. Chairman.

Mr. **Luken**. Thank you, Mr. Whittaker. Mr. McMillan.

Mr. **McMillan**. Thanks, Mr. Chairman. Mr. Shane, you have described New York and Philadelphia, which I guess basically are modifications to computer service primarily, isn't that what you were referring to?

Mr. **Shane**. I was thinking about the transit system.

Mr. **McMillan**. Subway system?

Mr. **Shane**. Yes.

Mr. **McMillan**. In your judgment have they demonstrated that the technology is there to do what this law requires?

Mr. **Shane**. Mr. Cline is a little closer to that, Congressman, if I could ask him to answer you.

Mr. **Cline**. The specific agreements in New York and Philadelphia did not necessarily address the technology available, but identified which stations would be rehabilitated to accommodate the needs of the disabled.

The technology required in what we refer to as the "old rail cities", the older systems, is a little bit more difficult because of some of the barriers in the original construction of those facilities, some of it dating to the last century. But mainly the negotiations concerned the availability of funding and the stations necessary to meet the needs of the disabled.

Mr. **McMillan**. Well, in terms of station modification, that is more an architectural question that probably varies from one situation to the next. I was thinking more in terms of equipment, the rail equipment itself. Have they demonstrated workable technologies that get the job done?

Mr. **Cline**. Most of the technology that's required for the vehicle itself, if we are not talking about the station modifications to platforms and elevators and the like, that technology is available. It has mainly been just a matter of widening doors and making accommodations in the aisles to move a wheelchair-using person through.

Mr. **McMillan**. In some cases does that mean elevator-type lifts?

Mr. **Cline**. Yes, there would be a need for an elevator or ramp-type system on light rail vehicles. Philadelphia has some, and there are some in other cities where they have street level operations. Boston is another city that had modified its light rail system to accommodate persons with disabilities.

Mr. **McMillan**. Shifting back a minute to the estimated, and I realize you are not necessarily fully up to speed on what Amtrak's cost estimates are, but you mentioned that Amtrak was basically in compliance with previously existing legislation on this or did I misunderstand you that maybe what you said was that this legislation reaffirmed what essentially had been imposed on Amtrak previously. Is that a more accurate description?

Mr. **Shane**. That's correct. As I understand it, they are not in compliance with the preexisting legislation. The requirements that are imposed on them by the new legislation are essentially the same requirements as have been in effect for Amtrak since effectively 1979.

Mr. **McMillan**. And that estimate of, you said $35 to $50 million, is that an Amtrak estimate of meeting that, the standards in that prior legislation?

Mr. **Shane**. Yes, it is.

Mr. **McMillan**. And so the fact that it is not in place has been a budgetary issue, I suppose?

In other words, funds have not been appropriated by the Congress to meet that?

Mr. **Shane**. Mr. Lindsey.

Mr. **Lindsey**. Yes, that is the case, Mr. McMillan. Those costs represent primarily station accessibility costs. On the equipment side, Amtrak comes very close to meeting the requirement now. Virtually, all trains have at least one car that is accessible, and the other requirement that's in place is that new equipment that's purchased be accessible.

And I believe you will find when Amtrak is up here that they will tell you that the additional cost on new equipment isn't primarily in the cost of acquiring that equipment, but rather in a tradeoff of revenue receipts. To the extent more spaces are made accessible to the handicapped, there is a sacrifice in revenue receipts and therefore a tradeoff in revenue rather than a major capital cost.

So most of the capital costs are involved in making stations accessible, and the trade off there is between direct accessibility or some kind of special services to enable the handicapped to get around barriers.

Mr. **McMillan**. There was a point made, I think, by Mr. Claytor at one point having to do with a number of station locations of Amtrak, somewhere in the 400 range out of a total number of stations of approximately 450 or 460, something like that.

Many of those stations have very limited use, maybe average boardings of four or five in which the cost of modifications to the station would exceed the total revenue over a period of 1 year. What is the resolution of that kind of problem?

Would the law mandate that those stations remain open or is that still at the discretion of Amtrak based on the revenue generated and the number of people using the service?

Mr. LINDSEY. It is at Amtrak's discretion under the Rail Passenger Service Act. There are under that statute route and service criteria with which Amtrak must comply on discontinuing services or starting new ones, and any decision on closing a station or changing Amtrak service is made under those criteria. This bill would not affect that.

Mr. McMILLAN. Well, is it possible, then, that if this law is adopted and if Congress appropriates the funds to meet the requirements of the law for Amtrak that Amtrak might in that process say:

> Well, this set of stations, because of limited use, and the capital requirements that are needed to comply with the law are not worth maintaining any longer, and therefore cease service in some locations?

Mr. LINDSEY. Yes, sir, that is a possible outcome.

Mr. McMILLAN. Does the law impose the cost entirely upon Amtrak, or does it recognize that many stations are maintained at the request of the local community, and in some cases are owned by the local community or some other transportation authority, and that that cost perhaps should be borne by them rather than Amtrak.

Has that been reviewed at all in terms of the cost estimates on compliance?

Mr. LINDSEY. In terms of the substance, yes, and the costs, no, sir. It is the case under the statute that if someone else owns the station, be they public or private, they, too, would have an obligation.

The statute doesn't directly say "Amtrak shall." It says "intercity rail transit stations shall." So, the obligation, I think, falls arguably both on operator and owner where they are different. It has also been the Department's view that many of the improvements that Amtrak would like to make for stations, either to accommodate the disabled or otherwise, may be done with other public and some private funds, as Amtrak is doing at the 30th Street Station in Philadelphia.

We don't have a good fix on how many of the 400-odd stations that would need some improvements could be handled in that way. And the improvements vary from relatively minor and inexpensive ones, such as lowering the height of the ticket counter or adding bars to assist the handicapped in a restroom, to relatively major structural ones.

We don't have a firm fix on what the total of those costs is, or who would bear them as between Amtrak and others. Perhaps Amtrak has a better one.

Mr. McMILLAN. That would be a negotiable issue, then, between the owner of the station and Amtrak?

Mr. LINDSEY. I believe so, sir. I think of Amtrak's 499 stations, it owns 81, and of those 81, many are in the Northeast Corridor and are fully accessible.

Mr. WHITTAKER. To follow up on that, I am a representative of a rural area, and I was listening to your testimony concerning Philadelphia that had a percentage of their stations accessible. Rather than to lose the availability of all rail passenger service in some local areas—if the ridership is very low, that is probably their only choice, to stop service, they would just shut the station down—how about on a regional basis, with say, six stations—can it be patterned that a handicapped individual could maybe commute to the next town to find a facility that they could board on? Is that anywhere in the thinking?

Mr. LINDSEY. The statute doesn't seem to contemplate that, Mr. Whittaker. It is not an unreasonable solution. That is a lot like the key station provision for the transit systems. I would offer the observation, though, that many of the low-density stations, the ones with four or five passengers a day or something, that Mr. McMillan referred to, and that presumably you are referring to also, wouldn't require very much capital investment to fix.

It might be a ramp that would accommodate a wheelchair or something, and ramps are pretty inexpensive. Those would not be large structures requiring extensive renovation, so I think most of those would be small investments.

Mr. McMILLAN. The location, for example, would an inclined ramp be an acceptable mode of access to an elevated car level?

Mr. LINDSEY. Under the statute, there would have to be a ramp that would reach a level where the wheelchair could roll directly into the car, also.

Mr. McMILLAN. But that is not a very expensive modification. If you take a very low-use stations that is essentially ground level that amounts to a parking lot, and a small structure and the ground level adjacent to the track, a relatively inexpensive ramp system could meet the requirements under this legislation?

Mr. LINDSEY. Yes, sir, I believe so.

As long as the person in the wheelchair would have access, and a person using crutches or something would have access, I believe that would meet the requirement. There wouldn't be any other facilities there requiring modification.

You wouldn't hit the major structural things that you would in a large structure, so I believe it would be a small cost.

Mr. McMILLAN. Is it now, or is it contemplated that the alternative might be done, so that an elevator-type system is put on the car itself so that the modification is made to the rolling stock and not the investment made in multiple points of access along the way?

Is that a feasible alternative?

Mr. LINDSEY. I would like to think that one over and supply an answer for the record, if I may, Mr. McMillan. I have not thought that one through.

[The following material was supplied:]

Amtrak has informed us that they believe that attaching an elevator-type system to each car would be costly in install and difficult and costly to maintain. Because their capital resources have been and are expected to continue to be tight, Amtrak has preferred to proceed with more reliable nonmechanical systems to be available at the station. However, Amtrak has agreed to take another look at the possibility of proceeding with a car-by-car approach.

Mr. McMillan. One final question. It has to do with the liability under the act. Amtrak is, and I think is being encouraged by circumstances to try to utilize more private sources of funding in financing its capital expenditures, which I think is an appropriate thing to do.

Does this impose any liability upon the lender under this legislation?

Mr. Lindsey. I don't believe it does, Mr. McMillan, but perhaps that merits a closer look, too. I am not aware of any provision that would do that.

Mr. McMillan. Certainly, that would simply elevate the cost of borrowing, and is something perhaps we should address if we possibly can. Thank you very much.

Mr. Luken. As I indicated, there are more questions, but little time. But there is one that I believe we have to go into a little bit, and that is the question of paratransit. Paratransit could be a very costly proposition, right? Paratransit, as I understand it, appears to be directed primarily at urban transportation, to bus systems. If the buses in use are not accessible, the bus system must, on request, provide some alternative transportation to the disabled.

Is that about your understanding of it, Mr. Shane or Mr. Cline?

Mr. Shane. That is indeed the way we read the Senate bill, and we base that reading to a great extent on the Senate report, which talks about fixed-route bus transportation in the discussion of the paratransit obligation.

Mr. Cline may want to supplement that answer, but I think by and large, that is the way we see the paratransit obligation coming down.

Mr. Luken. Well, does it apply to Amtrak as written?

Mr. Shane. No, it would not, and we don't see that it would apply to even commuter rail service.

Mr. Cline. The bill says that the paratransit provisions are applicable to fixed-route transit. The bill did not define fixed-route transit, but the Senate report language defined fixed-route transit as being bus transportation.

Mr. Luken. That is as simple as it is? Do you think that is very clear?

Mr. Shane. I wouldn't want to promise you that anybody won't make an argument that paratransit applies to either Amtrak or commuter rail, but we think that would be a reach in terms of what we understand the legislative intent to have been.

Mr. Luken. We will ask Mr. Claytor the same question, and if you have any thoughts on the way home about this, something that you would like to elaborate on, I think we should tie that down. It would appear not to be intended to apply to commuter rail or any rail transportation.

I suppose—even the commuter rail, any kind of rail, is that right?

Mr. Shane. The distances involved in commuter rail or intercity rail are both beyond that which we think paratransit was designed to cover.

Mr. LUKEN. It would apply to light rail, right?

Mr. SHANE. Light rail would be——

Mr. LUKEN. Trolleys, that is light rail, right?

Mr. SHANE. Again, we saw fixed-route bus systems being the principal target, but light rail and fixed-route bus systems essentially serve the same market, so I think light rail would be the exception. That would be one rail system for which the entire transit would be a required supplement.

Mr. LUKEN. Could you give us further written reports on that?

Mr. SHANE. We will be happy to, Mr. Chairman.

Mr. LUKEN. It would seem like the trolley or the light rail might somewhere conceivably fall in between, and I am not sure what would be the intention. Would it be your thought at this time, or do you want to reserve judgment of whether the bill applies to trolleys or light rail? Subways?

Mr. SHANE. I think it might be better if we took some time and gave you a thoughtful answer for the record.

[The following material was supplied:]

Section 203(c) of the Senate-passed version of the "Americans With Disabilities Act" provides requirements regarding paratransit service for the disabled as a supplement to a fixed route public transportation system. An issue has been raised as to whether these paratransit requirements apply only when a public transportation system provides fixed route bus service, or whether the requirements apply in connection with the provision of rail service by a public transportation system. Since the term "fixed route" is not defined in the Act, the bill itself does not provide specific guidance on this issue. The bill's legislative history, however, is quite clear. The Senate Report, at page 47, specifically defines the term "fixed route" to mean ". . . a bus system that operates on a continuing and regular basis on a fixed pattern and schedule."

Reading the language of the bill and its legislative history together, it is thus evident that the intent of the Senate-passed bill is to impose the paratransit requirements under section 203(c) only on those public transportation systems operating fixed route bus service. The requirements of the Senate-passed bill accordingly do not apply in connection with the provision by a public transportation system of rail service, whether commuter, light, or heavy rail.

A question also has been raised regarding which entity is responsible for providing the paratransit service, a transit authority or some other governmental unit. It is clear under the law that the public transportation system, if it operates a fixed route bus system, is responsible for ensuring that paratransit service is provided. In doing this, however, the public transportation system can take into account paratransit services made available by other entities and need not duplicate those services already being provided.

Mr. LUKEN. Not just subways, subways would be one in big cities, but in others there are light rail, and we are even developing light rail more in some areas.

Mr. SHANE. Yes. Usually, you have parallel systems in communities that have either subways or light rail systems. There is also a surface bus system as well. As to the extent they would enjoy the bus system, they would have fixed-route bus system within the meaning of the Senate report language, and therefore, you would have a paratransit facility available to the disabled community.

Mr. LUKEN. We could assume that, but maybe that wouldn't be a fair assumption to make.

Mr. SHANE. That is why I would like to go back.

Mr. LUKEN. Under the bill, does the obligation fall upon the local governmental unit or upon the system?

Mr. SHANE. Mr. Cline tells me it is the transit authority, that is the object of the legislation.

Mr. **Luken**. There could be some vagueness there? There are transit authorities and transit authorities. All shapes and sizes.

Mr. **Shane**. Well, my understanding is——

Mr. **Luken**. Put that discussion of that in your written submission.

Mr. **Shane**. Yes, sir.

Mr. **Luken**. While we are at definitions, what is a "vehicle" as used in this bill?

Mr. **Shane**. So glad you asked, Mr. Chairman. We think that the vehicle within the meaning of the act is a passenger vehicle, so that we don't think, for example, that for purposes of accessibility in the transportation provisions of the legislation, a locomotive would be a vehicle.

There is a locomotive issue; the locomotive, it seems to us, is a workplace issue, but for purposes of providing transportation, the purposes of the obligation to provide accessible transportation, we don't think the locomotive was meant to be included in the legislation.

Mr. **Luken**. I will settle for that.

Any further questions? Thank you very much. We will be interested in your further submission. We appreciate your willingness to testify and help us out in this matter.

Next, if nobody objects, we would like to give Mr. Graham Clayton an opportunity to testify—even though he was listed as the third panel. Those on the second panel will probably recognize it is a more orderly and better presentation to get Mr. Claytor and Amtrak's views on the record first. It would probably help the second panel to know what those are in advance of their testimony.

Mr. Claytor, it is always nice to see you.

STATEMENT OF W. GRAHAM CLAYTOR, JR., PRESIDENT, NATIONAL RAILROAD PASSENGER CORPORATION, ACCOMPANIED BY DAVID CAROL, GOVERNMENT OPERATIONS-PUBLIC AFFAIRS DEPARTMENT

Mr. **Claytor**. Thank you, Mr. Chairman.

Mr. **Luken**. We are pleased with the House approval of the Amtrak reauthorization bill.

Mr. **Claytor**. Yes, sir, it is always a pleasure to appear before this committee, Mr. Chairman. I have with me David Carol of our government operations-public affairs department, who is better acquainted with the details of this statute than I am.

Mr. **Luken**. That remains to be seen.

Mr. **Claytor**. Thank you.

Mr. Chairman, I would like to ask that my prepared statement be included in the record, and I will try to be as brief as I can and summarize the important points.

Quite apart from any statutory or regulatory requirements, Amtrak as a matter of policy, has been and is committed to avoiding discrimination against the handicapped to the maximum extent we can. We welcome handicapped and elderly passengers and make every reasonable effort not only to take care if them, but to make their trip as comfortable as possible.

We have special reduced fares for handicapped or disabled passengers. We have a 7-day-per-week special services bureau to help passengers who need help. Last year, some 120,000 disabled passengers used these services, and tens of thousands of others have traveled on Amtrak without assistance.

Mr. Chairman, practically all Amtrak trains now have equipment that meets the bill's accessibility requirements, including sleeping accommodations on all overnight trains. In other words, we already meet the requirement that all of our trains must have at least one handicapped-equipped car.

So, we are in pretty good shape with respect to compliance so far as equipment is concerned. Both the Senate and House bills, however, as has been pointed out already, contain the requirement that all new cars purchased must be handicapped-equipped.

Now, we have no problem with this with our superliners and sleeping cars since that is already our policy, anyway. But it is neither necessary nor feasible for this rule to be applied to all coaches, so long as there are handicapped-accessible coach accommodations on every train, a standard we will have meet and will continue to meet.

I want to make it very clear that the capital costs of building handicapped-accessible toilet and seating facilities into each low-level car, and that is single-level car, the kind we make in the East, is quite high. But that is not the big point.

The big point is that when we do that in a relatively small car that seats only 60 to 80 people anyway, we reduce the capacity of that car by a total of five seats. We have to point out we put in a special handicapped toilet and seating accommodation.

This reduces the revenue that we have to count on to meet our continuing objective of ever decreasing our need for subsidy and undermines the economics that justifies the cost purchase.

We feel that we can meet all requirements, over-meet all requirements if 20 percent of the new coaches that we purchase are handicapped-accessible. That actually is our current plan and policy subject to statutory requirement that this statute would have.

So, we have suggested an amendment which is attached to my prepared statement, attachment No. 1, that would allow us to purchase new coaches only that are—20 percent of which are handicapped-accessible. The other 80 percent are not. This will give—more than give us enough cars so that we can always meet the requirement of having one or more handicapped-accessible coaches on every train, a standard we already meet.

I think that is very important from the standpoint of Amtrak's financial future. We are committed to continuing to reduce the need for subsidy every year. This year, we are making about 72 percent of our total—covering about 72 percent of our total cost of our revenues. We hope to make 75 percent next year, and we have an objective that by the end of the century, we will make it 100 percent.

But we can only do that if we have capital funds that will enable us to increase our capacity and cut our expenses, as well as increase our revenues. This type of restriction would have a serious adverse effect on that. I think we ought to get rid of it. I think it is not necessary, and we can meet all the standards without it.

So, we ask that amendment. As Mr. Shane has pointed out, our principal problem is in the station area. We have about 500 stations scattered around the country, 499 I think is the exact figure today, and serve more communities than all the major airlines put together.

Most of these, of course, are not owned by Amtrak, but are owned by the fright railroads or by local communities. We have surveyed these and found that some 88 of the 499 stations used are now essentially in compliance with the bill. That leaves over 400 that will require modification or even total reconstruction.

Of course, these include all categories, fully staffed stations which are the largest stations, stations manned only by a caretaker, some of those with restrooms and some without restrooms, and about 117 totally unstaffed facilities that consist of shelters and platforms.

Now, there has been a discussion about what do you do about these very small, unmanned stations that probably have a handful of passengers using them every day? What would have to be done there in most cases, the platform is accessible, but you have to get the passenger from the platform into the car. These are low-level platforms and, of course, to take a wheelchair into the car, you have to lift it about four feet.

Now, we have manual wheelchair lifts that cost about $3,500 a piece that we are using, and under this bill, we would have to have those at every low-level station that we have. We would be prepared to do this if we get the necessary funding.

The problem of whether or not it really makes sense to have that kind of expense at an unmanned station with practically nothing but a platform is a serious question. One of the difficulties is you not only have to buy the lift, you have got to build housing to house the lift, because the lift has to stay there. It would have to be operated by the conductor from the train, who would get off and operate the lift for a handicapped passenger.

Then he would have to put it back in the little house that is built for it and locked up. That will cost some thousands of dollars on every one of these installations. I agree that there is a serious question in my mind whether a station that is as lightly used as that really should be required to have that kind of expense, but I leave that to the committee.

We think not. We think in truth and in fact, if it were our money that has to be spent on it, we would discontinue the service, we would discontinue the station, looking at all the various circumstances. But the chances are that rather than spend $5,000 to $10,000 on providing a lift there that may never be used, we would just discontinue the station, which we have the right to do in most cases.

Now, we have looked at the roughly 400 stations that are not in compliance, and we think it would cost today in current dollars about $34 million to make them, to meet the requirements of the statute.

It would be totally impossible for Amtrak to do this in the 3 years allowed by the House bill, but if provided with the required capital, we could on a year-to-year basis manage to do this and would provide full accessibility to all the stations in the 20 years provided in the Senate bill.

The problem is that if you extend this over that period of time, the $34 million figure starts to escalate. We figure on a 4-percent—assuming a 4-percent annual escalation, the total cost of this over the 20-year period would be about $52 million.

Now, we cannot possibly survive, and I don't think we will survive, unless we continue to reduce our need for subsidy. We can't possibly continue to do that unless we get capital funds for our own needs, expansion of equipment, repair and improvement of shops and the like, which we are getting this year for the first time in about 8 years in substantial amount.

We have go to have that. Now, we can't add to that, just take out of that, this $34 to $52 million for these stations. So, what we are asking is that this bill ought to include an authorization for $52 million available over the 20-year period as appropriated to give Amtrak separate appropriations to take care of these problems.

We could then each year—what we would propose to do would be to submit to the committees our request for operating funds, for Amtrak capital and for special capital to be used to improve our stations.

We would then use that money exclusively to improve the stations on a year-to-year basis. I think that would make sense. It would enable us to keep going. What I am afraid of is that President Reagan was unable to put us out of business after 5 years of trying, but if we started to have to take all this money out of our earnings and appropriations, we could get put out of business by this.

I don't want to take any chance on doing that. I think we are doing well. We have a great future. We have a plan to get self-sufficient in 10 years. But we have got to have Federal money to take care of these extra expenses on all these stations, which so many of you have pointed out, most of them are not owned by us.

Unless the community or a special appropriation is done, I don't think we will make it. Now, I have—there one other amendment that I have suggested that is a clarification. The statute doesn't make clear that Amtrak, which is a privately incorporated company with Federal assistance, is not treated in this statute as a public transportation system. It should be.

The Senate bill, the Senate report said that that was what was intended. But as the statute is drawn in both the House and the Senate, it refers only to State agencies and State operation companies. I ask that just to make this clear that Amtrak be included, the National Railroad Corporation be included with the list of State agencies and instrumentalities so there can't be any question that we come under the section that deals with public transportation and not private transportation.

I think that is—we have an amendment on that that is included here, too. So, I have proposed then three amendments. One is to permit us to acquire 20 percent of our coaches that are handicapped-equipped and 80 percent that are not. The second one is an appropriation—not an appropriation, an authorization, over the 20-year period of the estimated $52 million we would require to do the work on all these stations.

And third, a clarifying amendment that would make sure that Amtrak is included in the—as a public transportation agency for purposes of this act.

Now, there is one other thing that I want to mention. I want to emphasize the practical importance to Amtrak of continuing the regulation that exists under the Rehabilitation Act that requires individuals needing special transportation service to give Amtrak advance notice of this.

There has been some criticism of this, that this is discrimination of some sort against handicapped people. In a nationwide system that includes all kinds of manned and unmanned facilities, it is absolutely essential for us to get notice if someone wants special service that they are going to go.

We require that they notify us in advance and tell us what train they were on and what station they are going to get on, what station they are going to get off. Then we can take care of them. If that is not done, particularly when they are going to a small station that is unmanned or only partly manned, they won't get the service that they are entitled to.

I think this is a reasonable provision. It is in the regulation now, and nothing ought to be done to cancel that out. We think if we are going to really give the handicapped people the service that we want to give them, we need notice about this so as to make sure that they are taken care of.

Finally, Mr. Chairman, we urge the adoption of the Senate bill's provisions on drug and alcohol users. Amtrak has been a leader in the railroad industry in establishing employee assistance programs, and this option is always available to a drug or alcohol user at Amtrak.

Any limitation on our right to take action against drug or alcohol abuse by our employees with the EAP option always available to them, in my opinion, would be disastrous. For safety and other reasons, we try to have a workplace free of drug and alcohol abuse. The Senate bill takes care of this, and we accordingly urge its adoption in this area.

Mr. Chairman, I would be delighted to try to answer any questions.

[The prepared statement and attachments of Mr. Claytor follow:]

PREPARED STATEMENT OF W. GRAHAM CLAYTOR, JR., PRESIDENT AND CHAIRMAN OF THE BOARD, NATIONAL RAILROAD PASSENGER CORPORATION

My name is W. Graham Claytor, Jr. I am President and Chairman of the Board of the National Railroad Passenger Corporation [Amtrak]. I should note that I also serve as Vice Chairman of the Board of Directors of the National Rehabilitation Hospital in Washington, D.C. I am pleased to be here today to discuss the Americans With Disabilities Act [ADA] and to describe to the subcommittee the steps Amtrak has taken to improve access to intercity rail passenger service by individuals with disabilities. References in my testimony to the ADA refer to the proposal as recently passed by the Senate.

Amtrak applauds the effort to provide a comprehensive policy against discrimination on the basis of disability. As the nation's only intercity rail passenger carrier, we have strived to eliminate barriers to the use of our trains and stations by individuals with disabilities and I believe that we provide many disabled persons an increasingly important means of transportation. We provide special reduced fares for disabled passengers and operate a Special Services Bureau seven days a week that assists special needs passengers with ticketing and transportation. Indeed, more than 120,000 mobility-impaired and other disabled individuals sought the assistance of our Special Services Bureau last year and many tens of thousands of other disabled persons traveled on Amtrak unassisted. Our toll free reservation system can be accessed by the hearing-impaired through use of a Telecommunications Device for the Deaf, known as a TTD. In addition, Amtrak works each year with a number of organizations on large, special moves of disabled passengers.

Amtrak strongly believes that all persons seeking to travel by rail—including mobility impaired and other disabled individuals, as well as the elderly—should be accommodated and it is our intention, regardless of whether the ADA is enacted, to take the steps within our means to continue improving access to intercity rail passenger service. In this regard, I am pleased to state that practically all Amtrak trains presently meet the accessibility requirements of the ADA, and we offer accessible sleeping accommodations for disabled persons on all of our overnight trains. Amtrak's Viewliner prototype sleeper, our low-level car of the future, includes a handicapped-accessible bedroom with shower, as do all of our Superliner sleeping cars.

Accordingly, it already is our intention that all new sleeping cars to be purchased in the future, as well as new Superliner coaches, will be accessible to individuals with disabilities. However, I strongly believe that it is neither necessary nor feasible for all single-level coaches to be so equipped. In addition to the substantial capital cost of building accessible toilet and seating facilities into each of these relatively small, limited-capacity cars, the inclusion of these special facilities reduces the capacity of each coach by five seats, substantially reducing our revenues on trains that frequently are sold out or on which there is standing-room only. On a standard Metroliner train with five or six coaches, this can amount to a loss of some 30 premium revenue seats; some of our trains include as many as eight to ten coaches. The loss of this revenue undermines the economics of new cars and will result in an increase in our need for federal operating assistance at a time when our primary goal is to continue to reduce this federal subsidy. Amtrak accordingly requests that the ADA be amended to require that new coaches be made accessible only to the extent necessary to ensure that all trains have one or more readily accessible coaches, thereby meeting the standard set forth in the ADA. We are satisfied that requiring 20 percent of new coaches to be accessible to individuals with disabilities would more than meet this requirement. I accordingly have attached as Attachment 1 a proposed amendment to make this change.

It must be emphasized that Amtrak has been forced to spend much of the past decade simply fighting for corporate survival. I believe that we finally have turned the corner and that serious efforts to eliminate all federal support for Amtrak have ended, but this in turn is dependent on our ability to continue to cover more and more of our operating costs with our own revenue. In addition, severe budgetary cutbacks have left Amtrak a capital-starved corporation. Each year we are able to fund only a fraction of our most pressing capital needs, many of which are safety-related or must be undertaken simply to keep the trains operating. In fiscal year 1981, Amtrak was appropriated $221 million for capital projects. This shrunk to just $2 million in fiscal year 1986 and has been approximately $25 to $30 million since. Amtrak is suffering a serious equipment shortage that is forcing us to turn away millions of passengers each year. This in turn undermines our primary objective of reducing Amtrak's need for federal operating support. The cold reality of Amtrak's capital budget is that priority must be placed on projects that keep our operations safe and reliable. We simply have not had, nor do we presently have, the appropriated capital required to fund the costs of achieving full station accessibility throughout our national system.

Enactment of the ADA will impose significant capital costs on Amtrak, primarily to make the stations we use fully accessible. I support making these improvements, since they will enhance our service not only for individuals with disabilities, but for elderly and other mobility-impaired passenger as well. Nonetheless, Amtrak's ability to make steady progress toward the improvements required by the ADA will depend on the appropriation from year to year of sufficient capital for this specific purpose, over and above the capital required for our most critical safety and operating concerns, as well as on our ability to continue to increase our revenues. Amtrak cannot survive if capital needed for safe and reliable operations is diverted to station improvements required by the ADA.

Given these capital needs, Amtrak urges that compliance with the Act's intercity station accessibility requirements be made subject to the appropriation of funds specifically authorized for that purpose. In this way, Amtrak would submit a separate request in its yearly budget justification for the funds required for accessibility related projects during the next fiscal year. Funds then appropriated for those projects thus would not compete with Amtrak's capital budget. As discussed more fully later in this testimony, I have attached as Attachment 2 a proposal authorizing $52 million in federal support for Amtrak to be used over the next twenty years to fund modifications required to comply with the ADA.

I now would like to address three areas of the ADA which significantly impact Amtrak. The first more fully discusses the provision of the ADA requiring that all intercity stations be made completely accessible to individuals with disabilities. The second concerns the importance of advance notice to Amtrak by travelers requiring special services. The last relates to deficiencies in the House bill regarding the current use of drugs or alcohol by employees.

Amtrak is the nation's only intercity rail passenger service provider. We carry some 22 million passengers annually in 44 states. Although Amtrak serves 499 stations nationwide, it actually owns or partially owns only 81 of them. Local communities or third parties own a small number of the others, but the vast majority of the stations Amtrak serves are owned by the private freight railroads. Many of these stations are aging relics that are used for only one or two trains a day.

Most stations used by Amtrak presently are accessible from curbside to the platform. Thus, mobility-impaired passengers have access to and can board our trains at most locations. Many of our unmanned stations, which may only consist of a simple shelter, also are accessible. However, at those stations that include ticket counters, bathrooms and other comfort facilities, Amtrak has been able to fund complete accessibility only where the station has been newly constructed or where major renovations have been made. Over 400 stations will require at least some modification in order to comply with the ADA's requirement that all intercity rail passenger stations be fully accessible to and usable by individuals with disabilities. Some modifications will be relatively simple and inexpensive—lowering a ticket counter or making a toilet accessible; others will require complex and expensive design changes.

Under section 303(g)(3) of H.R. 2273, these modifications would have to be completed within three years of enactment, except for extraordinarily expensive structural changes, which must be completed within 20 years of enactment. The Senate changed this provision to require that all intercity rail passenger stations be made accessible as soon as practicable but at least within 20 years of enactment. Despite the significant number of stations which will require at least some modification to be fully accessible, Amtrak believes that it can meet a 20 year deadline, provided funds for the necessary modifications are made available. Amtrak could not possibly comply with the three-year time frame presently included in the House bill, and we urge the subcommittee to adopt the Senate's provision. In this regard, the Report on this bill should make clear that the time frame for station accessibility in the ADA overrides shorter time frames under the Rehabilitation Act and regulations thereunder.

In this regard, because Amtrak by law is not an agency, entity or instrumentality of the federal government, Amtrak urges that sections 301 and 302 of the House bill (sections 201 and 202 of the Senate-passed bill) be clarified to specifically include Amtrak as a public transportation system subject to the Act, along with departments, agencies, special purpose districts, and instrumentalities of a state or local Government. The Senate chose to clarify this issue in the Report accompanying S. 393 (at page 46). A statutory clarification is preferable, and I have attached as Attachment 2 an amendment making this change.

With respect to the cost of modifying the stations Amtrak uses in intercity rail passenger service, we estimate a total cost in current dollars of up to $34 million. This amount will escalate to $52 million in inflated dollars over a 20 year period (assuming a 4 percent rate of inflation) and Amtrak has included this amount in Attachment 3 as the amount to be authorized for this purpose. Our estimate is based on the modifications necessary to comply with the Uniform Federal Accessibility Standards [UFAS], and would provide access for mobility-impaired passengers from curbside to station to platform to train, as well as access to such comfort facilities as are available to any passenger within the station. Because of the excessive cost of installing high-level platforms, and because such platforms are incompatible with our Superliner equipment, our cost estimate includes the acquisition of additional mechanized or manually operated lifts at stations with low platforms rather than the installation of new platforms.

Assuming adequate funding, Amtrak stands ready and able to undertake the modifications necessary to comply with the ADA over the next twenty years. We have assigned a senior Amtrak management employee to oversee and coordinate compliance with existing law and with the ADA when enacted. We would anticipate modification of 20 to 30 stations each year for the next 20 years if Congress authorizes and appropriates specific funding for this purpose. In addition, Amtrak has started a new training program for all on-board service employees and operating crews on assisting customers with disabilities. The training program has been developed with assistance from many of the major disability organizations and will be fully implemented later this year.

Two points should be mentioned with regard to station accessibility. First, the House and Senate bills require that "key stations" used by "commuter rail, rapid rail or light rail" operators be made accessible within three years of enactment. Where Amtrak shares the use of such "key" stations with other operators, we believe that the cost of making the station accessible generally should be borne by the primary user of the station.

Second, Amtrak believes strongly that local and state governments should assist the federal government in the cost of station improvements. The ADA will require costly modifications at many Amtrak stations. At our Denver station, for example, the ramp leading to the platforms, while presently used by our disabled passengers, is too steep to technically comply with UFAS standards. Installation of an elevator to correct this deficiency will cost several hundred thousand dollars. Other stations requiring modifications serve as few as five passengers each day. In some cases, the cost of the modifications may even exceed the revenue generated by the station, in which case it may make economic sense simply to close the station. In any event, we believe that it may be appropriate to require local assistance in financing modifications required by the ADA.

Regulations promulgated by the Department of Transportation in 1979 under the Rehabilitation Act require individuals needing special transportation services to provide advance notice of 12 hours or more, and of at least 24 hours where the services of an attendant are required. As noted, Amtrak has a fully staffed Special Services Bureau, open seven days a week, 24 hours a day, to handle requests for special services by mobility-impaired, other disabled, and elderly passengers. At the present time, when not all Amtrak stations are fully accessible and many stations are unmanned, advance notice is essential to ensure that Amtrak can coordinate and provide the special services desired.

Concern was raised by some disability organizations in hearings before the Senate that the requirement for advance notice was discriminatory and denied persons with disabilities equal treatment. We take strong exception to this. In many, if not most cases, Amtrak can serve the special needs of its disabled and elder passengers only if it has advance notice of the services required by the passenger and the train on which the passenger intends to travel. Only in this way can we can ensure that wheelchairs, lifts or other services are properly manned at the right place at the right time. We strongly urge Congress to permit the retention of existing regulations requiring advance notice.

Amtrak is very concerned with provisions included in H.R. 2273 that could deem discriminatory the actions that an employer might take against an employee currently using drugs or alcohol. The bill passed by the Senate significantly altered this provision and we urge similar changes to the House bill.

Strenuous efforts are underway in the railroad industry to curb use of alcohol and drugs by employees. Most railroads, including Amtrak, prescreen job applicants for drug or alcohol use. Railroads also test employees for drug or alcohol use where there is cause to suspect current use, as well as for periodic and return-to-work physical examinations. In addition, the Department of Transportation has issued mandatory random drug-testing rules that go into effect in January 1990 and require the random testing for drug usage of certain employees involved in safety-sensitive jobs.

Currently, Amtrak and other employers generally are free to refuse employment to current users of drugs or alcohol abusers. In addition, Amtrak can take disciplinary action against an employee who use such substances in the work place, subject to the employee's right to voluntarily participate in Amtrak's Employee Assistance Program. However, the House bill provides that an employer cannot take action against current drug or alcohol use by a drug-abuser or alcoholic unless such use poses a direct threat to property or to the safety of others in the work place. Moreover, the House bill apparently would prohibit tests, such as preemployment drug and alcohol screening, that identify use of alcohol or drugs unless the test is substantially related to the ability of the individual to perform the essential functions of his or her job.

We strongly believe that current drug or alcohol abuse must be eliminated in the work place, even where such current use does not pose a specific threat to safety. It is Amtrak's position that current use of alcohol or drugs seriously undermines the ability of any individual to perform his or her job on the railroad, regardless of the individual's position.

The Senate bill addresses most of these concerns. It makes clear that preemployment screening is permissible provided all new employees are screened. In addition, the Senate bill states that an employer may prohibit the use of alcohol or "illegal" drugs at the work place. However, the term "illegal" drug fails to include the misuse of prescription and other drugs that can impact an employee's performance, and we strongly urge that the House make clear that an employer can prohibit the abuse of any such drugs.

The Senate-passed bill further specifies that an employer may require employees to conform their behavior to requirements established pursuant to the Drug-Free Workplace Act and may require transportation employees to meet requirements established by DOT. Amtrak strongly supports this change and urges the House to incorporate these changes made in the Senate-passed bill, together with a broader definition of drugs that can be prohibited at the work place.

Amtrak is proud of the services it has been able to provide to our disabled passengers and recognizes the importance of completing modifications to the stations we use to make them accessible to and usable by all travelers. With adequate designated capital resources and a reasonable time frame for compliance, we are ready and eager to take the steps needed to comply fully with the ADA, consistent with our overriding mandate to further reduce our need for federal support. Amtrak urges the House to incorporate the three specific recommendations we have proposed, as well as to include provisions incorporated in the Senate-passed bill extending the time frame for completing modifications to our stations and ensuring that the goals of the ADA do not undermine the equally important goal of protecting the public safety through an alcohol and drug-free work place.

ATTACHMENT 1

Section 303(b)[1] is amended by deleting the period at the end of the section and adding: ", except that in the case of new intercity rail passenger coaches acquired by the National Railroad Passenger Corporation, only 20 percent of said new coaches need be made readily accessible."

ATTACHMENT 2

A. Section 301 [2] is amended by deleting the period at the end of the section and inserting: ", or the National Railroad Passenger Corporation."

B. Section 302 [3] is amended by deleting the period at the end of the section and inserting: ", or the National Railroad Passenger Corporation."

ATTACHMENT 3

Section 601(b) of the Rail Passenger service Act (45 U.S.C. 601(b)) is amended by adding the following new paragraph (6): "(6) There are authorized to be appropriated to the Secretary for the benefit of the Corporation for costs incurred in complying with the Americans With Disabilities Act not to exceed $52 million."

Mr. **LUKEN**. Thank you, Mr. Claytor.

As usual, you have made your testimony very clear and, therefore, it is equally clear that it is not totally consistent with the Administration testimony which preceded yours. You are suggesting logically that if these obligations are placed upon Amtrak, that it can't be taken out of the relatively small amount of appropriations allocated for capital improvements, which you are finally getting, in order to advance the kind of service that Amtrak is providing and to improve that service.

The Administration rather clearly said that it would oppose such a suggestion. You heard that, did you not?

Mr. **CLAYTOR**. I think they didn't favor it. I don't think they violently oppose it, from what they said. I would hope after reconsideration, they would realize that imposing additional costs on us with respect to these low-level, low-capacity, low-level coaches, would not accomplish anything affirmative, and would just cost us and the Federal Government in the end money; and also make it harder for us to meet our objective, which is to get out of Federal subsidy altogether.

---

[1] Section 203(b) of the Senate-passed bill.

[2] Section 201 of the Senate-passed bill.

[3] Section 202 of the Senate-passed bill.

Mr. LUKEN. And to provide safety. You may have that impossible choice.

Mr. CLAYTOR. That is right.

Mr. LUKEN. The choice of providing safety or accessibility.

Mr. CLAYTOR. A significant point. The capital expenditures we just authorized, including some that we authorized at our board meeting yesterday, involve safety measures recommended by the National Transportation Safety Board. We are moving on that as far as we can get the money. But they take a lot of money.

We give them a very high priority. But again, we can't do it all with not enough money, unless we have a separate appropriation to take care of these stations. See, we are in good shape on everything except the stations, most of which we don't own.

We have taken a position which we are trying to follow up, uniformly, that Amtrak's job is to run safe, comfortable, convenient trains. When we get to the town that wants to be served by the train, the city has got to come up and put up the money for a station if they need a new station.

Most places, they do. When we start a few service along with a new line, we take the initial position that we will make stops only at cities that will provide 100 percent of the cost of building the new station.

In most cases, there is no station there at all. If not, we will run on through if there is no station. We have to do that, I think, if we are going to continue to move ahead financially, as I am determined to do.

This is just another, another expense in connection with stations. We don't want to spend money on stations for any purpose, and if you have to spend money on stations to meet this statute, that has got to come outside of the Amtrak budget.

Otherwise, we are going to be in real trouble.

Mr. LUKEN. You are urging that the requirement of accessibility on the standard train or standard car, be limited to a certain percentage of those cars so that you can provide one per train, is that right?

Mr. CLAYTOR. At least one per train, and this is only with respect to coaches. All of our sleeping cars are going to have handicapped capability. All of our superliner cars, which are these very much larger doubledecker cars that we run in the West, have a far bigger capacity in each car, and it is both less, less—it does less to cut down our capacity, and costs less to put handicapped accessibility in the downstairs of those cars.

When you get to the kind of cars that we have to use here in the East, the low-level coach, it is a substantial diminution of the coach's earning capacity to take out five seats out of every car and put in this facility. We can do this with 20 percent of the new cars we buy and that will give us plenty of handicapped-accessible coaches, to put one on every train and—Metroliners are only five or six cars long.

On longer trains, we could put as many as two or sometimes three. But with this 20 percent, it would give us all the handicapped-accessible coaches that we need to provide the needs of the handicapped. That is what we are asking.

Mr. LUKEN. Well, in order to provide you with that flexibility an amendment would be necessary to the Senate bill, is that right?

Mr. CLAYTOR. Yes.

Mr. LUKEN. Have you given us such an amendment?

Mr. CLAYTOR. Yes, sir. Our suggestions are attached to the back of my prepared statement.

Mr. LUKEN. I just wanted to make sure that that was the case.

Mr. CLAYTOR. Yes, sir.

Mr. LUKEN. Well, I think you have covered the essential parts, and my time has expired. The gentleman from Kansas is recognized.

Mr. WHITTAKER. You suggest on page 7 that it be clarified to include Amtrak explicitly, since it is not covered by current language of the House bill, section 202(a), or the Senate bill, section 302(a). This raises a related inquiry: is Amtrak exempt from the employment discrimination requirements of ADA?

Because it is a "corporation wholly owned by the United States"?

Mr. CLAYTOR. No, no. Let me ask Mr. Carol to respond.

Mr. CAROL. Sir, as I understand it, we would be covered under the employment sections, and we intend to be covered under title VII for all the other type of discriminations as well.

Mr. WHITTAKER. Thank you, Mr. Chairman.

Mr. LUKEN. The gentleman from North Carolina.

Mr. MCMILLAN. Thank you, Mr. Chairman.

Thank you for testifying, Mr. Claytor. With respect to this requirement on new equipment, and you suggested 20-percent requirement, what are the arguments against your approach?

Mr. CLAYTOR. I think only that they would just like to have every car fixed. It would be very nice to have every car fixed, and if you were going to get on a train, you don't have to get on a particular car, you can get on any car.

But it seems to me that this means that in most cases, a very large proportion, and that is true today in fact, already, a large proportion of these special facilities would not be used by any handicapped people, and you would be cutting out five revenue seats out of 60 to 80 seats on the car.

That is a significant percentage of loss of revenues. These are high revenue seats on things like our Metroliner. As long as we can be sure to take care of the handicapped people who want to go, it seems to me that this is reasonable. The statute already requires only that a handicapped car be on the train.

If there is a very long train, we normally would try to have more than one. But that, we are able to do that. Twenty percent, one out of every five cars bought would clearly maintain our stock of handicapped-equipped cars quite adequately.

Mr. MCMILLAN. To me, I think your argument is persuasive. The important thing is that there are enough handicapped-accessible seats on each train to meet the demand.

Mr. CLAYTOR. That is right. This would enable us, clearly, to do that.

Mr. McMillan. Now, if we basically solve this problem through station modification, you see equipment is essentially—you are in good shape, I think is the way you put it, with respect to equipment.

Mr. Claytor. Yes, sir.

Mr. McMillan. With the exception of the 100 percent requirement on future purchases of coaches.

Mr. Claytor. That is on new cars. We hope, we have just gotten enough capital money or are about to get enough to make a substantial purchase of new cars. And to have to put a handicapped seat in every one of the coaches that we buy, we will put it in all the other cars anyway for our own convenience.

It is convenient and not as expensive. But to put them in the small coaches is just an unnecessary expense and an unnecessary loss of revenue.

Mr. McMillan. Could you give us an estimate of incremental capital costs of doing that and the annual loss of the revenue——

Mr. Claytor. Oh, yes. We can estimate—I will give you the clearest-cut case, would be to give you the loss of revenue right here in the Northeast Corridor, because many of these cars——

Mr. McMillan. Or do it by car.

Mr. Claytor. We will do so, and give the cost of the installation. Yes.

Mr. McMillan. Now, if you got the 20 percent that you are seeking, that doesn't present any real operating problem in major locations in terms of the placement of the car on the train and its accessibility to the point at which it stops, at a given station?

Mr. Claytor. No, sir; no, sir.

Mr. McMillan. Because, well, in major traffic centers, the objective would be to have the station platform at the floor car level?

Mr. Claytor. That can only be done in really major stations. It is an extraordinarily expensive thing to do in the country, and we have other problems. Take Chicago. The main terminal in Chicago covering Union Station, that station served both Superliner cars, the doubledecker cars that run in the West, and the low-level cars that run in the East.

A high platform cannot be used by a Superliner car. It is inconsistent. The Superliner car has to have a low platform so that you can't put high platforms anywhere. Anywhere where you have a Superliner train, you have to have a low platform or it can't get into the station.

So, actually, the low platforms will continue to be the usual situation in all except major eastern terminals that do not use the high-level cars.

Mr. McMillan. You mentioned the manual lift——

Mr. Claytor. Yes, it is a lift.

Mr. McMillan. Which you attributed a $3,500 cost to the lift itself and probably an additional cost possibly of equal amount. I have no idea, to house it.

Mr. Claytor. Probably at least an equal amount. The housing would be required, of course, only in the small place that doesn't have a proper station building or baggage room. We normally keep the lifts in our other stations in the baggage room.

Mr. **McMillan**. Is it not feasible to maybe build just a permanent ramp?

Mr. **Claytor**. No, that would not be feasible, for lots of reasons. The ramp would interfere with clearances of freight trains going by, for one thing, the railroad would not permit. We actually explored that in one case and found that the railroad found it would be inconsistent.

Mr. **McMillan**. Even though a raised platform wouldn't.

Mr. **Claytor**. Yes, the raised platform would. They are not, therefore, not used anywhere where freight trains are. The only place we have a raised platform is in Washington, Union Station. Penn Station in Philadelphia, that sort of thing. You, as a matter of fact—New Carrollton station outside of Wasnington has a high platform and one side of that station, freight trains, Conrail freight trains have to go buy. We had to put in a special track that moved the freight train through a switch a little bit out from the platform and then back when it goes past the station.

We could do that at that one place because it is a very important place. But it is not the kind of thing one can do generally around the country. It is extraordinarily expensive. So that is the only way a high platform is inconsistent with freight train operations on the same track—as is any kind of ramp.

Mr. **McMillan**. Is it not feasible to provide a lift on the car itself to meet the requirements?

Mr. **Claytor**. That is—we have attempted to study that. No one has ever come up with anything that one could do that wouldn't be so expensive as to be almost beyond possibility. I very much oppose trying to get a mechanical thing like that, which will be used occasionally once in a blue moon and will almost always not work when you need it, because it is not used most of the time.

I think it is not feasible mechanically, anyway.

Mr. **McMillan**. One final question. With respect to notification, don't you require a notification anyway for any passenger in certain stops?

Mr. **Claytor**. No, no. This is advance notification, 12 or more hours in advance, so we can send messages down the line to make certain to have a lift ready or to have an operator ready, to have a red cap with a wheelchair and that sort of thing.

Mr. **McMillan**. But if I am not disabled and show up at that same stop, do I have to give you notification that I am boarding the train?

Mr. **Claytor**. Only if it is a flag stop. If it is a regular stop, you don't. We have relatively few flag stops. As a matter of fact, a flag stop, you can flag the train yourself. The railroads have always done that. The passenger can wave the train down. The engineer is instructed to look out if there is anyone on the platform who wants to get on, he stops the train.

So, no notification is required for that sort of thing. You tell the conductor if you want to get off at a flag stop, but you don't have to tell a conductor when you want to get on a train.

Mr. **McMillan**. Thank you very much. I yield back.

Mr. **Luken**. Thank you very much, Mr. Claytor. It has been very helpful.

Mr. CLAYTOR. Thank you, sir. It is always a pleasure. We will be glad to submit the information requested. If there are any other questions, we would be glad to submit them in writing.

Mr. LUKEN. We will do that.

Mr. LUKEN. Next we will have the panel listed as the second panel: Mr. Lawrence Roffe; Phil Calkins; Tim Cook; James Raggio; and Dennis Cannon.

Mr. Lawrence Roffe, executive director of the Access Board, for short.

STATEMENTS OF LAWRENCE ROFFE, EXECUTIVE DIRECTOR, ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD, ACCOMPANIED BY DENNIS CANNON, ACCESSIBILITIES SPECIALIST; PHILIP CALKINS, PRESIDENT'S COMMITTEE ON EMPLOYMENT OF PEOPLE WITH DISABILITIES; AND TIM COOK, EXECUTIVE DIRECTOR, NATIONAL DISABILITY ACTION CENTER

Mr. ROFFE. Thank you, Mr. Chairman. I am pleased to be here today on behalf of the Architectural Compliance Board. With me is our general counsel, to my right, Jim Raggio; and to my left, Dennis Cannon, our accessible transportation specialist.

Mr. LUKEN. We have your testimony in writing, which will be received without objection. You may proceed in any way you think may be helpful.

Mr. ROFFE. Thank you.

The Architectural Compliance Board—we like to be called the Access Board—was established by Congress 16 years ago to ensure that buildings which are designed, constructed, altered or leased with Federal funds are readily accessible to and usable by people with disabilities.

The Access Board has been responsible for developing and refining through active research programs, the minimum guidelines and requirements for accessible design. These guidelines represent the state of the art in creating an environment usable by all people and serve as the model for the Uniform Federal Accessibility Standards [UFAS].

Those standards are used to implement the Architectural Barriers Act of 1968 and section 504 of the Rehabilitation Act of 1973. They are followed by post offices, government buildings, and federally financed housing and transit facilities across the country.

The Access Board has studied the many and various architectural, transportation, communication and attitudinal barriers which limit the full participation of disabled citizens in our society, and has published a series of technical papers and staff reports on eliminating these barriers.

For example, lifts and wheelchair securement provides guidance on providing access to buses and paratransit vehicles. Aircraft stowage procedures and battery powered wheelchairs explains how to stow power wheelchairs on aircraft in accord with hazardous materials regulations.

Transit facility design for persons with visual impairments gives guidance to transit facility designers and operators on making transit systems usable by persons with visual impairments.

Through these and other activities, the Access Board has become a national resource and center of expertise on accessibility for persons with disabilities.

The Access Board, along with the President and the rest of the Administration, wholeheartedly support the broad goals of the Americans With Disabilities Act. This legislation would extend basic civil rights guarantees to over 36 million Americans With Disabilities and eliminate discriminatory barriers in public accommodations, places of employment, public transportation, and in communications. The legislation would significantly promote independence, freedom of choice, and productive involvement in the social and economic mainstream for our Nation's disabled citizens.

Through conducting public forums around the country and sponsoring research projects and studies, the Access Board has gathered extensive experience and information about the extent and effects of discriminatory barriers experienced by persons with disabilities in public accommodations and public transportation.

The Access Board has carefully analyzed the provisions of the Americans With Disabilities Act and believes that the act's provisions provide a comprehensive and cost-effective solution to removing these barriers.

In the area of public transportation, the Americans With Disabilities Act would require that all new buses, rail vehicles, and other fixed-route vehicles which are purchased 30 days after the enactment of the act be readily accessible to and usable by individuals with disabilities, including those who use wheelchairs.

In the case of the rail systems, within 5 years, at least one car per train would be required to be accessible to individuals with disabilities, including those who use wheelchairs. Stations on intercity rail systems, including Amtrak, would have to be made accessible within 20 years.

Key stations on commuter rail systems would have to be made accessible within three years, with the Secretary of Transportation being authorized to extend the period up to 20 years for extraordinarily expensive structural changes.

In addition, the Americans With Disabilities Act would require providers of fixed-route bus service to ensure the provision of paratransit service to individuals who could not use the fixed-route buses. The Senate Committee on Labor and Human Resources' report on S. 933 makes it clear that the operator of such bus service need not necessarily provide the paratransit service directly, but is responsible for ensuring that existing services or paratransit provided by other entities are coordinated with the service provided by the operator, especially to ensure that both fixed-route and paratransit systems provide feeder-distributor service to commuter and intercity rail.

It is our understanding that the requirement to provide comparable paratransit to those who cannot use fixed-route bus service was never intended to require providers of commuter of intercity rail service to operate paratransit.

The Access Board would be required to supplement its minimum guidelines and requirements for accessible design to include accessibility standards for transit vehicles and stations, as well as public accommodations.

In particular, the supplemental minimum guidelines would define the accessibility requirements for various types of rail vehicles and station configurations. It is our understanding that Amtrak has already met the requirement to have one accessible car per train, and the accessibility provided by those cars is generally adequate.

The California Department of Transportation [CALTRANS], has also sponsored a study on providing access to some types of commuter rail cars which may be useful in developing minimum guidelines. Also, in cooperation with CALTRANS, Amtrak is currently using an inexpensive, mechanically simple and reliable, hand-operated lift in California which may solve the access problems for many intercity and commuter rail stations.

The Access Board is in regular contact with CALTRANS and other agencies involved in such studies and believes the diversity of information will make compliance with the act for commuter and intercity rail relatively simple.

The act provides that regulations issued by the Department of Transportation and Attorney General under the act would have to be consistent with these standards. The Department of Transportation and the Department of Justice are members of the Access Board and have enjoyed good working relationships with the other Federal agency and public citizen members of the board.

We look forward to continuing this close relationship in the days and months after the Americans With Disabilities Act is enacted in developing accessibility guidelines and standards for public transportation and public accommodations.

As you are aware, the public transit industry has expressed some technical and financial concerns about the act's provisions. To accommodate those concerns, some amendments have been incorporated into the Senate-passed version of the act. We would especially recommend to you the technical assistance provision that was put in the act.

The provision would require the Attorney General, in consultation with the Access Board and certain other Federal agencies, to develop a plan to assist entities covered by the act to understand their responsibilities under the act, and to provide information and technical assistance on cost-effective means for achieving compliance with the act.

The Access Board currently has an extensive technical assistance program and believes that a strengthened technical assistance program is important to help public agencies and private businesses to fully understand the responsibilities under the act and achieve compliance.

The Access Board and other agencies have developed long and varied experience in cost-effective approaches for applying the principles of "readily accessible," "readily achievable," and "reasonable accommodation" which are embodied in the act.

By making this expertise available to all who must comply with the act, we can hasten implementation; prevent unnecessary litigation; and most importantly, avoid unnecessary costs to those entities covered by the act. We strongly urge this committee and the House to include a technical assistance provision in the act.

The Access Board looks forward to working with Congress, the Administration, and other Federal agencies in crafting and implementing a workable law that will ensure the full protection and guarantees of civil rights and an accessible environment for Americans With Disabilities.

We would be happy to answer any questions you have, Mr. Chairman.

Mr. LUKEN. Thank you very much, Mr. Roffe.

Next Mr. Phil Calkins, President's Committee on Employment of People with Disabilities.

Mr. Calkins.

STATEMENT OF PHILIP CALKINS

Mr. CALKINS. Thank you, Mr. Chairman. I am Philip Calkins. I am director of public affairs for the Employment of People with Disabilities. I am also a wheelchair user and a consumer and avid supporter of public transportation, including Amtrak. I thank you for this opportunity so share my experience with and thoughts about accessible public transportation with you.

Mr. LUKEN. Without objection, your written testimony will be received. You may proceed in any way you think will be helpful.

Mr. CALKINS. Thank you.

I believe that a good public transportation system is absolutely essential for the good of our society, and that inadequate public transportation systems will cause increasing problems for all of us in the coming years. I also prefer to use public transportation rather than drive to work. Fortunately, I work in Washington, DC, which has a very good and very accessible metro rail system, which I use to get to and from work every day.

Last year, I bought a house in Vienna, VA. An essential element in my decision to buy that particular house was that it is close enough to the Vienna Metro station so that I can take the train to my office at 20th and L Streets in the District of Columbia. I know three other people personally who use wheelchairs, commute from Vienna to downtown Washington, and made the choice of where to live on the basis of access to Metro. If I know three, there must be many more—just in Vienna.

I adhere that if I had known last year that I was going to be testifying today in this committee, I would have both a house in Maryland on the Amtrak line for the same reasons so that I would have been able to talk about a house that was under the jurisdiction of your committee.

I am absolutely sure that the same thing is true of the Amtrak commuter line in Maryland as the example I am giving for Vienna, VA. I also use Metro on a regular basis to do my job. I am expected to attend meetings on Capitol Hill and elsewhere in Washington on a regular basis. If it weren't for the accessible Metro system, I would have to take taxis to all of those meetings, at considerable additional expense to taxpayers. If I were an electric wheelchair user and consequently could not use regular taxis, I could not do my job without the Metro system.

You may ask, "What about paratransit? Couldn't someone who uses an electric wheelchair use paratransit to go from his or her office to meetings around the city?" The answer is no. Paratransit systems, because of their advance notice requirements, do not permit that flexibility.

Dennis Cannon, who works for the ATBCB and is here today, could not do his job efficiently without the accessible Metro system. Evan Kemp, also a user of an electric wheelchair, is soon to become chairman of the EEOC, depends on the Metro system for efficient transportation within the city.

If I may add a comment in relation to advance notice on Amtrak. Dennis, Evan Kemp, and I all use Amtrak from here to New York in work-related travel. My boss, Jay Rockman, is sitting right over there. He gets requests for people that can go to New York to make speeches, to go to meetings, and so forth all of the time.

Suppose for a minute he gets a request this afternoon for someone to be in a meeting in New York either this evening or tomorrow, which is not at all inconceivable, and he decides that I am the person who should go to that meeting.

Fortunately for me, Jay is a good guy and I don't think I would lose my job if I couldn't get on the Amtrak and go to New York. But it certainly would impair my usefulness to the President's Committee if Jay could not make the decision to send me to that meeting, which would of course require me to hustle down to Union Station, get on the train and go to the meeting.

If an advanced notice requirement of 12 hours is required, he can't do that. I, in my personal use of Amtrak, which includes three different routes, have never found that an advance notice requirement did anything. Sometimes I have told them in advance. Sometimes I have not told them. I have always gotten on the train.

What do these examples say about us as wheelchair users? I think that they demonstrate that we are just like everybody else. We have the same transportation needs, and make the same transportation choices, when they are available to us. I chose to live in Vienna because I can use the Metro to get to work from there.

Now, I wish I lived in Maryland, so I could use the Amtrak. Other people, disabled and able-bodied, make exactly the same choice. When a new metro line or a new computer line goes in, people move to that area so they can use it.

Some members of this committee may have been told that those of us who are mobility-impaired are less likely than are other people to use the Metro system or commuter rail system because we can't get to the stations. I doubt that anyone can prove that contention, because it is a difficult thing to study, and to the best of my knowledge, never has been studied in any reasonable way.

In any case, my personal experience indicates otherwise. Every morning when I go through the Metro parking lot at Vienna, all of the handicapped spaces are occupied by cars with the appropriate plates indicating that the drives are disabled. Other wheelchair commuters wheel to the station, as I do, or arrive by bus.

We're just like everybody else. If we want to use the accessible metro, we will figure out a way to do it. And, yes, we get wet when it rains, just like everybody else. That is appropriate. Metro is not obliged to treat us better than other passengers. We don't expect it. I personally don't want it. I just want equal access and equal treatment.

Mr. Chairman, I have been attending as many hearings on the ADA as possible, and I have participated in scores of meetings on this bill over the last several months. One thing that concerns me about the discussions that I have heard is that there has been considerable emphasis on the specific costs to specific providers of services and very little discussion of the potential long-range cost savings to the taxpayers of this country.

I realize that one reason for this disparity of emphasis is that it is much easier to obtain current cost data about equipment, for example, than it is to project potential cost savings on the basis of the anticipated employment of many of the 8 million Americans With Disabilities who are currently unemployed but who want to work. We at the President's Committee have found that, second only to attitudinal barriers, lack of access to public transportation is the greatest impediment to employment of Americans With Disabilities.

I hope that our concentration on the trees will not prevent us from seeing the forest. Last week, my chairman, Justin Dart, testified before another committee that his congressional task force estimates that the unnecessary unemployment of those 8 million people with disabilities costs our society more than 246 billion dollars annually.

Chairman Dart added that President Bush has used the figure of 300 billion annually. Those are very large figures, Mr. Chairman—perhaps so large that we have difficulty comparing them with the much smaller figures that we discuss when we talk about the cost of making a train or a bus accessible.

I understand that a particular concern of this committee is the cost of funding accessibility for Amtrak. I am not an expert on Amtrak, but I do find this concern a little bit confusing. My confusion has been somewhat lessened by the earlier testimony here today which confirms what we had understood to be the case, that Amtrak is already obliged to make its system accessible under section 504 of the Rehabilitation Act.

I think I will leave it up to the lawyers to determine what effect the passage of ADA in its current form might have on the obligation under section 504, but it seems clear to me that an obligation exists even without ADA.

Finally, even though I know that a discussion of costs is inevitable, I would hope that members of this committee will keep in mind that the Americans With Disabilities Act is intended as a civil rights statute. As my chairman, Justin Dart, said last week: "Is equality affordable in America? Not since the abolition of slavery has equality been negotiable for money in this country."

Thank you.

Mr. Luken. Mr. Tim Cook.

Your organization is called the National Disability Action Center.

STATEMENT OF TIM COOK

Mr. Cook. Thank you, Mr. Chairman.

Mr. Luken. Perhaps you will start out by telling us what that entity is.

Mr. Cook. It is an advocacy organization which is in existence to defend the rights of people with disabilities to be integrated and to be free from discrimination in all aspects of society.

Mr. LUKEN. Are you totally independent or affiliated with any other——

Mr. COOK. No, we are independent, Mr. Chairman.

It is a special pleasure as an advocate for people with disabilities to appear here this morning with these distinguished members of the administration. Too often over the past several years we have gone on opposite ends of a courtroom battle or an administrative battle trying to obtain access.

That is changing, and we can see that that is changing, and we are very happy to appear before this committee, along with the administration to urge that the Senate version of the Americans With Disabilities Act be also adopted by the House of Representatives.

As the director of the National Disability Action Center, I have seen firsthand the fundamental importance to people with disabilities of accessible transportation, and part of it is the result of something this Congress did in 1975, 14 years ago, in enacting the education of the Handicap Act.

As a result of that piece of legislation, we now have adults with severe disabilities who have been educated and trained, and they want jobs, they want to be able to use recreational facilities. They want to be able to receive educational programs, but they cannot do it without the ability to get there.

It is a civil rights issue for us as much as it was for those brave people in Montgomery, AL, in the 1950's who boycotted the bus system because they were segregated from that system. But we have today transit systems who are still arguing that they want to be excluded from the provisions of the Americans With Disabilities Act, and the issue I urge upon you this morning is that that is not the debate anymore.

That is not the question. The only question at this point is not whether transportation systems and all aspects of those systems should be covered, it is how they should be covered. The transit systems are continuing still to ask that they be excluded from the Americans With Disabilities Act and that for that reason the people with disabilities may continue to be excluded from those transportation systems.

The whole thrust of much of the testimony you are going to be hearing later on this morning is that cost must come first, but the whole point of the Americans With Disabilities Act is that providing access to people with disabilities is no longer to be considered an extra, a luxury item, something that may in the transit system's discretion be provided.

The whole thrust of this act is access to people with disabilities, about an essential part of the provision of transportation systems. Now, there are a number of features of the Americans With Disabilities Act that actually makes it less costly and to the disability community constitute a severe compromise.

For one thing it doesn't require the retrofitting of most of the vehicles used by this transit systems. It only requires the retrofitting of at most one vehicle per train, and that is a compromise. The rest of the cars, for as long as they are used by the transit system can remain inaccessible. Only new vehicles must be accessible. Moreover, transit systems are given an enormous length of time to comply with the statute for the structural changes, an additional 20 years.

People with disabilities have waited a very, very long time to obtain access. Under this act we will still have to wait until the year 2009 before we can fully use accessible train systems where structural changes are required, 2009. The transit systems are coming back and saying that is not even enough for them.

They want the ability to exclude us from those systems even past the year 2009. They want to be able to exclude us forever, and that is unacceptable to the disability community. It is also important to acknowledge that the costs of this bill are diminished by the fact that many new transit systems are currently being proposed and considered, and these new systems are already being built to full accessibility standards as required by other statutes such as the Architectural Barriers Act and section 504 and even State and local building codes.

These are not any additional costs attributable to the Americans With Disabilities Act. Similarly, in terms of alterations of facilities, when a transit system that receives Federal assistance alters their stations, they are already required by separate legislation to make these alterations accessible. There is no additional cost attributable to the ADA there, either.

It is also important to realize that many systems are already in 100 percent full compliance with all the requirements of the ADA. Just let me list a few: the Miami Tri Rail System, the Bay Area Rapid Transit System in northern California. The Washington, DC metro rail, of course, is fully accessible, the Atlanta, GA Subway and Elevated System, Baltimore Metro, the Sacramento, San Diego and San Jose, CA.

Light rail systems all are accessible, as are the Jacksonville, FL; Detroit, MI; Las Vegas, NE People Movers. The Buffalo, Portland, OR and Fort Worth systems are also 100 percent accessible already so there will be no additional costs there under the statute. It is also an important thing to realize that under the Urban Mass Transit Act of 1970, and this has long been the case, 80 percent of the costs of capital expenditures are already covered by the Federal Government, and 50 percent of the operating costs, such as maintenance are already covered by the Federal Government.

So you have an enormous influx of Federal financial assistance here already to assist transit systems in making the changes that are going to be required by the statute. I think it is also reasonable to assume that the millions of people with disabilities who are currently excluded from transit systems will begin using these systems, and this has been the case in study after study, that once you make the system accessible you have an enormous influx of people with disabilities into the system.

These are fair paying customers. It also makes the systems more usable for other people besides people with disabilities. It makes it easier for parents with small children to somewhere an accessible vehicle. It is easier for women here pregnant. It is easier for our elders in society to board an accessible vehicle.

It is easier for someone carrying packages, even, so it is an overall improvement to the system to render that system accessible that will have enormous benefits, not just for people with disabilities. Finally, I wanted to briefly address Mr. Callahan's question on charter services, and I am happy to inform him and the committee that there is already a provision which permits flexibility in the way charter bus systems comply with the ADA.

I believe it is section 304(b)(3) of the Senate-passed version which your talking about demand responsive systems, such as charter bus systems, they do not have to make every bus in their fleet accessible.

It is not an exclusion. They still have to comply with the act, but the act says that if you look at their system in its entirety, as long as they have sufficient vehicles to ensure the service to people with disabilities, they do not have to make their entire fleet accessible, that they can make 5 out of their 20 buses, as Mr. Callahan suggested, accessible, and that meets the demand, and that is sufficient.

In fact, they may have to purchase no accessible buses whatsoever if they have the ability, for instance, to rent an accessible bus when the demand is called for by people with disabilities. I would like to briefly address some of the points that are going to be made on the next panel, specifically two points by the representative from Southern Pennsylvania Transit Assistant Program in Philadelphia.

They have requested a complete exclusion for streetcars, which are often called light rail systems under the statute. There are various means by which light rail systems can be rendered accessible. There is enormous flexibility over all in this act in the ways that vehicles can be made accessible.

For instance, on the streetcars parallel lifts are being developed which will render those streetcars accessible. You can also construct islands in the highways to make it easy for people with disabilities to board and unboard streetcars. It may not even be necessary to make every single station stops accessible.

You could make the key station stops along the streetcar lines accessible without necessarily making 100 percent of the stops along those ways accessible. So because of this enormous flexibility under the act, we believe it is very important that this committee reject the suggestion that light rail systems be excluded from the act.

The same principle generally that applies to Amtrak and the computer rail system applies here, and that is the ADA does not dictate one single method for making systems accessible. It is left to the option of the local transit system to figure out how to do it, as long as they do do it, and these systems, these light rail systems are as critical to people with disabilities as they are to other people.

In many areas of Philadelphia, for instance, the light rail system is the only way for people to get into center city from the outlying suburbs. Ms. Lavoritano also requests that they not be required to provide mobility training because they say they don't have the capability to do that.

It is interesting that many, many transit systems in this country do provide mobility training to people with disabilities. There is an enormous impact. If I may give an example from the head of the Johnstown, PA Transit System, one of Ms. Lavoritano's colleagues, testified when Johnstown first started making their buses accessible they provided approximately 200 rides a month.

Once they initiated a program of mobility training there to train people with disabilities how to use the accessible buses and, let's face it, many people who aren't disabled are afraid to use public transit, so it is especially important that that sort of training be provided to people with disabilities.

As a result, in Johnstown of providing mobility training, they now serve 36,000 disabled people a month on their bus systems. In terms of Amtrak, I would like to make one critical point here which has been alluded to, and that is that when regulations were issued by the Department of Transportation ten yeas ago in 1979, those regulations required Amtrak to make all of its stations accessible within 10 years.

Here we are in 1989, and under those regulations they are already required to be where the ADA will require them to be 20 years from now. If I would have been Mr. Claytor I would have come to this committee and urged this committee to pass this act as soon as possible. What this act really does is give Amtrak a 20-year reprieve from the requirements of the current Department of Transportation regulation, and those regulations appear at volume 49 of the Code of Federal Regulations, part 27, subpart D, and so this act really does Amtrak a major favor by extending by 20 years the time by which it must comply with the accessibility requirements of section 504.

But what are the costs, Mr. Chairman, of not providing access?

Mr. LUKEN. I wonder if we could move along.

Mr. COOK. Yes, sir. I wanted to just very briefly outline the costs of not providing access, and I would like to briefly allude to some testimony provided by——

Mr. LUKEN. Well, I think your time has expired. We are going to have some discussion. I believe you are going into a subject that has been covered.

Mr. COOK. Thank you, Mr. Chairman.

Mr. LUKEN. We can all agree fervently on the objectives, but your testimony, Mr. Calkins, Mr. Cook, Mr. Roffe, in your testimony you seem to be lecturing us that we are talking about money and we shouldn't be talking about money. Well, let's look at this now. Does accessibility cost money, Mr. Calkins?

Mr. CALKINS. I think this is something I am really an avid believer in. I honestly believe that in a not too distant future, maybe within the decade, we will see that the Americans With Disabilities Act will pay for itself.

Mr. LUKEN. But could we talk about it in my terms. Then we will allow time to talk about it in your terms. Does it cost money or doesn't it?

Mr. CALKINS. It certainly does cost money.

Mr. LUKEN. There is no legislative ledger domain that is going to provide that money. We can't just pass a law or wave a wand to provide that money, right?

Mr. **Calkins**. The money to pay for in this case you are talking about Amtrak?

Mr. **Luken**. Amtrak, buses.

Mr. **Calkins**. Bus.

Mr. **Luken**. Any of them, right?

Mr. **Calkins**. That's right.

Mr. **Luken**. Our transportation system in this country is sustained largely by or significantly by public subsidies.

Mr. **Calkins**. Absolutely.

Mr. **Luken**. That's us.

Mr. **Calkins**. That's us. That's you.

Mr. **Luken**. And you are lecturing us for talking about money. Especially when we say we would want to provide that money. But the administration says it will veto that money when we provide it, and yet you lecture us. You don't mind if I become a little impatient.

Mr. **Calkins**. Oh, not at all.

Mr. **Luken**. And you don't help us to get the administration to provide the money. Now, if we didn't provide the money, there wouldn't be any Amtrak. Would that inconvenience or provide any hardships for the disabled?

Mr. **Calkins**. It would for me, yes.

Mr. **Luken**. What are you doing about Mr. Bush, who wants to abolish it?

Mr. **Calkins**. Well, unfortunately I am not at a level within the Federal Government that I am doing anything with exalted people at that level.

Mr. **Luken**. Well, we didn't support you.

Mr. **Calkins**. No.

Mr. **Luken**. So what are you doing with Mr. Reagan and Mr. Bush to get the money? We are willing to provide it, but they are going to veto it.

Mr. **Calkins**. One way that I think you——

Mr. **Luken**. We were told yesterday or when was it the Amtrak bill was up? Monday. We were told Mr. Bush is going to veto it. So what are we talking about? If he vetos it, we don't have to worry about any of this.

Mr. **Calkins**. One way that you will have more money to appropriate for Amtrak, or anything else that you deem appropriate to appropriate for, is if a significant proportion of those 8 million people who are unemployed and are currently a drain on the Federal Treasury become employed and pay taxes.

Mr. **Luken**. I am sorry, but that is not relevant to the question. Before we get to that question, we must first decide whether we are going to provide Amtrak with money to provide service, and we probably will, and Mr. Bush is going to disagree with that part of it, which is irreconcilable with the administration's position on this bill.

We can't agree to make Amtrak accessible if there is no Amtrak. Your position, I think, is irreconcilable, in conflict, unless you also take a position in support of Mr. Claytor when he says he needs the money and he can't take it out of the money that we give him—relatively a few dollars—to provide cars. We can't upgrade the cars if he doesn't have cars. That is the situation that he has been in.

Mr. CALKINS. If someone in the Administration who did have the authority to make such a decision were to ask me my opinion——

Mr. LUKEN. I don't agree with you. You have the ability to make your position known within the Administration.

Mr. CALKINS. We have.

Mr. LUKEN. For you to say if somebody would ask you, I just question the total consistency of that.

Mr. CALKINS. Put it this way. My chairman, who is at a level where he can make such suggestions, agrees with you, that providing Federal money for accessibility ought to be a priority, because it will pay for itself in the long run, and I certainly agree with him.

Mr. LUKEN. I agree with that.

Mr. CALKINS. So I don't think we are really in disagreement.

Mr. LUKEN. We will probably do it. But, because of the power of the veto, we may be forced to do it along the lines of setting a requirement, but then not paying for it. In the long run, that is not going to work out, because, as Mr. Claytor has said in a couple of cases here, they would have to close down some of the stations, and as an example, not provide as much service—as an example, basic services for the disabled.

If the basic service isn't there, the disabled can't partake of it. Now, I apologize for just taking a portion of your testimony and concentrating on it. On the other hand, I don't apologize in the sense that I don't think it appears relevant or that I don't think it is most important, because that is what I did. I think that is why I decided to do it, because I think it is most essential.

I agree with everything else that you say, in other words, and I will work for it, but I don't think we are going to accomplish it unless we provide the funds, adequate funds for, in this in case, the Amtrak situation. We are not as familiar with it here in the sense of working with it every day, but the same argument is going to be made on bus service. Bus service is still—I believe it is in a significant way—subsidized through the Federal coffers. We are probably going to have a vote in a minute. I just wanted to in this way, urge your support, and we will support, or I will, support your position. Okay?

Mr. CALKINS. Thank you.

Mr. LUKEN. The gentleman from Kansas.

Mr. WHITTAKER. I would like to direct my questions really to anybody from the Access Board, but at a fiscal year 1990 appropriations hearing, the board testified that the ADA would:

> Tremendously expand the scope of the board because it would, for the first time, deal with transportation and local building codes and even with the private sector.

From the fiscal year 1990 budget justification, it appears that the board currently has an annual budget of about $2 million and only 24 full-time employees. What is the estimated expansion of the board envisioned if the ADA is enacted?

Mr. ROFFE. Sir, we have told OMB we would like an additional two and a half FTE to bring it up primarily for technical assistance type functions.

Mr. **Whittaker**. Two and a half additional employees is all of would think you would require?

Mr. **Roffe**. Yes sir.

Mr. **Whittaker**. Thank you.

Mr. **Luken**. Anything that any of you would want to say about paratransit, in view of what has been said? I don't think any of you have mentioned it, and you haven't been asked about it, and I don't intend to quiz you on it, but if there is anything up to—Mr. Cannon?

Mr. **Cannon**. We agree that our interpretation of the bill is that paratransit is not something that was intended to be required of the commuter authorities or Amtrak. The difference has to do with the way in which you look at something like a service area. When you talk about bus service, and urbanized area transportation, you can define a geographical service that is covered, and the issue there is if a provider provides fixed route buses and there are some people in that service area who cannot use them, it has an obligation to provide some kind of comparable level through paratransit to those people who cannot use them.

In the case of commuter rail, in which there is no real service area in the same sense—it is a long corridor—the commuter rail and Amtrak services don't now provide any service to the general public that goes out into the community and brings them to stations. And the bill, as we understand it, is not intended to create additional extra services for disabled people, but rather to give them an equal access to the services that are provided to the public.

Now, if an Amtrak station is in the community where the community is providing some fixed route bus service to and from that station, then our analysis would be that that entity which is providing that service would be required to provide some kind of comparable paratransit to the disabled persons in the same community that could not take advantage of the fixed route, but that it would not be a requirement of the commuter rail or the intercity rail operator itself.

Mr. **Luken**. A reasoned statement. We thank you very much for it. I think that clarifies your position, and perhaps sheds some light on the whole situation.

Mr. **Cannon**. One more station bout the cost of putting lifts and buses—which is not in your jurisdiction but is somewhat analogous. There has been in the last 8 to 10 years a decrease in the Federal contribution to public transit in general, and as a transit advocate, I happen to think that is not a good idea. During that same period——

Mr. **Luken**. I somewhat tentatively offer my comments about that, you know. I was Mayor of Cincinnati and when we went public, at that time much of the transit system was financed—capital and operating costs—out of the Federal subsidy. But as you say, that is less so today.

Mr. **Cannon**. It has been decreasing.

Mr. **Luken**. But that brings up the point that the relatively few people who pay through the fare box are not going to be able to support the service on their own—that is the reason they went public in the first place—for any significant amount of services of which the disabled could partake.

Mr. CANNON. Well, but the point is that during that same period of time, with decreasing Federal commitment, there has been a tremendous increase in the number of transit agencies that have put lifts on buses, as opposed to paratransit, and the reason is simple. It is cheaper, and in reality, as the costs go down, there is a cost payback in terms of switching to that kind of services as opposed to paratransit.

Mr. LUKEN. Well, we thank you very much. That is very, very helpful. We thank all of you on this panel.

We will move on with such time as we have. We may be called away at any moment for a vote, but we will move on until that happens, with Chicago METRA.

Mr. Phil Pagano, Ms. Carol Lavoritano, Mr. Henry Miller, and Mr. Scott Fazekas. I would like to move along as quickly as we can. We will start with Mr. Pagano.

STATEMENTS OF PHILIP A. PAGANO, ASSISTANT EXECUTIVE DIRECTOR FOR CORPORATE ADMINISTRATION, CHICAGO METRA; HENRY MILLER, DIRECTOR OF GOVERNMENT AND COMMUNITY RELATIONS, NEW YORK METROPOLITAN TRANSIT AUTHORITY; SCOTT FAZEKAS, ON BEHALF OF THE AMERICAN INSTITUTE OF ARCHITECTS; AND CAROL LAVORITANO, DIRECTOR, PROGRAM AND POLICY ANALYSIS DEPARTMENT, SOUTHEASTERN PENNSYLVANIA TRANSPORTATION AUTHORITY

Mr. PAGANO. Thank you, Mr. Chairman.

Let me start by expressing my appreciation for inviting METRA to be here today. I am here to comment on the Americans With Disabilities Act.

Mr. LUKEN. Tell us what METRA is in a word.

Mr. PAGANO. The Commuter Rail for the Chicago metropolitan area.

Mr. LUKEN. What is within your system, what types of transit?

Mr. PAGANO. Strictly commuter rail.

Mr. LUKEN. Strictly commuter?

Mr. PAGANO. That is correct.

Mr. LUKEN. Is there another authority in the Chicago area?

Mr. PAGANO. There is three other authorities in the Chicago area.

Mr. LUKEN. It bothered me before when the Federal people were talking about transit authorities, as if to describe just one kind of a system. It varies in different metropolitan communities, and in nonmetropolitan communities, right?

Mr. PAGANO. I was here when you made that statement, and I think your point was well taken.

Mr. LUKEN. What are the other three?

Mr. PAGANO. The Chicago Transit Authority, which runs within the city of Chicago, and some outlying suburban areas; the Rapid Transit and Bus, and then there is PACE, which is the suburban bus division, and that runs strictly light suburban buses within the surrounding communities of north Illinois.

Mr. LUKEN. So the rapid transit would be light rail, right?

Mr. **Pagano**. That is right.

Mr. **Luken**. Basically. Of course, none of those definitions are concrete, are they, depending upon the community?

Mr. **Pagano**. That is correct.

Mr. **Luken**. Proceed.

Mr. **Pagano**. In my testimony today I want to stress our willingness to meet the purposes of the ADA, while noting our concern about certain implications. I will focus on METRA's plan to provide accessibility to all its trains in a cost effective manner that will meet the needs of the disabled community.

METRA oversees all commuter rail operations in the 3,700 square mile northeast Illinois region, with responsibility for day-to-day operations, fare and service levels, capital improvements and planning.

The METRA system is comprised of seven railroads, which operate on 13 separate lines radiating from the Chicago Loop and serves 100 communities at 208 rail stations. METRA currently directly owns and operates three railroads and has purchase of service agreements with four others. Railroads in the METRA system, collectively, operate more than 3,600 trains weekly over approximately 1,200 miles of track. Our fleet consists of 131 diesel locomotives, 686 bilevel commuter cars and 209 self-propelled electric cars. On an average weekday, over 140,000 people board our trains twice daily. In 1988, the METRA system carried more than 68.5 million passenger trips, accounting for about one-fifth of all commuter rail trips in the Nation. Over the last 5 years METRA has experienced annual ridership growth of anywhere from 4 to 6 percent.

Passage of the Americans With Disability Act will have a profound impact on METRA. I am pleased to say that extensive planning by METRA will permit, for the most part, timely compliance with ADA's requirements. We have spent a considerable amount of time and money over the past several years engaged in a number of activities aimed at improving accessibility for the disabled residents of, and visitors to the METRA service area. These efforts include: Ongoing implementation of accessibility improvements to existing stations and accessible design for all new construction; operation of a growing lift equipped paratransit service to provide "rail-like" service to disabled people using wheelchairs; and detailed analysis of options for permitting the use of METRA diesel powered services by persons with disabilities, including wheelchair users.

These efforts, undertaken in consultation with Chicago area representatives of people with disabilities, have put METRA in the desirable position of being prepared for the central requirements of Americans With Disability Act, and have also given us keen insight into compliance.

We believe that as Congress prepares to expand and confirm the rights of the disabled in our society, it should give serious thought to how the costs of these necessary changes are to be met.

METRA's overall capital needs over the next 10 years already exceed projected available funding by approximately $600 million. It should be brought to the committee's attention that this projected shortfall would have been even more substantial if it were not for legislative action, just taken by the State of Illinois, that provides an infusion of almost $500 million to METRA for capital improvements coming from an increase in the State gas tax.

For your consideration, here is a list of several items that will represent additional costs to improve accessibility for the disabled: One, METRA estimates that providing one accessible car on every train will add about $45 million to our rail car acquisition program. In addition to the capital investment, we expect to incur an annual increase in operating costs of approximately 250,000; two, METRA estimates an annual revenue loss could result, depending on usage, from $470,000 to $630,000 per year because of the seat loss on cars designed to be accessible. To relieve this situation, it may be necessary to add more commuter cars beyond normal requirements, further exacerbating our capital requirements. In discussing the impact of projected operating cost increases on revenue loss, the committee should be aware that under State law, it is mandated that the region's cost recovery ratio must be at lest 50 percent. Thus, METRA must be extremely sensitive to any abnormal cost conditions that must be met over time; and three, increased accessibility is likely to have an impact on the schedule and on time performance of METRA trains. Significant disruptions could affect ridership and revenue. It is difficult to quantify such potential input, but METRA believes that the one car per train requirement that we advocate in this testimony will do the most to ensure that scheduling delays are kept to a minimum, to the advantage of the able bodied and the disabled alike. METRA's ontime performance over the last 5 years averaged 98 percent, and our market research indicates that riders consider this a key element in their decision to use the system.

We doubt that anyone will take issue with the notion that accessibility ought to be achieved in the most cost effective manner possible. One of the key provisions of the ADA bill requires that within 5 years commuter rail services provide that at lest one car per train is accessible to disabled persons, including wheelchair users.

METRA supports and applauds this provision. We are in the process of implementing a plan, recently approved by the METRA Board, that will produce this result.

Mr. LUKEN. Mr. Pagano, as we indicated, we are running out of time, and your time has expired. If you want to finish in 30 seconds?

Mr. PAGANO. Thank you, Mr. Chairman.

I think the gist of the report for the record is that we would like, one, a recognition that it will have, in fact, a capital impact upon our system, and that Congress should take appropriate action to address that.

And second, the requirement that all cars are made accessible, be limited to one car being made accessible, since by the car design that we are proposing, we can always add additional wheelchair facilities to one vehicle. It makes no sense to have all the rolling stock made accessible.

Mr. LUKEN. Thank you.

Your full testimony has been made a part of the record. Thank you very much, Mr. Pagano.

[The prepared statement of Mr. Pagano follows:]

PREPARED STATEMENT OF PHILIP A. PAGANO, ASSISTANT EXECUTIVE DIRECTOR FOR CORPORATE ADMINISTRATION, METRA, THE COMMUTER RAIL DIVISION OF THE NORTHEASTERN ILLINOIS (CHICAGO) REGIONAL TRANSPORTATION AUTHORITY

I am here today to comment on the Americans with Disabilities Act as it is likely to affect my organization, METRA, and the many people we serve.

In my testimony today, I want to stress our willingness to meet the purposes of the ADA, while noting our concern about cost implications. I will focus on METRA's plan to provide accessibility to all its trains in a cost-effective manner that will meet the needs of the disabled community.

METRA oversees all commuter rail operations in the 3,700 square mile northeast Illinois region, with responsibility for day-to-day operations, fare and service levels, capital improvements and planning. A division of the Regional Transportation Authority, METRA was formed in 1985 and is the first agency in the history of the region to focus solely on commuter rail.

The METRA system is comprised of 7 railroads which operate on 13 separate lines radiating from the Chicago Loop and serves 100 communities at 208 local rail stations. METRA currently directly owns and operates three railroads and has purchase-of-service agreements with four others. Railroads in the METRA system, collectively, operate more than 3,600 trains weekly over approximately 1,200 miles of track. Our fleet consists of 131 diesel locomotives, 686 bilevel commuter cars and 209 self-propelled electric cars. On an average weekday, over 130,000 people board our trains twice daily. In 1988, the METRA system carried more than 68.5 million passenger trips, accounting for about one-fifth of all commuter rail trips in the nation.

Passage of the Americans with Disabilities Act will have a profound impact on METRA. I am pleased to say that extensive planning by METRA will permit, for the most part, timely compliance with ADA's requirements.

We have spent a considerable amount of time and money over the past several years engaged in a number of activities aimed at improving accessibility for the disabled residents of, and visitors to, the METRAservice area. These efforts include: Ongoing implementation of accessibility improvements to existing stations and accessible design for all new construction; operation of a growing lift-equipped paratransit service to provide "rail-like" service to disabled people using wheelchairs; and detailed analysis of options for permitting the use of METRA diesel-powered services by persons with disabilities, including wheelchair users.

These efforts, undertaken in consultation with Chicago area representatives of people with disabilities, have put METRA in the desirable position of being prepared for the central requirements of ADA, and have also given us keen insight into the cost of compliance.

It is the projected cost of compliance for which we are unprepared. We believe that as Congress prepares to expand and confirm the rights of the disabled in our society, it should give serious thought to how the costs of these necessary changes are to be met.

METRA's overall capital needs over the next ten years already exceed rejected available funding by approximately $600 million. It should be brought to the Committee's attention that this projected shortfall would have been even more substantial if it were not for legislative action just taken by the State of Illinois that provides an infusion of almost $560 million to METRA for capital improvements coming from an increase in the State gas tax. These spending needs cover an aspects of METRA's operations such as bridge rehabilitation, signals and communications improvements, and upgrading station facilities, and include capital commitments to improve services for the disabled. Our projected capital shortfall over the next decade reflects significant investments already made over the past few years directed specifically to meeting the needs of the disabled. The imposition of major new capital requirements to comply with this bill obviously will exacerbate METRA's projected budgetary situation.

For your consideration, here is a list of several items that win represent additional costs to improve accessibility for the disabled: (1) METRA estimates that providing one accessible car on every train will add about $45 million to our railcar acquisition program. In addition to the capital investment, we expect to incur an annual increase in operating costs of at least $235,000; (2) METRA estimates an annual revenue loss could result, depending on usage, from $470,000 to $630,000 per year because of the seat loss on cars designed to be accessible. To relieve this situation, it may be necessary to add more commuter cars beyond normal requirements, further exacerbating our capital requirements. In discussing the impact of projected operating cost increases on revenue loss, the committee should be aware that under Illinois law, it is mandated that the Region's cost recovery ratio (revenue vs. expenses) must be at least 50 percent. Thus, METRA must be extremely sensitive to any abnormal cost conditions that must be met over time; and (3) increased accessibility is likely to have an impact on the schedule and on-time performance of METRA trains. Significant disruptions could affect ridership and revenue. It is difficult to quantify such potential impact, but METRA believes that the one car per train requirement that we advocate in this testimony will do the most to ensure that scheduling delays are kept to a minimum, to the advantage of the able-bodied and the disabled alike. METRA's on-time performance over the last five years average 98 percent, and our market research indicates that riders consider this a key element in their decision to use the system.

We doubt that anyone will take issue with the notion that accessibility ought to be achieved in the most cost-effective manner possible. One of the key provisions of the ADA bill requires that within 5 years commuter rail services provide that at least one car per train is accessible to disabled persons, including wheelchair users.

METRA supports and applauds this provision. We are in the process of implementing a plan, recently approved by the METRA Board, that will produce this result. In fact, our plan will provide a degree of certainty and reliability not required in the legislation. Under this plan, all cab cars on our trains will become accessible as quickly as possible. Our rail car purchase program will be revised so that the only cars purchased in the next several years will be accessible cab cars. The effect of this plan is that METRA will be providing cost-effective, accessible service on all its trains.

To understand why this proposal is uniquely workable in the case of METRA's type of operation, I must first explain how the "push-pull" diesel service works. For most of passenger railroading's history, locomotives could only pull passenger cars, and if the train was to reverse direction, the train had to be physically turned around, often with the use of a turntable. Push-pull service, on the other hand, allows operation of a train in either direction by employing a "cab-control car" at the end of the train opposite the locomotive. Otherwise similar to the predominant passenger cars (called trailers), the cab-car has a crew compartment with the full complement of controls needed to run the train. In "push-pull" mode, the train crew occupies the locomotive. In "push" mode, the locomotive, of course, continues to supply motive power, but the crew occupies the other end of the train controlling its functions from the cab-control car. Operationally, this offers the major advantage of not having to physically turn trains at the end of a run. Instead, the crew simply locks up controls on one end of the train, walks through to the other end, and resumes operation in the opposite direction.

Push-pull operation is employed on every diesel line in the METRA system, and, therefore, every single train operated must have at least one cab control car. Trains on the METRA system are not, and cannot be, operated without a cab-control car. This was the main reason that our recently completed Accessible Railcar Design Project concluded that making cab-cars accessible was the best way to ensure full accessibility on the METRA system. There were additional reasons for choosing the cab-car including: The cab car has already been established as a specialized piece of equipment, requiring more intensive inspection and maintenance than trailer cars; the cab car's location on the train ensures that, at downtown terminals, the car will be located at the most advantageous boarding position possible, minimizing travel distances for disabled people to and from the station entrances; and use of the cab car was strongly endorsed by our project review committee, composed of wheelchair users find other disabled people, which worked closely on design details throughout the course of the project.

However, the ADA does not allow for the kind of innovative approach we have taken to providing accessibility. Under the Senate-passed bill, every new rail car would also have to be accessible. This requirement will impose substantial additional costs on METRA for very little additional benefit. Our approach of making all cab cars accessible would provide equivalent, if not better service. If demand increases, we can simply make more wheelchair locations available on each cab car.

I want to stress that our plan to make cab cars accessible has been strongly endorsed by METRA's project review committee, composed of wheelchair users and other disabled. We take this endorsement as recognition by the disabled community of the fact that full access to commuter rail services can be accomplished without a budget-busting requirement that every individual car have a rift. We hope that Congress will come to the same responsible conclusion reached by our disabled community.

As a final but very important note, Congress must recognize that this legislation, even if tailored to be highly cost-effective, will impose substantial costs over and above the massive capital needs of METRA and other transit services all over the country. The proposed requirement for an accessible paratransit service, even if METRA trains are accessible, will also add to the costs associated with compliance. The "undue financial burden" language in the legislation is welcome as a means of moderating excessive financial impacts, but does not entirely solve the problem.

Therefore, I urge Congress to give serious consideration to providing transit services the means by which those requirements are to be fulfilled. Federal funding support for public transportation has weakened considerably in recent years, and now we are being asked to do more with less. Accessibility for the disabled is a laudable public policy goal, and we believe such policymaking ought to be accompanied by the funding needed to achieve that goal.

This concludes my prepared testimony and I would be happy to answer any questions the Committee may have.

Mr. Pagano. Mr. Miller.

STATEMENT OF HENRY MILLER

Mr. Miller. Thank you, Mr. Chairman.

Mr. Luken. Your testimony will be made a part of the record. You can proceed in any way that will be helpful.

Mr. Miller. Thank you, Mr. Chairman.

I am Henry Miller. I am director of government and community relations with New York Metropolitan Transit Authority.

The MTA includes Triborough Bridge and Tunnel Authority as well as the Metropolitan Commuter Railroad and the Long Island Railroad, the two commuter railroads on which our attention is focused today.

Before I address specific aspects of the Americans With Disability Act, I would like the committee to know the MTA has been working aggressively for years to achieve an accessible transportation system which meets the principals of the proposed act.

As examples of our efforts, I would cite the following: At present, our bus fleet includes 2,800 buses equipped with wheelchair lifts. This represents 80 percent of the bus fleet. By 1990, 89 percent of our bus fleet will be lift equipped. This level will increase steadily until 100 percent is reached; the 100 percent of our subway fleet can accommodate wheelchairs, meaning that the doors are wide enough and the platform gap is small enough to permit wheelchairs to enter, and a program is underway to make key stations in the subway system accessible; and the Metropolitan Transit Authority Commuter Railroad operates 772 commuter rail cars and 93 percent of them can accommodate wheelchairs. The Long Island Railroad operates 1,100 rail cars and 84 percent of them can accommodate wheelchairs. Thirty-nine percent of the Metropolitan Transit Authority's commuter rail stations are accessible, 35 percent of the Long Island Railroad's stations are accessible.

While we support the goals of the act before us, we have substantial concerns with certain aspects of the bill in its present form. Those concerns focus on the paratransit requirements, the key station determinations, and the vehicle requirements.

I am interested to hear on the subject of paratransit, I am interested to hear the view expressed consistently today that the paratransit requirements of the bill do not apply to the commuter railroads. I would urge that this matter be made explicit in the bill.

There is an uncertainty about that, and a specific aspect of it that additionally concerns us is the requirement in the bill, in the Senate bill, that the transit authority in any given service area be responsible for paratransit. That requirement is inconsistent with the legal framework for existing paratransit operations in New York. In New York City, the city of New York is by State law, responsible for paratransit operations, not the transit authority.

With regard to key stations, both of our railroads have been retrofitting stations. We would urge the—given the age, scope and diversity of the stations in our system, we believe it is critical that the criteria used to determine key stations not follow a rigid formula, and we have a number of criteria that are included in our written testimony that we believe are important in determining what key stations are.

With regard to vehicles, there are certain provisions in the Senate bill and certain operational realities that we face which will make it difficult at bet to meet the deadlines for rail car accessibility.

First of all, the Senate bill refers to a requirement of one accessible car per train. That requirement, especially if it is interpreted to include securing devices and accessible bathrooms, is far more difficult to achieve from an operational standpoint than it sounds. Cars are switched constantly and in order to ensure that one train has one accessible car, means far more than one.

Second, the retrofitting of cars for accessible bathrooms would be a substantial loss. They include loss of seating and on route already filled to capacity, an increase in standees or where operationally feasible, the purchase of additional cars to make up that loss.

Third, on both railroads many of those cars which cannot presently be entered by wheelchairs and would thus be most difficult and expensive to retrofit, are scheduled to be retired within 10 years. In some cases, in order to meet the deadline contained in the Senate bill, we would be compelled either to undertake the expense of retrofitting the cars only to use them for an additional year or two, or forego the remaining years of the car's projected service.

Mr. LUKEN. Thank you.

[The prepared statement of Mr. Miller follows:]

PREPARED STATEMENT OF HENRY MILLER, DIRECTOR OF GOVERNMENT AND COMMUNITY RELATIONS FOR THE NEW YORK METROPOLITAN TRANSPORTATION AUTHORITY

Mr. Chairman, Members of the Committee, my name is Henry Miller, and I am Director of Government and Community Relations for the New York Metropolitan Transportation Authority. The MTA is a State Chartered Authority which oversees the operations of the largest public transportation system in the nation—a system which provides the vast majority of public transportation in the New York City metropolitan area. The MTA system includes, among other elements, the New York City Transit Authority, the Triborough Bridge and Tunnel Authority, an well as the Metro-North Commuter Railroad and the Long Island Rail Road, the two commuter railroads on which our attention is focused today.

Before I address specific aspects of the Americans with Disabilities Act, I would like the Committee to know that the MTA has been working aggressively for years to achieve an accessible transportation system which meets the principles of the proposed Act. We have committed substantial financial resources to theme efforts. We support the goals of the Act, and we believe that, with the efforts we have made to date coupled with future activities, the MTA can meet the objectives of the Act.

As examples of our efforts, I would cite the following:

One, at present, our bus fleet includes 2,898 wheel chair lift-equipped buses; this represents 80 percent of the bus fleet. By 1990, 89 percent of our bus fleet will be lift-equipped and this level will increase steadily until 100 percent is reached, assuming the availability of projected capital funds.

Two, 100 percent of our subway fleet can accommodate wheelchairs, meaning that the platform gap is small enough to permit wheelchairs to enter and a program is under way to make key stations in the subway system accessible. We do not have securing devices on subway cars.

Three, the Metro-North Commuter Railroad operates 772 commuter rail cars, and 93 percent of them can accommodate wheelchairs. The Long Island Rail Road operates 1,116 commuter rail cars, and 84 percent of them can accommodate wheel chairs. These figures do not reflect the availability of securing devices or accessible bathrooms on the cars.

Four, 46 of Metro-North's 117 commuter rail stations (39 percent) are accessible. Forty-seven of the Long Island Rail Road's 134 commuter rail stations (35 percent) are accessible.

Five, on the Long Island Rail Road, two stations serve well over 90 percent of the ridership: Jamaica Station, the key transfer station, will have new elevators for full access in 1990, and Pennsylvania Station, the main terminal, is currently undergoing a major reconstruction, including the introduction of elevators, targeted for completion in 1994. The reconstruction is being conducted in conjunction with Amtrak, the owner of the Station. At Grand Central Terminal, the main terminal for Metro-North, virtually every platform is accessible due to the foresight of its designers who included numerous ramps and elevators during its construction in 1914.

While there is still much to do, we believe that our commitment to accessible main line public transportation has shown real and substantial progress.

Our support for the goals of this Act, however, does not mean that we do not have substantial concerns with the bill in its current form. Our concerns are primarily definitional or operational in nature. They focus on three areas: The paratransit requirements; the "key station" determinations, and the vehicle requirements.

As the Committee requested; our concerns today will focus only on the impact of the Act on the commuter rail services that we provide on the Metro-North and Long Island railroads.

Our concern with the paratransit requirement contained in the Senate bill is primarily with the comparable level of service provision. While the Senate recognized that, as systems become increasingly accessible, the need for alternative service will diminish, we would like to see it made clear that paratransit should feed into key stations in main line accessible service rather than run parallel to it. We would also like to see a clearer definition of precisely who is "unable to use main line accessible service". We would hope that the Congress could provide more detailed guidance in these areas.

In addition, the requirement that the transit authority in any given service area be responsible for paratransit service is inconsistent with the legal framework for existing paratransit operations in Now York. Current State law requires the City of New York to assume this responsibility in the New York City Transit Authority service area. Consistent with this policy, we believe that it would be moot effective if the responsibility for operating paratransit service continued to rest with units of State or local government, as established by State law or executive determination.

The Metro-North Commuter Railroad and the Long Island Rail Road operate in two distinct service areas, in Metro-North's case involving multi-State operations and in both cases involving travel distances in excess of two hours. Should the MTA be required to coordinate alternative service, it would divert our attention and resources from our primary responsibility: accessible main line service. So long as service is provided, there is no compelling federal interest in determining which unit of local government provides it.

Consistent with the MTA's overall commitment, both the Metro-North Commuter Railroad and the Long Island Rail Road have been retrofitting stations on their routes as part of their capital improvement programs. As indicated above, more than one-third of those stations are accessible. As the capital program continues, the number of accessible stations will continue to increase.

In determining which stations are "key" stations, both Metro-North and the Long island Rail Road consider the following criteria to be important: The volume of passengers using a station; the role of a station as a transfer point within the system; the role of a station as an intermodal transfer point; the extent to which a station serves a major activity center; the location of a station at the end of a rail line; the proximity of a station to other accessible stations, and the extent and feasibility of structural reconstruction that would be required.

Because of the age, scope, and diversity of the stations in our system, we believe that it is critical that the criteria used to determine key stations not follow a rigid formula. Each station should be judged on site-specific characteristics including the cost and feasibility of accessibility provisions.

We would also suggest that the Committee go a stop further. We believe that when a transportation authority develops a "key station" plan for meeting the requirements of this legislation—a plan which would be developed in consultation with representatives of the disabled community—that plan should be approved by the governing entity of the authority with responsibility for the operation. The governing board should be required to hold a public hearing before any such approval.

There are certain provisions in the Senate bill and certain operational realities that we face which will make it difficult, at best, to meet the deadlines for tail car accessibility detailed in the bill. First, while the Senate bill refers to a requirement of one accessible car per trains that requirement (especially if it is interpreted to include securing devices and accessible bathrooms) is far more difficult to achieve from an operational standpoint than it sounds. Cars are switched constantly, and in order to ensure that every train has one fully accessible car, far more than a small portion of the fleet will have to be retrofitted. This could require almost all cars or multicar sets to be retrofitted.

Second, the retrofitting of cars to include accessible bathrooms would result in substantial hidden costs. These include the loss of seating and (on routes already filled to capacity) an increase in standees or, where operationally feasible, the likely purchase of additional care to make up that loss.

It should be noted that Metro-North currently operates coaches with accessible bathrooms on certain of its long-distance routes. The Long Island Rail Road is currently awaiting delivery of a prototype bilevel coach which is fully accessible, including bathrooms, for use in similar service.

Third, on both railroads, many of those cars which cannot presently be entered by wheelchairs, and would thus be most difficult and expensive to retrofit, are scheduled to be retired within ten years. In some cases, in order to meet the deadline contained in the Senate bill, we would be compelled either to undertake the expense of retrofitting the cars, if that is indeed possible, only to use them for an additional year or two or to forego the remaining years of the cars' projected service. In either case there is an added cost to the system.

For all of the above reasons, we believe that the legislation should provide flexibility and discretion in requiring existing vehicles to meet the standards of this Act and give particular consideration to the normal retirement schedule for cars.

The MTA in committed to creating a system that is safe, reliable, and available to all of the residents of our service area. While we have accomplished a great deal towards that end, there is much more to be done.

As you continue your deliberations on the legislation that is before you, we would hope that we could work with you to address the operational and definitional issues that we have raised today. We would also hope that you would consider the possibility of increased federal funding to expedite our ongoing efforts to make our main line service accessible.

We feel compelled to note that complying with this legislation, as currently passed by the Senate, is made all the more difficult by the fact that federal funding for mass transit has been reduced by 50 percent since 1981. It is our hope that you will consider the capital costs, both direct and indirect, required by this legislation and will consider providing additional federal aid to assist with those costs.

I appreciate the opportunity to testify before you and I would be happy to answer any questions that you might have.

Mr. LUKEN. I think the alternatives are if you would each take about 4 minutes, and much of the material we have gone over, we can wind this up. Of course, we may have to have an hour or two lunch hour, and I don't think any of us want to come back. I don't think I do, nor do we have the time, so Mr. Fazekas, would you try to do that?

Mr. FAZEKAS. Yes, Mr. Chairman.

STATEMENT OF SCOTT FAZEKAS

Mr. FAZEKAS. My name is Scott Fazekas. I am a member of the American Institute of Architects, whose views I represent, and I also have served as a building official for five different California jurisdictions. We appreciate the opportunity to appear. I will summarize my statement and request that the full text be printed in the record.

Mr. **Luken**. Okay. You may proceed.

Mr. **Fazekas**. The American Institute of Architects are no strangers to the challenges of disability. AIA public policy has long endorsed improved handicapped access. The AIA recognizes the human resource and the humanity of handicapped people, the ADA and congressional action to accomplish it, but we want this legislation to work, so its requirements must be clear, understandable, and achievable, or else it fails.

I feel a number of them would erect barriers to compliance by good people intending to do the right thing. This would also significantly increase the liability problems for architects. It is not sufficient to leave some of the ADA's policy specifications to the regulations and the people who will have to write them.

The AIA is concerned that title II's provisions for alterations of existing facilities in rail stations are confusing. Neither existing facilities nor new stations are defined in this legislative language, but separate requirements are apparently set forth for each. For example, the legislation should say that the alteration of exiting public transportation facilities—emphasis on "except for rails," which are addressed separately and effectively upon enactment as soon as capable. If this is intended by the committee, ADA requires removal of architectural barriers if the removal is readily achievable.

The provision fails to distinguish between the removal of a single barrier and removal of many barriers of the same type in a single facility. The legislation should provide that if a facility has many repetitive and similar barriers that singly aren't difficult or costly to remove, the removal should either be phased or take place when the facility, or portions thereof, is renovated.

The alteration section of title III suffered from the same problems as in title II. There is no way of telling when a readily achievable removal and architectural barrier becomes an alteration and when an alteration also becomes a major structural one. Our statement notes Pennsylvania law provides welcome guidance in this area.

We are concerned that the legislation makes no provision for historical properties as well. The AIA is also concerned that the new construction provisions fail to account adequately for projects under design prior to the enactment of the bill.

Architects must comply by the effective dates, but may be subjected to costly, often complicated, redesign without knowing precisely what they must do to ensure compliance. To handle the problem we propose retention of the effective dates for alterations in new construction, but application of the new projects that receive a design contract prior to the day of enactment. Are you looking for a summary? Am I at the 4 minutes?

Mr. **Luken**. You are about a minute away.

Mr. **Fazekas**. To assure smooth transition between the date of enactment and the promulgation of regulations, the law should provide architects with a safe harbor. We proposed adherence in the interim to an appropriate standards of the American National Standards Institute standard 117.1, be deemed sufficient for compliance. A safe harbor could also be the uniform Federal accessibility standard, which is based on ANSI, but also contains a scoping element.

This provides architects with a readily accepted handicap access standard that they can refer to with confidence, and reduce their concerns about liability.

The ADA's new construction provisions exempt handicapped access features that are structurally impractical to incorporate. Unreasonable hardship terminology has been effectively used in the California handicapped laws to accommodate legitimate economic concern. AIA would support this type of wording.

To summarize how the Architectural and Transportation Compliance Board can do the writing of regulations with only two and a half additional employees, and to provide the technical assistance, and to spread information about the bill, that is something that would be difficult to accomplish. The AIA is mainly interested in seeing the bill proceed and hopes that our suggestions are constructive and will help the bill to be the bill it deserves to be.

Mr. LUKEN. Thank you very much, Mr. Fazekas. We will continue to work with you and solicit your assistance perhaps to draft the amendments and so on.

Thank you very much.

[The prepared statement of Mr. Fazekas follows:]

PREPARED STATEMENT OF SCOTT FAZEKAS, AMERICAN INSTITUTE OF ARCHITECTS

Mr. Chairman, my name is Scott Fazekas, AIA, a principal in the firm of BSI Consultants, Inc., of Santa Ana, California. I am a member of the Building Performance and Regulations Committee of the American Institute of Architects, whose views I offer today. I have also served as the building official for five separate California jurisdictions. The AIA is the professional association of 56,000 members which represents the nation's architects. This year, the AIA celebrates its 132nd anniversary. We commend you for holding these hearings and appreciate the opportunity to appear.

American architects are not strangers to the challenges of disability. The architectural profession seeks to serve the diverse needs of people through the buildings and other structures they occupy and use. The design of each of these places should be sensitive to the problems of people with special needs. Too many people live isolated and unfulfilled lives because too many places fail to accommodate their disabilities. As technology has advanced, as society has paid more attention to the rights of disabled citizens, and as law has increasingly specified standards to guarantee those rights, architects have become more successful in meeting the design challenges that disabilities pose.

Ending the isolation of handicapped people, and expanding their opportunities for fulfillment have been part of AIA public policy for a long time. Such a policy makes sense not only from a humanitarian standpoint but from an economic one as well. Our nation's population is aging, and between now and the end of the century we face the likelihood of serious labor shortages. The 43 million disabled Americans can swell the ranks of workers and enlarge the pool of consumers—both essential to economic prosperity—but only if we expand their access to workplaces and public accommodations.

The Americans with Disabilities Act (ADA) recognizes the human resource and the humanity of handicapped citizens. It seeks the same opportunity for handicapped people to secure a job, enter a workplace, use transportation, or visit a park that nondisabled people enjoy. The AIA supports the intent of the legislation and we support Congressional action to accomplish it. Because we do, we want this legislation to work. Its requirements must be clear, understandable, and achievable, or else it fails. Civil rights law trapped for years in costly litigation denies justice and opportunity for the very people it is designed to uplift.

Since the AIA bill would reach into so many aspects of national life, its effects are profound and complex. Unfortunately, the lack of clarity and the uncertainty of many important provisions would compound its complexity, would unfairly erect barriers to compliance by people who undertake to comply in good faith, and could significantly increase liability for a profession already beset by liability burdens. Given the increasing tendency of the Supreme Court to discount report language and legislative history, it is not sufficient to leave so many of the legislation's policy specifics to the regulatory process. By merely directing the legislation in a couple of crucial areas, which I mention below, it will contribute to more clear and successful legislation and regulations.

Because we expect that the Senate-passed bill, rather than the House bill as introduced, will form the basis for House deliberations, our remarks pertain to the provisions of S. 933 as approved by the Senate.

The AIA is concerned principally with certain provisions of Title II, which applies to public services, and of Title III which covers public accommodations and privately provided services. While we appreciate that this subcommittee's jurisdiction connects most directly with Title II, the ADA's impact on structures and facilities covered by both titles, such as office buildings and recreational facilities, has relevance for many of the subcommittee's interests. For example, the subcommittee has a primary jurisdiction over railroads but would have an interest in office buildings covered by the ADA. Within these two titles, we focus on those provisions that apply to architects and their practices. Let me review the AIA's specific concerns with this measure and suggest revisions to improve the bill's chances of accomplishing its purpose.

The AIA is concerned that the sections of Title II covering alterations for existing facilities and for rail stations are confusing, leaving in doubt what is required. It appears that separate requirements are set forth for existing facilities and for stations. Neither is defined in the legislative language, and so the distinction is unclear. To compound the confusion, the Senate report in Title III defines facilities to encompass stations.

It appears that alterations and major structural alterations, as in Titie III, are not required upon enactment, but if undertaken, then the altered area must be made readily accessible and usable. In the case of major structural alterations, the path of travel to the altered area must be made accessible, too. The AIA supports the distinction between the two alteration forms as necessary to encourage renovations by preventing small projects from burgeoning into costly, complex ones solely due to the need to provide an accessible route to the altered area. The legislation, however, provides no way of determining when an alteration becomes a major structural alteration, leaving the decision to the Attorney General. We also believe that the ADA's use of the term "structural" is inconsistent with the legislation's intent as described in the report. Major structural alteration implies major building support functions such as posts, columns, and load-bearing walls, yet the report makes it clear that alteration which are much more minor in nature are also within the scope of the legislation's intent. Dropped ceilings, doorways, and floors are not deemed major structural elements by the architectural and engineering community. The inconsistency can be eliminated by referring only to major alterations or by changing the word "structural" to "architectural".

Later on, the legislation demands that all intercity rail stations and key stations for other rail types be made readily accessible and usable by disabled people, as soon as practicable. The Secretary of Transportation may delay the requirement for up to three years in some cases, and for up to 20 years in others, with extraordinary cost of compliance a factor in the length of delay for key stations. Is the legislation providing that alterations for facilities other than stations and key stations are voluntary, but that rail stations must be made readily accessible and usable following enactment? It is unclear. If that is the requirement, then the legislation ought to say so, with proper definitions of the terms "facilities" and "key stations", and logical structuring of the sections.

Title III also suffers from problems with clarity.

The legislation requires that public accommodations remove architectural barriers, effective upon enactment, if the removal is "readily achievable". "Readily achievable" is described as "easily accomplishable and able to be achieved without much difficulty or expense". Additional criteria for determining whether the removal is readily achievable includes the size and type of the operation and the number of its employees and facilities. The provision fails to distinguish clearly between the cost and difficulty of removing a single barrier, and many barriers of the same type in a single facility. For example, the Senate report concludes that the installation of grab bars fits the readily achievable standard. The absence of a grab bar in a bathroom is evidently a barrier. The installation of a grab bar in a single bathroom is not much of a problem, but the installation of many grab bars in many bathrooms in a large office or hotel is a different matter entirely. The legislation should provide that if a facility has many architectural barriers that singly aren't difficult or costly to remove, the removal of all these barriers should either be phased in or occur when the facility is renovated.

Title III then contemplates "alteration" of a facility, which is more expensive and complex than the readily achievable removal of an architectural barrier. The legislation indicates that an alteration occurs at the choice of the facility owner. Title III does a better job than Title II in handling the distinction between handicapped access improvements required upon enactment in existing facilities, and those that take place only when owners choose to initiate them. The legislation still suffers from the recurring problem of no clear distinction between a readily achievable removal of an architectural barrier and an alteration of a facility. Also, as in Title II, the legislation gives no clue as to what differentiates a major structural alteration from an alteration. State laws already in existence provide better guidance. Pennsylvania law, adopted in December 1988, provides that alterations worth less than 30 percent of the value of a building must make only the altered area readily accessible and usable. Alterations valued at 30 to 50 percent of the building's value must also include an accessible route to the altered area. Alterations worth more than 50 percent of the value of the building must make the entire facility readily accessible and usable. The alterations section of Title III also establishes a "maximum extent feasible" test. This phrase is too vague, although the Senate report attempts a definition. Also, the legislation should take into account the potential for conflict between its provisions and federal requirements for historic preservation.

Distinctions between one term and another are very important. For example, if the threshold for a major structural alteration is set too low, then many owners may simply delay or even refuse renovations in situations where building values are low.

The legislation imposes requirements for new construction, which apply to facilities open for first occupancy more than 30 months after the date of enactment. It makes a distinction between public accommodations, which are defined in a list of facilities and establishments, and "potential places of employment" which appear to be everything not considered public accommodations. The AIA generally agrees with the premise that accessibility features can be more easily and less expensively incorporated into the original design.

"Potential places of employment", however, is a new term. It is unclear in the legislation whether all spaces within potential places of employment must be made readily accessible and usable, such as a storeroom rarely visited by anybody. The legislation's requirements should cover only those spaces within an establishment or facility that would be generally used by the public, permitting the accessibility of other spaces to be handled in the operations policies of the employer.

Although the legislation attempts to accommodate projects already in the design process by delaying their effective date of compliance (a year after enactment for alterations, 30 months for new construction), there will be serious transition problems for some projects that are or will be under contract for design prior to enactment of the bill. These projects must comply by the effective dates. They will therefore be subjected to costly, often complicated redesign, yet architects will not know with any certainty what they must do to comply. In its section estimating the bill's cost for state and local government, the Senate report acknowledges the significant added costs of redesign. One way to handle this problem is to retain the effective dates in the legislation for alteration and new construction, but have the law apply only to those projects that receive a contract for design after the date of enactment. Projects currently under design would not be covered. New or altered buildings thus escaping early compliance would eventually come under the alteration requirements. Our suggestion is also similar to, but we believe more effective than, the approach instituted in the Fair Housing Act Amendments regulations which exempt from compliance those projects whose final building permits are issued on or after January 14, 1990.

To provide a "safe harbor" for architects, particularly necessary during the transition from enactment to final regulations, the legislation should provide in the statute language that compliance with the requirements of the American National Standards Institute ANSI standard 117.1 1986 or an equivalent standard would be sufficient, though not necessary, for compliance with the legislation. ANSI 117.1 is a national model handicapped access standard adopted throughout the country, and well understood by architects and others. Given the uncertainty of the ADA's requirements, and of the nature of the regulations, architects need a readily accepted standard to which they can refer with confidence. Since ANSI no longer prescribes the scope of the standard, such as how many accessible bathrooms should be placed in a new office project as opposed to what a handicapped accessible bathroom looks like, the legislation as an alternative could instead refer to the Uniform Federal Accessibility Standard (UFAS), which contains a scoping element. In the new fair housing law enacted last year, ANSI is deemed a sufficient standard to follow in complying with accessibility requirements for housing.

Because the report makes it clear that the Architectural and Transportation Barriers Compliance Board shall extend and make necessary revisions to the federal Minimum Guidelines and Requirements for Accessible Design (MGRAD), a question is raised about the relationship of this provision to current ANSI standards. Is the revised MGRAD supposed to supplant ANSI as the standard for the details of handicapped accessibility design? MGRAD now relies on the ANSI standard. The legislation should specify this continued reliance, except, to the extent that a scoping element is required.

The ADA's new construction provisions also exempt from compliance those new projects where it is "structurally impractical" to do so. The Senate report makes it clear that structural impracticability does not pertain to conditions involving the steep grade of a site but only to those conditions that would prevent accessibility or destroy the physical integrity of a structure. It is meant to be a very limited exemption involving such buildings as those built on stilts in marshland or in a floodplain. The issue of economic feasibility should not be overlooked, especially since such feasibility is inherent in the idea of structural impracticability. The sections of the ADA dealing with readily achievable removal of architectural barriers and with alterations already acknowledge the cost of compliance and seek to ensure that the legislation's costs are not unreasonable. The new construction requirements should do the same. The AIA supports the legislation's intent to require the incorporation of accessibility features which are not prevented by structural impracticability or economic infeasibility. The ADA should also incorporate the term "equivalent facilitation" to allow alternative access means where conventional accessibility is impracticable.

The Senate bill also provides that courts should consider a good faith effort to comply when hearing complaints brought against a covered entity or individual. We support a stronger provision. First, the ADA should give administering authority for ADA to local building officials, and the certification of such officials that an architect has complied should constitute a strong defense against complaints of discrimination.

Finally, the Senate bill establishes a program of technical assistance for affected segments of the public to inform them about the act and its details. This is a worthwhile provision aimed at encouraging compliance through better understanding and information, rather than through the heavy hand of the courts.

The American with Disabilities Act is far-reaching legislation aimed at opening doors for a segment of our society shut out of the mainstream for too long. The legislation's significance demands that its crafting advance rather than impede achievement of its objectives. We hope that our suggestions will make this the bill it deserves to be.

Mr. LUKEN. Ms. Lavoritano.

STATEMENT OF CAROL LAVORITANO

Ms. LAVORITANO. Thank you, Mr. Chairman. If I might, I would like to briefly summarize my statement and have the whole incorporated.

Mr. LUKEN. Please do. Your testimony is received.

Ms. LAVORITANO. Thank you.

METRA is the fourth largest—we operate commuter rail, light and rapid rail, bus and track and also trolley, metropolitan Philadelphia. Last year we provided approximately 1.2 million passenger trips for disabled persons by accessible bus, rail and paratransit. We have had an elderly and handicapped advisory committee since 1974. We have a variety of different types of accessible services, and we recently entered into an agreement to guarantee the purchase of only accessible buses, and to expand the number of key rail stations.

As a result of our own experience, I would like to provide the following specific comments on the Senate bill. First, section 20e(b)(3) should specifically state that structural modifications to existing rail vehicles are not required. While we agree that only accessible buses and rail cars should be obtained in the future, we have a number of concerns about making structural modifications to existing vehicles if they would have to specifically comply with requirements similar to the uniform Federal accessibility standards regarding doorway width and aisle width. That might compromise the structural integrity of a number of our vehicles.

We have an additional concern relating to rail accessibility for streetcar operations in mixed traffic, and this goes to a comment professionally made by Mr. Cook. Philadelphia is an old city, and we have an extensive network of surface streetcar operations. These are trollies, old fashioned trollies that operate in the middle of the street. In mixed traffic, trucks, automobiles and trollies, in many cases we have a narrow cartway and as it poses a serious safety consideration, perhaps new technology will be developed, but we have yet to come up with anything that would permit safe boarding and alighting of wheelchairs via a lift.

In most cases in mixed traffic operations the cartway is too narrow to effectively put up an aisle under some sort of loading platform in the middle of the street without compromising the rest of traffic.

Another major concern that we have relates to section 203(c), which creates a requirement for full bus and key rail station accessibility, plus extensive paratransit service. This will be very expensive to provide and no funding is available for additional services.

The Senate Labor and Human Resources Committee report interprets this provision of the act to require supplemental paratransit services to meet extensive service criteria. The Senate committee report effectively provides the public transportation operators are responsible for overcoming many mobility barriers faced by the disabled, including lack of adequate municipal facilities, such a suburb cuts and sidewalks and ineffective or unfunded human service agency transportation programs.

Eligibility for supplemental paratransit services is not well defined. The phrase "unable to use mainline transportation" can be broadly or narrowly interpreted. Our experience has been that people often prefer to use paratransit because it is difficult but not impossible for them to use accessible fixed route service.

The Senate committee report also calls for developing programs to provide mobility training for people with diverse disabilities, such as visual and hearing impairments, as well as mental retardation. In response to a comment made earlier by Mr. Cook, there are degrees of mobility training. As a transit operator, we have often provided training on how to use a wheelchair lift on a bus, but we cannot provide the type of training required for blind or mentally retarded people to become completely familiar with the route to take through the transportation system, and the concept of mobility training is much more complicated than what Mr. Cook alluded to.

Another concern that we——

Mr. Luken. Could you summarize?

Ms. Lavoritano. Summarize, okay.

Basically our principal concern with this act relates for funding for additional services that we would be required to provide. I think the transit community is in favor of improved access for the disabled, but the funding concerns must be met.

Thank you, Mr. Chairman.

Mr. LUKEN. Well, thank you. You all helped us to define these issues, and we find there is a certain amount of consensus, and other things that we have to work on. We thank you very much.

We have this major issue that I have to vote on right now, so I am going to retire post haste, and the subcommittee is adjourned, subject to the call of the Chair.

Thanks a lot.

[Whereupon, at 12:15 p.m., the hearing was adjourned.]

[The following material was submitted for the record:]

PREPARED STATEMENT OF CAROL H. LAVORITANO, DIRECTOR, PROGRAM AND POLICY ANALYSIS DEPARTMENT, SOUTHEASTERN PENNSYLVANIA TRANSPORTATION AUTHORITY

Good morning, Mr. Chairman and members of the Subcommittee on Transportation and Hazardous Materials, I am Carol H. Lavoritano, Director, Program and Policy Analysis Department of the Southeastern Pennsylvania Transportation Authority, or SEPTA. I am pleased to have the opportunity to present testimony before you today on the Americans with Disabilities Act of 1989. While we support the intention to provide improved services to the disabled, we do have a number of cost and operational concerns with the Senate bill.

SEPTA operates the fourth largest public transportation system in the United States. SEPTA provides over 1.1 million passenger trips each weekday by commuter, light and rapid rail, bus and trackless trolley in metropolitan Philadelphia. In addition, we contract for the provision of paratransit service in Philadelphia, primarily for disabled people.

Last year SEPTA provided approximately 1.2 million passenger trips for disabled persons by accessible bus, accessible rail and paratransit. The Authority set up an elderly and handicap advisory committee in 1974, and began working with the disabled community to improve services for them. We have been meeting many of the transportation needs of the disabled in Southeastern Pennsylvania with accessible bus and rail service since 1980. The Authority began contracting paratransit service in 1981. In 1988, accessibility was extended to all of SEPTA's Suburban Transit Division bus routes through the implementation of our Suburban On-Call service, which allows a disabled person to call one day in advance to request an accessible bus to be assigned to any route. By November of this year, 48 percent of our bus fleet will be lift equipped.

This past summer, the Eastern Paralyzed Veterans Association, the City of Philadelphia and SEPTA entered into an agreement to guarantee the purchase of only accessible buses in the future and to expand the number of key rail stations to 45, or approximately 16 percent of the system.

As a result of our own experience and the broad impact of this legislation on SEPTA, I would like to provide the following specific comments on the Senate bill:

(1) Section 203(b)(3) should specifically state that structural modifications to existing rail vehicles are not required. We agree that only accessible buses and rail cars should be obtained in the future when purchasing or leasing new vehicles. Furthermore, we concur with the idea of making rail vehicles accessible "to the maximum extent possible" for disabled persons, including wheelchair users, within three years. SEPTA has already removed seats in all its commuter rail trains to make space for wheelchairs, and our rapid rail cars are wheelchair accessible. SEPTA has on order replacement cars for its Norristown High Speed Line, which include wheelchair securements.

While our commuter rail fleet is generally accessible, these cars do not precisely meet Uniform Federal Accessibility Standards regarding doorway width and turning radius. It would be very expensive to undertake the major structural modifications necessary to change these dimensions because of limited space in the car entry area; such modifications could affect the structural integrity of the cars. We also agree with the Senate Labor and Human Resources Committee report language which indicates that accessibility modifications must only be made to remanufactured vehicles when the remanufacturing effort involves stripping the vehicle to frame prior to rebuilding.

An additional concern relating to rail accessibility relates to streetcar operations in mixed traffic. Philadelphia has an extensive surface streetcar network, which features trolley operations in the middle of several major city streets. Lift deployment and wheelchair boarding in the middle of a busy street present a serious safety hazard, therefore, streetcar operations in mixed traffic should be specifically exempted from accessibility requirements.

Since many areas, particularly older cities, have unique or unusual aspects of transit operations, the final legislation should contain waiver provisions for safety considerations.

(2) The SEPTA negotiations on a key station plan would serve as a successful model for Section 203(i)(1) of the Senate legislation. We agree with the Senate Committee that it is best to leave the selection of which stations are key to each locality. While our own negotiations with the disabled community generally involved such criteria as high ridership, major transfer points, and balanced regional coverage, they also considered physical constraints, cost and funding availability. We believe that the relative importance of such criteria should be locally determined, and that specific key station criteria are unnecessary and would be difficult to administer.

(3) Section 203(c) of the Senate bill creates a requirement for full bus and key rail station accessibility RIM extensive paratransit service. This will be very expensive to provide, and no funding is available for additional services.

The Senate Labor and Human Resources Committee Report interprets this provision of the act to require supplemental paratransit service to meet extensive service criteria.

The Senate Committee report effectively provides that public transportation operators are responsible for overcoming all mobility barriers faced by the disabled. Public transportation operators would be required to compensate for lack of adequate municipal facilities such as curb cuts and sidewalks; and ineffective or underfunded human service agency transportation programs.

Eligibility for supplemental paratransit service is not well defined in the Senate bill. The phrase "unable to use mainline transportation" can be broadly or narrowly interpreted. Our experience has been that people often prefer to use paratransit because it is difficult, but not impossible, for them to use accessible fixed-route service.

Congress should avoid mandating a broad eligibility criteria for supplemental paratransit because it will perpetuate costly dual services for the disabled. We believe the majority of the disabled would opt for the convenience of door-to-door services and the expenditure to retrofit our nation's public transit systems will only serve a small segment of the disabled population.

(4) The Senate Committee report calls for developing programs to provide mobility training for people with diverse disabilities, such as visual and hearing impairments and mental retardation. Transportation of large numbers of people is the business of public transit operators. The industry does not have the expertise to understand the needs and provide mobility training for people with such a variety of special needs.

(5) Short response time requirements for paratransit service can create expensive vehicle requirements and scheduling inefficiencies. The Senate report language raises questions as to what is intended as a comparable response time. It in totally unrealistic to require that paratransit response times be equivalent to fixed route headways, and the committee report language should be revised to clearly reflect this. SEPTA operates many bus routes with headways between five and fifteen minutes. Such a response time requirement is clearly impossible to meet; similar response times are not even available with taxi service. If paratransit service is intended to be truly supplemental, we recommend a response time no shorter than twenty-four hours, to permit efficient scheduling and routing of vehicles, in many cases utilizing existing computerized systems which have been developed at considerable expense.

(6) While supplemental paratransit services are only required to the extent that they do not "impose an undue financial burden," the term "undue financial burden" is not clearly defined. We are greatly concerned about the increased cost of compliance with this bill at a time when the federal government is continuing to reduce assistance to public transit. For example, in the last ten years: Operating assistance has been reduced by 50 percent; capital assistance is down by 64 percent in terms of real buying power; and the transit trust fund is frozen.

In this context, public transit authorities must resist any mandates which are unfunded, especially in the face of demands for expanded service of all types.

For many transit authorities, any additional expense for which new funding is not provided constitutes an undue financial burden, insofar as fares must be raised or other services cut in order to provide new services. We would point out that fare increases and service reductions cause serious hardship to other low and fixed income riders, many of whom have no alternative means of transportation. Therefore, we strongly urge the Congress to fund the increased cost of compliance with the Americans with Disabilities Act.

(7) Finally, we endorse the employment provisions of the Senate bill, with one minor exception. SEPTA has employed the disabled for many years, some of whom are employees who were injured on the job. The Authority has already made "reasonable accommodations" at a number of work locations for its employees.

However, we take exception to the requirement to hire qualified readers for the blind and interpreters for deaf employees. Such a requirement makes it necessary to hire two individuals in order to obtain the production of one person. In a public service expense environment which is constrained by diminishing subsidy and pressure to improve productivity, such a rule would be exceedingly burdensome.

In conclusion, I believe that this Act can provide for major improvements to the lives of many disabled Americans. However, the language of the proposed legislation must be revised and clarified to prevent lengthy and expensive court battles following the issuance of regulations pursuant to the act. Changes must be made to provide for realistic implementation requirements and schedules, and funding must be included for public service providers who will be expanding and improving their services to the disabled.

Thank you for the opportunity to testify before you today.

PREPARED STATEMENT OF THOMAS GAGLIANO, EXECUTIVE DIRECTOR, NEW JERSEY TRANSIT

Thank you for the opportunity to submit for the record NJ Transit's views on H.R. 2733, the Americans with Disabilities Act. I am sorry that I was not able to appear at the Commerce Committee hearing on September 28, 1989 to personally deliver this testimony, but I respectfully submit this information for the hearing record.

NJ Transit provides bus service on approximately 177 commuter and local bus routes and 11 rail lines. The Newark City Subway is a 4.5 mile system that operates within the city of Newark.

NJ Transit directly provides service to 215,000 bus and subway riders a day throughout the state. Private bus companies under service contracts or subsidy agreements serve thousands of additional riders daily. NJ Transit commuter rail service carries 85,000 people each day throughout the state and into midtown Manhattan and Rockland County in New York. Service to Atlantic City, resumed in mid-September of this year, is expected to carry between 1200 and 1500 people daily.

NJ Transit Bus operates a 1,901 bus fleet. The average age of the NJ Transit bus fleet is approximately 4.5 years, compared to the national average of 7.8 years.

NJ Transit Rail operates on 394.1 rail route miles. All commuter rail lines are owned by NJ Transit, except for the Northeast Corridor (NEC) owned by Amtrak and a section of the Raritan Valley line. The NJ Transit rail fleet consist of 81 locomotives and approximately 600 rail cars.

NJ Transit works closely with all 21 New Jersey counties in the development of special transportation services for the elderly and the handicapped. NJ Transit through the Federal Section 16(b)2 program and Section 18 program provides local governments with capital and operating subsidies for locally provided accessible transportation services. Further, through New Jersey's Casino Revenue Fund, NJ Transit distributed $11.2 million in fiscal year 1989 to counties for transportation services. As a condition for receiving funding, each county must submit an annual plan that describes the nature of the services to be provided. These plans are reviewed and approved by the NJ Transit Special Services Citizen Advisory Committee.

With regard to its impacts on commuter railroads, NJ Transit fully supports 2733. We have developed aggressive policies aimed at providing accessibility throughout the rail system. H.R. 2733 would reinforce and strengthen the policies we currently have in place.

Of the three terminal points on NJ Transit's rail system, Newark Penn Station is already accessible. Both New York Penn Station and Hoboken Terminal will be made accessible within the next few months. In Hoboken, accessibility will be accomplished through the use of a portable wheelchair lift which can be moved to any platform where it is needed.

Of the 158 rail stations on NJ Transit's system, 17 (more than 10 percent) are already accessible. It is our policy that any station that undergoes major rehabilitation or new construction be made accessible. In addition, we are in the process of installing minihigh level platforms at key stations throughout New Jersey's rail network. Nine of these platforms will be installed during fiscal 1990, ten in fiscal 1991, and ten in fiscal 1992. In all, approximately $1 million will be spent in the next three years to make New Jersey's rail lines accessible. The money is provided through the New Jersey's casino Revenue Fund, a source of funding dedicated to help the elderly and handicapped citizens of our state.

Our long-term goal is to make the entire commuter rail system accessible. We are proud of our successes so far. The Northeast Corridor Line will be completely accessible by the end of fiscal 1990. The Raritan Valley Line will have at least three accessible key stations, and the North Jersey Coast Line will have at least five. In addition, the new Atlantic City Rail Line is entirely accessible.

On the Hoboken Division, only one station, Summit, is accessible to date. However, we are about to undertake a study of the lines which terminate in Hoboken to determine which stations should be identified as key stations and receive minihigh level platforms. At the completion of the study within the next twelve months, our aggressive accessibility efforts will be expanded to include the Hoboken lines.

Of course, accessibility of stations is only part of the picture. Accessibility is included in any new rail car purchase NJ Transit undertakes. Regarding existing equipment, we have found that cab cars are accessible to wheelchair users, and it is therefore no hardship to ensure that one car on each commuter train is accessible.

In summary, I wholeheartedly support Congress' effort to provide all of the nation's citizens with the civil right of mobility. I believe H.R. 2733 accomplishes this goal in a fair and reasonable manner with respect to railroads.

In addition to our commuter railroad, NJ Transit operates a light rail, commuter bus, and transit bus system. We have made a substantial effort to provide accessibility in as many of our service areas as possible. However, there are some technological limitations with regard to the light rail and commuter bus accessibility which we have been unable to overcome. The following outlines those limitations.

NJ Transit currently provides accessible bus service at a minimum of every 30 minutes on local bus lines. Commuter bus accessibility is provided on a 24 hour reservation basis. The reservation system is necessary because the ability to lift-equip certain commuter buses is constrained by technology and because there are very few accessible platforms within the Port Authority Bus Terminal. Special arrangements must be made to ensure that a bus carrying a person with a wheelchair is directed to an accessible platform within the terminal.

While we generally support the intent of H.R. 2733 to ensure that buses are fully accessible, we believe it would be appropriate to provide an exemption where technology precludes accessibility, or where technological deficiencies would cause significant operating problems. For example, a 96-inch width restriction in the Lincoln Tunnel precludes NJ Transit, from using the standard 102-inch commuter bus. Manufacturers have informed us that it is infeasible to construct a wheelchair lift for a 96-inch commuter bus.Further, we believe an exemption is warranted where terminals preclude full access, such as the Port Authority Bus Terminal (PABT). Since H.R. 2733 would not require the PABT to increase its accessibility until it undergoes construction for other reasons, it would be unreasonable to require that all buses entering the terminal be accessible. Suggested language to provide these two exemptions is provided as attachment 1.

NJ Transit's 4.5 mile light rail system, the Newark City Subway, is not currently accessible, although there is accessible bus service running parallel to it. H.R. 2733 groups light rail systems with commuter, rapid, and intercity rail and requires that at least one car per train be accessible. However, many light rail systems, including the Newark City Subway, operate one car trains at a time. The one car per train requirement would require all cars to be accessible in this type of operation. Further, while the bill does not for the most part require retrofitting of existing equipment to achieve accessibility, the one car per train requirement in the case of the Newark City Subway could only be achieved through an expensive retrofit or through the premature purchase of now equipment. Although the Presidential Conference Cars in use on this system are forty years old, a rehabilitation project begun in 1987 has extended their expected useful life for at least 10 years. NJ Transit proposes that it would be within the spirit of the bill, to provide an exemption to the one car per train requirement in cases where the requirement would result in retrofitting existing equipment. Attachment 2 provides language for this proposed amendment.

The Newark City Subway also provides a unique situation with regard to the requirement for accessibility of key stations on light rail systems. The Subway was built in the 1930's, at a time when elevator access was not a common element in station designs. Nine of the eleven stations on the system would require the addition of elevators for accessibility. The design of many of the stations is such that it would be structurally impracticable to add elevators. The subway was rehabilitated in 1983 at a cost of $19.2 million and the additional cost of redesigning and reconstructing the 50-year-old stations to provide accessibility would be prohibitive. Section 402(B)(6) of the bill provides exemptions to accessibility requirements for newly constructed businesses where it is "structurally impracticable" to do so. A similar exemption should be provided for key light rail station accessibility.

NJ Transit administers funding for and oversees an extensive paratransit system throughout the state. A total of 859 paratransit vehicles have been distributed in the last six years to counties and local agencies which provide transportation to elderly and disabled persons in their communities. In administering the paratransit program, NJ Transit considers the mobility needs of the community as well as the cost of the service.

H.R. 2733 would require a level of paratransit service "comparable" to the level of service provided on a fixed route basis. While we agree with the need for the Federal government to guarantee disabled citizens the civil right of access to public transportation, the issue of mobility as provided through a paratransit system must, remain a local issue. Some communities may elect to provide paratransit services where no fixed route service exists. Others who have fixed-route service may determine that local conditions do not require comparable paratransit services, and the resources may be more efficiently used elsewhere. New Jersey's paratransit system has been developed with the input of the local disabled community. A Federal requirement for a comparable paratransit system in conjunction with a fixed-route transit system would inappropriately interfere with this local decisionmaking process.

Further, the cost of providing a level of paratransit service comparable to NJ Transit's fixed-route bus and commuter rail systems would be prohibitive. At a time when Federal and state funding is limited, compliance with this requirement could lead to cutbacks in other services that NJ Transit provides. While the Senate bill provides for exemptions in cases of "undue hardship," without definition of this phrase it is difficult to determine how it would be interpreted. I strongly urge that the requirement for a comparable level of paratransit service be deleted from the bill so that decisions on how to allocate the limited resources available for the mobility of all citizens remain at the local level.

NJ Transit supports the basic intent of H.R. 2733. As I have noted, we have a long history of working with the disabled community in New Jersey to ensure that our service is accessible to the greatest extent feasible given financial and technological limitations. Our record demonstrates that we understand the importance or providing disabled citizens with the essential civil right of mobility. I would respectfully request that H.R. 2733 be amended to recognize these difficulties. I believe such amendments can be structured so as not to interfere with the civil rights of disabled citizens.

ATTACHMENT 1

Language included in S.933 (Section 203(e)) provides for temporary relief where lifts are unavailable. NJ Transit urges that this section be included in the H.R. 2733, and that a new paragraph be added to this section as follows (proposed new language is italic).

Section 203

(e) Temporary Relief Where Lifts are Unavailable . . .

. . . (3) that the public entity seeking temporary relief had made good faith efforts to locate a qualified manufacturer to supply the lifts to the manufacturer of such buses in sufficient time to comply with such solicitation; and

(4) *that if a qualified manufacturer had been found, the bus manufacturer was unable to certify that installation of the lift would not impact the structural integrity, operating performance, and warranty of the bus; and*

(*5*) that any further delay in purchasing new buses necessary to obtain such lifts would significantly impair transportation services in the community served by the public entity.

NJ Transit further urges that a new Section 203(f) be added to the bill as it was passed by the Senate which reads:

(f) Temporary relief where terminals are not accessible.—With respect to the purchase of new buses, a public entity may apply for, and the Secretary of Transportation may temporarily relieve such public entity from the obligation to purchase new buses that are readily accessible to and usable by individuals with disabilities if such public entity demonstrates that the terminal to be served by the buses is not readily accessible. Such temporary relief will end if the terminal is made accessible under the terms of this Act.

ATTACHMENT 2

Section 303(g)(2) should be changed to read as follows:

(2) Intercity, Rapid, Light, and Commuter Rail Systems.—

(*a*) *Except as provided in paragraph (b) of this section*, with respect to vehicles operated by intercity, light, rapid and commuter rail systems, for purposes of this Act and section 540 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for an individual or entity to fail to have at least one car per train that is accessible to individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in any event in no less than 5 years.

(*b*) *The Secretary has the authority to grant an exemption to the provision in paragraph (a) above if the provision would result in retrofitting all existing vehicles because a transit authority operates only one car train.*

AMERICAN ASSOCIATION OF AMERICAN RAILROADS,
Washington, DC, November 10, 1989.

Hon. Thomas A. Luken,
Chairman, Subcommittee on Transportation and Hazardous Materials, Committee on Energy and Commerce, House of Representatives, Washington, DC.

Re: Hearings on H.R. 2273, "Americans with Disabilities Act of 1989"

DEAR MR. CHAIRMAN: On September 28, 1989 you chaired a hearing on H.R. 2273 which has the laudable and universally supported objective of eliminating discrimination against individuals with mental or physical disabilities. Unfortunately this proposed legislation is so broad and ambiguous that employees, prospective employees, and employers will have no clear guidance as to their rights and obligations. We request that this letter be included in the record of your hearings.

The railroads have concerns with provisions in these bills which are undoubtedly shared by other employers, but also anticipate problems which will be unique to the railroad industry.

Of general concern is Section 205 which provides for enforcement through the remedies set forth in Title VII of the Civil Rights Act of 1964 and the remedies and procedures available under Section 1981 of the Revised Statutes (42 U.S.C. sec. 1981). This latter section provides for suits by individuals without prior administrative requirements and permits jury trials with a variety of potential damages, including punitive damages. Litigation can be instituted on the bare allegation that an individual is ". . . about to be subject to discrimination."

The availability of Section 1981 procedures and remedies would afford a redundant avenue of litigation even though the Title VII procedures and remedies have proven workable and equitable and include the opportunity for court action when individuals are not satisfied with administrative results. On the other hand, Section 1981 would afford a hunting license to plaintiffs and their attorneys without any incremental effect in preventing discrimination and often with the effect of penalizing an employer when no discrimination has occurred. In passing S. 933 the Senate rejected the proposed private cause of action under section 1981 of the Revised Statutes. We recommend that the House also reject this proposal.

The vague standards in the legislation can only lead to expensive and burdensome litigation. Title II would define a "qualified individual with a disability" as one who can perform the "essential functions of ah employment position." This not only will require defining the "essential functions" of every position a person with a disability holds or desires, but undoubtedly will lead to litigation. Section 202 provides that discrimination includes "denial . . . because of the need for reasonable accommodation" and limits "reasonable accommodation" to arrangements or actions which would not cause "undue hardship on the operation of its (the employer's) business." The term "undue hardship" lacks definition and could be interpreted as imposing no real limitation on the nature of required accommodations. The Act thus creates rights and obligations with little or no guidance as to which attempts to comply will satisfy the Act. The Equal Employment Opportunity commission is to issue regulations, but they are almost certain to be ambiguous because of the terms of the statute. We urge that Congress and the EEOC adopt the language and intent of the relevant provisions of the Rehabilitation Act of 1973 (29 U.S.C. 794) to avoid unnecessary litigation over developed concepts.

The proposed legislation presents a unique set of problems for the railroad industry. Railroads are required to provide their employees with a safe place to work. This has been construed to mean that it is a violation of that duty to allow a person to perform a job beyond his physical capabilities. To comply with that duty, railroads have medical standards which, if not followed, can be the basis of liability under the Federal Employers Liability Act (45 U.S.C. sec. 51 et seq.). There is a natural conflict between the duty to provide a safe place to work and the proposed legislation requiring the employment of people with disabilities.

For example, railroads may be held liable for allowing employees with heart conditions to perform strenuous work under the FELA if those employees suffer heart attacks. Additionally, railroads may be liable for injuries caused by fellow employees with disabilities who must be employed under the proposed legislation.

Section 101(b) of H.R. 2273, in describing defenses available to employers, provides for qualification standards and specifies that such standards may include ". . . requiring that the current use of alcohol or drugs by an alcoholic or drug abuser not pose a direct threat to property or the safety of others in the program." Thus the bill would "appear to define alcoholism and drug addiction as disabilities and preclude denial of employment of alcoholics or drug addicts unless current use could be proven and it could be demonstrated that such use poses a threat to property or the safety of others. Existing regulations promulgated by the Federal Railroad Administration, as well as pending legislation, prohibit unauthorized use of controlled substances whether on duty or off duty without requiring a specific finding of impairment or a showing that there is an immediate threat to property or the safety of others. The language of the bill assumes that there can be instances where the current use of drugs might be tolerated. Thus, the language of Section 101(b)(2)(a) is at cross-purposes with the objective of totally eliminating drug use by employees in safety sensitive positions in the railroad industry as a threat to the safety of employees and the public. We urge that the House adopt the language of Section 104 of S. 933 as passed by the Senate.

Sincerely,

William H. Dempsey, *President.*

The President's Committee on
Employment of People With Disabilities,
Washington, DC, October 20, 1989.

Hon. Thomas Luken,
Chairman, Subcommittee on Transportation and Hazardous Materials,
Washington, DC.

Dear Mr. Chairman: Thank you for the opportunity to respond to several concerns expressed by members of Congress during Committee hearings on the Americans with Disabilities Act.

The President's Committee has conducted consensus meetings with leaders in business, government, rehabilitation, and disability rights in 45 communities over the last seven years. These meetings have enabled communities to identify the major barriers to employment of people with disabilities. Consistently, inaccessible transportation services have been identified as a major barrier, second only to discriminatory attitudes. Therefore, the President's Committee feels strongly that fully accessible public transportation is essential to full employment of people with disabilities.

Prior to addressing specific concerns raised during the hearings, I would like to share with you a recent article, copy attached, published in "Report on Disability Programs," entitled "Transit Agencies Finding Costs of Lifts Cheaper Than Providing Paratransit." We believe that the economics of mainline lift equipped buses versus paratransit is not limited to Tulsa, Atlanta and Seattle.

I would now like to address, from our perspective, the accessibility requirements under the Americans with Disabilities Act for intercity and commuter rail service. We believe there are several misunderstandings that need clarification.

The ADA, as we understand it, does not impose any additional accessibility requirements on Amtrak. In fact it appears the bill represents a reduction in obligation by deferring current requirements for twenty years. As we understand current statutory and regulatory mandates, Amtrak was required to be completely accessible as of July 1989. That being the case, Amtrak could be required to make stations accessible immediately. The ADA, on the other hand, would permit Amtrak to phase in compliance gradually without the threat of immediate action.

It seems that some witnesses assume that an accessible restroom would be a necessary component of every accessible rail vehicle; that wheelchair securement devices would be required; or, in some cases, that vehicle lifts would be mandated. As I understand it, the bill does not specify any of those items but, like the Architectural Barriers Act on which it was partly modeled, requires only that new vehicles meet standards for accessibility.

Accessibility involves more than access for wheelchair users. Therefore, we believe, all new vehicles should meet minimum requirements for lighting, slip resistant surfaces, clearances, handrails, et cetera and the regulations should deal with the requirements for other accessible elements such as restrooms. Congress can ensure that regulations appropriately address these issues through report language or legislative history.

Amtrak representatives and the American Institute of Architects have expressed concern about the cost of modification that would be necessary to the stations Amtrak uses. In all likelihood the Uniform Federal Accessibility Standards [UFAS] would be the minimum design standards secured for the Act. Therefore, there would be no obligations in terms of new or altered construction by the ADA. Furthermore, under the ADA, Amtrak would have more of an opportunity to develop additional cost-sharing arrangements with entities that currently own stations used by Amtrak. Certainly, both the Architectural Carriers Act and UFAS would have a substantial history to guide compliance without causing hardship.

The commuter rail operators allude to two common myths among transportation agencies: (1) That serving persons with disabilities will delay on-time performance. Our response to that is, to our knowledge, even in bus systems where complex lifts must be deployed and ridership is high, there is no evidence to substantiate this allegation. (2) That serving persons with disabilities will result in lost seating. Our response to that is, it is our understanding, that in level-boarding rapid and commuter rail systems it is precisely because every car is accessible that seating is not lost. Wheelchair users can fit into available space, provided for standees, on several cars instead of the additional maneuvering clearance which would be required if several wheelchairs were required to be accommodated on the same car.

Mr. Chairman, the ADA is, above all else, civil rights legislation. It is good solid legislation that addresses years of discrimination against people with disabilities. We believe that a look at the facts will alleviate many of the concerns of the transit industry.

We feel the above information is vital for the ADA. We believe passage of the ADA will provide the essential foundation for full employment and full participation in society by our Nation's citizens with disabilities.

Sincerely,

JUSTIN DART, *Chairman.*

TRANSIT AGENCIES FINDING COSTS OF LIFTS CHEAPER THAN PROVIDING PARATRANSIT

Economics of a local transit system will have profound effects on that system's ability to serve people with disabilities, the vice chairman of the Metropolitan Tulsa Transit Authority [MTTA] told conferees at the American Public Transit Association's annual meeting last week.

"The first major step in addressing the economic problems is for the local transit board to develop a total annual operating budget for the entire program," explained Brook D. Tarbel. "One portion of this budget will deal with the cost of serving people with disabilities. How much money is allocated to this item of the budget will dictate operation of 'The Decision Making Process in the Choice of Services for Persons with Disabilities'."

Tarbel described the effects of economics on MTTA's system. While the total amount of money in the budget decreased over the last four years, the city of Tulsa had to pay a higher percentage of the budget, with fewer dollars coming from the state and federal governments, he said. During that time, the city signed a contract for paratransit service, refusing to buy lift-equipped buses. Between February 1987 and June 1989, the total number of paratransit rides increased from 3,731 trips per month to 18,897 trips per month. In the last fiscal year, the total; cost of the paratransit service was $988,460, more than 17 percent of MTTA's total operating budget.

The cost of the paratransit service, combined with a change in the composition of the transit authority's board, has since led to a change in the stance of the MTTA on lift-equipped buses, Tarbel explained. It has placed an order for 16 lift-equipped buses due for delivery in February 1990. Since the federal government pays 95 percent of the fixed-lift cost, the total expense to the transit system for the lifts will be $600 per bus.

"This figure indicates that to make Tulsa's entire fleet of 84 buses totally accessible in the future would cost the city $50,400," said Tarbel. "This figure can hardly be considered a significant cost when compared to the paratransit expense." Atlanta and Seattle also have found that the cost of buying lift-equipped buses is actually less than the cost of paratransit, he added.

Legislative Update

Budget Reconciliation. The Senate Finance Committee October 3 approved a proposal to raise the amount of money that certain Social Security recipients may earn without suffering a reduction in their benefits. The panel also voted to make the Social Security Administration an independent agency, moving it out of the Department of Health and Human Services. The provisions were part of the budget reconciliation will being considered by the committee. The bill also contains other measures related to disability, but details were not available at press time. See the next issues of RDP for more information.

Labor-HHS-Education Appropriations. As RDP went to press, Senate and House conferees were meeting to hammer out differences in their different versions of appropriations for the departments of labor, education and health and human services. The Senate late in September approved a bill that provides $2.083 billion of education of the handicapped programs, while the House in early August approved about $20 million less for those programs. Once conferees reach an agreement, the compromise must be approved by the full House and Senate.

SUBCOMMITTEE ON SURFACE TRANSPORTATION

HEARINGS ON

AMERICANS WITH DISABILITIES ACT

SEPTEMBER 20 AND 26, 1989

SUMMARY OF SUBJECT MATTER

The hearings will provide testimony from the Department of Transportation, the disability community, public transit authorities, and the intercity bus industry on the transportation provisions within the proposed Americans with Disabilities Act (H.R. 2273 and S. 933) which would ensure accessibility for the disabled to public and private transportation services.

(1) Existing Laws and Regulations

Current DOT regulations (primarily interpretations of Section 504 of the Rehabilitation Act of 1973 and Section 317 of the Surface Transportation Act of 1982) require that transit systems provide the disabled with access to their systems. Transit systems can currently provide access through the use of lift-equipped buses along a fixed-route, paratransit services (generally, small vans which provide door-to-door service), or a combination of the two. Minimum service criteria are included in the regulations.

Prior to a recent Third Circuit Appeals Court decision, the DOT regulations provided that a transit system which expended 3% of its average annual operating budget on serving the disabled would be considered in compliance with the regulations, regardless of the level of service which it actually provided. The Appeals Court held that there was no basis in current law for an exemption from minimum service criteria simply because a system meets an arbitrary 3% "cost-cap" standard.

(2) H.R. 2273 and S. 933

H.R. 2273, which now has 219 cosponsors, was referred to the House Committees on the Judiciary; Education and Labor; Energy and Commerce; as well as Public Works and Transportation. Hearings have been held in the House; but, so far, no Committee has reported the bill.

The companion bill, S. 933, was referred exclusively to the Senate Committee on Labor and Human Resources, which reported the bill unanimously on August 2, 1989. Prior to reporting the bill, the Committee, in consultation with the White House and representatives of the disability community, approved amendments to the bill which made it acceptable to the White House. At that time, President Bush endorsed the legislation and said that he was "committed to producing a bill which can be signed this year."

On September 7, 1989, the Senate passed S. 933, as amended, by the overwhelming margin of 76 to 8 (see attachment, Senate Rollcall Vote No. 173 Leg.).

The following lists the highlights of the original legislation, as well as the amended, Senate-passed version:

Public Transportation Provided by Public Entities

H.R. 2273	S.933, as passed by Senate
Prohibits discrimination against the disabled in the provision of services by state and local government entities.	Essentially the same.
Prohibits the purchase or lease of any new fixed-route bus or rail vehicle if such vehicle is not accessible to persons with disabilities (including wheelchair users).	Essentially the same.
No provision.	DOT may waive requirement to purchase accessible, new buses if: (1) Initial solicitation specified lifts; (2) No lifts were available from any manufacturer; (3) Public entity made good faith efforts to locate a manufacturer; and (4) Any delay while waiting for lifts would significantly impair transportation services.
Requires "demonstrated good faith efforts" for accessibility in purchase or lease of used vehicles.	Essentially the same.
Requires, to the maximum extent feasible, accessible remanufactured vehicles when remanufacturing will add at least 5 years to the life of the vehicle.	Essentially the same.

H.R. 2273	S. 933, as passed by Senate
Requires systems which offer fixed-route service to offer comparable paratransit service in accordance with DOT regulations.	Same, unless public transit entity demonstrates that provision of paratransit or special transportation service would impose undue financial burden. Then, paratransit service would be required only up to the point that it becomes an undue financial burden.
Demand responsive systems must purchase accessible vehicles unless they demonstrate that their system, in its entirety, provides an equivalent level of service to both the disabled and the general public.	Essentially the same.
Newly built public transportation facilities must be accessible.	Essentially the same.
Alterations to existing facilities must incorporate accessibility to the "maximum extent feasible".	Essentially the same.
Rail facilities, when viewed in their entirety, must be accessible.	Essentially the same.
Requires rail systems to make one car per train accessible as soon as practicable, but at least within 5 years.	Essentially the same.
Key rapid rail, commuter rail and light rail transit stations must be accessible within 3 years, except that DOT can extend the deadline by up to 20 years for extraordinarily expensive structural changes to, or replacement of, existing facilities.	Essentially the same.

H.R. 2273	S. 933, as passed by Senate
DOT has 8 months to issue regulations on public transit accessibility.	DOT has one year to issue regulations.
Effective date for bill is upon enactment.	Effective date is 18 months after enactment, except in case of fixed-route requirements, which become effective upon enactment.

Public and Private Transportation Provided by Private Entities

Requires purchase or lease of accessible, new vehicles (except automobiles) which carry 12 or more passengers, including over-the road coaches.	Requires purchase or lease of accessible, new vehicles (except automobiles) which carry 16 or more passengers in private transportation, or any size vehicle (except automobiles) in public transportation; except for vehicles which are operated as part of a demand responsive system which provides when viewed in its entirety, an equivalent level of service to the disabled as it provides to the general public.
	Requires purchase of accessible, new over-the-road buses in 7 years for small providers and 6 years for other providers. Mandates an OTA study of the access needs of the disabled to over-the-road buses, as well as the most cost-effective way to achieve this accessibility, to be completed in 3 years.

9/14/89

abled Americans. Mark Wellman is not alone. There are millions of disabled Americans who want and deserve full participation in American life and yearn for the opportunities to be productive.

With the passage of this legislation, we can pave the way for these citizens to overcome the barriers they now face and begin the journey to economic productivity and self-independence.

I urge my colleagues to support this necessary and overdue guarantee of simple fairness and justice.

• Mr. HATCH. Mr. President, before the Senate votes on final passage, I want to thank the following staff for their hard work on S. 933. For Senator HARKIN: Bobby Silverstein, Katie Bay, Terry Muilenberg; for Senator KENNEDY: Carolyn Osolinik and Michael Iskowitz; for Senator DURENBERGER: Carolyn Boos; for Senator MCCAIN: Mark Buse; and Steve Bettis, Chris Lord, Millard Wyatt, Evan Liddiard, Kris Iverson and Mark Disler of my staff.

Their dedication to this bill was important to its success, and of course, I thank all of the Senators for their diligent efforts.

• Mr. MURKOWSKI. Mr. President, I am happy to support and to cosponsor the American's With Disabilities Act of 1989 (ADA). As the ranking minority member of the Committee on Veterans' Affairs, I applaud the administration and Senators DOLE, KENNEDY, HARKIN, and HATCH for the hard work in reaching an agreement on this important legislation.

I have received many letters of support from various veterans' service organizations for S. 933 and I believe that it is vital to ensure equal rights to disabled veterans who served their country in such an extraordinary manner. I am delighted to see that small businesses are in some ways protected in this bill while still eliminating discriminatory actions against individuals with disabilities.

ADA is a timely and compassionate bill that allows those 43 million disabled Americans to work, live, enjoy life, and contribute to their communities. These are truly the greatest rights any American should have. I wholeheartedly support S. 933.•

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendments to be proposed, the question is on agreeing to the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and the third reading of the bill.

The bill was ordered to be engrossed for a third reading, and was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

Mr. KENNEDY addressed the Chair.

The PRESIDING OFFICER. The Senator from Massachusetts.

Mr. KENNEDY. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Washington (Mr. ADAMS), the Senator from Montana (Mr. BAUCUS), the Senator from Texas (Mr. BENTSEN), the Senator from Louisiana (Mr. BREAUX), the Senator from Ohio (Mr. GLENN), the Senator from Hawaii (Mr. INOUYE), the Senator from Ohio (Mr. METZENBAUM), the Senator from Maryland (Ms. MIKULSKI), the Senator from Arkansas (Mr. PRYOR), the Senator from North Carolina (Mr. SANFORD), and the Senator from Tennessee (Mr. SASSER) are necessarily absent.

I further announce that, if present and voting, the Senator from Maryland (Ms. MIKULSKI) would vote "yea."

Mr. SIMPSON. I announce that the Senator from Montana (Mr. BURNS), the Senator from Mississippi (Mr. LOTT), the Senator from Alaska (Mr. MURKOWSKI), the Senator from Delaware (Mr. ROTH), and the Senator from New Hampshire (Mr. RUDMAN) are necessarily absent.

The PRESIDING OFFICER. Are there any other Senators in the Chamber who desire to vote?

The result was announced—yeas 76, nays 8, as follows:

[Rollcall Vote No. 173 Leg.]

So the bill (S. 933), as amended, was passed, as follows:

(NOTE.—The text of S. 933 as passed by the Senate will appear in a subsequent edition of the RECORD.)

Mr. MITCHELL. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. DOLE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

MORNING BUSINESS

Mr. MITCHELL. Mr. President, I ask unanimous consent that there be a period for morning business with Senators permitted to speak therein and that the distinguished Senator from Hawaii, Senator MATSUNAGA, be recognized for 5 minutes, that upon the completion of his remarks the Senate return to legislative business to complete the wrapup and concluding statements of the bill just passed and that Senator MATSUNAGA's remarks appear in the RECORD at an appropriate place.

The PRESIDING OFFICER. Without objection, it is so ordered.

AN OCTOGENARIAN FUTURIST

Mr. MATSUNAGA. Mr. President, I rise today to salute an octogenarian futurist whose intellect focuses on the next two centuries while his career as a Hawaiian journalist and broadcaster spans more than six decades. Kiyoshi Okubo of Hilo foresees the fading of ethnic and national distinctions by the 21st century; his vantage point is that of a scholar of ethnic cultures and languages who today continues to publish a Japanese newspaper on the Aloha State's "Big Island" of Hawaii at an age when his contemporaries are content to rock on lanais.

Last May, Okubo, who is 83, was the lone American to be honored by Emperor Akihito among those selected for recognition with the Order of the Rising Sun. He was accorded this honor for his many years of advancing cultural and scientific exchange between Japan and Hawaii, including a joint United States-Japan study to develop a tsunami (tidal wave) barrier for Hilo Bay and contributions from each of Japan's 47 prefectures for Hilo's Queen Liliuokalani Park. He is said to be nearly as conversant in Hawaiian as he is in English and he still broadcasts weekly on Sunday morning radio, publishes a twice-monthly newspaper, and operates a cultural museum on Japanese immigration to Hawaii.

For all his activity, however, Okubo is best known as a "dreamer," one who envisions an era of "The Pacific Man," the evolutionary product of trans-Pacific cultural exchange. As one who shares his dream, Mr. President, I was most interested in a recent newspaper article on Kiyoshi Okubo which appeared in the Honolulu Sunday Star-Bulletin & Advertiser written by Hugh

A BILL

To establish a clear and comprehensive prohibition of discrimination on the basis of disability.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) Short Title.—This Act may be cited as the "Americans with Disabilities Act of 1989".

(b) Table of Contents.—The table of contents is as follows:

Sec. 1. Short title; table of contents.
Sec. 2. Findings and purposes.
Sec. 3. Definitions.

TITLE I—GENERAL PROHIBITION AGAINST DISCRIMINATION

Sec. 101. Forms of discrimination prohibited.

TITLE II—EMPLOYMENT

Sec. 201. Definitions.
Sec. 202. Discrimination.
Sec. 203. Posting notices.
Sec. 204. Regulations.
Sec. 205. Enforcement.

TITLE III—PUBLIC SERVICES

Sec. 301. Definition of qualified individual with a disability.
Sec. 302. Discrimination.
Sec. 303. Actions applicable to public transportation considered discriminatory.
Sec. 304. Regulations.
Sec. 305. Enforcement.

TITLE IV—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

Sec. 401. Definitions.
Sec. 402. Prohibition of discrimination by public accommodations.
Sec. 403. Prohibition of discrimination in public transportation services provided by private entities.
Sec. 404. Regulations.
Sec. 405. Enforcement.

TITLE V—TELECOMMUNICATIONS RELAY SERVICES

Sec. 501. Definitions.
Sec. 502. Telecommunications relay services.
Sec. 503. Regulations.
Sec. 504. Enforcement.

TITLE VI—MISCELLANEOUS PROVISIONS

Sec. 601. Construction.
Sec. 602. Prohibition against retaliation.
Sec. 603. State immunity.
Sec. 604. Regulations by the Architectural and Transportation Barriers Compliance Board.
Sec. 605. Attorney's fees.
Sec. 606. Effective date.

SEC. 2. FINDINGS AND PURPOSES.

(a) FINDINGS.—Congress finds that—

(1) some 43,000,000 Americans have one or more physical or mental disabilities, and this number is increasing as the population as a whole is growing older;

(2) historically, society has tended to isolate and segregate individuals with disabilities, and, despite some improvements, such forms of discrimination against individuals with disabilities continue to be a serious and pervasive social problem;

(3) discrimination against individuals with disabilities persists in such critical areas as employment, housing, public accommodations, education, transportation, communication, recreation, institutionalization, health services, voting, and access to public services;

(4) unlike individuals who have experienced discrimination on the basis of race, sex, national origin, religion, or age, individuals who have experienced discrimination on the basis of disability have often had no legal recourse to redress such discrimination;

(5) individuals with disabilities continually encounter various forms of discrimination, including outright intentional exclusion, the discriminatory effects of architectural, transportation, and communication barriers, overprotective rules and policies, failure to make modifications to existing facilities and practices, exclusionary qualification standards and criteria, segregation,

and relegation to lesser services, programs, activities, benefits, jobs, or other opportunities;

(6) census data, national polls, and other studies have documented that people with disabilities, as a group, occupy an inferior status in our society, and are severely disadvantaged socially, vocationally, economically, and educationally;

(7) individuals with disabilities are a discrete and insular minority who have been faced with restrictions and limitations, subjected to a history of purposeful unequal treatment, and relegated to a position of political powerlessness in our society, based on characteristics that are beyond the control of such individuals and resulting from stereotypic assumptions not truly indicative of the individual ability of such individuals to participate in, and contribute to, society;

(8) the Nation's proper goals regarding individuals with disabilities are to assure equality of opportunity, full participation, independent living, and economic self-sufficiency for such individuals; and

(9) the continuing existence of unfair and unnecessary discrimination and prejudice denies people with disabilities the opportunity to compete on an equal basis and to pursue those opportunities for which our free society is justifiably famous, and costs the United

State billions of dollars in unnecessary expenses resulting from dependency and nonproductivity.

(b) PURPOSE.—It is the purpose of this Act—

(1) to provide a clear and comprehensive National mandate for the elimination of discrimination against individuals with disabilities;

(2) to provide clear, strong, consistent, enforceable standards addressing discrimination against individuals with disabilities;

(3) to ensure that the Federal Government plays a central role in enforcing the standards established in this Act on behalf of individuals with disabilities; and

(4) to invoke the sweep of congressional authority, including its power to enforce the fourteenth amendment and to regulate commerce in order to address the major areas of discrimination faced day-to-day by people with disabilities.

SEC. 3. DEFINITIONS.

As used in this Act:

(1) AUXILIARY AIDS AND SERVICES.—The term "auxiliary aids and services" shall include—

(A) qualified interpreters or other effective methods of making aurally delivered materials available to individuals with hearing impairments;

(B) qualified readers, taped texts, or other effective methods of making visually delivered materials available to individuals with visual impairments;

(C) acquisition or modification of equipment or devices; and

(D) other similar services and actions.

(2) Disability.—The term "disability" means, with respect to an individual—

(A) a physical or mental impairment that substantially limits one or more of the major life activities of such individual;

(B) a record of such an impairment; or

(C) being regarded as having such an impairment.

(3) Reasonable accommodation.—The term "reasonable accommodation" shall include—

(A) making existing facilities used by employees readily accessible to and usable by individuals with disabilities; and

(B) job restructuring, part-time or modified work schedules, reassignment, acquisition or modification of equipment or devices, appropriate adjustment or modifications of examinations and training materials, adoption or modification of procedures or protocols, the provision of qualified readers or interpreters, and other similar accommodations.

(4) STATE.—The term "State" means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, the Canal Zone, the Trust Territory of the Pacific Islands, and the Commonwealth of the Northern Mariana Islands.

TITLE I—GENERAL PROHIBITION AGAINST DISCRIMINATION

SEC. 101. FORMS OF DISCRIMINATION PROHIBITED.

(a) IN GENERAL.—

(1) SERVICES, PROGRAMS, ACTIVITIES, BENEFITS, JOBS, OR OTHER OPPORTUNITIES.—Subject to the standards and procedures established in titles II through V, it shall be discriminatory to subject an individual or class of individuals, directly or through contractual; licensing, or other arrangements, on the basis of disability, to any of the following:

(A) Denying the opportunity to participate in or benefit from a service, program, activity, benefit, job, or other opportunity.

(B) Affording an opportunity to participate in or benefit from a service, program, activity, bene-

fit, job, or other opportunity that is not equal to that afforded others.

(C) Providing a service, program, activity, benefit, job, or other opportunity that is less effective than that provided to others.

(D) Providing a service, program, activity, benefit, job, or other opportunity that is different or separate, unless such action is necessary to provide the individual or class of individuals with a service, program, activity, benefit, job, or other opportunity that is as effective as that provided to others.

(E) Aiding or perpetuating discrimination by providing significant assistance to an agency, organization, or individual that discriminates.

(F) Denying the opportunity to participate as a member of boards or commissions.

(G) Otherwise limiting the enjoyment of any right, privilege, advantage, or opportunity enjoyed by others.

(2) EQUAL OPPORTUNITY.—For purposes of this Act, aids, benefits, and services to be equally effective, must afford an individual with a disability an equal opportunity to obtain the same result, to gain the same benefit, or to reach the same level of achievement, in

the most integrated setting appropriate to the individual's needs.

(3) OPPORTUNITY TO PARTICIPATE.—Notwithstanding the existence of separate or different programs or activities provided in accordance with this section, an individual with a disability shall not be denied the opportunity to participate in such programs or activities that are not separate or different.

(4) ADMINISTRATIVE METHODS.—An individual or entity shall not, directly or through contractual or other arrangements, utilize standards or criteria or methods of administration—

(A) that have the effect of discrimination on the basis of disability;

(B) that have the purpose or effect of defeating or substantially impairing the accomplishment of the objectives of the services, programs, activities, benefits, jobs, or other opportunities provided with respect to an individual with a disability; or

(C) that perpetuate the discrimination of others who are subject to common administrative control or are agencies of the same State.

(5) RELATIONSHIPS OR ASSOCIATIONS.—It shall be discriminatory to exclude or otherwise deny equal services, programs, activities, benefits, jobs, or other

opportunities to an individual or entity because of the relationship to, or association of, that individual or entity with another individual with a disability.

(b) DEFENSES.—

(1) IN GENERAL.—It shall be a defense to a charge of discrimination under this Act that an alleged application of qualification standards, selection criteria, performance standards or eligibility criteria that exclude or deny services, programs, activities, benefits, jobs, or other opportunities to an individual with a disability has been demonstrated by the covered entity to be both necessary and substantially related to the ability of an individual to perform or participate, or take advantage of the essential components of such particular program, activity, job, or other opportunity and such performance, participation, or taking advantage of such essential components cannot be accomplished by applicable reasonable accommodations, modifications, or the provision of auxiliary aids or services.

(2) QUALIFICATION STANDARDS.—The term "qualification standards" may include—

(A) requiring that the current use of alcohol or drugs by an alcoholic or drug abuser not pose a direct threat to property or the safety of others in the workplace or program; and

(B) requiring that an individual with a currently contagious disease or infection not pose a direct threat to the health or safety of other individuals in the workplace or program.

TITLE II—EMPLOYMENT

SEC. 201. DEFINITIONS.

As used in this title:

(1) COMMISSION.—The term "Commission" means the Equal Employment Opportunity Commission established by section 705 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–4).

(2) EMPLOYEE.—

(A) IN GENERAL.—The term "employee" means an individual employed by an employer.

(B) EXCEPTION.—The term "employee" shall not include any individual elected to public office in any State or political subdivision of any State by the qualified voters thereof, or any individual chosen by such officer to be on such officer's personal staff, or an appointee on the policy making level or an immediate adviser with respect to the exercise of the constitutional or legal powers of the office.

(C) LIMITATION ON EXCEPTION.—The exception contained in subparagraph (B) shall not

2527

include employees subject to the civil service laws of a State government, governmental agency or political subdivision.

(3) EMPLOYER.—

(A) IN GENERAL.—The term "employer" means a person engaged in an industry affecting commerce who has 15 or more employees for each working day in each of 20 or more calendar weeks in the current or preceding calendar year, and any agent of such a person.

(B) EXCEPTIONS.—The term "employer" does not include—

(i) the United States, a corporation wholly owned by the government of the United States, or an Indian tribe; or

(ii) a bona fide private membership club (other than a labor organization) that is exempt from taxation under section 501(c) of the Internal Revenue Code of 1986.

(4) PERSON, ETC.—The terms "person", "labor organization", "employment agency", "commerce", and "industry affecting commerce", shall have the same meaning given such terms in section 701 of the Civil Rights Act of 1964 (42 U.S.C. 2000e).

(5) QUALIFIED INDIVIDUAL WITH A DISABILITY.—The term "qualified individual with a disability" means an individual with a disability who, with or without reasonable accommodation, can perform the essential functions of the employment position that such individual holds or desires.

SEC. 202. DISCRIMINATION.

(a) GENERAL RULE.—No employer, employment agency, labor organization, or joint labor-management committee shall discriminate against any qualified individual with a disability because of such individual's disability in regard to job application procedures, the hiring or discharge of employees, employee compensation, advancement, job training, and other terms, conditions, and privileges of employment.

(b) CONSTRUCTION.—As used in subsection (a), the term "discrimination" includes—

(1) the failure by an employer, employment agency, labor organization, or joint labor-management committee to make reasonable accommodations to the known physical or mental limitations of a qualified individual with a disability who is an applicant or employee unless such entity can demonstrate that the accommodation would impose an undue hardship on the operation of its business;

(2) the denial of employment opportunities by a covered employer, employment agency, labor organization, or joint labor-management committee to an applicant or employee who is a qualified individual with a disability if the basis for such denial is because of the need of the individual for reasonable accommodation; and

(3) the imposition or application by a covered employer, employment agency, labor organization or joint labor-management committee of qualification standards, tests, selection criteria or eligibility criteria that identify or limit, or tend to identify or limit, a qualified individual with a disability, or any class of qualified individuals with disabilities, unless such standards, tests or criteria can be shown by such entity to be necessary and substantially related to the ability of an individual to perform the essential functions of the particular employment position.

SEC. 203. POSTING NOTICES.

Every employer, employment agency, labor organization, or joint labor-management committee covered under this title shall post notices in an accessible format to applicants, employees, and members describing the applicable provisions of this Act, in the manner prescribed by section 711 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–10).

SEC. 204. REGULATIONS.

Not later than 180 days after the date of enactment of this Act, the Commission shall issue regulations in an accessible format to carry out this title in accordance with subchapter II of chapter 5 of title 5, United States Code.

SEC. 205. ENFORCEMENT.

The remedies and procedures set forth in sections 706, 709, and 710 of the Civil Rights Act of 1964 (42 U.S.C. 2000e-5, 2000e-8, and 2000e-9), and the remedies and procedures available under section 1981 of the Revised Statutes (42 U.S.C. 1981) shall be available, with respect to any individual who believes that he or she is being or about to be subjected to discrimination on the basis of disability in violation of any provisions of this Act, or regulations promulgated under section 204, concerning employment.

TITLE III—PUBLIC SERVICES

SEC. 301. DEFINITION OF QUALIFIED INDIVIDUAL WITH A DISABILITY.

As used in this title, the term "qualified individual with a disability" means an individual with a disability who, with or without reasonable modifications to rules, policies and practices, the removal of architectural, communication, and transportation barriers, or the provision of auxiliary aids and services, meets the essential eligibility requirements for the receipt of services or the participation in programs or activities provided by a State or agency or political subdivision of a

State or board, commission or other instrumentality of a State and political subdivision.

SEC. 302. DISCRIMINATION.

No qualified individual with a disability shall, by reason of his or her disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination by a State, or agency or political subdivision of a State or board, commission, or other instrumentality of a State and political subdivision.

SEC. 303. ACTIONS APPLICABLE TO PUBLIC TRANSPORTATION CONSIDERED DISCRIMINATORY.

(a) DEFINITION.—As used in this title, the term "public transportation" means transportation by bus or rail, or by any other conveyance (other than air travel) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

(b) VEHICLES.—

(1) NEW BUSES, RAIL VEHICLES, AND OTHER FIXED ROUTE VEHICLES.—It shall be considered discrimination for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for an individual or entity to purchase or lease a new fixed route bus of any size, a new intercity rail vehicle, a new commuter rail vehicle, a new rapid rail vehicle, a new light rail vehicle to be used for public transporta-

tion, or any other new fixed route vehicle to be used for public transportation and for which a solicitation by such individual or entity is made later than 30 days after the date of enactment of this Act, if such bus, rail, or other vehicle is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) USED VEHICLES.—If an individual or entity purchases or leases a used vehicle after the date of enactment of this Act, such individual or entity shall make demonstrated good faith efforts to purchase or lease a used vehicle that is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(3) REMANUFACTURED VEHICLES.—If an individual or entity remanufactures a vehicle, or purchases or leases a remanufactured vehicle, so as to extend its usable life for 5 years or more, the vehicle shall, to the maximum extent feasible, be readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(c) PARATRANSIT AS A SUPPLEMENT TO FIXED ROUTE PUBLIC TRANSPORTATION SYSTEM.—If an individual or entity operates a fixed route public transportation system to provide public transportation, it shall be considered

discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to fail to provide paratransit or other special transportation services sufficient to provide a comparable level of services as is provided to individuals using fixed route public transportation to individuals with disabilities, including individuals who use wheelchairs, who cannot otherwise use fixed route public transportation and to other individuals associated with such individuals with disabilities in accordance with service criteria established under regulations promulgated by the Secretary of Transportation.

(d) COMMUNITY OPERATING DEMAND RESPONSIVE SYSTEMS FOR THE GENERAL PUBLIC.—If an individual or entity operates a demand responsive system that is used to provide public transportation for the general public, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to purchase or lease a new vehicle, for which a solicitation is made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs unless the entity can demonstrate that such system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to that provided to the general public.

(e) NEW FACILITIES.—For purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for an individual or entity to build a new facility that will be used to provide public transportation services, including bus service, intercity rail service, rapid rail service, commuter rail service, light rail service, and other service used for public transportation that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(f) ALTERATIONS OF EXISTING FACILITIES.—With respect to a facility or any part thereof that is used for public transportation and that is altered by, on behalf of, or for the use of an individual or entity later than 1 year after the date of enactment of this Act, in a manner that affects or could affect the usability of the facility or part thereof, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to fail to make the alterations in such a manner that, to the maximum extent feasible, the altered portion of the facility, the path of travel to the altered area, and the bathrooms, telephones, and drinking fountains serving the remodeled area are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(g) Existing Facilities, Intercity Rail, Rapid Rail, Light Rail, and Commuter Rail Systems, and Key Stations.—

(1) Existing facilities.—Except as provided in paragraph (3), with respect to existing facilities used for public transportation, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for an individual or entity to fail to operate such public transportation program or activity conducted in such facilities so that, when viewed in the entirety, it is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) Intercity, rapid, light, and commuter rail systems.—With respect to vehicles operated by intercity, light, rapid and commuter rail systems, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for an individual or entity to fail to have at least one car per train that is accessible to individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in any event in no less than 5 years.

(3) Key stations.—For purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29

U.S.C. 794), it shall be considered discrimination for an individual or entity to fail to make stations in intercity rail systems and key stations in rapid rail, commuter rail and light rail systems readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in no event later than 3 years after the date of enactment of this Act, except that the time limit may be extended by the Secretary of Transportation up to 20 years for extraordinarily expensive structural changes to, or replacement of, existing facilities necessary to achieve accessibility.

SEC. 304. REGULATIONS.

(a) Attorney General.—Not later than 180 days after the date of enactment of this Act, the Attorney General shall promulgate regulations in an accessible format that implement this title (other than section 303), and such regulations shall be consistent with this title and with the coordination regulations under part 41 of title 28, Code of Federal Regulations (as in existence on January 13, 1978), applicable to recipients of Federal financial assistance under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794).

(b) Secretary of Transportation.—

(1) In general.—Not later than 240 days after the date of enactment of this Act, the Secretary of

Transportation shall promulgate regulations in an accessible format that include standards applicable to facilities and vehicles covered under section 303.

(2) CONFORMANCE OF STANDARDS.—Such standards shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 604(b).

SEC. 305. ENFORCEMENT.

The remedies, procedures, and rights set forth in section 505 of the Rehabilitation Act of 1973 (29 U.S.C. 794a) shall be available with respect to any individual who believes that he or she is being or about to be subjected to discrimination on the basis of disability in violation of any provisions of this Act, or regulations promulgated under section 304, concerning public services.

TITLE IV—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

SEC. 401. DEFINITIONS.

As used in this title:

(1) COMMERCE.—The term "commerce" means travel, trade, traffic, commerce, transportation, or communication among the several States, or between the District of Columbia and any State or between any for-

eign country or any territory or possession and any State or the District of Columbia or between points in the same State but through another State or the District of Columbia or foreign country.

(2) PUBLIC ACCOMMODATION.—

(A) IN GENERAL.—The term "public accommodation" means privately operated establishments—

(i)(I) that are used by the general public as customers, clients, or visitors; or

(II) that are potential places of employment; and

(ii) whose operations affect commerce.

(B) INCLUSIONS.—Public accommodations referred to in clause (i)(I) include auditoriums, convention centers, stadiums, theaters, restaurants, shopping centers, inns, hotels, and motels (other than inns, hotels, and motels exempt under section 201(b)(1) of the Civil Rights Act of 1964 (42 U.S.C. 2000a(b)(1))), terminals used for public transportation, passenger vehicle service stations, professional offices of health care providers, office buildings, sales establishments, personal and public service businesses, parks, private schools, and recreation facilities.

(3) PUBLIC TRANSPORTATION.—The term "public transportation" means transportation by bus or rail, or by any other conveyance (other than by air travel) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

SEC. 402. PROHIBITION OF DISCRIMINATION BY PUBLIC ACCOMMODATIONS.

(a) GENERAL RULE.—No individual shall be discriminated against in the full and equal enjoyment of the goods, services, facilities, privileges, advantages, and accommodations of any place of public accommodation, on the basis of disability.

(b) CONSTRUCTION.—As used in subsection (a), the term "discriminated against" includes—

(1) the imposition or application of eligibility criteria that identify or limit, or tend to identify or limit, an individual with a disability or any class of individuals with disabilities from fully and equally enjoying any goods, services, facilities, privileges, advantages, and accommodations;

(2) a failure to make reasonable modifications in rules, policies, practices, procedures, protocols, or services when such modifications may be necessary to afford such privileges, advantages, and accommodations

2540

unless the entity can demonstrate that making such modifications would fundamentally alter the nature of such privileges, advantages, and accommodations;

(3) a failure to take such steps as may be necessary to ensure that no individual with a disability is excluded, denied services, segregated or otherwise treated differently than other individuals because of the absence of auxiliary aids and services, unless the entity can demonstrate that taking such steps would result in undue burden;

(4)(A) a failure to remove architectural and communication barriers that are structural in nature in existing facilities, and transportation barriers in existing vehicles used by an establishment for transporting individuals (not including barriers that can only be removed through the retrofitting of vehicles by the installation of a hydraulic or other lift), where such removal is readily achievable; and

(B) where an entity can demonstrate that removal of a barrier under subparagraph (A) is not readily achievable, a failure to make such goods, services, facilities, privileges, advantages, and accommodations available through alternative methods if such methods are readily achievable;

(5) with respect to a facility or part thereof that is altered by, on behalf of, or for the use of an establishment later than one year after the date of enactment of this Act in a manner that affects or could affect the usability of the facility or part thereof, a failure to make the alterations in such a manner that, to the maximum extent feasible, the altered portion of the facility, the path of travel to the altered area, and the bathrooms, telephones, and drinking fountains serving the remodeled area, are readily accessible to and usable by individuals with disabilities;

(6) a failure to make facilities constructed for first occupancy later than 30 months after the date of enactment of this Act readily accessible to and usable by individuals with disabilities, except where an entity can demonstrate that it is structurally impracticable to do so, in accordance with standards set forth or incorporated by reference in regulations issued under this title; and

(7) in the case of an entity that uses a vehicle to transport individuals not covered under section 303 or 403—

(A) a failure to provide a level of transportation services to individuals with disabilities, in-

cluding individuals who use wheelchairs, equivalent to that provided for the general public; and

(B) purchasing or leasing a new bus, or vehicle that can carry in excess of 12 passengers, for which solicitations are made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

SEC. 403. PROHIBITION OF DISCRIMINATION IN PUBLIC TRANSPORTATION SERVICES PROVIDED BY PRIVATE ENTITIES.

(a) General Rule.—No individual shall be discriminated against on the basis of disability in the full and equal enjoyment of public transportation services provided by a privately operated entity that is primarily engaged in the business of transporting people, but is not in the principal business of providing air transportation, and whose operations affect commerce.

(b) Construction.—As used in subsection (a), the term "discrimination against" includes—

(1) the imposition or application by an entity of eligibility criteria that identify or limit, or tend to identify or limit, an individual with a disability or any class

of individuals with disabilities from fully enjoying the public transportation services provided by the entity;

(2) the failure of an entity to—

(A) make reasonable modifications consistent with those required under section 402(b)(2);

(B) provide auxiliary aids and services consistent with the requirements of section 402(b)(3); and

(C) remove barriers consistent with the requirements of section 402(b)(4); and

(3) the purchase or lease of a new vehicle (other than an automobile) that is to be used to provide public transportation services, and for which a solicitation is made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

SEC. 404. REGULATIONS.

(a) ACCESSIBILITY STANDARDS.—Not later than 240 days after the date of enactment of this Act, the Secretary of Transportation shall issue regulations in an accessible format that shall include standards applicable to facilities and vehicles covered under section 403.

(b) OTHER PROVISIONS.—Not later than 240 days after the date of enactment of this Act, the Attorney General shall

issue regulations in an accessible format to carry out the remaining provisions of this title not referred to in subsection (a) that include standards applicable to facilities and vehicles covered under section 402.

(c) STANDARDS.—Standards included in regulations issued under subsections (a) and (b) shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 604(b).

SEC. 405. ENFORCEMENT.

Sections 802(i), 813, and 814 (a) and (d) of the Fair Housing Act (42 U.S.C. 3602(i), 3613, and 3614 (a) and (d)) shall be available with respect to any aggrieved individual, except that—

(1) any reference to a discriminatory housing practice or breach of a conciliation agreement shall be considered to be a reference to a practice that is discriminatory under this title concerning a public accommodation or public transportation service operated by a private entity; and

(2) subparagraph (B) of paragraph (1) and paragraphs (2) and (3) of subsection (a) of section 813 shall not apply.

TITLE V—TELECOMMUNICATIONS RELAY SERVICES

SEC. 501. DEFINITIONS.

As used in this title:

(1) COMMISSION.—The term "Commission" means the Federal Communications Commission.

(2) TELECOMMUNICATIONS RELAY SERVICES.—The term "telecommunications relay services" means services that enable simultaneous communication to take place between individuals who use TDDs or other nonvoice terminal devices and individuals who do not use such devices.

(3) TDD.—The term "TDD" means a Telecommunication Device for the Deaf, a machine that employs graphic communications in the transmission of coded signals through the nationwide telecommunications system.

SEC. 502. TELECOMMUNICATIONS RELAY SERVICES.

(a) GENERAL RULE.—It shall be considered discrimination for purposes of this Act for any common carrier, as defined in section 3(h) of the Communications Act of 1934 (47 U.S.C. 153(h)), that offers telephone services to the general public, to fail to provide, not later than 1 year after the date of enactment of this Act, interstate or intrastate telecommunication relay services so that such services provide indi-

viduals who use nonvoice terminal devices because of disabilities with opportunities for communications that are equal to those provided to their customers who are able to use voice telephone services, except that it shall not be considered discrimination for such a common carrier to fail to provide such services in any State to which subsection (b) applies if such services are provided under subsection (b).

(b) STATE DISCRIMINATION.—It shall be considered discrimination by a State, that designates an entity to provide interstate or intrastate telecommunication relay services to individuals throughout the entire State in a manner consistent with regulations issued by the Commission, for purposes of this Act, for such State, through the designated entity, to fail to provide, not later than 1 year after the date of enactment of this Act, interstate or intrastate telecommunication relay services so that such services provide individuals who use nonvoice terminal devices because of disabilities with opportunities for communications that are equal to those provided to their customers who are able to use voice telephone services.

(c) CONSTRUCTION.—Nothing in this title shall be construed to discourage or impair the development of improved or future technology designed to improve access to telecommunications services for individuals with disabilities.

SEC. 503. REGULATIONS.

Not later than 180 days after the date of enactment of this Act, the Commission shall issue regulations to carry out this title, and such regulations shall establish minimum standards and guidelines for telecommunications relay services.

SEC. 504. ENFORCEMENT.

(a) CIVIL ACTIONS.—Section 802(i), 813, and 814 (a) and (d) of the Fair Housing Act (42 U.S.C. 3602(i), 3613, and 3614 (a) and (d)) shall be available with respect to any aggrieved individual, except that—

(1) any reference to a discriminatory housing practice or breach of a conciliation agreement shall be considered to be a reference to a practice that is discriminatory under this title concerning the provision of an appropriate interstate or intrastate telecommunication relay service; and

(2) subparagraph (B) of paragraph (1) and paragraphs (2) and (3) of subsection (a) and subsection (d) of section 813 shall not apply.

(b) ADMINISTRATIVE ENFORCEMENT.—

(1) IN GENERAL.—The Commission shall enforce the provisions of this title.

(2) APPLICABLE ENFORCEMENT PROVISIONS.—The remedies, procedures, and rights set forth in sections 206, 207, 208, and 209 of the Communications Act of 1934 (47 U.S.C. 206, 207, 208, and 209) and

in title IV of the Communications Act of 1934 (47 U.S.C. 401 et seq.) shall apply with respect to the enforcement of this title, except that nothing in this subsection shall be construed to limit or restrict in any manner the remedies, procedures, or rights set forth in subsection (a).

(3) CEASE AND DESIST ORDERS.—Whenever, after full opportunity for hearing, on a complaint or under an order for investigation and hearing made by the Commission on the initiative of the Commission, the Commission shall be of the opinion that any carrier, or any State as described in section 502(b), is or will be in violation of this title or of any regulation issued under this title, the Commission shall—

(A) order that the carrier or State cease and desist from such violation to the extent that the Commission finds that such violation exists or will exist; and

(B) take other actions as it finds appropriate and necessary.

(4) PENALTIES.—

(A) IN GENERAL.—Any carrier or State to which section 502(b) applies that knowingly fails or neglects to comply with this title or of any regulation or order made by the Commission in car-

rying out this title shall forfeit to the United States the sum of $10,000 for each such offense.

(B) SEPARATE OFFENSES.—Each distinct violation of the provisions of this title shall be a separate offense under subparagraph (A). In case of a continuing violation, each day shall be considered a separate offense.

(C) RECOVERING FORFEITURES.—Such forfeitures shall be payable and recoverable in the same manner as prescribed in section 504 of the Communications Act of 1934 (47 U.S.C. 504).

TITLE VI—MISCELLANEOUS PROVISIONS

SEC. 601. CONSTRUCTION.

(a) REHABILITATION ACT OF 1973.—Nothing in this Act shall be construed to reduce the scope of coverage or apply a lesser standard than the coverage required or the standards applied under title V of the Rehabilitation Act of 1973 (29 U.S.C. 790 et seq.) or the regulations issued by Federal agencies pursuant to such title.

(b) OTHER LAWS.—Nothing in this Act shall be construed to invalidate or limit any other Federal law or law of any State or political subdivision of any State or jurisdiction that provides greater protection for the rights of individuals with disabilities than are afforded by this Act.

(c) RELATIONSHIP AMONG TITLES.—The requirements contained in titles I through V shall be construed in a manner that is consistent with the other provisions of this Act, and any apparent conflict between provisions of this Act shall be resolved by reference to the title that specifically covers the type of action in question.

SEC. 602. PROHIBITION AGAINST RETALIATION.

No individual shall discriminate against any other individual because such other individual has opposed any act or practice made unlawful by this Act or because such other individual made a charge, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this Act.

SEC. 603. STATE IMMUNITY.

A State shall not be immune under the Eleventh Amendment to the Constitution of the United States from an action in Federal court for a violation of this Act. In any action against a State for a violation of the requirements of this Act, remedies (including remedies both at law and in equity) are available for such a violation to the same extent as such remedies are available for such a violation in an action against any public or private entity other than a State.

SEC. 604. REGULATIONS BY THE ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD.

(a) ISSUANCE OF GUIDELINES.—Not later than 6 months after the date of enactment of this Act, the Architectural and Transportation Barriers Compliance Board shall issue minimum guidelines that shall supplement the existing Minimum Guidelines and Requirements for Accessible Design for purposes of sections 304 and 404.

(b) CONTENTS OF GUIDELINES.—The guidelines issued under subsection (a) shall establish additional requirements, consistent with this Act, to ensure that buildings, facilities, and vehicles are accessible, in terms of architecture and design, transportation, and communication, to individuals with disabilities.

SEC. 605. ATTORNEY'S FEES.

In any action or administrative proceeding commenced pursuant to this Act, the court, or agency, in its discretion, may allow the prevailing party, other than the United States, a reasonable attorney's fee, including litigation expenses, and costs, and the United States shall be liable for the foregoing the same as a private individual.

SEC. 606. EFFECTIVE DATE.

This Act shall become effective on the date of enactment.

AMERICANS WITH DISABILITIES ACT

WEDNESDAY, SEPTEMBER 20, 1989

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON SURFACE TRANSPORTATION,
COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION,
Washington, DC.

The Subcommittee met, pursuant to notice, at 10:38 a.m., in room 2167, Rayburn House Office Building, Hon. Norman Y. Mineta, Chairman of the Subcommittee, presiding.

Mr. MINETA. The Surface Transportation Subcommittee will please come to order. I apologize for this delay. We just swore in two new members of the House of Representatives, a gentlemen, Mr. Geren from Texas, and Mr. Gary Condit from California. I, unfortunately, was delayed.

Today, as all of you know, we do begin our hearings on H.R. 2273, the Americans With Disabilities Act. Before proceeding, I would like to recognize the presence of Mr. Anderson, the Chairman of the full Committee on Public Works and Transportation. We are pleased to have you here, Mr. Chairman. At this time, I would like to yield to you.

The CHAIRMAN. Thank you, Mr. Chairman. I am very pleased to participate in this hearing today. The Subcommittee on Surface Transportation has always prided itself on its ability to keep America on the move by providing funding for transportation programs which enhance the lives of all Americans.

Therefore, I am especially pleased to continue this great tradition by fully supporting this effort to extend mobility rights to the forty-three million disabled Americans across the country. After all, mobility for all Americans is really what this hearing is about. The Americans With Disabilities Act has simple internal logic which is hard to fault.

Those members of the disability community who can use fixed-route lift-equipped buses will be able to do so. Those who cannot otherwise use the fixed-route system will use alternative paratransit systems. This simple logic has been lacking in our earlier attempts to address this issue. That is why we have such a long and tangled legal history of court decisions dealing with accessibility regulations in this country today.

That is also a reason for us to insure that we craft a bill which not only looks good on paper but is also one which can be implemented in the real world. I believe that we can achieve this goal by pursuing a bill along the lines of the one passed by the Senate, which also has the full support of President George Bush.

This Committee has always prided itself on its bipartisan spirit. So I am hopeful that we can pass a bill this year, as President Bush has requested. Once and for all, let's settle the accessibility issue and generate new opportunities for tens of millions of Americans in the process.

Unfortunately, Mr. Chairman, since the Airline Security Bill is on the House floor this morning, I will not be able to stay for the entire hearing. But I do want to let you know that your efforts have my full support. I want to thank you very much for giving me this opportunity.

Mr. **Mineta**. Thank you very much, Mr. Chairman. Knowing that the Aviation Security Act is on the floor, many of our members are already there.

The Americans With Disabilities Act gives us a unique opportunity to complete the work that we first started when we passed the Civil Rights Act some twenty-five years ago. The ADA legislation is a tangible, significant effort to knock down the barriers confronted by Americans with disabilities as they continue their efforts to be self-reliant, productive members of society

The Americans With Disabilities Act will provide basic civil rights protections to our 43 million disabled friends, neighbors and colleagues. This legislation would prohibit discrimination against disabled individuals in terms of employment opportunities, public services, public accommodations, transportation and telecommunications.

Many disabled individuals have cited a lack of transportation as the chief barrier to full participation in their communities. Accessible transportation is the vital link to employment for the disabled community in the same way that transportation links the able-bodied to their jobs and careers.

Tremendous technological advances have been made in recent years which offer increasingly easy access to the work place and other community activities for persons with disabilities. Our nation has achieved great expertise in the construction of accessible housing and transportation systems. Full access for Americans for disabilities is now well within our grasp. So we owe it to ourselves and our society to achieve this goal.

During today's hearing, we will be examining the transportation requirements that are included in the Americans With Disabilities Act bill. Specifically, the ADA requires that all new fixed-route public-transit buses be able to accommodate wheel chairs and their users. It mandates that our rail transit systems and stations be made fully accessible.

In addition, the bill makes accessible demand-responsive service, inter-city bus transportation, and other privately-provided transportation as well as transportation services that are provided by hotels, airport rental car companies and other enterprises not in the principal business of providing public transportation.

While we have the responsibility of assuring that these provisions of the bill are comprehensive, carefully stated and will achieve the intended results, the ADA Bill is, first and foremost, a civil-rights bill. Our nation has worked to respond to the needs of other minorities who have been denied equal opportunity because of ignorance and prejudice. We must now address the needs of disabled Americans who are currently denied the opportunity to be full participants in our communities.

President Bush, members of both parties, the House leadership, the unanimous vote out of the Committee on the Senate side, as well as a strong 76 to 8 vote in the Senate and a number of private non-profit organizations, fully support this legislation.

I am hopeful that, following our hearings, we can take swift and positive action on this civil-rights legislation.

At this time, I would like to call on our very fine colleague and a member of this Committee, a hard-working gentleman from Pennsylvania, the ranking Republican on the Surface Transportation Subcommittee, Mr. Bud Shuster.

Mr. SHUSTER. Thank you very much, Mr. Chairman. First of all, I would like to ask unanimous consent that the statement of the ranking member of the full Committee, the Honorable John Paul Hammerschmidt, be made a part of the record.

Mr. MINETA. No objection. So ordered.

[Mr. Hammerschmidt's prepared statement follows:]

STATEMENT OF THE HONORABLE JOHN PAUL HAMMERSCHMIDT

Thank you, Mr. Chairman.

First of all, I would like to commend you, Mr. Chairman, and Congressman Shuster for scheduling these two days of hearings on the Americans with Disabilities Act.

This proposed legislation is designed to end discrimination against individuals with disabilities and to bring persons with disabilities into the economic and social mainstream of American life. These are certainly goals which I personally support.

Throughout my career I have had the pleasure of working very closely with fine organizations such as the Paralyzed Veterans of America on many issues. My work with these groups has given me a first hand understanding and appreciation of the many barriers facing the disability community.

No where are these goals more important than in transportation, for it is often the key which enables the disabled to become part of the mainstream and take advantage of education, employment and recreational activities. Mobility for the disabled American is our upmost consideration. Testimony for our broad collection of knowledgeable witnesses will help us to determine how best to achieve that mobility.

The proposed legislation offers solutions to the transportation problems of the disabled which are complex and wide ranging in their potential impact. We must be sure that we understand exactly what the legislation would require of the transportation providers. We must understand the variety of ways in which our disabled friends are presently aided in the many communities across our Nation and what effect these requirements would have on current services. We must remember the needs of not only wheel-chair bound individuals, but the mentally impaired, the growing population of elderly Americans, and others who benefit from special transportation services. Concerns have been raised as to whether or not the requirements of the proposed bill, as applied to all situations, will result in greater mobility. Until we know the facts, we can not be assured that our common goal of improved service to the disabled will in fact be achieved.

I look forward to hearing from all our distinguished witnesses and working with the subcommittee on this important legislation.

Mr. MINETA. Now, Mr. Shuster, ranking member of the subcommittee.

Mr. SHUSTER. Mr. Chairman, as some of my colleagues know, I bring a very personal interest to this legislation, having a mother who is a double amputee in a wheel chair. I have banged up my knuckles more times than I can remember trying to juggle a wheel chair through a door that was too narrow or trying to get a wheel chair up a flight of stairs or into rest areas. While all of that, indeed, was a labor of love, it certainly brought home to me in a very, very personal way, the need for us to address the issue of providing access to disabled people in our country.

Mr. Chairman, I certainly anticipate supporting this legislation. I anticipate our passing it through the House and making it law this year, but having said that, I am concerned with some of the transportation provisions in it because I think there are some reasonable concerns that we are going to have to focus on.

For example, having lifts on every bus does not do a thing for those thousands of disabled people who need door-to-door transportation. I think we have got to be very careful that we don't limit our focus in this area. Having lifts on buses does not do a thing for those disabled who live in snowy areas of the country where lifts do not work in snowy conditions.

I think we have got to be very careful that we craft this legislation so that it not only expresses a very strongly-felt civil rights view but that it also takes into account the diversity of interests, not only regionally, but among people with different disabilities and, indeed, people in different age groups of the disabled.

I am also concerned, Mr. Chairman, that if we increase costs to the point that we bring about a reduction of service, then we are not serving the disabled. We are not serving the general public, either. If we increase cost, particular in the private sector, so that we drive small transportation companies out of business, we are not serving the disabled nor the general public.

So I believe that we should be focusing on the cost implications here and focusing on the diversity questions to make sure that what we do is not only good but right and reasonable and cost-effective for all Americans.

With those comments, Mr. Chairman, I look forward to our crafting legislation that can become law, that can improve the lives of the millions of disabled in this country. I congratulate you for holding these hearings and look forward to the weeks ahead.

Thank you.

[Mr. Shuster's prepared statement follows:]

STATEMENT BY THE HONORABLE BUD SHUSTER

AMERICANS WITH DISABILITIES ACT
HEARINGS BEFORE THE SUBCOMMITTEE ON SURFACE TRANSPORTATION
WEDNESDAY, SEPTEMBER 20, 1989 – 10:00 AM
2167 RAYBURN HOUSE OFFICE BUILDING

THANK YOU MR. CHAIRMAN.

I WOULD FIRST LIKE TO THANK CHAIRMAN MINETA FOR SCHEDULING THESE HEARINGS ON THE AMERICANS WITH DISABILITIES ACT. I WOULD ALSO LIKE TO THANK OUR WITNESSES, THE DEPARTMENT OF TRANSPORTATION, THE DISABLED COMMUNITY AND THE TRANSIT INDUSTRY FOR JOINING US.

THE LEGISLATION WE ARE EXAMINING TODAY HAS AS ITS GOAL, THE INTEGRATION OF THE DISABLED COMMUNITY INTO OUR SOCIETY THROUGH INCREASED MOBILITY AND ACCESS TO OUR NATION'S TRANSPORTATION SYSTEMS.

WHILE I SUPPORT THE WORTHY GOALS OF THIS LEGISLATION, WE SHOULD, I FEEL, TEMPER OUR PURSUIT BY THE QUITE REASONABLE CONCERN THE SOLUTIONS PROPOSED WILL HAVE UPON THE ACCESS ALL AMERICANS, BOTH DISABLED AND NON-DISABLED, WILL HAVE TO TRANSPORTATION. IF IN OUR EFFORTS TO 'MAINSTREAM' DISABLED AMERICA, WE IMPOSE SUCH AN ECONOMIC BURDEN UPON THE TRANSIT AUTHORITIES OF OUR COMMUNITIES – BOTH LARGE AND SMALL, THAT SERVICE IS CUT BACK OR EVEN DROPPED, THEN WE HAVE SHIRKED OUR RESPONSIBILITY TO THE DISABLED COMMUNITY THIS BILL IS DESIGNED TO HELP AND PROTECT.

I AM CERTAIN HOWEVER, THAT A SOLUTION CAN BE FOUND THAT WILL SERVE TO INCREASE THE MOBILITY OF OUR DISABLED CITIZENS WHILE PRESERVING AND IMPROVING EXISTING TRANSPORTATION SERVICES. WHETHER THIS SHOULD BE ACCOMPLISHED THROUGH A FLEXIBLE, COMMUNITY APPROACH OR WHETHER GEOGRAPHIC AND CLIMATIC CONDITIONS SHOULD PLAY A GREATER ROLE OR WHETHER FULL ACCESSABLITY IS WARRENTED, WILL I HOPE, BE BROUGHT OUT IN THE TESTIMONY WE HEAR TODAY AND NEXT TUESDAY.

FOR THESE REASONS, I LOOK FORWARD TO HEARING FROM OUR WITNESSES TODAY AS THEY SHARE WITH THE COMMITTEE THEIR EXPERIENCE AND KNOWLEDGE ON THIS ISSUE. WE MAY THEN MOVE FORWARD TOWARD OUR GOAL OF A TRANSPORTATION SYSTEM WHICH ALLOWS THE DISABLED OF OUR SOCIETY ACCESS TO ALL FORMS OF TRANSPORTATION AND THEREFORE TO ALL WALKS OF LIFE ACROSS THE UNITED STATES.

Mr. MINETA. Thank you very much, Bud. Are there other members who wish to make opening statements?

Mr. Petri?

Mr. PETRI. Thank you very much for the courtesy of allowing me to do this, Mr. Chairman. I would like to put my full statement in the record and abbreviate it, if possible.

Mr. MINETA. Without objection.

Mr. PETRI. Mr. Chairman, as Yogi Berra would say, I have a sense of deja vu all over again as this subject comes before this Subcommittee. Some advocacy groups are insisting that all public transit equipment should be equipped to meet the needs of all disabled persons. Politically, this is difficult to oppose, but it is not the best way to go.

Back in 1980 and 1981, in the 96th and 97th Congresses, the same subject was addressed as part of the implementation process for Section 504 of the Rehabilitation Act. The principal issue then as now was requiring that buses be equipped with lifts, regardless of local needs and conditions, or alternative means of transportation tailored by localities for themselves.

Proponents of mandatory lifts tend to cast those who favor more flexible approaches as being anti-disabled. Such was not the case eight years ago and it needs to be made clear again that being against mandatory bus lifts does not mean being against having transportation available to the disabled.

In fact, the reverse is true. If we provide a common-sense framework in the legislation, then local communities can adapt their transportation systems to what works for them. In my state of Wisconsin, which has a long tradition of innovative action in solving social needs, a number of realistic solutions have been tried and proven. These examples are compelling evidence of how local decisions and solutions can best meet that need.

In this hearing today, Mr. Henry Mayer will give testimony to this Subcommittee that will provide compelling evidence that local flexibility is the answer. Mr. Mayer served as Mayor of Milwaukee during a study and test period that Milwaukee underwent to determine how best to serve the transportation needs of the local disabled community.

Mr. Chairman, I also have a letter from Mayor Paul Soglin of Madison, Wisconsin to Senator Kohl describing why Madison has opted for paratransit service rather than lift equipment mainline bus service.

I would ask that his letter be inserted in the record at the conclusion of my statement.

Mr. MINETA. Without objection. So ordered.

Mr. PETRI. Thank you, Mr. Chairman.

[Mr. Petri's prepared statement follows:]

STATEMENT OF HON. THOMAS E. PETRI, A REPRESENTATIVE IN CONGRESS FROM WISCONSIN

Mr. Chairman, this bill has been referred to this subcommittee to address the transportation requirements which the bill would mandate; specifically the civil right of disabled persons to enjoy full availability of and accessibility to public transit facilities.

Now, that is an admirable and moral goal, and it is achievable—but Mr. Chairman, as Yogi Berra would say, I have a sense of deja vu all over again.

Some advocacy groups are insisting that all public transit equipment should be equipped to meet the needs of all disabled persons.

Politically, this is difficult to oppose, but it is not the best way to go.

Back in 1980 and 1981, in the 96th and 97th Congresses, this same subject was addressed as part of the implementation process for Section 504 of the Rehabilitation Act.

The principal issue then, as now, was requiring that buses be equipped with lifts, regardless of local needs and conditions, or alternative means of transportation tailored by localities for themselves.

Proponents of mandatory lifts tend to cast those who favor more flexible approach as being anti-disabled.

Such was not the case 8 years ago, and it needs to be made clear again that being against mandatory bus lifts does not mean being against having transportation available to the disabled.

In fact, the reverse is true. If we provide a common sense framework in the legislation, then local communities can adapt their transportation system to what works best for them.

In Wisconsin, which has a long tradition of innovative action in solving social needs, a number of realistic solutions have been tried and proven.

These examples are compelling evidence of how local decisions and solutions can best meet the need.

Later in this hearing, Mr. Henry Mayer will give testimony to this subcommittee that will provide compelling evidence that local flexibility is the answer. Mr. Mayer served as a Milwaukee City Official during the study and test period that Milwaukee underwent to determine how best to serve the transportation needs of the local disabled communities.

My own home town of Fond du Lac, Wisconsin, is very proud of the system that they developed to meet the transportaiton needs of the disabled community. Back in 1979 when Federal dollars were made available, coalitions that included representatives of the disabled and the transit authority, were formed to study the needs of the disabled community to seek the best, most cost-effective system to meet these needs. Bus-lifts were considered and studied, and passed over in favor of a paratransit system.

It seems once again that as with most problems that the federal government tries to legislate a federal cure for, the best solution can be found in each community. We should only establish a *result oriented standard*, leaving local flexibility to determine how *best* to achieve that standard. Milwaukee, Madison, Fond du Lac, and many other progressive communities have proven that local flexibility is the answer. The communities that have been successful in developing dependable, timely, cost effective transportation to the disabled should not be penalized through federal mandates that tell them, despite their findings to the contrary, bus lifts are the answer. The disabled community is not limited to those in wheel chairs. There are many other elderly and disabled citizens that enjoy the convenience and ease that door-to-door service provides them.

It is important to look at ways for communities to not only provide service to the disabled, but to provide *proven superior* service through *proven* methods such as paratransit.

Mr. Chairman, I also have a letter from Mayor Paul Soglin of Madison, Wisconsin, to Senator Kohl, describing why Madison has opted for paratransit service rather than lift-equipped mainline bus service.

Basically, para-transit offers *better service* to the elderly and disabled, at less expense. Without objection, I would like to insert Mayor Soglin's observations in the record following my statement.

Mr. Chairman, when we went through this same debate almost 10 years ago, we saw a number of 'horror stories'.

For example, in Appleton, Wisconsin, $140,000 was spent on wheelchair lifts for buses to serve only *nine* people in Appleton.

In short, Mr. Chairman, federal *requirements* do not guarantee the success of community programs.

It is the efforts of local citizens that will determine their outcome. We should prescribe a *performance-based standard of expectation* in the legislation.

I urge each of you to examine the experiences of Milwaukee, Fond du lac, and Madison closely. I think you will find them to be models of successful local initiatives.

We should frame our requirements in such a way to encourage such flexible, efficient, and cost-effective local responses.

[The letter referred to by Mr. Petri follows:]

AUG - 3 1989

Transportation [illegible]

Office of the Mayor

City of
Madison

Paul R. Soglin, Mayor

City-County Building
210 Martin Luther King, Jr. Boulevard
Madison, Wisconsin 53710
608 266 4611
608 266 4443 (TDD/Device for Deaf)

July 31, 1989

The Honorable Herb Kohl
U. S. Senator
704 Hart Senate Office Building
Washington, D.C. 20510

Dear Senator Kohl:

I understand that S. 933, the Americans with Disabilities Act, will soon be voted on in the Senate Committee on Labor and Human Resources.

As you consider the provisions of this bill, I ask that you seek to retain the option for cities to choose the best means of providing transportation service to the elderly and disabled. My immediate concern is that cities, such as Madison, continue to have the option of choosing whether or not to purchase buses with wheelchair lifts or to use available funds to improve demand responsive paratransit.

The City of Madison has just faced a decision about whether to buy lift-equipped buses. Initially, I favored purchase of lift-equipped buses. As I learned more about the variety of transportation needs among disabled individuals and as I learned about the limitations of a fixed route, lift-equipped service, I changed my mind. I decided Madison should continue to focus its resources on paratransit service. The Madison Common Council strongly supported this position in a voice vote to purchase six paratransit type buses rather than to purchase mainline buses with lifts.

Several factors were key in the City's decision. First, Madison's severe winter weather would result in unreliable lift-equipped mainline service even for that portion of the disabled community that preferred to use it. Subzero temperatures, snow and icy streets, curbs and sidewalks would be substantial barriers to reliable service.

Second, a significant portion of disabled individuals cannot use lift-equipped mainline service either because they do not use wheelchairs, because they are not sufficiently mobile, or because transit routes are not conveniently located.

Finally, given a fixed number of dollars, Madison's paratransit system delivers many times more rides than a lift-equipped mainline service. I have looked at the number of rides actually taken on lift-equipped mainline bus service in cities with climate's similar to Madison's. The number of rides is quite small in comparison to the number provided by Madison's paratransit system.

Over the past fifteen years, the City of Madison has developed an outstanding paratransit system. In 1989, paratransit service expenditures equal 9.55% of the total transit system's budget. The annual dollar amount equals $1,540,980 far exceeding the approximately $1,000,000 the City annually receives from the federal government for operating costs. The City's paratransit service will provide approximately 180,000 rides this year.

Without the exclusive paratransit option, I think it is unlikely that the City would have the quality and quantity of elderly and disabled transit service we have today. I believe it is an option that is most appropriate for cities in a cold climate such as Wisconsin's.

Thank you for your consideration.

Sincerely,

Paul R. Soglin

Mr. Mineta. The gentleman from Tennessee, Mr. Clement.

Mr. Clement. Mr. Chairman, I would just request unanimous consent that my opening statement be admitted into the record.

Mr. Mineta. Without objection; so ordered.

[Mr. Clement's prepared statement follows:]

STATEMENT OF HON. BOB CLEMENT, A REPRESENTATIVE IN CONGRESS FROM TENNESSEE

Mr. Chairman, thank you for convening today's hearing on the Americans With Disabilities Act. I am proud to join you and 21 of our Public Works Committee colleagues as a cosponsor of this important measure.

I am proud to join you in supporting legislation which will end discrimination against disabled individuals. Twenty-five years after the passage of the 1964 Civil Rights Act, it is time to make all citizens of the United States full and participating members of our society.

Despite some reluctance, I believe that the business community will share our view that disabled Americans are as talented and skilled as the non-disabled and that they are excellent and hard-working employees. Businesses will also share our view that the disabled are consumers with desires, wants, and appetites as voracious as the non-disabled. All they need is access, all they deserve is equality.

While our goals are lofty, crafting the most appropriate legislative solution is problematic. As in all areas guaranteeing the civil rights of one group of citizens, we are often asked to strike a legislative balance. And such a balance is a particularly delicate issue in the areas of public and private transportation.

As a former public service commissioner, I understand the cost-sensitive basis on which transit service decisions are made. And while my service was prior to Congress' deregulation of much of the transportation industry, the cost-sensitive nature of these decisions has not changed, only the flexibility with which industry can implement them without State or Federal intrusion.

Like you, Mr Chairman, and the other members of the subcommittee, I look forward to hearing the testimony of our witnesses and getting a clear understanding of the problems which confront the disabled community and an understanding of the issues which confront providers of transit.

Thank you, Mr. Chairman.

Mr. Mineta. Mr. Parker, Mr. Payne, any other members seek recognition?

[No response.]

[Mr. Payne's prepared statement follows:]

STATEMENT OF HON. LEWIS F. PAYNE, JR., A REPRESENTATIVE IN CONGRESS FROM VIRGINIA

Mr. Chairman, I applaud your leadership in calling for hearings on Americans with Disabilities legislation.

In addition to serving on this Committee, I also have the pleasure of sitting on the Committee on Veterans Affairs. In that capacity, I am acutely aware of the difficulties disabled individuals must cope with in order to function in our society. I appreciate this Committee's interest in this matter, and I welcome this opportunity to explore possible avenues of improving transportation for this nation's disabled.

I also thank all of the witnesses who are joining us today, and I look forward to hearing your views on the legislation before this Committee.

[Mr. Costello's prepared statement follows:]

STATEMENT OF HON. JERRY COSTELLO, A REPRESENTATIVE IN CONGRESS FROM ILLINOIS

Mr. Chairman, as a cosponsor of the Americans with Disabilities Act, I look forward to today's hearing and how it will affect the transportation of disabled individuals across the nation.

This bill is an attempt to include the members of the disabled community into everyday life by making a variety of public facilities convenient to the disabled. In particular, it is my interest to see what direct impact this will have on transit authorities and transportation companies in Illinois and throughout the country.

For years, a lack of good transportation has been a constant complaint from representatives of the disabled community. The Americans with Disabilities Act takes large steps toward making very transportation vehicle in the country accessible to the disabled, so that they can share the convenience of public transportation that is shared by many other non-disabled individuals.

Through greater access to transportation, the disabled can have the same access to their workplace that is now enjoyed by others. That will enable many disabled workers to put their skills to work for America's businesses and other employers.

Mr. MINETA. At this time, I would like to call together our first panel: Mr. Roland Mross, Deputy Administrator, Urban Mass Transportation Administration, Department of Transportation, accompanied by John Cline, the Associate Administrator for Budget and Policy of UMTA as well as Don Trilling, the Deputy Director of the Office of Transportation Regulatory Affairs of the Department of Transportation.

If you would please come forward to the table.

TESTIMONY OF ROLAND MROSS, DEPUTY ADMINISTRATOR, URBAN MASS TRANSPORTATION ADMINISTRATION, DEPARTMENT OF TRANSPORTATION, ACCOMPANIED BY JOHN CLINE, ASSOCIATE ADMINISTRATOR FOR BUDGET AND POLICY, URBAN MASS TRANSPORTATION ADMINISTRATION, DEPARTMENT OF TRANSPORTATION, AND BY DON TRILLING, DEPUTY DIRECTOR, OFFICE OF TRANSPORTATION REGULATORY AFFAIRS, DEPARTMENT OF TRANSPORTATION

Mr. MINETA. Mr. Mross, your full statement will be made a part of the record. So you may go ahead and proceed in your own fashion, sir.

Mr. MROSS. Thank you, Mr. Chairman, members of the Committee. My name is Roland J. Mross. I am the Deputy Administrator of the Urban Mass Transportation of the U.S. Department of Transportation. I am pleased to have this opportunity to appear before you today to present the views of the Department of Transportation on the Americans with Disabilities Act which the Senate passed on September 7, 1989. As I am sure you know, the Administration strongly supports enactment of Federal legislation extending civil rights to Americans with disabilities.

Appearing with me today to discuss this bill are John Cline, the Associate Administrator for Budget and Policy in the Urban Mass Transportation and Mr. Donald Trilling, Director, Office of Transportation Regulatory Affairs, Office of the Assistant Secretary for Policy and International Affairs.

Despite the best efforts of all levels of government and the private sector, and the tireless efforts of concerned citizens and advocates everywhere, many persons with disabilities in this nation still lead lives in a state of isolation and dependence.

Sixteen years have gone by since the Rehabilitation Act was passed. In that time the doors of educational opportunity have been opened to persons with disabilities. Nevertheless, persons with disabilities are still, too often, shut out of the economic and social mainstream of American life. The Americans With Disabilities Act would directly address this problem.

In brief, the purpose of the Act is to provide a clear national mandate to end discrimination against individuals with disabilities, and to bring persons with disabilities into the economic and social mainstream of American life, to provide enforceable standards addressing discrimination against individuals with disabilities and to insure that the Federal government plays a central role in enforcing these standards on behalf of individuals with disabilities.

Let me, now, briefly summarize for you some of the key provisions in the Americans With Disabilities Act as passed by the Senate and which affect transportation. Under that bill, public entities must purchase or lease accessible vehicles—bus, [NAIL] and other fixed-route vehicles—in any solicitation made thirty days after the enactment of the Act.

The Department of Transportation may temporarily relieve a public entity from purchasing a lift-equipped bus if a lift is unavailable and the public entity has made a good-faith effort to locate a lift-equipped bus.

A public entity providing fixed-route transit service must provide a comparable level of paratransit service to handicapped individuals who cannot use the fixed-route service. The Department would issue service criteria in this regard. If providing such service presents an undue financial burden, the Department may allow the public entity to limit its service pursuant to a flexible numerical formula.

A public entity only providing demand-responsive service must buy or lease accessible vehicles unless it can demonstrate that its system provides a level of service to disabled people equivalent to that provided the general public. New facilities built by a public entity must be accessible. Existing facilities with major alterations will, to the maximum extent feasible, be made accessible in the altered areas.

Regarding rail systems, at least one car per train must be accessible as soon as practical, but in no less than five years. Existing key rail stations must be made accessible within three years, except that the Department may extend that time to twenty years for extraordinarily expensive structural changes necessary to achieve accessibility.

The proposal that public transit agencies purchase only lift-equipped buses is necessary to accomplish the goal of the legislation to provide civil rights to individuals with disabilities; that is, to mainstream them into daily American life. For disabled people who lead, or who want to lead, independent lives and to be integrated into their communities, the availability of lift-equipped buses provides the broadest and most immediate benefits.

Such accessibility can be accomplished relatively easily since more than 35 percent of public transit buses already are lift-equipped. We estimate that it would take ten to twelve years for all public transportation buses to be lift-equipped. Disabled persons want to use lift-equipped vehicles once they become widely available. This demand should lower costs and advance the technology and the reliability of the lifts. Regarding current costs, adding lifts to buses costs approximately $10,000 to $15,000 per bus and adds annual maintenance costs, per bus, of approximately $2,000.

The ADA legislation would also require that paratransit buses be made available to those individuals who cannot use accessible, fixed-route transit. The Senate-passed legislation recognizes, however, that in some cases the provision of unlimited paratransit service may be an undue financial burden on the transit provider. The Senate-passed bill thus would allow the use of a flexible numerical formula that incorporates appropriate local characteristics such as population, interim degree of accessible bus service, and residential patterns to determine when provision of paratransit reaches a level of undue financial burden and limits the provider's required paratransit to that level.

If the bill is enacted, the Department would look forward to working with the disabled community, and providers of transit services, through the regulatory process to establish a workable formula in this regard. It is important to note, moreover, that if another entity in the area provides paratransit services that meet the requirements of the ADA, the local transit authority would not be required to duplicate that service.

In those urban areas where rail transit is available, it is just as important to provide access for the disabled to that system as it is to provide access to the fixed-route bus system. The ADA requires that, within five years, all rail systems have one car per train that is accessible to the disabled. New construction of transit facilities would be made accessible. The bill also provides for retrofitting of existing key stations in light-rapid and commuter rail systems.

The transit agencies and members of the disabled community would work together to plan the strategy for key station accessibility. The pattern of New York and Philadelphia, which already have worked out agreements to retrofit key stations, would serve as an excellent model in this regard for other cities. The ADA, as passed by the Senate, would require no incremental effort by the cities of New York and Philadelphia.

Entities that operate only demand-responsive systems for the general public are, for the most part, small rural communities. Therefore, it is appropriate that in those areas a new vehicle need not be lift-equipped if the entity can demonstrate that its system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to the level of service provided to the general public.

The ADA also extends to transportation provided by private entities. Hotel and airport shuttle services and around-the-mall parking lot vans, when they offer demand-responsive services, would be required to provide adequate levels of service to individuals with disabilities and need not equip all vehicles with lifts.

Private intercity bus companies, clearly, provide an important transportation service. They are a transportation safety net providing service to regions not otherwise serviced by other modes of transportation and to people who do not generally have other transportation options available to them. Therefore, the Senate-passed legislation would require these operations to be made accessible within seven years for small operators and six years for all others.

The Department must issue regulations within a year of enactment to implement these requirements. This legislation also calls for a three-year study of how best to achieve this accessibility for intercity carriers. The rule promulgated by the Secretary will, thus, be available to serve as a baseline against which other approaches can be compared.

This study required by the bill should indicate cost-effective methods for making over-the-road buses accessible within the statutory time period.

Finally, the Department supports provisions adopted in the Senate-passed bill that appropriately distinguish the obligations of employers with respect to active alcoholics and drug abusers, on the one hand, and those who are no longer using illegal drugs or abusing alcohol, on the other hand. Moreover, these provisions would allow an employer to prohibit the use of illegal drugs by an employee and prohibit the use of alcohol at the work place.

Mr. Chairman, twenty-five years ago Congress and the President were finalizing enactment of the Civil Rights Act of 1964, one of the most comprehensive civil rights legislation ever passed. We now have the chance to extend the nation's civil-rights guarantees to the disabled community. The Department and the Administration are pleased to support this landmark legislation.

Mr. Chairman, that concludes my remarks and we would be pleased to respond to any questions that you might have.

Mr. MINETA. Thank you very much, Mr. Mross. Either Mr. Cline or Mr. Trilling, do you have statements to submit for the record or any comments?

If not, thank you very much, Mr. Mross, for your very fine statement. Let me ask, first of all, what is the Department's current policy as it relates to accessibility?

Mr. CLINE. Currently, the Department is abiding by the regulations that were issued under Section 504 of the Rehabilitation Act. As you may be aware, there was a court decision of the Third Circuit which may have an impact upon that. But we are still operating under the original 504 Regulations.

Mr. MINETA. Plus any requirements from the Surface Transportation Assistance Act of 1982. Are there any provisions in that Act that deal, also, with accessibility or had it generally been Section 504 of the Rehabilitation Act?

Mr. CLINE. Those requirements are reflected in the regulations, also.

Mr. MINETA. The recent court decision in the Third Circuit did affect the Department's accessibility regulations, did they not?

Mr. CLINE. Yes.

Mr. MINETA. Could you, briefly, describe what that impact is from that Third Circuit's decision?

Mr. CLINE. My recollection of the initial decision was that the 3 percent cost cap that was used for paratransit was overruled by the court, as was the local option, which refers to the choice of either lifts on buses or paratransit.

Upon the *en bank* review by the full court, however, the local option was restored but regarding the 3 percent cap, the court maintained the position that that was to be changed.

Mr. MINETA. Do I assume that, regardless of whether the Third Circuit Court had ruled this way or not, as it relates to the 3 percent accessibility or as to whether or not agencies were meeting their obligation to provide accessibility, that because of the Third Circuit Court decision, the Department would have revisited this whole issue regardless of this ADA bill or not?

Mr. Cline. Assuming that we receive the order from the court as we anticipate we will, we would have begun to engage in a regulatory process based upon that order.

Mr. Mineta. In Mr. Mross' statement, the figure of 35 percent of the national fleet is, currently, lift-equipped. That is mentioned, but what percentage of buses bought last year, if we have that figure, Mr. Mross, were lift-equipped? First of all, how many buses were purchased last year and, of those that were purchased last year, how many were lift-equipped?

Mr. Cline. There has been a trend over the last few years that approximately 3,000 to 3,700 buses are purchased each year using UMTA Federal assistance. Of those buses that were purchased last year, we do not have a figure as to how many were lift-equipped, but I would venture to say that it was substantially higher than previous years.

Mr. Mineta. Higher than that 35 percent that you say are equipped right now?

Mr. Cline. Yes. It is hard to commit a specific number, but because so many major transit systems have elected to purchase with lift-equipped buses there has been a higher percentage. Exactly what that percentage would be, I really can't say.

Mr. Mineta. The cost of this lift-equipment is, as I understand it, roughly $10,000 to $15,000 per lift. What is the average cost of a transit bus?

Mr. Mross. $155,000.

Mr. Mineta. As I understand it, we are now in the fourth or fifth generation of lift technology in this country. From your experience within UMTA, what would you say is the reliability of these lift mechanisms?

Mr. Cline. We do not have specific statistics that indicate the failure rates of lifts. From my personal experience with several transit systems that are lift-equipped, though, there was a higher than acceptable rate of failures on the lifts. Many of those were due to poor maintenance at times or just pure mechanical failures—pinched hydraulic hoses, computer command function failures, and the like.

But I would say that it was higher than acceptable.

Mr. Mineta. Would you say that, with each generation of improvement of lift technology, at least to some degree, that there have been improvements in the reliability of the lifts, even though it may be a little higher than what you would like to see?

Mr. Cline. Yes. I think that there have been some improvements. They have not been as quick as, I think, the industry would like to have seen, but compared to some of the original lifts that were coming out ten or fifteen years ago, there has been a marked improvement.

Mr. Mross. If I might, Mr. Chairman, our expectation also is that with the wider utilization of lift equipment, the technology ought to improve and reliability ought to improve, as well as the cost go down.

Mr. Mineta. We have had estimates, I guess, from articles and other testimony indicating that the cost of annual lift maintenance is roughly $2,000. In fact, I think that is what is included in your testimony. At the same time, we have had other estimates given to us that range anywhere from a third to three times the figures that you have indicated.

I am wondering what do you think accounts for this very wide range of costs attributable to the maintenance of that lift equipment?

Mr. CLINE. Each transit system, I think, has taken a different approach towards maintenance on lifts in recent years; some transit systems have claimed very high maintenance costs. Specifically, what that is due to, I am not sure. I have suspicions that, possibly, the proper level of maintenance was not completed on those lifts. The lifts must be cycled on a regular basis even if there is no malfunction in the lift. Ongoing preventive maintenance can be conducted on them.

I would venture to say that different transit systems have taken a different approach to it and that has resulted in varying degrees of expenses. We, too, have heard of the various expenses.

Mr. MINETA. Would you have any idea how many of those, let's say, roughly about 430-some transit systems across the country that we have—what percentage of them are currently providing some kind of paratransit services--maybe not percentages of the numbers, but maybe if you have some absolute numbers of all the transit agencies? Do you have any idea what that might be?

Mr. MROSS. Three quarters, we believe—75 percent or more.

Mr. MINETA. How will the Department implement this provision that is in the ADA that refers to the flexible formula provisions surrounding undue financial burden as indicated, or as contained, in the Senate-passed bill? Any idea as to how UMTA would look at that in the implementation of some kind of a flexible formula?

Mr. CLINE. We do not have any idea at this time. We anticipate engaging in the regulatory process, assuming the passage of the bill. Sitting here today, I really could not give any indication how that will proceed.

Mr. MINETA. To what extent has the Department been monitoring the new, much-less-expensive, wheel chair lift designed for use in over-the-road buses which are being used in Denver?

Mr. CLINE. I assume you are referring to the Hubmatic lift that the Denver——

Mr. MINETA. Yes, that's correct, John.

Mr. CLINE. We at the Department have not yet monitored that lift mainly because it is a relatively new lift. There are very few of them in use throughout the country. The Hubmatic, as I mentioned, is a German-manufactured lift that currently is installed and maintained, I believe, by Stewart-Stevenson who has, from what I understand, the sole rights for implementation.

The lift, itself, is a very interesting design and substantially different from other intercity coach lifts. We are, obviously, going to take a look at it in the near future. But I would mention that the usage that it is incurring in Denver is not indicative of what a normal, intercity-type coach would incur. So there will need to be, obviously, further analysis on that lift besides the Denver experience.

Mr. MINETA. Is there any explanation as to why it only costs one-third to one-fifth of the cost of other over-the-road bus lifts?

Mr. **Cline**. I had the lift demonstrated for me when I was in Denver. As I mentioned, it was a very interesting design. It appears to have less moving and working parts on it than the other lifts do. That might contribute to its lower cost; the fact that it is a little more simplified.

Mr. **Mineta**. How adequate is the current policy of accessibility practiced by inter-city bus providers in meeting the needs of the community with disabled citizens.

Mr. **Trilling**. It certainly does not provide a level of accessibility compared to what is called for in the ADA. I think the inter-city bus industry has tried to do what it can, but it is, really, just starting to come to grips with the problem and is in its early phases of making accessibility arrangements.

Mr. **Mineta**. The inter-city bus industry has suggested that the ADA be amended so that they would be treated in the same way that airlines are relative to the accessibility issue. Would you summarize for us the form that the regulations arising from the Air Carrier Access Act will take?

Mr. **Trilling**. The air carrier access industry is quite different. There has always been some degree of accessibility in the airline industry, a good degree of accessibility for many. The problem there has been some unfair discrimination and a lot of inconsistency in how those with disabilities are treated when they get on the carriers.

The difference that they cite between what goes on in the airline industry and what would go on in the bus industry is not well-defined. All the regulations that we will be putting in about the airline industry, as far as accessibility goes, are very particular to the kind of aircraft. For large aircraft, we would require more accessible features and for small aircraft, we would require less.

So I am not exactly sure what it is that the bus industry is referring to when they say equal treatment. The situation is quite different as far as the physical constraints of the two different kinds of vehicles.

Mr. **Mineta**. Thank you very much. Mr. Shuster?

Mr. **Shuster**. Thank you, Mr. Chairman. Mr. Chairman, I have a whole series of questions. I will probably run out of time, so if you would, simply, let me know when my time expires then I will, on a second round, continue with my questions.

Thank you, gentlemen, for being here today. The Senate Bill requires transit authorities, when they are purchasing new buses for their fleets, to buy lift-equipped buses. I wonder if you could tell us the following factual information concerning bus fleets and costs for public transit. How many transit buses are there in operation?

Mr. **Mross**. Around 50,000, nationwide.

Mr. **Shuster**. Of these, how many are lift-equipped?

Mr. **Mross**. We estimate about 35 percent.

Mr. **Shuster**. A new transit bus, you say, is $155,000?

Mr. **Mross**. That's correct.

Mr. **Shuster**. The lift costs——

Mr. **Mross**. $12,000 to $15,000.

Mr. **Shuster**. The average annual maintenance; is that $2,000?

Mr. **Mross**. The average annual maintenance cost of a bus or——

Mr. **Shuster**. Of a bus, first.

Mr. **Mross**. Of a bus is $32,000.

Mr. **Shuster**. A year?

Mr. **Mross**. Yes.

Mr. **Shuster**. The average maintenance cost, per bus, is $32,000 a year. And the increase in that cost with the addition of a lift is what; $2,000?

Mr. **Mross**. $2,000; that's correct.

Mr. **Shuster**. What is the average life of a transit bus?

Mr. **Mross**. Twelve years or more.

Mr. **Shuster**. Can you estimate the aggregate annual cost to public transit entities to implement the lift requirement?

Mr. **Mross**. It is difficult. Our best guess is that it is around $30 million. If the Federal government participates, we would expect, out of the Urban Mass Transportation Administration, that would be $24 million of Federal funds, $6 million of local funds.

Mr. **Shuster**. You are saying $30 a year to implement the lift requirement is the total cost, of which $24 million would be Federal?

Mr. **Mross**. That's correct.

Mr. **Mineta**. What are the ridership levels, disability ridership levels? For example, I have heard a story that in Seattle, where they have lift-equipped buses, they average only one person using the lift every other day, per bus. Is that accurate?

Mr. **Mross**. Again, that figure, nationally, we are estimating to be around 1,500 to 3,000, daily.

Mr. **Shuster**. 1,500 to 3,000 users daily?

Mr. **Mross**. Yes, on a national basis.

Mr. **Shuster**. Isn't there great variability between cities?

Mr. **Mross**. Yes.

Mr. **Shuster**. I see people behind you nodding their heads yes when I quoted the Seattle statistic. Can somebody tell me is that an accurate statistic from Seattle?

Mr. **Cline**. The Seattle statistic, from 1981 or 1983, is about 0.5 usage per lift.

Mr. **Shuster**. So that is one every other day?

Mr. **Cline**. Right.

Mr. **Shuster**. Does that suggest that there is great variability, that there may be, in some cities, much greater use of lifts and in other cities much less use?

Mr. **Cline**. Currently, Seattle, based on our information, has the highest usage per lift.

Mr. **Shuster**. Seattle has the highest usage per lift, and it is only .5 per day?

Mr. **Cline**. That's correct.

Mr. **Shuster**. That is an incredible statistic, is it not? You are saying that Seattle, which has the highest lift use per bus in the nation, has only one person using the lift every other day?

Mr. **Cline**. That's correct.

Mr. **Shuster**. Let me move on. The Senate bill also requires private bus companies to purchase new over-the-road coaches within six years for large companies, seven years for small companies. Tell us the following factual information regarding the bus fleets and costs for the private inter-city bus industry? How many over-the-road coaches are in operation?

Mr. **Trilling**. There are about 20,000, sir.

Mr. **Shuster**. Of these, how many are currently lift-equipped?

Mr. **Trilling**. Only just a handful.

Mr. **Shuster**. Practically zero. What does an over-the-road coach cost, the same $155,000?

Mr. **Trilling**. No, it is more expensive; about $225,000.

Mr. **Shuster**. Would the lift be the same for it, $12,000 to $15,000?

Mr. **Trilling**. This lift would add anywhere from $15,000 to $35,000 depending on which lift they bought.

Mr. **Shuster**. $15,000 to $35,000?

Mr. **Trilling**. Right.

Mr. **Shuster**. Why would they spend more than $15,000, if you can get one on a——

Mr. **Trilling**. The lift you are referring to, which is the one that is being tested in Denver, has not had heavy over-the-road experience. We don't actually know how well it will fare in an over-the-road environment.

Mr. **Cline**. I might also add that there is a substantial difference in the price. Up until recently, before the Hubmatic lift came on the scene, most of the inter—city coach lifts that were available were in the $30,000 to $35,000 range. The Hubmatic lift is substantially cheaper.

Mr. **Shuster**. But that is the one in Denver?

Mr. **Cline**. That is the one in Denver and that is the one that is anywhere from $12,000 to $15,000.

Mr. **Shuster**. It is not proven out yet, either?

Mr. **Cline**. No, it hasn't.

Mr. **Shuster**. So it is speculative on that. The average annual maintenance cost of an over-the-road coach?

Mr. **Trilling**. For the coach, itself, we do not have any statistics. The government does not collect that kind of data.

Mr. **Shuster**. Surely Greyhound or somebody can provide us with those statistics later on today.

Mr. **Trilling**. Surely.

Mr. **Shuster**. How much does that cost increase with the addition of a lift?

Mr. **Trilling**. It ranges from $1,000 to $3,000 a year per bus.

Mr. **Shuster**. So is $2,000 a good figure?

Mr. **Trilling**. Yes, as a mean.

Mr. **Shuster**. What is an average life of an over-the-road motor coach?

Mr. **Trilling**. They very often last ten years, but sometimes Greyhound will sell them off at an earlier point.

Mr. **Shuster**. Of course, it is related to mileage.

Mr. **Trilling**. Yes; but ten years is a reasonable number to use.

Mr. **Shuster**. Can you estimate what the aggregate annual cost would be to the private inter-city bus industry if the lift requirement was implemented?

Mr. **Trilling**. It could be in the range of 50 million to 130 million, and that does not get into the area of displaced seats or displaced cargo space and the lost revenue attributable to that.

Mr. **Shuster**. Do I understand correctly, that a lift on an intercity bus would require displacing two seats?

Mr. **Trilling**. It could.

Mr. **Shuster**. Two to three seats?

Mr. **Trilling**. It depends on the technology.

Mr. **Shuster**. What is it today?

Mr. **Trilling**. I would say two seats or three seats is a good number to use.

Mr. **Shuster**. Would this act also require the restroom be accessible? There is somebody behind you shaking their head no.

Mr. **Trilling**. It is not implemented yet. The accessible lavatories will become part of something that is decided later on when they determine whether the technology is available to do so.

Mr. **Shuster**. So the lavatory, the restroom, is a question mark? It is not excluded, nor is it included, at this point?

Mr. **Trilling**. Right; that is one of the reasons it is so difficult to estimate the cost.

Mr. **Shuster**. So that is another potential cost. In addition to the lift requirement, the Senate bill requires transit authorities to provide comparable paratransit. Could you tell us the following factual information regarding paratransit service and cost: what percentage of transit authorities provide some level of paratransit service?

Mr. **Mross**. We are estimating, again, about 75 percent of them do, either directly or under contract.

Mr. **Shuster**. Let me back up a minute. When I was talking about over-the-road inter-city motor coaches, the figures you gave me were of 20,000 in operation. Does that include both scheduled and charter bus?

Mr. **Trilling**. Yes, it does.

Mr. **Shuster**. Back on the paratransit. Do most of the operators also provide some level of fixed-route mainline service which is accessible?

Mr. **Mross**. Most do, yes.

Mr. **Shuster**. What is the average cost per ride to provide paratransit service?

Mr. **Mross**. The average cost per ride is a little over $6.00, but we might caution that there is a wide variation.

Mr. **Shuster**. Let's look at the paratransit requirements. Paratransit must provide a comparable level of service to the fixed-route system. What is comparable in terms of the service-area response time? How do you define comparable?

Mr. **Mross**. It would be comparable to the mainline service.

Mr. **Shuster**. So if a bus comes every twenty minutes along a route, then I should expect a van to pick me up every twenty minutes?

Mr. **Mross**. Yes.

Mr. **Shuster**. Is that reasonable?

Mr. **Mross**. To make a distinction between, as it is now, of a wait of sometimes twenty-four hours.

Mr. **Shuster**. You say twenty-four hours?

Mr. **Mross**. It might be.

Mr. **Shuster**. Pre-notification?

Mr. **Mross**. Right.

Mr. **Shuster**. Under the law, you are saying that paratransit must be comparable. So, if there is bus service every twenty minutes along a route, that means that the law requires that there be paratransit service every twenty minutes on that route as well? That is mind-boggling, if that is true.

Mr. CLINE. If I could add, sir, our view of the term "comparable" does not mean identical to the mainline service. So we would anticipate in the regulatory process that the department would determine some level, some time frame, under which that service would have to operate.

Mr. SHUSTER. So you are saying that is undefined at this point?

Mr. CLINE. Currently, that is undefined.

Mr. SHUSTER. You are the ones that are going to be involved in defining it. What do you think would be—what is comparable service, then?

Mr. CLINE. Obviously, it would be something less than twenty-four hours, but we have not fully——

Mr. SHUSTER. If I just heard Mr. Mross, he said it is, essentially, providing the same service, the twenty-minute example which we just gave.

Mr. CLINE. We would be looking at a comparable service, not——

Mr. SHUSTER. Why couldn't I, as a disabled person, go into court and sue to get comparable service? It is not comparable if somebody can walk and get on a bus in twenty minutes, and I have to sit for two hours. That is not comparable service.

Mr. CLINE. I would say that, specifically, even in a large city—for example, like Washington—it would be very difficult to provide the level of mainline service——

Mr. SHUSTER. We are not talking about what is difficult. We are talking about what the law requires.

Mr. CLINE. In terms of not producing an undue financial burden on the transit provider. That will be the key element in the regulatory process.

Mr. SHUSTER. Would you define, then, the undue financial burden?

Mr. CLINE. As I had mentioned earlier, we have not yet been able to define that and that would be defined in the regulatory process.

Mr. SHUSTER. The service must also be available to individuals who cannot otherwise use fixed-route public transportation. Who would this cover; for example, people in wheel chairs who can't get to the bus stop because of terrain or snow and ice? Who would make the decision as to who is eligible for paratransit under the bill?

Mr. CLINE. There, again, that would have to be taken into consideration during the rule-making process.

Mr. SHUSTER. The bill requires that paratransit be available for individuals associated with the disabled individual. The Senate report makes clear that this includes any number of associates for any purpose; for example, several friends going to a movie. How would the transit agency realistically provide for this sort of contingency? If my mother were to want to go to a movie and take the whole family along——

Mr. MROSS. Again, that would have to be taken into consideration during the rule-making process. The consideration of what is an undue financial burden would enter in there, also.

Mr. CLINE. I might add, too, that as the bill is currently worded, it would allow for those associates to accompany that person.

Mr. **Shuster**. Right; you have just made my point. It would require that the service be available to the whole family. Do you think that is reasonable? As somebody just said, that is the law.

I will wait for my next time around, Mr. Chairman. Thank you very much.

Mr. **Mineta**. Thank you very much.

Let me, at this time, because of a prior commitment to the gentleman from North Carolina who is going to have to leave, let me recognize Mr. Valentine.

Mr. **Valentine**. Thank you very much, Mr. Chairman. I will take just a couple of minutes. I want to compliment you for arranging this hearing and to say to my colleagues and others who are here, and for the record, that I believe that it is high time that the United States Congress address this problem and the realities. It is time for us to take some kind of action.

My concern is, of course—and it has been underscored by some of the previous questions—I have an empty feeling in the bottom of my stomach, oftentimes, when we talk about these tremendous problems, many of which have been addressed by the previous questioner. We say, "Well, that will be left to the rule-making process." That scares the heck out of a lot of us.

Let me ask you, first of all, if you could give me some information as to what the legislation would require of the Federal government in dollars and cents, or are we going to, mainly, say to the states and local governments and municipalities, "You do these things," and we just wash our hands of the problems that are inherent with respect to cost?

What is there in here that increases the financial responsibility of the Federal government?

Mr. **Mross**. As far as the bus——

Mr. **Valentine**. Yes; as far as all these things. We are saying to all the cities in the country, "You have got to do certain things to your buses?" Or are we saying to them, also, "And you find some ways to pay for it yourselves. Don't call us; we'll call you."

Mr. **Mross**. I mentioned before that our estimate of what the total annual cost would be—it's somewhere in the neighborhood of $30 million. We, of course, could cost-share in that figure. We have evidence, that public transit agencies across the country have been moving in this direction and that, as I also mentioned earlier, 35 percent of public transit buses now are lift-equipped and, in another few years, another 15 percent—about half of the fleet—would be even without this legislation.

So there has been, and there is, movement in that direction—if I can use the word marginal cost.

Mr. **Valentine**. We are not talking about the overall cost. When you say "marginal cost," are you talking about the Federal government's participation in it? Does this bill authorize the expenditure of Federal funds to help these cities do these things?

Mr. **Mross**. No.

Mr. **Valentine**. So what we are, in effect, doing is saying, and Congress is saying, "You, in Atlanta and Chicago and Denver and other places, you do these things and we are going to see that you do them. But we are not going to help with the cost of it?"

Mr. MROSS. But our agency has funding available, and we have been assisting in the provision of lift-equipped vehicles.

Mr. VALENTINE. One other area, Mr. Chairman, and I will get out of the way for the time being.

You have given us an estimate as to the cost of what it would take to put lift equipment on a bus. But then that is the only figure that is in your statement, that I could see, about dealing with that expense. But, as has been pointed out, there are other expenses involved. For example; the loss of space on board the bus. Do you have any figure to give this Subcommittee as to what that translates into as an item of cost?

Doesn't it go without saying that additional personnel will be required to operate this? It is going to have somebody there to help handicapped persons on and off the bus. Isn't that a realistic consideration?

Mr. TRILLING. As far as the added personnel, we have no idea what that would possibly cost, nor the extent to which it would be necessary. As far as the displaced seats, and the displaced cargo space on the over-the-road, we have some very rough estimates which are not sufficiently sound to place in the record. But they are there, and they are real.

One thing about the inter-city bus is that the capacity utilization is usually low except at times such as Friday night and Sunday night when they are very, very full. If the seats have been taken out, then there is the need to add additional sections for those runs at those times. Greyhound has tried to give us some estimates on that.

I would also like to add that, at least in one lift-equipped configuration, a seat is actually added. So in some lifts, seats are taken away and in some lifts—at least in one configuration—one seat is added.

Mr. SHUSTER. Would my good friend yield?

Mr. VALENTINE. I yield.

Mr. SHUSTER. As to these costs; I have just put a pencil to this. You say it costs $30 a year. If you are talking 50,000 buses at $2,000 a year maintenance, that is $100 million a year just for maintenance on the whole fleet, or $50 million a year for the 50 percent of the fleet it goes up to. If you take the $12,000 to $15,000 a year and multiply that by just half the fleet, $25,000, that is $375 million for the capital costs.

I don't understand where you are coming up with the $30 million when the maintenance cost, alone, would be well over $50 million a year, plus the $375 million.

Mr. TRILLING. The capital cost has to depreciate over the life of the bus.

Mr. SHUSTER. Sure, it does.

Mr. CLINE. The $30 million figure refers to the capital purchase of the lift, only.

Mr. SHUSTER. Fine; so it has nothing to do with the maintenance, which is another $50 million to $100 million a year.

Mr. VALENTINE. Let me reclaim my time. I am about to finish. I don't want to be misunderstood because I think, as I said, it is time that the Federal government do something about this question. But, you know, one has to wonder, when you talk about these costs

2576

and you talk about the use of buses in a population center such as Seattle, if I understood the testimony, you have one handicapped person using one bus maybe every other day—one has to wonder if we wouldn't be better off spending this money for some specialized type of service, buses that were equipped for any type of handicap, that were on call to go and find the handicapped person and take them wherever they wanted to go on call.

The cost of this thing—and we are just talking about municipal bus systems. We haven't even gotten out to taxi companies and all these other specialized services.

But I am sure you will provide us with answers so that we can meet all these needs and still live within our budget.

Thank you, Mr. Chairman.

Mr. **Mineta**. Thank you very much, Mr. Valentine.

In my opening statement I had indicated that we have House leadership on both sides of the aisle supporting this bill. I notice that we just had come walking in, a little while ago, the gentleman from Maryland, Mr. Hoyer, who chairs the Democratic caucus and is a strong supporter of the bill.

Mr. Hoyer, do you wish to make a comment on the ADA?

TESTIMONY OF HON. STENY H. HOYER, A REPRESENTATIVE IN CONGRESS FROM MARYLAND

Mr. **Hoyer**. I thank you, Mr. Chairman, very much, for this opportunity just to say a few words. I want to congratulate you, Mr. Chairman, the ranking member, on having these hearings. Clearly, one of the most controversial aspects of the pending legislation is the issue of public transit and the cost attendant thereto. It is very important that we look at that carefully so that all of our members, when this bill comes to the floor—we hope in the very near future—have an understanding of what the costs are, what the needs are, what the challenges are.

I think, Mr. Chairman, this bill is one of the most important bills in the Congress and one of the most important to be considered in the first session of the 101st Congress. I am very pleased that President Bush and the Administration have given their very strong support to the passage of this legislation. That strong support and the hard work of the Administration was reflected, as you know, Mr. Chairman, in the overwhelming vote in the United States Senate with only eight votes against the legislation.

It is our intent, Mr. Chairman, and the House leadership, to see this legislation hopefully reported to the floor and passed by the end of next month so that we can see the President's signature on this very important key civil-rights legislation before the end of this year.

I want to, again, say to you how much I appreciate the personal involvement that you have had and the work that you have given to this bill pointing out that it is a bipartisan bill supported strongly on both sides of the aisle. With that bipartisan support and the strong testimony—I apologize that I was not here to hear all of the testimony, of the Department but, I understand, it was very strong in its advocacy of this legislation.

This is, I think, going to be one of the principal bipartisan accomplishments of the first session of the 101st Congress. I am pleased to be here with you, Mr. Chairman, to briefly participate in these hearings.

Thank you, sir.

Mr. **Mineta**. Thank you very much, Mr. Hoyer. Thank you for your leadership on this issue.

At this time, I would like to recognize our fine colleague from New York, Mr. Boehlert.

Mr. **Boehlert**. Thank you very much, Mr. Chairman. I, too, would add my words of praise to the Vice-Chairman of the Committee for bringing this issue forward. While we are giving out plaudits, I would like to give some credit to the Administration for the enlightened position and leadership it is providing.

I think, as is very evident by the line of questioning today, it is not going to be easy. Like most of us up here, before I do anything, I would like to know the consequences of my action. Do you have any projections on what impact the implementation of this portion of the Americans With Disabilities Act might have on fares and service?

Mr. **Cline**. That would be difficult to answer at this point because we do not, really, have any solid estimates on what will happen to the demand for the fixed-route lift-equipped buses and paratransit in relation to that. So "no estimates" is the answer.

Mr. **Boehlert**. It seems to me that would be relatively easy to get. I would encourage you to try to obtain it.

Mr. **Cline**. We have, sir. We have tried to, as best we can, estimate what the shift might be from those individuals who are currently using paratransit services because of the unavailability of lift-equipped fixed-route buses. However, there is such a variation, nationwide, and there are some systems that are substantially lift-equipped but still are not nearly 100 percent lift-equipped. That impacts the travel for disabled individuals in not knowing that they can complete their trip with a fixed-route lift-equipped bus.

So it is still a nebulous issue.

Mr. **Boehlert**. But you are thinking about trying to get that information?

Mr. **Cline**. Most definitely.

Mr. **Boehlert**. I would encourage you to do so.

I notice on page 3 of your testimony, Mr. Mross, you indicate that temporary relief might be provided a public entity from purchasing a lift-equipped bus if the lift is unavailable and the public entity has made a good-faith effort to locate a lift-equipped bus. Is that possible? How many manufacturers are there of lifts, for example?

Mr. **Mross**. Three or four.

Mr. **Boehlert**. Do you anticipate a lot more getting into the business if this becomes law?

Mr. **Mross**. More manufacturers?

Mr. **Boehlert**. Yes.

Mr. **Mross**. It is not likely.

Mr. **Boehlert**. As a practical matter, if it signed, sealed and delivered at the Oval Office next week—and although we all would like to see it move foreward rapidly, you and I both know it is not going to happen—and then the order goes forward to all the public transit systems, as a practical matter, are they all going to have to stand in line to get the lifts that we require? How long a period will it take?

Mr. **Cline**. Currently, there are approximately anywhere from 3,000 to 3,800 buses manufactured each year. It is our belief that the current number of manufacturers of lifts could meet that level of demand. So we would not anticipate that there would be any shortfall of lift production.

Mr. **Boehlert**. How long does the bill require for compliance; how long a period before compliance is required?

Mr. **Cline**. Within 30 days of the enactment of this bill, all solicitations for the purchase of new vehicles must include a lift. So any new vehicles solicited within 30 days after enactment of the bill are covered by it.

Mr. **Boehlert**. How about the retrofitting provision?

Mr. **Cline**. The retrofitting is only to the extent that the bus goes through a major rehabilitation. That would require a lift to be placed on that vehicle.

Mr. **Boehlert**. Forgive me for being somewhat parochial, but are you familiar with the Orion 2?

Mr. **Cline**. Yes, I am.

Mr. **Boehlert**. That wouldn't fall under this, would it, because that is not a lift? It is a magnificent vehicle. If my colleagues have not seen it, I would be glad to extend an invitation to visit my district where it is manufactured. But the whole rear end of the Orion 2 goes down to ground level, so it is easily accessible. It is a magnificent vehicle. I know they just sold 80 of them in Sweden. I would like to see them sell some more in the United States.

Would that meet the requirements of this legislation?

Mr. **Cline**. Yes. It is our belief that it would because that vehicle, from what I remember of it, it has a flip-down ramp, and it is a low-floor bus to begin with.

Mr. **Boehlert**. Right.

Mr. **Cline**. The current legislation requires an accessible vehicle. So the use of that ramp on that particular bus would meet that requirement.

Mr. **Boehlert**. Thank you for that enlightened answer.

Thank you, Mr. Chairman.

Mr. **Mineta**. Mr. Rahall? Wait a minute; before I call on you, I just remembered we have a call of the House for a vote. So let me, at this point, recess before I get into your time.

We will recess for responding to this vote on the Rule as it relates to the Aviation Security Act.

[Recess from 11:50 a.m. to 12:14 p.m.]

Mr. **Mineta**. Would the Subcommittee on Surface Transportation please come back to order. Just before we had the vote, I was about to call on our colleague from West Virginia, Mr. Rahall. Mr. Rahall?

Mr. **Rahall**. Thank you, Mr. Chairman. Mr. Chairman, I, like many of my colleagues from rural parts of America, are deeply concerned that our areas of the country have adequate access to the major markets. We have seen cutbacks in recent years in airline service, in trucking service. Our roads are, often, very difficult to build because of our terrain. We have seen cutback even in bus service.

What limited bus service we still maintain, we have been told, is threatened by this legislation. I don't buy that but, nevertheless, it is a concern that I don't think can go without being expressed in these hearings as it was expressed in the debate in the other body.

As I understand it, the other body has added language that would provide a three-year study on provision of access for handicapped to over-the-road vehicles; is that correct?

Mr. TRILLING. That is correct, sir.

Mr. RAHALL. In addition, there would be a six or seven year period in which certain bus companies have an opportunity to comply.

Mr. TRILLING. Right; six years for the large ones and seven years for the small one companies.

Mr. RAHALL. So there is no opting out in the Senate provision of any of the requirements of the bill, but just this additional language of a study in which we can find out more answers like access to restrooms or just what the legislation does or does not do; is that correct?

Mr. TRILLING. Yes. There is one clause in there that indicates that if the President finds, from the results of the study, that intercity bus would be curtailed in rural areas, the deadline could be postponed year by year, postponed a year at a time.

Mr. RAHALL. This is in rural parts?

Mr. TRILLING. This is in rural parts; right. That is in the Senate bill as it stands.

Mr. RAHALL. Is there any way that study could be speeded up, say, to an eighteen-month period, or is the three-year period supported by you? Is that what is necessary?

Mr. TRILLING. I don't know if I could comment on that. The study is to be done by the Office of Technology Assessment with inputs and review by the Architectural Barriers Board. But it would be a very, very difficult study to do. I don't know whether it could be accelerated or not. There is very little data out there on many of these issues: what the patronage would be, things of that nature.

Mr. RAHALL. The Senate report, as I understand it, but not the bill, says that inter-city buses must be fitted with bathrooms as the technology exists to assist them in this effort. Since the technology appears to be available today, won't that requirement become an immediate requirement for compliance along with other costs that will be incurred by the private bus companies?

Mr. TRILLING. The inference, as we read it, is that technology means a way to put those accessible lavatories in without a major loss of seats because they do take a lot more room. So the reference to the technology applies to being able to do so without a high economic cost because of the loss of seats. That is the way we interpret it.

Mr. RAHALL. Let me ask you another question about complaints that you have received from disabled individuals. In your proposed rule making on airline access, the DOT did state that you had received many complaints from disabled persons in their problems with the airlines.

Are there any available figures in comparison as to the number of specific complaints you have received from disabled persons not being able to ride on inter-city buses and, if so, over what period of time have those complaints been made?

Mr. TRILLING. I do not have any offhand. We could try to get you that for the record, Mr. Congressman.

[Mr. Trilling's answer follows:]

The Departmental Office of Civil Rights which investigates accessibility complaints concerning mass transit systems estimates that it has received three such complaints during the past three years. The Interstate Commerce Commission estimates that it receives approximately twenty complaints a year from people who do not think that Greyhound's Helping Hand Service is an appropriate substitute for lift-equipped inter-city buses.

Mr. RAHALL. Again, referring to the airline rulemaking proceeding, DOT does not require on-board wheel chairs on each plane, but allows the airlines to require the forty-eight hour advance notice by disabled persons for such equipment. If that is a provision in that particular situation, in the airline situation, has thought been given to requiring such advance notice or advance booking, so to speak, for intercity buses to also be able to be accessible to the disabled?

Mr. TRILLING. It is a possible form of a solution. The requirements are a little bit different because the wheel chair that applies to the Air Carrier Access Act would be the on-board wheel chair which the disabled individual would transfer into. If you are talking about a twenty-four hour advance notice that a disabled individual would have the needs for an accessible bus, that is a possibility and I would assume that would come out in the study as to whether that was a feasible solution or not.

Mr. RAHALL. Thank you. I have no further questions. Thank you, Mr. Chairman.

Mr. MINETA. Mr. Hastert?

Mr. HASTERT. Thank you, Mr. Chairman. Let me first say that I really appreciate you and the ranking member, or Vice Chairman, bringing this issue before this Committee. There are a lot of needs to be addressed and, certainly, the needs of all people in this country to be able to move from one point to another point, and have fair and equal access to areas so that they can transfer freely back and forth.

I have some concerns in this legislation. Some questions have arisen during the testimony that I would like to set straight. We were just talking about buses. Do you have any idea what is a seat replacement on a bus; to have two wheel chair positions, how many seats do you have to replace on a bus?

Mr. CLINE. Are you referring to inter-city buses?

Mr. HASTERT. I'm talking about both, but inter-city first.

Mr. TRILLING. If the standard bus had 47 seats, with the TMC/MCI, the seating capacity with one wheel chair would go down to 44. With two wheel chairs, it would go down to 41.

Mr. HASTERT. Then with a different configuration of a restroom; what would that extra area be?

Mr. TRILLING. The restrooms are tentative, but with an accessible restroom, the 47 seats would go down to 43. So, according to these estimates, you would lose four seats. However, with a one wheel chair provision, you would only lose two seats. You would go from 44 to 42, with the accessible lav.

Mr. HASTERT. So you would have two wheel chair positions and an accessible lavatory——

Mr. TRILLING. No; that is one wheel chair with an accessible lavatory. But the same holds for two wheel chairs. It goes from 41 to 39.

Mr. HASTERT. So, basically, what we have done is cut capacity by roughly 20 percent.

Mr. TRILLING. Two parts on a 40 base. That's not 20 percent.

Mr. HASTERT. No, it's not.

Mr. TRILLING. You are referring to the accessible lav?

Mr. HASTERT. Right.

Mr. TRILLING. That is about 2.5 percent.

Mr. HASTERT. I don't think it is 2.5 percent, either.

Mr. CLINE. It would eliminate four seats; that is just shy of 10 percent.

Mr. TRILLING. Not with the two wheel chair; it would only eliminate two. If you had a wheel chair provision and a lav——

Mr. HASTERT. If you go from 47 seats to 39 seats with a lav and two wheel chair positions, you have cut, basically, 8 positions out of 50, so you are around 16 percent or 17 percent reduction.

Mr. TRILLING. That's correct.

Mr. HASTERT. The cost of that bus would increase by how much? One of those buses is $225,000?

Mr. TRILLING. Yes, sir.

Mr. HASTERT. What would the additional cost to outfitting a bus like that be?

Mr. TRILLING. I don't think it is too high. It is probably on the order of $1,000.

Mr. HASTERT. So it is, really, in the same ball park;
$1,000 to $2,000, you say?

Mr. TRILLING. The $1,000 is the estimate I have.

Mr. CLINE. That is excluding the lift cost.

Mr. HASTERT. Not counting the lift cost.

Mr. TRILLING. This is only the accessible lav.

Mr. HASTERT. Then in a mass transit situation, I heard you use a phrase before, "key station." Could you define what a key station is?

Mr. CLINE. Do you want to know the current——

Mr. HASTERT. You said key station. I am a layman. I don't know what it means. Tell me what it means.

Mr. CLINE. The bill's report language states that the determination of what is key is best left to the local community and suggests that the recent agreements that I mentioned previously that had been worked out in New York and Philadelphia would serve as good models in making that determination.

Mr. HASTERT. What is that?

Mr. TRILLING. In New York City, 38 stations out of 465 were considered key while 11 out of 53 in Philadelphia, on a high-speed line, and 31 out of 172 commuter rail stations were considered key. The characteristics that were taken into consideration would be high ridership, transfer and feeder stations and stations near cultural, educational, recreational or entertainment centers.

Mr. HASTERT. Let's be parochial, as my colleague who sat next to me was parochial, in a sense. I serve an area that is really a suburban area of the Chicago metropolitan area. We have worked real hard, both in the years when I was in the legislature and after, to be able to extend out our ridership on the commuter rail.

We have moved the commuter rail, and are still working to move it out even to farther perimeters, maybe 50 miles out of the city of Chicago. In those situations, you may have a station ten minutes apart, or you may have a station five miles apart. Does that mean that every station is a key station, or that the stations ten miles apart would be key stations?

Are we going to treat some people one way and some people another way in this issue? In that situation, maybe every station, in your interpretation, could be a key station. That is why I thought it was important to understand what you are talking about there.

Mr. CLINE. The Senate report language stresses the fact that the negotiated decisions that were reached in Philadelphia and New York would be looked upon as a type of model for determining what level would occur; for example, in Chicago, the situations that you are raising, we would say, again, to look to the New York and Philadelphia agreements that were reached as models.

Mr. HASTERT. I would say that, probably, we Midwesterners would not look kindly on your saying that we are the same as New York and Philadelphia because, quite frankly, we are not. We have different needs and different requirements.

Mr. CLINE. Sir, I would not suggest that you are. Being from Chicago, I can respect that, also. It is just that we would stress that the local process of determining whether a station, for example in Naperville, or a station in Park Ridge, should be accessible should be an issue that is debated and decided upon at the local levels much in the same way that they did that in New York and Philadelphia.

Mr. HASTERT. But not the same criteria as New York and Philadelphia?

Mr. CLINE. No, not at all. It is more a process rather than a specific criteria that would be listed.

Mr. HASTERT. Again, being parochial, but that is my frame of reference I guess; mass transit; let's say the CTA in the city of Chicago has some duplicative transportation options for people. In other words, you can take surface transportation, which is a bus and which would require a lift, or you take the subway. Those routes, many, many times are exactly parallel to each other.

I see a great deal of urban transportation is platform-level transportation. You can come here in the city of Washington and take an elevator down to the station level, the platform level, and you can roll a wheel chair right on board without any lifts or hassle or anything else. It is quite different.

If parallel routes and parallel transportation opportunities were available, would the alternate route also be required to have the same type of access?

Mr. CLINE. It is our belief that the rail would have to be accessible per the current language of the Senate bill.

Mr. HASTERT. What about the parallel bus route on the surface?

Mr. CLINE. Yes; the bus routes would also have to be accessible.

Mr. **Hastert**. So those persons have not only a choice of destination, where they want to go, but a choice of mode of transportation?

Mr. **Cline**. That's correct.

Mr. **Hastert**. That is your interpretation of the Senate bill. The Senate bill explains that? It lays that out?

Mr. **Cline**. It is more a specific reference to the vehicle requirements. The language in the bill is specific to the vehicle requirements rather than the service requirement.

Mr. **Hastert**. In the language in the Senate bill dealing with train transportation, commuter trains. We call those METRA in Illinois, meaning not subway but other types of train transportation. It said one car on every train, I understand, would have to be outfitted with a lift facility. Is there a provision in the language, or would there be an opportunity in Rules and Regs to say that that car had to be the engine car, or the motor car? On commuter trains, they use an engine to go one way and, of course, a motor car to go the opposite way with controls.

One of the problems on those types of configurations is that the motor car is always on the train, if that was the designated car for the lift. However, when you start to switch trains and switch cars, if there was just one designated car per train, that might not be in the configuration, if you have a seven-car train as opposed to a three-car train.

It seems to me that a practical solution to this would be to say that the motor car would be the car with the lift and solve a lot of problems.

Mr. **Cline**. My understanding of the bill is that it does not specify which particular car would have to be accessible but rather that one car per train, only, be accessible.

Mr. **Hastert**. Then, is there any provision in that bill that says new cars coming on-line have to have lift accessibility?

Mr. **Cline**. Yes; the rail provision is the same as the bus provision, that within 30 days of the enactment of this Act, all solicitations for the procurement of new vehicles would require lift accessibility or accessibility provisions.

Mr. **Hastert**. The situation with comparable service, if there were parallel routes—and I am talking about bus transportation and specialized transportation to pick up people on demand, a phone call—say, if you took an hour to walk to a place or to be wheeled to a place, or to wheel to a place and then a twenty-minute wait for a bus—compared to that comparable time, if you made a phone call and that service could be provided to you within an hour at your doorstep, how would that be interpreted?

Mr. **Cline**. I want to stress a point that we made earlier, too, that the Senate report specifically refers to certain service criteria that can be used in determining the level of comparable service and time. Response time is one of those criteria so, as mentioned earlier in the twenty-minute example, a twenty-minute headway on a fixed-route bus line would not, necessarily, equate into a twenty-minute response time for paratransit.

Mr. **Hastert**. That's assuming that sometimes there is a time lap from your residents to get to the point of pickup.

Mr. **Cline**. Right.

Mr. Hastert. What provision, in your study and in any subsequent studies you have had—I understand that private shuttle-type operations are also subject to this whether they are publicly funded or privately funded, such as hotel shuttles, rental car shuttles, amusement park shuttles, grocery store shuttles at some shopping centers.

Mr. Trilling. That is correct as long as they are not what we would call demand responsive, and that they are over 15 seats.

Mr. Hastert. So all those, then, have to have a lift or some type of wheel chair accessibility; is that right?

Mr. Trilling. If they fall under that criteria; yes, sir.

Mr. Cline. Not the airport shuttle.

Mr. Hastert. How about senior citizen type of transportation? I am thinking, now, that I have a rather mixed district. I have a big rural area as well as a suburban area. In many of our senior citizen centers, those people have saved up to buy themselves a van so, out of those senior citizen centers, they can go shopping once a week or get taken to the hospital or the doctor. If they don't have wheel chair facilities, are they in violation of the law?

Mr. Trilling. I do not believe, so, sir.

Mr. Hastert. Why not?

Mr. Cline. Currently, the bill does not require that all vehicles be equipped with lifts. As Don had mentioned, first of all, there is a requirement that vehicles above 15 passengers would fall into that category.

Mr. Hastert. Which many of these are.

Mr. Cline. Right. But, for example, the mall shuttles and parking lot vans and hotel and airport shuttles do not have to have all of their vehicles lift-equipped as long as they can provide a service that, when viewed in its entirety over all of the service that is provided, is comparable.

So, for example, an airport shuttle could use a contracted lift-equipped vehicle to serve the needs of the disabled.

Mr. Hastert. Going back to the senior citizen situation, if they have a vehicle that is 15 passengers or above, do they have to fall under the law?

Mr. Cline. Yes, I believe so.

Mr. Hastert. So these people who can scrape up the $30,000 but would have to go an additional cost and may cancel their service, is there any other determination if that service if they can't afford to run it? It is cheaper for them to terminate and say, "Well, we are not going to do this anymore." We see that happening in good Federal law all the time. All of a sudden, it is too expensive for small businesses to provide the service or comply.

Section 89 happens to be one of those things that we are dealing with right now. The people simply throw up their hands and say, "Well, we can't afford to do this anymore so, therefore, we are not going to do it. We will withdraw it from everybody."

Is that a consideration in the law?

Mr. Cline. To the best of my knowledge, it is not a specific consideration in the law. Whether that scenario would take place is hard to judge. Obviously, those are individual local decisions that have to be made on the importance of that service.

So, in terms of any conclusions——

Mr. **Hastert**. So it is a very good possibility that would happen?

Mr. **Cline**. I'm sure it is.

Mr. **Hastert**. Thank you. Thank you, Mr. Chairman.

Mr. **Mineta**. Thank you, Dennis.

The gentleman from Tennessee, Mr. Clement.

Mr. **Clement**. Thank you. Mr. Mross, have there been any studies on the needs of the disabled for inter-city bus transportation and how will the current inter-city network of private lines serve that population?

Mr. **Trilling**. There have not been any definitive studies that I know of. Are you talking about how they do it now, or how they will under the bill?

Mr. **Clement**. Both.

Mr. **Trilling**. How they will under the bill is sufficiently uncertain that that is why the whole idea of the study was established in the bill, because it is not clear what the patronage would be or where the concentrations would be—things of that nature.

So I know of no study yet that has been done that answers those questions.

Mr. **Clement**. In your own assessment, how well is the rural disabled population served by the network of private bus lines?

Mr. **Trilling**. I don't know if I can assess that. The bus companies have tried to accommodate those with disabilities, and the bus companies in many rural areas are the only source of transportation. But I would not want to assess how well they do. It is something the Department has not done officially.

Mr. **Clement**. Have there been any complaints about the inter-city bus services' failure to provide service to the disabled?

Mr. **Trilling**. As I responded to Mr. Rahall, we will have to look into the records and find out to what degree there have been complaints. I am sure there have been some.

Mr. **Clement**. But you are not really aware of many complaints?

Mr. **Trilling**. No. I am sure it is a point of dissatisfaction and I am also sure that the inter-city bus industry is trying to do what they can to take care of it. They have had some imaginative ideas. But I could not go on record with an assessment or an evaluation.

Mr. **Clement**. Would you support the full and equal service standard of Section 403(a) without the "every vehicle" requirement of Section 403(b)?

Mr. **Trilling**. I would have to look at what they are, Congressman. In S. 933, Title IV is a telecommunications title which is not related to transportation. That is one of the reasons I am having trouble developing an answer.

Mr. **Clement**. It is in the House bill.

Mr. **Trilling**. I'm sorry. I do not have the House bill in front of me.

Mr. **Cline**. We don't have a copy of the House bill.

Mr. **Clement**. For the record, if you would answer that question.

Mr. **Trilling**. Yes, sir.

[Mr. Trilling's answer follows:]

We support the provisions as modified in the Senate version, and as they appear in Section 304 of S. 933.

Mr. Clement. The Senate bill has a provision, Section 305, requiring the Office of Technology Assessment to undertake a study on the access needs of disabled individuals to over-the-road buses. Would the Administration support a similar provision in the House bill in lieu of the wheel chair requirement of Section 403(b) and then await the study's recommendations before deciding whether to mandate wheel chair lifts on inter-city over-the-road buses?

Mr. Cline. In short, sir, the Administration is supporting the bill as passed by the Senate.

Mr. Clement. So that is not on the agenda at all, then.

That will be all at this time.

Mr. Mineta. Mr. Payne.

Mr. Payne. Thank you very much, Mr. Chairman. I thank all of you gentlemen for being here and for the good work that I think you, the Administration and the Department have done, in crafting and implementing a law to protect and guarantee civil rights for Americans with disabilities. Certainly, it is legislation that I, very strongly, support.

I have not been here for all of the questioning, but the questions that we are hearing have to do with affordability and, particularly, situations that are relevant to a particular community, particular city or particular entity.

To that end, there is language that seems to be fairly broad in terms of suggesting that there are certain things that, if they represent an undue financial burden, the Department may allow the public entity, for instance, to limit its service to "a flexible numerical formula," and that sort of thing.

In terms of the implementation of that, how do you see that kind of thing being accomplished? To what extent do you think communities will have the autonomy to come to you to present that information or how specifically will those guidelines be so that this will be mandated to that community?

Mr. Cline. The Senate report language specifically refers to certain service criteria that can be used in determining what is a comparable level of service for paratransit. Within those criteria are things like eligibility, response time, restrictions or priorities based on trip purpose. Those sorts of things lend themselves, obviously, to local decision making, too.

Generally, the broad framework for the implementation would come from DOT, but the specific standards and implementation, obviously, would have to occur at the local level.

Mr. Payne. Let me ask you about a real situation in a community such as Alexandria, Virginia, for instance, that has a public transportation system. It also has a paratransit system that is in operation now that is very responsive and, from indications that I get, seems to get good marks, generally.

If there is a paratransit system that will do the same thing as the public transportation system, would there be consideration given to not providing for the lifts, say, for the public transportation or the fixed-route buses if that service could be equally well provided by the paratransit system? Is that a consideration?

Mr. Cline. No, it is not. The Senate bill, in its current form, mandates that lifts be put on all fixed-route buses and that, in addition, a comparable paratransit service be provided. So there is no allowance for either/or or combinations.

Mr. **Payne**. In the bill as it is currently written and passed by the Senate?

Mr. **Cline**. The Senate bill that we support.

Mr. **Payne**. So the undue financial burdens, and so forth, would be exclusively in the paratransit area, perhaps in those areas that don't have a paratransit system that would have difficulty implementing such a system?

Mr. **Cline**. No. The undue financial burden would apply to all those who, even currently have a paratransit system in place. It is a measurement of determining to what extent service would be provided.

Mr. **Payne**. The criteria, then, is comparable service?

Mr. **Cline**. Correct.

Mr. **Payne**. As described in the Senate bill?

Mr. **Cline**. Right. As I mentioned, the report language has some suggestions of the type of criteria that would be used to develop or determine that level of comparability.

Mr. **Payne**. Does the department have any concerns about this question of affordability as it relates to the various entities across the country that will be required to expend funds to be able to come into compliance with this legislation?

Mr. **Mross**. Do we have any concerns?

Mr. **Payne**. That's correct.

Mr. **Mross**. I think there is a concern that has been expressed here this morning during the hearing. But I made the statement earlier that we feel that this is the direction that public transit has been moving. Once the priorities become clearly established, we will be able to accommodate those costs within the budgets, essentially, that we have operating now.

I mention that there will be additional costs for the lifts. But, again, this is the direction that public transit has been going and I think it will be accommodated within local budgets.

Mr. **Payne**. I understand the criteria that you have used, or that you base that upon, is that some 35 percent of all buses now already have the lifts and that the cost, per bus, is between $10,000 and $15,000? Is that a correct assumption?

Mr. **Cline**. That's correct. For public transit systems, the average cost of a lift, itself, is roughly $10,000 to $15,000.

Mr. **Payne**. Given that, do you feel that that could be—in the existing system, those kinds of costs could be accommodated satisfactorily?

Mr. **Cline**. Yes, we do. We recognize that these are substantial costs, but that it is important to achieve the civil rights intention of the bill.

Mr. **Payne**. Thank you very much, Mr. Chairman. Those are all the questions I have.

Mr. **Mineta**. Any other questions? Second round?

Mr. **Shuster**. The—Budget Office was unable to determine the cost of the paratransit requirements of the Senate bill because of the uncertainties in the language of the bill and its potential demand for service. Do you agree that these costs cannot be calculated, and what factors contribute to the uncertainty of the language?

Mr. Cline. Yes; we would agree that today we could not compute a solid number. The things that contribute to the——

Mr. Shuster. Could you compute a squishy number?

Mr. Cline. I suppose, probably, anybody could. Do we have a rough estimate, Don, or a range?

Mr. Trilling. It is, really, very squishy. It is just full of assumptions that we do not know whether——

Mr. Shuster. One of those assumptions is that the need for paratransit will decline as lift-equipped buses are put into service under the terms of this bill. Do you agree with that assessment?

Mr. Cline. That is one of the difficult parts. We are not, currently, able to determine what, exactly, will happen with the demand for paratransit.

Mr. Shuster. So that is an assumption we cannot make, is what you are saying?

Mr. Cline. Today, no.

Mr. Shuster. The bill would mandate both lift requirement and a comparable paratransit requirement on public transit entities. Do you believe the transit authorities will be able to absorb the extra costs of providing essentially duplicative services without increased Federal funding or increased fares?

Mr. Mross. We think that the costs are going to be marginal. The undue burden of financial hardship would apply in the case of paratransit.

Mr. Shuster. What does that mean, the cost will be marginal? A few moments ago, we calculated that the total cost of maintenance, on the lifts alone, will be $100 million a year. 35 percent of that cost is now being absorbed, $35 million a year. So that is another $65 million a year. Is that marginal?

Mr. Cline. It is based on the reality that for example, many transit systems are moving in the direction, of lift-equipping their fixed-route buses.

Mr. Shuster. Yes; you have already testified they are going to from 35 percent to 50 percent.

Mr. Cline. Right; and beyond the 50 percent. The 50 percent would be attained within the next year or two absent any action on this bill, and we would anticipate that it would even go beyond the 50 percent.

Mr. Shuster. So if it goes to 60 percent, we are still looking at $40 million a year or more on maintenance. Let me ask my question again. Do you believe that transit authorities will be able to absorb the extra costs, or I guess you call them marginal costs, of providing essentially duplicative services without increasing Federal funding or increasing fares?

Mr. Cline. That would be a difficult question to answer in terms of the fares without Federal funding. Yes, we do.

Mr. Shuster. Yes, you do believe that the local facilities can absorb these costs?

Mr. Cline. The cost of the fixed-route lift-equipped——

Mr. Shuster. So you are testifying that these costs can be absorbed by the local transit authorities; therefore, this Congress should not entertain any consideration of increasing Federal transit funding to cover these costs because it is your testimony that these costs will be covered by local transit authorities? I thank you.

Let me go further. It is likely that the existing service might have to be cut to accommodate these costs?

Mr. CLINE. Once again, I would say that this all comes back to the local decision-making process in terms of what the locality determines is important in the area of public transit.

Mr. SHUSTER. What is your estimate as our experts in Washington on transit?

Mr. CLINE. Whether service will be reduced as a result of action on this bill?

Mr. SHUSTER. Yes. You are shaking your head no. I presume that means you don't know.

Mr. CLINE. Frankly, Congressman, I really couldn't say.

Mr. SHUSTER. So we don't know. It's a question mark.

Mr. CLINE. Right.

Mr. SHUSTER. It may and it may not. We have heard from several cities who have experimented with lift-equipped buses and found them to be unsatisfactory in serving the needs of the disabled communities in their area in some of those cities, particularly those in northern climates. Many of these cities have answered the needs of their disabled population through extensive paratransit services. Isn't this flexibility important in order for transit authorities to best meet the needs of their disabled passengers in light of local factors?

Mr. CLINE. As you are aware, currently, there is flexibility in the current 504 Regulations.

Mr. SHUSTER. I am not talking about current. We are talking about this new legislation.

Mr. CLINE. Correct; I am just referring to the fact that that flexibility currently exists.

Mr. SHUSTER. We are going to take that away. We are going to mandate lifts on every bus.

Mr. CLINE. Right. The arguments that we have heard in support of mandating the lifts on every bus is that each local area has continued to have a great deal of conflict over this issue of lift-equipped buses versus paratransit. After going back and forth for many years on that issue, the Department and the Administration——

Mr. SHUSTER. I am not asking what arguments you have heard. I have heard the arguments, too. I am asking what your expert opinion is.

Mr. CLINE. Our opinion whether the lifts would accomplish the same goals that they currently do now?

Mr. SHUSTER. Isn't the flexibility needed to let local transit authorities make the decisions as to what kind of response they provide for the disabled? You are nodding your head yes. Does that mean yes?

Mr. CLINE. I will have to stop moving my head. Clearly, the Administration's policy that we have gone forward on in this area is that the local flexibility has not served and met the needs of the disabled community in the recent past.

Mr. SHUSTER. So you are opposed the current local flexibility?

Mr. CLINE. Correct.

Mr. SHUSTER. The Senate bill contains a provision that the public entity could be relieved of the comparable transit requirement if it presents an undue economic burden which would be defined by you, by regulation. How do you presume to come up with such a flexible numerical formula that could be applied to all transit entities fairly?

Mr. CLINE. We have not had a chance, yet, to examine that through the regulatory process, but that will be the debate that ensues.

Mr. SHUSTER. You have already been asked about the air carrier comparability. What about the competitive problem of holding the bus industry to a standard more stringent than the airline industry. Whatever standard we pass in terms of accessibility of the disabled, why shouldn't that same standard be applied to both the bus industry and the airline industry?

Mr. TRILLING. All the standards should be fair, of course. I assume what you mean by the same standard is the loss of revenue seats which is addressed in the Air Carrier Access Act but has not yet been addressed in any regulations written about the inter-city bus.

Mr. SHUSTER. Shouldn't we have the same standards?

Mr. TRILLING. I would think, in that particular context, that would be a rule that should hold. The differences between, as I said before, what the regulations are in the Air Carrier Act and what they would be under inter-city buses is a matter of the physical restraints on the equipment that is being used.

It is very much more difficult to put in accessible lavs in a small commuter plane than it is on a bus. On the other hand, the bus has limitations by regulation for how big and how long they may be. Some review of that has to be done, also.

Mr. SHUSTER. My last question. With regard to service cuts that might result from intercity bus requirements—for example, there are 10,000 communities that Greyhound serves. 9,000 of them are not served by any other form of intercity transportation. What if, as a result of these increased costs, which we have described here, Greyhound decides not to serve, or to reduce service to, 10 percent of its communities—"only" 10 percent of its communities.

That is 1,000 communities. Since we have had regulatory reform with the bus industry, what is to stop Greyhound from doing this? Nothing; right?

Mr. CLINE. Obviously, no, we do not have any control over Greyhound's business plan decision.

Mr. SHUSTER. Do you think it is reasonable to assume that if you increase a company's operating cost it is going to try to find ways to reduce those costs, and one way is to cut service to those marginally-profitable service areas? Isn't that a rather classic economic business decision that gets made?

Mr. CLINE. Let me start out by saying that the Department is very sensitive and fully recognizes the nature of the intercity transit system and the fact that it is a fragile industry. We would look to the study that is to be conducted on this issue to find those answers that——

Mr. SHUSTER. You are talking about a law that mandates requirements on the industry before the study is completed. Does that make sense, to have a study after we mandate the requirements?

Mr. TRILLING. There is a lead time between when the study is completed and when the requirements go into effect.

Mr. SHUSTER. But they will be in the law. They will already be in the law.

Mr. TRILLING. But there is a postponement provision in the law as well that if the President sees that intercity service will deteriorate, he may postpone that requirement.

Mr. SHUSTER. Why shouldn't we simply not put these particular provisions in the law until the study comes out and then, based on the study, make a decision?

Mr. TRILLING. As you point out, the intercity buses are a very vital component of the national transportation system. Another goal and objective that we are seeking is full accessibility for those with disabilities. The Administration, at least, feels that the full accessibility goal is one that they wanted to support in this particular context.

Mr. SHUSTER. Let me close by telling you a story. A member of Congress with the President last week. He said to the President, "Mr. President, in my little town there is a little charter bus company. It has five buses. Do you realize this law is going to require that charter bus company to put lifts on all those buses?"

The President said, "Oh, no, no. That is not required in the law."

He said, "Mr. President, you'd better go back and read the law."

The President said, "Well, if it is, I guess we better fix it." So my suggestion to you, gentlemen, is you better go back and fix it.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much. Mr. Duncan?

Mr. DUNCAN. I don't have any questions.

Mr. MINETA. Fine. Thank you.

Mr. Mross, Mr. Cline and Mr. Trilling, I think you have a good feel for what we are going to be facing in terms of some of the other unanswered questions about the Americans With Disabilities Act. I think there are, clearly, concerns that have been expressed. As Mr. Shuster has just said, maybe in some respects you are going to have to make sure that we have the kinds of fine tuning on this bill that will make it possible to get support and get it passed through the Committee and onto the House floor.

So, again, thank you very much for your being here, Mr. Mross, for your first time before this subcommittee in your new capacity. Congratulations on being the deputy. We will look forward to working with you in the future.

Thank you very much.

Mr. MROSS. Thank you, Mr. Chairman.

[Mr. Mross' prepared statement follows:]

STATEMENT OF ROLAND J. MROSS
DEPUTY ADMINISTRATOR
URBAN MASS TRANSPORTATION ADMINISTRATION
BEFORE THE
SUBCOMMITTEE ON SURFACE TRANSPORTATION
COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION
UNITED STATES HOUSE OF REPRESENTATIVES
SEPTEMBER 20, 1989

Mr. Chairman, members of the Committee, my name is Roland J. Mross. I am the Deputy Administrator of the Urban Mass Transportation Administration (UMTA), at the Department of Transportation. I am pleased to have this opportunity to appear before you today to present the views of the Department of Transportation on the "Americans with Disabilities Act," which the Senate passed on September 7, 1989. As I am sure you know, the Administration strongly supports enactment of Federal legislation extending civil rights to Americans with disabilities.

Appearing with me today to discuss this bill are John Cline, Associate Administrator for Budget and Policy, UMTA; and Donald Trilling, Deputy Director, Office of Transportation Regulatory Affairs, Office of the Assistant Secretary for Policy and International Affairs.

Despite the best efforts of all levels of government and the private sector and the tireless efforts of concerned citizens and advocates everywhere, many persons with disabilities in this

Nation still lead their lives in a state of isolation and dependence. Sixteen years have gone by since the Rehabilitation Act was passed. In that time the doors of educational opportunity have been opened to persons with disabilities. Nevertheless, persons with disabilities are still too often shut out of the economic and social mainstream of American life. The Americans with Disabilities Act would directly address this problem.

In brief, the purpose of the Act is to provide a clear national mandate to end discrimination against individuals with disabilities and to bring persons with disabilities into the economic and social mainstream of American life; to provide enforceable standards addressing discrimination against individuals with disabilities; and to ensure that the Federal Government plays a central role in enforcing these standards on behalf of individuals with disabilities.

Let me now briefly summarize for you some of the key provisions in the Americans with Disabilities Act, as passed by the Senate, affecting transportation. Under that bill -

0 Public entities must purchase or lease accessible vehicles - bus, rail and other fixed route vehicles - in any solicitation made thirty days after enactment of the Act.

0 DOT may "temporarily relieve" a public entity from purchasing a lift-equipped bus if a lift is unavailable and the public entity has made a good faith effort to locate a lift-equipped bus.

0 A public entity providing fixed route transit service must provide comparable level paratransit service to handicapped individuals who cannot otherwise use the fixed route service. The Department would issue service criteria in this regard. If providing such service presents an "undue financial burden," the Department may allow the public entity to limit its service pursuant to a "flexible numerical formula".

0 A public entity only providing demand responsive service must buy or lease accessible vehicles unless it can demonstrate that its system provides a level of service to disabled people equivalent to that provided to the general public.

0 New facilities built by a public entity must be accessible. Existing facilities with major alterations will, to the maximum extent feasible, be made accessible in the altered areas. Regarding rail systems, at least one car per train must be accessible as soon as practicable but in no less than five years. Existing key rail stations must be made accessible within three

years except that DOT may extend that time to twenty years for "extraordinarily expensive structural changes..." necessary to achieve accessibility.

The proposal that public transit agencies purchase only lift-equipped buses is necessary to accomplish the goal of the legislation to provide civil rights to individuals with disabilities - that is, to "mainstream" them into daily American life. For disabled people who lead or want to lead independent lives and to be integrated into their communities, the availability of lift-equipped buses provides the broadest and most immediate benefits.

Such accessibility can be accomplished relatively easily, since more than thirty-five percent of public transit buses already are lift-equipped. We estimate that it would take ten to twelve years for all public transit buses to be lift-equipped. Disabled persons want to use lift-equipped vehicles once they become widely available, and this demand should lower costs and advance the technology and reliability of the lifts. Regarding current costs, adding lifts to buses costs approximately $10,000 to $15,000 per bus, and adds annual maintenance costs per bus of approximately $2,000.

The ADA legislation would also require that paratransit services be made available to those individuals who cannot use accessible fixed route transit. The Senate-passed legislation recognizes, however, that in some cases the provision of unlimited paratransit service may be an undue financial burden on the transit provider. The Senate-passed bill thus would allow the use of a flexible numerical formula that incorporates appropriate local characteristics such as population, interim degree of accessible bus service, and residential patterns to determine when provision of paratransit reaches a level of undue financial burden, and limits the provider's required paratransit to that level. If the bill is enacted, the Department would look forward to working with the disabled community and providers of transit services through the regulatory process, to establish a workable formula in this regard.

It is important to note, moreover, that if another entity in the area provides paratransit services that meet the requirements of the ADA, the local transit authority would not be required to duplicate that service.

In those urban areas where rail transit is available, it is just as important to provide access for the disabled to that system as it is to provide access to the fixed route bus system. The ADA requires that, within five years, all rail systems have one car per train that is accessible to the disabled. New construction of transit facilities would be made accessible. The bill also provides for retrofitting of existing "key stations" in light, rapid and commuter rail systems. The transit agencies and members of the disabled community would work together to plan the strategy for key station accessibility. The pattern of New York and Philadelphia, which already have worked out agreements to retrofit key stations, would serve as an excellent model in this regard for other cities. The ADA as passed by the Senate would require no incremental effort by New York and Philadelphia.

Entities that operate only demand-responsive systems for the general public are, for the most part, small rural communities. Therefore, it is appropriate that in those areas a new vehicle need not be lift-equipped if the entity can demonstrate that its system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to the level for service provided to the general public.

The ADA also extends to transportation provided by private entities. Hotel and airport shuttle services and around-the-mall parking lot vans, when they offer demand-responsive services; would be required to provide adequate levels of service to individuals with disabilities, and need not equip all vehicles with lifts.

Private intercity bus companies clearly provide an important transportation service. They are a transportation "safety net" providing service to regions not otherwise serviced by other modes of transportation and to people who do not generally have other transportation options available to them. Therefore, the Senate-passed legislation would require these operations to be made accessible within seven years for small operators and six years for all others. The Department must issue regulations within a year of enactment to implement these requirements. This legislation also calls for a three-year study of how best to achieve this accessibility for inter-city carriers. The rule promulgated by the Secretary will thus be available to serve as a baseline against which other approaches can be compared. This study required by the bill should indicate cost-effective methods for making over-the-road buses accessible within the statutory time period.

Finally, the Department supports provisions adopted in the Senate-passed bill that appropriately distinguish the obligations of employers with respect to active alcoholics and drug abusers, on the one hand, and those who are no longer using illegal drugs or abusing alcohol, on the other hand. Moreover, these provisions would allow an employer to prohibit the use of illegal drugs by an employee and prohibit the use of alcohol at the workplace.

Mr. Chairman, twenty-five years ago Congress and the President were finalizing enactment of the Civil Rights Act of 1964, one of the most comprehensive civil rights legislation ever passed. We now have the chance to extend the Nation's civil rights guarantees to the disabled community, and the Department and the Administration are pleased to support this landmark legislation.

Mr. Chairman, that concludes my remarks and we would be pleased to answer any questions you may have.

Mr. MINETA. At this time, I would like to call forward a gentleman who is going to have to catch a plane, but who has done just outstanding service not only to the business community but to this country and serves, presently, as the Chair of the Task Force on the Rights and Empowerment of Americans with Disabilities. So, at this point, I would like to call forward Justin Dart. I appreciate Mr. Roffee, the Executive Director of the Architectural and Transportation Barriers Compliance Board allowing Mr. Dart to be inserted and to testify at this point.

TESTIMONY OF JUSTIN DART, CHAIRPERSON, TASK FORCE ON THE RIGHTS AND EMPOWERMENT OF AMERICANS WITH DISABILITIES

Mr. MINETA. Mr. Dart, it is good to have you with us. If you would go ahead and proceed in your own fashion, sir.

Mr. DART. Thank you, Mr. Chairman. It is a privilege to appear before this distinguished Committee. I deeply appreciate, Mr. Chairman, your support for the rights of people with disabilities, and that of your colleagues. My name is Justin Dart. I serve as Chairman of the President's Committee on Employment of People with Disabilities. I am exceedingly proud to serve in the Administration of the first President and Vice-President of the United States to endorse comprehensive civil-rights protection for people with disabilities.

I address you today not as an official representative of the Administration but as Chairperson of the Task Force on the rights and empowerment of Americans with disabilities. As a fiscal conservative, as an active Republican, and as a lifelong advocate for the principles of individual responsibility, individual productivity and individual rights which have made America great.

Mr. Chairman, you and your colleague members of the Congress have contributed to a miracle of progress for people with disabilities in the last few decades. Yet we all know that the job is far from finished. Blocked by discriminatory and paternalistic practices, and environmental barriers from fulfilling their potential for productive and satisfying lives, 43 million citizens with disabilities form this nation's most isolated, unemployed, impoverished and dependent minority.

The depth of their spiritual suffering would be impossible to express in words. It is absolutely imperative for the integrity and the prosperity of this nation that the Americans With Disabilities Act become law in a form that provides equal or greater protection to people with disabilities as the version endorsed by the President and passed by the Senate.

The provisions of the act that require the eventual total accessibility to people with disabilities of all bus systems serving the public are particularly important. It will do little good to prohibit discrimination in employment if people with disabilities are still denied the right to use the mainline public transit services necessary to prepare for employment, to travel to and from places of employment and to access the public facilities and services necessary to maintain themselves in and advance in employment.

There must be no exceptions to the requirement for equal opportunity to transit services. Transportation is just as vital to the ability to be employed. Intercity tour and charter bus transit is, often, the only possible method by which hundreds of thousands of rural and impoverished inter-city residents with disabilities can access the educational and cultural activities necessary to become qualified for employment and for advancement in employment and can travel to and from places of employment.

Airport, hotel and other similar transit services are absolutely necessary to many types of employment and to the full enjoyment of American citizenship. Experience has clearly demonstrated that there is no area of this nation where local circumstances, such as inclement weather, render accessible public transit impractical or unnecessary.

During the heavy snows of 1987, here in Washington, D.C., I negotiated the sidewalks in my wheel chair to be in my offices when only two or three able-bodied employees out of, perhaps, 60 were present. There is no city where totally paralyzing weather conditions occur more than a few days in a year.

Paratransit systems for persons with certain types of severe disabilities are essential, not as a substitute for but as a supplement to 100 percent accessible public transit. I can tell you, from 40 years of personal experience and from testimony I have taken in each of the 50 states, that paratransit and other demand-response systems for people with disabilities simply do not serve the needs of fully-employed, fully-active citizens.

The President's Committee on Employment of People with Disabilities feels so strongly about this issue that we moved our 1991 national meeting from a city that did not plan for fully-accessible public transit to one that did, from San Antonio to Dallas, Texas. I am delighted to report that San Antonio has since adopted a policy of total equality and that we look forward to having our annual meeting there in some future year.

But what about cost? Is ADA and is accessible public transit affordable? Mr. Chairman, is equality affordable in the United States of America? Not since the abolition of slavery has equality been negotiable for money in this country. But while we all agree that equality is not contingent on economic expediency, we also agree that there is, always, the responsibility to implement equality as affordably as possible.

Mr. Chairman, cost and fiscal responsibility provide the strongest possible arguments for ADA. The forced dependency of a large proportion of our increasing population of people with disabilities has resulted in heavy and rapidly-escalating economic burdens on government, business, families and tax payers.

Using data provided by Federal agencies, the Congressional Task Force which I chair estimates that the unnecessary unemployment of more than 8 million citizens with disabilities costs our society in excess of $246 billion annually. The President of the United States has used the figure $300 billion.

Mr. Chairman, I can sympathize with the fear of the unknown on the part of some of my colleagues in the transit industries who, perhaps, are not fully knowledgeable about the problems and the potential of people with disabilities. I can understand, particularly, the concerns of the representatives of privately-owned systems that do not benefit from public subsidies.

But these fears of undue burdens are not justified. Accessible public transit has been operating productively in many communities for years. As technology and public attitudes mature, as other aspects of the environment become accessible, and as incentives for productivity are refined, accessible public transit will be accomplished with increasing economy, increasing ridership and increasing profitability to operators, to tax payers, and to every citizen of this nation.

Mr. Chairman, the time has come for fiscally and morally responsible Government leadership to lay the foundation for a fully just and productive society. We cannot continue to pass the unconscionable social and financial burdens of discrimination to our children. ADA must not be amended to a statement of partial equality because partial equality is not equality, and partial equality is no longer tolerable to Americans with disabilities.

Partial equality written into law simply institutionalizes discrimination and guarantees more segregation, more unemployment and more public and private expenditures for welfare. Mr. Chairman, the Americans With Disabilities Act must be passed as a true mandate for equality and for productivity.

I thank you.

Mr. MINETA. Mr. Dart, thank you very, very much for your very fine statement, very moving statement from the bottom of your heart. Let me ask about the work of the Task Force. How would you say that the work of your Task Force has been incorporated into the ADA bill, itself?

Mr. DART. Many members of our Task Force have conferred with the Congressional leadership and writers of the ADA in both houses. They have conferred with individuals in the White House and with all who have been concerned with writing the Americans With Disabilities Act. I would to add, Mr. Chairman, that I did preside at 63 public forums, at least one in each of the 50 states. These forums were attended by several thousand, more than 8,000, individuals. I have addressed other meetings, maybe 100 other meetings, attended by almost 20,000 persons in the last 18 months in every state on this subject.

We have made every effort to distill the information which we gained and to convey it to the Congress and to the White House.

Mr. MINETA. I have heard repeatedly that non-accessible public transportation is one of the principal barriers to employment of the disabled. Does this situation vary in different parts of the country such as between urban and rural areas, or does it have a uniformly negative impact on employment of our fine fellow citizens who, unfortunately, are struck with disabilities regardless of where they might be living?

Mr. DART. It is my impression and experience that the lack of transportation is a problem which is universal and which exists in every community in the United States, be it large or small.

Mr. MINETA. Do you believe that the ADA goes far enough in removing the transportation barrier to employment?

Mr. DART. Mr. Chairman, the Americans With Disabilities Act is not going to solve all of the problems of people with disabilities. It is an essential foundation for all other solutions because, until we eliminate the insidious assumption that people with disabilities are less than fully human, and until we eliminate the discrimination that results from that assumption by a mandate for equality to every citizen of this nation, we are not going to solve all of the other problems.

I think it will begin to solve the transportation problems. But it will be a beginning, an essential beginning.

Mr. **Mineta**. Thank you. That is very, very fine.

Mr. Duncan?

Mr. **Duncan**. Mr. Dart, thank you for a very fine statement. I just want to ask you one thing. It seems that almost everything we do up here benefits big business and the big giant corporations in the end. Yet it seems as if the Federal government is driving small business out of existence in this country at a very rapid rate no matter what field you look at.

I am a little bit concerned. Do you think that this bill will hit adversely on small business or cause more small businesses to go out of existence?

Mr. **Dart**. I do not believe so. As a matter of fact, as a person who has been a small businessman, have been a founder and a chief executive officer of three small businesses and of a business that, fortunately, became larger—and I have done all of the things which are required by this act. I know as Chairman of the President's Committee and through my researches over the years, over the last ten years, that all of the requirements of this bill are being complied with successfully and productively by some small businesses somewhere, that I think I can tell you that I know that properly implemented, properly enforced and implemented, with common sense as I know our administration will do it, that this bill will not negatively impact small businesses.

As a matter of fact, it will help them because people with disabilities are the natural customers of the neighborhood small business, and they are the natural employees of the neighborhood small business. If they can get into the small business and if they can overcome the attitudinal barriers that now prevent them from being employed.

Mr. **Duncan**. Have you seen this editorial from The New York Times, September 6, which says, Blank Check for the Disabled?

Mr. **Dart**. Yes, I have.

Mr. **Duncan**. What do you think about that editorial?

Mr. **Dart**. I think that that editorial is not correct. I think that, at some point in our addressing of this subject, we need to ask not only how much is it going to cost to have equality, but how much does it cost not to have it and how much are we going to profit by investing in productivity as our forefathers have wisely done throughout the history of this nation.

Mr. **Duncan**. I was told a few days ago that one of the major cities in the West had put lifts on their buses within the last few years and that they had found that they were being used once every two days on the average, and that they had found it was less expensive to just provide individual vans or more personalized transportation to the disabled. Is that what you are talking about when mention in your testimony paratransits?

Mr. DART. In regard to the situation which you address about the apparently low ridership of lift-equipped mainline public transit, I believe that we are in the pioneering stages of this great initiative to make our society accessible to millions of people with disabilities. I think the same arguments were made against early trains, and early airplanes and early cars, which were demonstrably inferior at one time to horses and buggies.

I think that is true. That sounds like a joke, but they were demonstrably inferior, at some point in their development, to horses and buggies. People ask why are we going to subsidize railroads that carry no passengers to the nowhere that exists in the Western wilderness of this country.

I believe, Mr. Congressman, that it is virtually certain that, as technology improves, as the accessibility of this society improves, as people with disabilities lose their fear of addressing society—and, of course, that is the whole point of ADA, to make equality popular and fashionable and acceptable. As those things occur, I think you will see that the ridership and the utilization of accessible public transit will become very profitable and will become an investment in the productivity of this nation.

Mr. DUNCAN. What you are really saying is that this unnecessary unemployment that you mention, you think that the government will end up making money because of increased tax revenues and so forth if some of these unemployed disabled people are able to have income and so forth? Is that what you are saying?

Mr. DART. I think the government will make money. Tax payers will make money. Families will make money. Businesses will make money. We do well to recall that—I can recall that, and many of my colleagues that are younger maybe don't—that as we approached the Civil Rights Act of '64, I was a small businessman. I lived in the segregated South. I went to meetings where it was confidently predicted that if black people were allowed to come into our businesses, we would all go bankrupt.

What happened? We had the biggest boom in the history of human culture.

Mr. DUNCAN. Of the 43 million disabled Americans that you mention in your testimony, how many of those would use these lifts on public transit?

Mr. DART. Of the how many?

Mr. DUNCAN. You say in your testimony that there are 43 million disabled Americans. But I assume that you are talking about some who have epilepsy or other forms of disabilities who would not use these lifts. I am just wondering how many of those 43 million would use these lifts and other devices that you are asking to be put on public transit systems?

Mr. DART. I have heard the estimate that there are approximately, at this time, 7 million potential users. This figure will, certainly, increase as the proportion of our population of elderly persons and persons with disabilities does increase and is increasing.

Mr. DUNCAN. Just one more question. The last witness who was here, you heard Congressman Shuster end up with a story. He said that the President had lunch a few days ago with another member of Congress, and apparently expressed surprise that this law might apply to small charter bus companies who had only five buses, or something like that. Is it your understanding that this law would apply even to very small bus companies with, say, one or two buses?

Mr. Dart. I am not familiar with the exact question that was asked the President. Or, of course, with his answer, I am not entirely sure what the question was. I will say this, that I have been present at meetings with the President and heard his views on this bill and the equality of people with disabilities.

It is my experience that he is totally dedicated to having a civil rights law, and a real civil rights law, for people with disabilities.

Mr. DUNCAN. So it would apply to all companies regardless of size, period; is that what you are saying?

Mr. DART. I leave that up to some of my attorney friends who will follow. I think it should indeed—and hopefully will—apply, if you want my personal opinion, to all buses, eventually.

Mr. DUNCAN. Thank you very much.

Mr. MINETA. Mr. Payne?

Mr. PAYNE. Thank you very much, Mr. Chairman. Mr. Dart, thank you very much for being here today. I have long admired your success in business and, certainly, very much appreciate the work that you have done as chairperson of this very important Task Force. I think you have made a tremendous contribution to all of America. Certainly, all of us appreciate what you have done.

I recognize, as you point out in your testimony, that this is not a matter of dollars and cents, or cost and benefits. Certainly, it is a matter of civil rights and equality first and foremost. As you have described yourself, a man of keen fiscal responsibility, and certainly you have proven that in your business life, perhaps you have looked at the fact that today we can quantify that the cost to our society of the more than 8 million citizens that are unnecessarily unemployed, is $246 billion, or the President has used $300 billion.

I guess my question is, has the Task Force looked at attempting to quantify what this legislation might do in terms of reducing that cost from $246 billion to some other number; in other words, the quantified benefits of this legislation as it is now written. Has there been any attempt to quantify that?

Mr. DART. We have not attempted to make estimates in that regard. I am not sure to what extent one could make a responsible estimate. I believe I have stated to the Chairman previously that this is not going to solve all of the problems of people with disabilities. This is not going to result in the instant employment of those 8 million plus, or 10 million, individuals. It is, however, an essential foundation for the eventual employment of those individuals.

I believe that. I have been in disability policy for ten years now, and I have been doing it full time. I have been to every state three times gathering information on this, at least most of them seven or eight times. I am absolutely convinced that we are never going to solve our problems, the problems of people with disabilities, until we can eliminate the assumption that we are less than fully human and, therefore, not eligible for the same rights and services as other people.

I think buses are a good example. Nobody is talking about taking air conditioning which costs more than lifts off of buses. I ride in a car without air conditioning. We could, easily, ride in buses without air conditioning. They do it in many countries in the world that are very hot. And the buses get there just as quickly as ours, get to their destination.

We very easily say that it might be too expensive to take people with disabilities anywhere. But we do not say that we are willing to give up our air conditioning to allow people with disabilities to get out of the back rooms and off of social welfare.

I think that tells you something, Mr. Congressman, about how we think of the equality and the humanity of people with disabilities.

Mr. PAYNE. I thank you very much for that statement. Again, thank you for all that you have done in this matter. I yield back my time.

Mr. MINETA. When we talk about these costs, I think figures can be bandied about. Just taking a very quick look at how much is being expended totally in this whole field of transportation or transit by all levels of government, I think you could probably get to about $15 billion or so being spent.

At the same time, even if we were to assume some of the figures that Mr. Shuster used here, and I believe he used the figure $150 million for capital costs of lifts and maintenance of those lifts with the life of the bus, $150 million. $150 million in the realm of a $15 billion environment involving all of transit, really, is not that much in terms of the proportion.

As you have just very eloquently stated, the cost of air conditioning of that fleet is so much more than the cost of the lift. So it is a matter of values. I think you have put a finger on the issue very, very clearly.

Mr. Dart, I would like to, again, thank you very much for your presence here—Mr. Duncan?

Mr. DUNCAN. I would just like to ask one other question. You mentioned the buses in foreign countries. I am just curious, are there any countries where they have the requirements that are in this Act such as the special lifts and the special bathrooms and so forth on the buses? I don't know. I just was curious. You mentioned the buses in other countries.

Mr. DART. Mr. Congressman, I must tell you that I don't know either. But there are many of my colleagues in the room who do know. It is my impression that buses of that nature do exists in foreign countries. But I am going to ask you to ask that question to somebody who can give you a really accurate answer.

Mr. DUNCAN. Thank you very much. Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much, again, Mr. Dart. We appreciate your being here, and especially thank you for your work as Chair of this Task Force. The results of your efforts are well-known and have been embodied, I can see, in the ADA bill. Thank you very, very much.

At this time, we will take a break and come back at 2:15.

[Whereupon, at 1:35 p.m., the Subcommittee adjourned, to reconvene at 2:15 that same day.]

AFTERNOON SESSION

Mr. **Mineta**. The Subcommittee will please come to order. I would like to call forward our next panel made up of Larry Roffee, Executive Director of the Architectural and Transportation Barriers Compliance Board; Jim Raggio, the General Counsel; and Dennis Cannon, the Accessibility Specialist of the Architectural and Transportation Barriers Compliance Board.

TESTIMONY OF LARRY ROFFEE, EXECUTIVE DIRECTOR OF THE ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD, ACCOMPANIED BY JIM RAGGIO, THE GENERAL COUNSEL, AND DENNIS CANNON, THE ACCESSIBILITY SPECIALIST OF THE ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD

Mr. **Mineta**. Mr. Roffee, we have your statement and it will be made a part of the record. If you would go ahead and proceed in your own fashion.

Mr. **Roffee**. On behalf of the Architectural and Transportation Barriers Compliance Board, we are happy to be here. As you noted, with me we have Mr. Jim Raggio, our general counsel, and Dennis Cannon, an accessibility specialist, specializing in the transportation area.

The Architectural and Transportation Barriers Compliance Board, or the Access Board as we are more commonly known, was established by Congress sixteen years ago to insure that buildings are designed, constructed, altered or leased with Federal funds are readily accessible to, and usable by, people with disabilities.

The Access Board had been responsible for developing and refining, through active research programs, the Minimum Guidelines and Requirements for Accessible Design. These guidelines represent the state of the art in creating an environment usable by all people and serve as a model for the Uniform Federal Accessibility Standard. Those standards are used to implement the Architectural Barriers Act of 1986 and are also used in the Vocational Rehabilitation Act of 1973. They apply to post offices, government buildings and Federally financed housing and transit facilities across the country.

Mr. Chairman, I would like to speed things up; if we can have the written statement put in the record, I will just summarize quickly.

The Access Board has studied many and various architectural, transportation, communication and attitudinal barriers which limit the full participation of citizens with disabilities in our society, and have published a series of technical papers and staff reports on how to eliminate these barriers; for example, Lifts and Wheel Chair Securement gives guidance on providing access to buses and paratransit vehicles; Aircraft Stowage Procedures for Battery-powered Wheel chairs explains how to stow power wheel chairs on aircrafts in accordance with the hazardous materials regulations; and Transit Facility Design for Persons with Visual Impairment gives guidance to transit facility designers and operators on making transit systems usable by person with visual impairments.

Through these and other activities, tne Access Board has become a natural resource and center of expertise on accessibility for persons with disabilities.

The Access Board, along with the President and the rest of the Administration wholeheartedly support the broad goals of the Americans With Disabilities Act. This legislation would extend basic civil-rights guarantees to over 36 million Americans with disabilities and eliminate discriminatory barriers in public accommodations, place of employment, public transportation and telecommunications.

The legislation would significantly promote independence, freedom of choice and the productive involvement in the social and economic mainstream for our nation's disabled citizens. Through conducting public forums around the country and sponsoring research projects and studies, the Access Board has gathered extensive information about the extent and effects of discriminatory barriers experienced by people with disabilities and public accommodations and transportation.

The Access Board has carefully analyzed the provisions of the Americans with Disabilities Act which have passed the Senate, and believes that they provide a comprehensive solution to removing these barriers.

As we have seen, the public transit industry has expressed some technical and financial concerns about the act's provisions. To accommodate those concerns, some amendments have been incorporated in the Senate-passed version of the act which we would like, now, to discuss. The Administration endorses the Senate approach which includes a narrow, temporary exception to the lift requirement for new buses in the cases where a public transit agency can demonstrate that manufacturers are unable to supply lifts for the new buses.

The Access Board maintains extensive files on lift manufacturers and their products. There are, now, several qualified lift manufacturers. With the passage of this act, we believe that American industry will respond to the increased demand for the lifts and that exceptions will be unnecessary.

Consistent with the Senate-passed version of the act, the Administration also recommends that if the provision of paratransit services would impose an undue financial burden on a public transit agency, such services should be required only to the extent that they would not impose an undue financial burden.

The Access Board believes that a flexible approach should be used for determining what constitutes an undue financial burden and that it should take into account such factors as population, service area size and characteristics, current level of paratransit service and interim degree of fixed-route accessible services.

As fixed-route services are substantially achieved, the use of paratransit services will then shift to a feeder distributor system which would be more cost-effective than alternative services presently provided. The over-the-road bus industry has also expressed concerns about the Act's provisions based upon a lift which costs about $35,000 and takes up one luggage bay and seven seats. There are other lifts which cost between $7,000 and $10,000 and displace no luggage space and only two seats.

The act, as passed by the Senate, would require the Office of Technology Assessment to conduct a study of the most cost-effective means for making over-the-road buses accessible and extending the period of compliance to seven years for small providers and six years for other providers, with the possibility of an additional year extension based upon review of the study.

The Access Board would be involved in reviewing and comments upon the study. We believe that this study will provide a firm basis for establishing minimum guidelines and requirements for access to such vehicles.

Finally, there is a technical assistance provision in the act as passed by the Senate which we would especially recommend to you. The provision would require the attorney general, in consultation with the Access Board and certain other federal agencies, to develop a plan to assist entities covered by the act to understand their responsibilities and to provide information and technical assistance on cost-effective means for achieving compliance with the Act.

The Access Board currently has an extensive technical assistance program and believes that such a program is important to help public agencies and private businesses fully understand the responsibilities under the act and how to achieve compliance.

The Access Board and other federal agencies have developed long and varied experience in cost-effective approaches for applying the principles of readily-accessible and reasonable accommodation which are embodied in the act. By making this expertise available to all who must comply with the act, we can hasten its implementation, we can prevent unnecessary litigation, and, I think most importantly, we can avoid the unnecessary costs to those entities covered by the act. We strongly urge the House and this Committee to include a technical provision in the act.

The Access Board looks forward to working with Congress, the administration and other federal agencies in crafting and implementing a workable law that will insure the full protection and guarantees of civil rights and an accessible environment for Americans with disabilities.

If there are any questions from you, sir, we would be glad to answer them.

Mr. MINETA. Before I get into the questions, let me recess so that we can respond to the call of the House for a vote, and convene in about fifteen minutes.

[Recess from 2:35 p.m. to 2:55 p.m.]

Mr. MINETA. The Subcommittee will please come to order. Mr. Roffee, thank you very much for your testimony. We are pleased to have good friends here on the panel and especially, to see my good friend, Dennis Cannon, before the Subcommittee.

Mr. Roffee, how will the functions and responsibilities of the Architectural and Transportation Barriers Compliance Board differ from what they are today under the Americans with Disabilities Act?

Mr. ROFFEE. Sir, under the ADA, we would be required to update and enhance and revise the MGRAD publication, the Minimum Guidelines and Requirements for Accessible Design, to include standards for rolling stock. We would also have a much larger role as bill has passed the Senate providing technical assistance and, I think, see a significant increase in the number of requests for technical assistance coming into our office. I would also imagine that our current caseload of complaints under the Architectural Barriers Act would probably decrease.

Mr. MINETA. I am wondering, is there a current design criteria that the Access Board has for transit bus and rail facilities?

Mr. ROFFEE. May I turn the microphone over to Dennis.

Mr. CANNON. We don't have, as yet, any specific guidelines for those vehicles and what-not because we have not, heretofore, had the authority to define those kinds of things. The ADA would give us that authority for the first time.

However, those requirements are not new. They were embodied, in many respects, in the 1979 DOT regulation which I helped draft when it was written in '79. There have been subsequent studies as well. The Urban Mass Transportation Administration sponsored an industry panel in 1968 to come up with guidelines, advisory guidelines, for lifts, ramps and wheel chair securements. Our intention would be to borrow from those very heavily in writing the minimum guidelines.

In essence, we also have some previous studies that have to do with the accessibility of things like platforms. We are developing advisory guidance at this time on a number of issues that we would anticipate to be able to translate into minimum guidelines and requirements.

So we don't see that as a major contractual or study obligation. Our role would be to define the envelope, if you will, into which the DOT standards would fit. The DOT standards would be more explicit. Ours would provide the guidance for setting the upper and lower limits for a variety of things.

Mr. MINETA. Do I understand that under the ADA, design standards would now extend to privately-operated facilities where, up to this point, that has not been covered.

Mr. CANNON. At the present time, the minimum guidelines only cover things which are Federally financed and Federally funded. What would change is not so much the technical provisions of those, but the scope of coverage. And we have with the Uniform Federal Accessibility standard, for example——

Mr. MINETA. Could you explain scope of coverage a little more, then?

Mr. CANNON. The current Architectural Barriers Act, which we enforce the standards for, sets forth facilities in buildings which are designed, altered, constructed or leased with Federal financial assistance. That covers a very broad range of things and types of facilities.

What would change under the Americans With Disabilities Act is that those same standards, or similar ones, would now apply to privately-operated and privately-built motels and so forth, or transit facilities, or transit vehicles which are not currently covered under the standards. We don't believe that the technical requirements would be substantially different.

What it would do is extend the coverage beyond the very limited coverage that is currently under the Architectural Barriers Act.

Mr. MINETA. As an example, if a hotel had been built under a UDAG grant, there were standards being applied. Now those same standards, or something similar, would be applied to any hotel being built?

Mr. **Cannon**. That's correct. You also need to understand that in reality the vast majority of facilities in this country are already covered by state and local regulations and laws most of which incorporate the American National Standards Insitutute standard which is almost identical to the Federal standard which we enforce for Federally-financed buildings.

In reality, for the broad majority of cases, there would be no new requirements under the ADA. Those local buildings and hotels and whatever still have to conform to the local laws. In fact, California is one of those states that has a building code which is more stringent than the Federal standard. So California is already subject to, in terms of its building requirements, a law that is being applied with little or no problems throughout the state of California and a few others that actually require more, in terms of access, than does the federal standard.

Mr. **Mineta**. In later testimony, it will be suggested that the federal government develop design standards for wheel chairs which are compatible with workable safety restraints and which will work on transit vehicles and in transit facilities.

In view of the Access Board's research in the area of wheel chair securement, what is your reaction to this suggestion. Is such a standard for wheel chairs needed?

Mr. **Cannon**. First of all, there is already a process underway to develop some standards—in fact, international standards—through an organization called RESNA which I have been a part of in developing those standards. Those standards would refer to such things as the structural integrity of the wheel chair, how strong it is and so forth, so that if you grabbed onto it with a securement device, you would some reason to believe that it would, in fact, be held in place.

The match up of securement in wheel chair is a complicated issue. What is complicated is that while you can set certain standards about the structural integrity, structural tie points, and so forth, on the wheel chair, you can't, necessarily, define a standard wheel chair. All the wheel chairs are designed, like a set of clothing, to meet the individual needs of the individual.

So there isn't any such thing, really, as a "standard wheel chair" except that you can define certain points on the frame, for example, that would have structural integrity where a clamp of a particular design could grab onto. We think those things are very necessary, and we are working on them.

My understanding of the ADA—and, perhaps, a lawyer could better answer it—is that it does not cover that to the extent that we would be given any authority to write those kinds of standards. But, as I say, we have been working on the issue and we are more than happy to cooperate and work with the designers of chairs.

We also know that there are at least two transit systems that have designed their own securement system which, in their own words, "We can secure anything that has come along so far," including the three-wheel devices which are the largest expanding market, and many of the power chairs including the one that I am using.

So those systems do exist in the sense that they can be specified for purchase or the transit agency can modify existing systems. It is true that you can't go out to the wheel-chair securement store and buy one off the shelf yet. I expect that will change.

Mr. **Mineta**. In your statement, Mr. Roffee, you mentioned wheel-chair lifts for over-the-road coaches which cost between $7,000 and $10,000, which displace no luggage space and take two seats in contrast to more seats—I believe four seats—and taking luggage space and costing something like up to $35,000.

Using what you have described to achieve accessibility on over-the-road coaches would significantly lessen the financial burden on the inter-city bus industry of eventual compliance with the ADA bill after six or seven years. Could you provide the Subcommittee with additional information about this lift? For example, is it being used by any transportation provider in the United States, and do you know what their experience has been thus far with the lift as far as its reliability and cost to maintain?

Mr. **Cannon**. Currently, the one you are referring to is, really, the one being used in Denver and has been mentioned earlier. There is limited experience with that device which is why we support the provision of the study done by the Office of Technology Assessment to really determine what that device is.

I have seen the device. It was here in Washington in 1984, a prototype of it, at the Convention Center at the APTA show. It is very similar to the kinds of lifts that are used on private vehicles in that it is extremely simple. It is much simpler than the complicated so-called passive lifts used on urban buses, so it ought to be easy to maintain.

My lift on my van, which I just recently had to replace, I bought back in 1976. It was No. 19 on the production line. Except for some modifications and maintenance and one motor replaced, it has been extremely serviceable. Those kinds of things are very easy to maintain and relatively inexpensive.

Because this lift, essentially, operates on the outside of the vehicle, it does not take up a luggage bay and, therefore, it does not restrict the carrying of baggage express or package express on which, I believe, Greyhound depends a great deal for their income.

Mr. **Mineta**. Are you going to be monitoring the experience there in Denver with regard to this Hubmatic lift?

Mr. **Cannon**. We are attempting to collect as much information as we can. According to the Senate version of the ADA, we would be involved, we would expect, with the study that the Office of Technology Assessment would do, and intend to keep a close watch on that.

Mr. **Mineta**. So you will be incorporating something of that Denver experience, so to speak, in your OTA report as provided under the ADA.

Mr. **Cannon**. That is correct.

Mr. **Mineta**. Very well. Mr. Shuster?

Mr. **Shuster**. Thank you, Mr. Chairman.

With regard to the Hubmatic lift, staff tells me that it is a prototype only, and they were installed on buses which were not typical over-the-road coaches, and that the cost of the lift, itself, was accompanied with an additional $11,000 charge to make the bus compatible with the lift.

Is that a fair characterization of the situation as you understand it?

Mr. **Cannon**. My understanding is part of that additional cost had to do with a change order which would not, necessarily, incur on an initial purchase from another manufacturer, a new manufacturer, today. That is one of the uncertainties, however, that we hope to study. It is very difficult to nail down what is the real cost of that device versus what was caused by the change order which always adds additional costs that are not really attributable to the equipment.

Mr. **Shuster**. Thank you very much. Thank you, Mr. Chairman.

Mr. **Mineta**. Mr. Roffee, Mr. Cannon and Mr. Raggio, thank you very much for being here. I look forward to our working together as we go down this path. Again, thank you very much.

[Mr. Roffee's prepared statement follows:]

STATEMENT OF LARRY ROFFEE, EXECUTIVE DIRECTOR, ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD

Mr. Chairman, I am pleased to be here today on behalf of the Architectural and Transportation Barriers Compliance Board to testify on the Americans With Disabilities Act. The Architectural and Transportation Barriers Compliance Board, or the Access Board as we are more commonly known, was established by Congress 16 years ago to ensure that buildings which are designed, constructed, altered or leased with Federal funds are readily accessible to, and usable by, persons with disabilities.

The Access Board has been responsible for developing and refining, through active research programs, the Minimum Guidelines and Requirements for Accessible Design (MGRAD). These guidelines represent the state-of-the-art in creating an environment usable by all people and serve as the model for the Uniform Federal Accessibility Standards (UFAS). Those standards are used to implement the Architectural Barriers Act of 1968 and are referenced in regulations used to implement Section 504 of the Rehabilitation Act of 1973 which apply to post offices, Government buildings, and Federally financed housing and transit facilities across the country.

The Access Board has studied the many and various architectural, transportation, communication, and attitudinal barriers which limit the full participation of disabled citizens in our society and has published a series of technical papers and staff reports on eliminating these barriers. For example, Lifts and Wheelchair Securement provides guidance on providing access to buses and paratransit vehicles. Aircraft Stowage Procedures and Battery Powered Wheelchairs explains how to stow power wheelchairs on aircraft in accord with hazardous materials regulations. Transit Facility Design for Persons with Visual Impairments gives guidance to transit facility designers and operators on making transit systems usably by persons with visual impairments. Through these and other activities, the Access Board has become a national resource and center of expertise on accessibility for persons with disabilities.

The Access Board, along with the President and the rest of the Administration, wholeheartedly support the broad goals of the Americans With Disabilities Act. This legislation would extend basic, civil rights guarantees to over 36 million Americans with disabilities and eliminate discriminatory barriers in public accommodations, places of employment, public transportation, and telecommunications. The legislation would significantly promote independence, freedom of choice, and productive involvement in the social and economic mainstream for our nation's disabled citizens.

Through conducting public forums around the country and sponsoring research projects and studies, the Access Board has gathered extensive information about the extent and effects of discriminatory barriers experienced by persons with disabilities in public accommodations and public transportation. The Access Board has carefully analyzed the provisions of the Americans With Disabilities Act which have passed the Senate and believes that they provide a comprehensive solution to removing these barriers.

In the area of public transportation, the Americans With Disabilities Act would require that all new buses, rail vehicles, and other fixed route vehicles which are purchased 30 days after the enactment of the Act be readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs. Because the average life of a bus is 12 years, accessible bus transportation would be available to disabled citizens in cities and towns throughout the country in a relatively short period. In the case of the rail systems, within 5 years, at least one car per train would be required to be accessible to individuals with disabilities, including individuals who use wheelchairs. Stations on intercity rail systems, including Amtrak, would have to be made accessible within 20 years. Key stations on rapid rail, commuter rail, and light rail systems would have to be made accessible within 3 years, with the Secretary of Transportation being authorized to extend the period up to 20 years for extraordinarily expensive structural changes.

In addition, the Americans With Disabilities Act would require public transit agencies to ensure the provision of paratransit services for individuals with disabilities who cannot otherwise use accessible fixed route transportation. Public transportation services provided by private entities and over-the-road buses would also have to be made accessible.

The Access Board would be required to supplement its Minimum Guidelines and Requirements for Accessible Design to include accessibility standards for transit vehicles and stations, as well as public accommodations. Regulations issued by the Department of Transportation and Attorney General under the Act would have to be consistent with these standards. Representatives of the Department of Transportation and the Department of Justice are members of the Access Board and have enjoyed good working relationships with the other Federal agency and public citizen members of the Board. We look forward to continuing this close relationship in the days and months after the Americans With Disabilities Act is enacted in developing accessibility guidelines and standards for public transportation and public accommodations; educating covered entities about their responsibilities under the Act; and providing information and technical assistance for achieving cost-effective compliance with the Act.

The public transit industry has expressed some technical and financial concerns about the Act's provisions. To accommodate those concerns, some amendments have been incorporated in the Senate passed version of the Act which we would like to further discuss with you. The Administration endorses the Senate approach which includes a narrow, temporary exception to the lift requirement for new buses in the case where a public transit agency can demonstrate that manufacturers are unable to supply lifts for the new buses. The Access Board maintains extensive files on lift manufacturers and their products. There are several qualified lift manufacturers and with the passage of the Act, the Access Board believes that the American industry will respond to the increased demand for lifts and that exceptions will be unnecessary.

Consistent with the Senate passed version of the Act, the Administration also recommends that if the provision of paratransit services would impose an undue financial burden on a public transit agency, such services should be required only to the extent that they would not impose an undue financial burden. The Access Board believes that a flexible approach should be used for determining what constitutes an undue financial burden which takes into account such factors as population, service area size and characteristics, current level of paratransit service, and interim degree of fixed route accessible services. As fixed route accessible services are substantially achieved, the use of paratransit will shift to feeder-distributor systems which will be more cost-effective than alternative services presently provided.

The over-the-road bus industry has also expressed concerns about the Act's provisions based on a lift which costs about $35,000 and takes up one luggage bay and seven seats. There are other lifts which cost between $7,000 and $10,000 and displace no luggage space and only two seats. The

Act, as passed by the Senate, would require the Office of Technology Assessment to conduct a study of the most cost effective means for making over-the-road buses accessible and extending the period of compliance to 7 years for small providers and 6 years for other providers, with the possibility of an additional year extension based on review of the study. The Access Board would be involved in reviewing and commenting on the study. We believe that this study will provide a firm basis for establishing minimum guidelines and requirements for access to such vehicles.

Finally, there is a technical assistance provision in the Act, as passed by the Senate, which we would especially recommend to you. The provision would require the Attorney General, in consultation with the Access Board and certain other agencies, to develop a plan to assist entities covered by the Act to understand their responsibility under the Act and to provide information and technical assistance on cost-effective means for achieving compliance with the Act. The Access Board currently has an extensive technical assistance program and believes that such a program is important to help public agencies and private businesses to fully understand the responsibilities under the Act and achieve compliance. The Access Board and other agencies have developed long and varied experience in cost-effective approaches for applying the principles of "readily accessible" and "reasonable accommodation" which are embodied in the Act. By making this expertise available to all who must comply with the Act, we can hasten implementation of the Act; prevent unnecessary litigation; and most importantly, avoid unnecessary costs to those entities covered by the Act. We strongly urge the House to include a technical assistance provision in the Act.

The Access Board looks forward to working with Congress, the Administration, and other Federal agencies in crafting and implementing a workable law that will ensure the full protection and guarantees of civil rights and an accessible environment for Americans with disabilities.

Mr. MINETA. I would like to call on David Capozzi, Vice President, Project ACTION, Jim Massara from the Eastern Paralyzed Veterans of America and Ellen Daly of the President's Committee on Employment of People with Disabilities.

I believe Mr. Jenkins wanted to get back to Pennsylvania this evening, so let me call on the General Manager of the Cambria County Transit, Harold Jenkins, to also come forward at this time.

TESTIMONY OF A PANEL CONSISTING OF DAVID CAPOZZI, VICE PRESIDENT, NATIONAL EASTER SEAL SOCIETY AND MANAGER, PROJECT ACTION; JIM MASSARA, EASTERN PARALYZED VETERANS OF AMERICA, ELLEN DALY, LEGISLATIVE ANALYST, PRESIDENT'S COMMITTEE ON EMPLOYMENT OF PEOPLE WITH DISABILITIES, AND HAROLD JENKINS, GENERAL MANAGER, CAMBRIA COUNTY TRANSIT

Mr. MINETA. Mr. Capozzi, we have your statement. It will be made a part of the record. Please proceed in your own fashion.

Mr. CAPOZZI. Thank you, Mr. Chairman. My name is David Capozzi. I am the Vice President of Easter Seals, and I manage Project ACTION. I just want to give you a little bit of background about myself to explain my knowledge about transportation and my interest in this bill. Prior to coming to Easter Seals, I was with the Paralyzed Veterans of America for four years where I served as the Advocacy Director where we worked very closely with Mr. Mineta in passing a very important bill a couple of years ago called the Air Carrier Access Act.

I was somewhat happy to hear that the American Bus Association and Greyhound want to be treated just like the airlines as far as private transportation because, as you know, airlines are required to have vertical lifting devices and level boarding changes in all the airplanes, since 1978. Many of them do not do that, but they have been required to do that. That is irregardless of the Air Carrier Access Act.

We don't know what the final regulations under the Air Carrier Access Act are going to say, but they do have that requirement. So it is great that they want to be treated the same.

My predecessor, that I took over from with Project ACTION at the National Easter Seal Society, was Bob Bergdorf. Bob, as many people in the room know, was the principal draft person of the original Americans With Disabilities Act that was introduced in the last Congress. So Project ACTION has considerable interest in transportation

I would like to just tell you a little bit about Project ACTION. Project ACTION stands for Accessible Community Transportation in our Nation. It is a $3 million, multi-year demonstration project that is funded through UMTA. Its basic concept is cooperation.

A lot of what you have heard today and what you are going to hear today is that there are problems and that there are successes with transportation. Many of the problems and many of the successes can be keyed to whether or not there was cooperation between the disability advocates and a local community, and the transit providers in that community. If there is good cooperation, there is generally satisfaction with the transportation that is being offered.

If there has been discord, there hasn't been cooperation, it results in problems. Project ACTION is an effort to provide cooperative efforts at the local level between transit operators and the disability community to improve access. We will do that through a demonstration project which will channel money to local communities. Like I said, it is a $3 million project. We intend on spending at least 65 percent of that money in the local areas, so we are looking at about 15 demonstration projects all over the country to improve transportation through a cooperative process.

We are looking at, specifically, five areas: one, how do you identify people with disabilities in the community; second, improving training for transit operators so that they can be more sensitive to the needs of people with disabilities; third, training disabled people so that they get over some of their fears of using public mass transportation and to teach them how to use it more effectively. How do you use a lift, how do you read a bus schedule? How do you get to the bus stop? How do you access transportation; fourth, marketing transportation, developing cooperative programs to market accessible public transportation; fifth, finally, developing technologies that will break down many of the barriers to transportation.

Those five areas, all five areas, will be critical to helping with the implementation of the ADA. Chairman Anderson of the full committee said he was interested in the implementation of the ADA. Project ACTION will specifically help out with the implementation of the ADA.

As part of our research in developing the Request for Proposals for these cooperative model program, we have done a reconnaissance survey of 119 transit districts all over the country, and we have identified 59 transit districts—I have attached that as Attachment B to my testimony—59 transit districts that either have 100 percent accessible fixed route systems, or have a commitment to achieve 100 percent fixed-route systems within a reasonable time period.

That is only 59 systems that we have surveyed. I am sure that there are more that I am leaving out. Those are 59 that we have identified that are providing accessible transportation in their communities already. They do it in a multi-modal approach. There are large rural and medium-sized cities, anywhere from New York City to Los Angeles and Greensburg, Pennsylvania to Columbia, Maryland, a variety of city size and a variety of inclement weather and sunny-weather cities, places from Long Beach, California to West Palm Beach, Florida. Buffalo, New York and Oshkosh, Wisconsin. In fact, I have a letter from the Mayor of Oshkosh that I would like to insert into the record.

Mr. MINETA. No objection.

[The letter referred to by Mr. Capozzi follows:]

September 7, 1989

The Hon. Robert Kasten
United States Senator
Senate Office Building
Washington, D.C. 20510

Dear Senator Kasten:

I am writing in support of the Americans with Disabilities Act and to dispel the notion that problems with main line transportation for persons with disabilities militates against passage of the legislation. For nearly a decade we in Oshkosh have provided public transportation for persons with disabilities and others having mobility limitations. Our buses are equiped with wheelchair lifts and have "kneeling" capability to accommodate the needs our our traveling public.

Our winters can be harsh and the snow deep and persistent yet we have encountered minimal difficulty in serving our customers. The Oshkosh Public Works Department is sensitive to the special concerns of persons with disabilities and do a yeoman's job in keeping curb cuts free of snow and in maintaining other areas to ensure that all individuals have access to public transportation.

I urge you to support the Americans with Disabilities Act to allow all citizens equal opportunity of access to the quality of life offered by this great nation of ours.

Thank you.

Sincerely,

James A Mather

James A. Mather, Mayor
CITY OF OSHKOSH

Mr. **Capozzi.** The mayor says that he is writing in support of the Americans With Disabilities Act and to dispel the notion that problems with mainline transit for people with disabilities mitigates against passage of the legislation. He goes on to say, "Our winters can be harsh and the snow deep and persistent. Yet we have encountered minimal difficulty in serving our customers."

That was one of the 59 cities that we identified that have 100 percent accessible systems.

In addition, one thing was mentioned earlier about, "doesn't it make more sense to go back to the local option policy of providing service to people with disabilities because it might be too costly to provide lifts on buses?" As part of our research, we looked at the effects of different federal policies on the provision of accessible transportation.

The local option policy and the special effort policy which was, really, the same as local option—the special effort policy of the Federal government resulted in less than 5 percent of new buses being made accessible. 95 percent of the buses that were bought during the special effort phase of Federal regulations were inaccessible.

During the local option phase, only 42 percent of the buses bought during that phase were accessible. So if we go back to that, the result will be fewer buses being purchased accessible than are being purchased today.

Another question was asked to a witness earlier, how many buses last year were purchased that were accessible? In our research, we identified about 42 percent of the buses purchased in the last two years were accessible buses. So, in city after city, the trend is to provide a multi-modal approach, buses with lifts and paratransit as a supplement for those who can't use lifts.

I want to give you just five examples of how Project ACTION can help in the implementation of the ADA. First is in the area of paratransit. One of the things that Project ACTION is going to do is, identify people with disabilities in the community, and develop marketing tools. Those two things, tied together, will assist in the concept of who cannot use public transportation.

We will identify people with disabilities in the community, target marketing to those individuals in an effort to move them from paratransit onto fixed-route accessible buses. A number of the comments that we received in our research to the 119 transit operators were, "Paratransit is a very burdensome thing for us to do because it is a very time-intensive, labor-intensive, process."

We need to, somehow, craft a way to move people onto fixed-route buses. Project ACTION is very well positioned to help in doing that.

Also, one of the things that was raised in testimony earlier was that ridership levels are very low. Project ACTION will help increase those numbers, but ridership levels are, in fact, not that low in many cities. It is based on how you count riders. In Seattle, last year, it was reported to us that they had 1,400 lift usages in their fleet. They have 770 accessible buses.

So the number of people using accessible vehicles is growing. It is a question of encouraging them to use it more through a cooperative process between transit and disability folks. Project ACTION can help in that.

The other thing that we are going to be doing is institute training programs, for transit operators and for disabled people. That will help. We also have a commitment to improving lift reliability. One thing that hasn't been mentioned here today, UMTA had funded and did a research project on lift reliability two years ago in Syracuse, New York. It was funded by UMTA. It was an accelerated lift cycle testing process where they exposed a variety of lifts to severe weather conditions, snow, salt, rain and ice in a compressed time period so that you could determine how a lift was going to withstand winters for a ten-year period, and study it in about a ten-week period.

The result of that study is that lift manufacturers now incorporate the recommendations that came out of the study into their design of lifts. So what we have now is, really, state-of-the-art lifts that are coming out. So what may have been true ten years ago, that there were problems with lift reliability, will not be true subsequent to the ADA because you have state-of-the-art lifts coming out.

We have a commitment to making those even more reliable. I want to see lifts that produce a lift every single time it is used. We don't want to see a breakdown. We are committed to helping with that.

Also, we have collected some information on maintenance figures for lifts. DOT, in their regulatory impact analysis back in 1986, assessed the cost of maintenance at $650 per lift rather than $2,000. In Seattle, last year's cost for maintenance was $471. Many cities don't even keep track of the lift maintenance cost because it is either very negligible or it is just not worth their time to keep count of it because it is such a low cost.

What we have found is that if you integrate the lift maintenance program with the regular maintenance of the bus, the cost is marginal. If you have a person that is responsible for maintenance of the bus, and make one of their tasks maintenance of a lift, as opposed to identifying one person who is just going to be the lift repair person, it makes a lot more sense to do it the other way as opposed to single out lifts as a special component. That jacks the price up considerably.

We are going to try to replicate cost-effective ways of maintaining lifts all over the country.

Securement has been raised, and I believe it is going to be raised in later testimony by the American Public Transit Association. Securement has been raised as an issue in a lot of transit districts that we have contacted in our research. As Dennis Cannon from ATBCB reported, the securement problem is not a major problem. It is a problem with matching different kinds of wheel chairs up to the current securement devices.

Project ACTION will work with transit operators and manufacturers of transit equipment and disability organizations to come up with a securement device that can be used affordably around the country that will be safe.

Finally, I want to point out a really innovative program that is starting up in Detroit. If I were in Detroit right now, I would be a bus stop. [Holding up a red mitt.] One of the things that we hear all the time is, "I can't get to the bus stop because it is up a hill. It is ten blocks away from my house," or, "It is snowing," or, "There are no curb cuts." You hear all these issues being raised. That is an answer to support paratransit.

What can work and what has worked in Detroit is, if you can get to the bus route, even though the bus stop is ten blocks away, if you can get to the bus route, and you hold up an orange mit, you are a bus stop. So if you live on a bus route and you go out your driveway, even though the bus stop is ten blocks up a hill or up a vertical cliff, and it is snowing out, you don't have to get to the bus stop. All you have to do is get to the end of your driveway and hold up a 50-cent mit, and you are on the bus.

Those are the kinds of innovative programs that we are going to examine and replicate around the country, that are cost-effective simple solutions to improving transit.

A couple more points. Mention was made earlier about a meeting with the President about charter bus. I want to answer that and then I want to, also, tell about a meeting that I had with the President since we are all meeting with the President. The answer that the President gave regarding charter bus was, in fact, correct. Not every single new charter bus need be accessible under the Senate-passed version of the ADA. There is no retrofit for charter buses or any other buses under the ADA and not every single new charter bus need be accessible.

Every scheduled service private bus put into production six or seven years after the passage of the ADA would have to be made accessible. So it is not every single new charter bus. So the President's answer was, essentially, correct.

The other thing that the President said in the meeting that a group of disability advocates had with him several weeks ago was that he has a commitment to maintaining the Senate-passed version specifically in the area of inclement weather. He doesn't want to see a broader exemption for inclement weather areas. That was a commitment that he made to us.

In conclusion, I want to say that when the Senate passed their bill, they included a piece on technical assistance. You already have a piece on technical assistance. Project ACTION is a way to help implement this bill. We fully support the Senate's version on technical assistance. I think it should be included in the House version.

But I want you to be aware that you already have technical assistance available. It is funded by UMTA, and we are ready to help.

I also want to include Mr. Dirks' testimony from Detroit for the record.

Thank you.

Mr. **Mineta**. Very well. Thank you very much.

Mr. Massara, we have your statement and will go ahead and make it part of the record. Because we are running late, I wonder if you could just go ahead and summarize in your own fashion.

Mr. **Massara**. Certainly. Thank you, Mr. Chairman.

In my professional capacity, I am in constant contact with roughly 1,300 disabled veterans in the Buffalo, New York region. Approximately 25 percent of these persons use mass transit for employment, medical treatment, shopping or other personal errands. Virtually all these people's basic personal needs would be severely curtailed without the use of lift-equipped buses and/or the light-rail rapid transit system.

I have observed, firsthand, in both Buffalo and Syracuse, New York, the paratransit systems are not conveniently available any time a disabled person may require their use. In Syracuse—I used to live in Liverpool, New York, which is just outside of Syracuse—unfortunately, the paratransit system, at that time, only came to Liverpool on Thursdays. I had to schedule my entire life around Thursdays. This is not equal access.

From the standpoint of disabled veterans, there is a dire need of transportation to and from VA medical center appointments for treatment. Cutback in the VA's budget have resulted in curtailing beneficiary travel within local areas since June, 1987. When beneficiary travel was drastically reduced, our office was deluged with calls from distressed veterans wanting to know how they could get to and from appointments.

Some of the slack was taken up by voluntary services. The rest was absorbed by lift-equipped buses. In every case handled by our office—there were 393 in the first three months—paratransit was out of the question because of scheduling problems. These veterans had no idea how long they were going to be at the VA hospital so they could not schedule their return trips. The lift-equipped buses certainly come in handy for them.

As far as the problem of snow removal is concerned, cities such as Buffalo that experience excessive snow fall are equipped to handle such snow fall. Obviously, the snow fall came before the city and the city's ability to cope with removal evolved accordingly.

Buffalo averages 96 inches of snow fall annually. The average temperature for December, January and February is 15 degrees Fahrenheit. Snow removal is rapid and efficient. Rock salt is dumped on streets and sidewalks to keep them free of ice. Bus stops are cleared concurrently as streets are cleared. The only time that the disabled person would be prevented from catching a bus or from getting to a bus stop really would be the times when nobody is traveling, everybody is snowbound, able-bodied and disabled, alike.

Mr. Chairman, I am proud to say that I live in a city which, in spite of severe winter weather, has become a leader among the nation's cities regarding accessible mass transportation. Despite a desperate need for funding sources, Niagara Frontier Transportation Authority already has successfully operated and maintained a system with more than 50 percent of its buses equipped with wheel chair lifts and a fully-accessible light-rail rapid-transit line.

As further indication of the ability to implement accessible mass transit, in spite of inclement weather, NFTA has committed itself, through a procurement policy, to having 100 percent of its buses equipped with wheel chair lifts. I have attached some information from NFTA.

But this, clearly, sends a message to other snow cities that, if we can do it, so can they.

I would just like to add one thing in the area of private transit. The Act will require intercity transit providers to purchase only accessible buses after six years. Bankruptcy and severe service cutbacks are the specters raised by Greyhound. But this does not stand up to the light of reason.

Accessible over-the-road coaches are on the road today in which access costs no more than for city buses. Lifts on these buses take up no baggage space and only one seat is lost. Rest rooms are not accessible, but the ADA would not require accessible rest rooms on these buses.

Given the rapid development of lift technology so far without a legal mandate, the cost will surely fall. The extra time given this industry, in particular, should be more than sufficient.

Thank you for affording me the opportunity to speak before this subcommittee. I would be happy to answer any questions.

Mr. Mineta. Fine. Thank you.

Now we will have Ms. Daly, from the President's Committee on Employment of People with Disabilities.

Ms. Daly. Thank you, Mr. Chairman. I will also summarize. You have my testimony. I have been involved with transportation for the last fifteen years as it relates to people with disabilities, so I would like to share with you some of the learning, I have experienced.

People with disability need to be able to choose the method of transportation that best suits them. It is true that for a small percentage of people, paratransit is the only system that will meet their need. But for a great many of the disabled population, an accessible mainline system can fully meet their transportation need.

For those who live in parts of the country served by public transportation, accessible transit can facilitate regular employment. The United States is facing a labor shortage. Yet, there are people with disabilities wanting to be employed. A 1986 Louis Harris pole report states that the lack of accessible or affordable transportation is a significant reason why they are not employed.

The hour is now. There needs to be accessible public transportation. Paratransit, as it operates in most communities today, is very restrictive and not equal to that of public transit. Paratransit systems operate on an advance reservation call-in system. That call may need to be into the scheduling anywhere from 16 to 72 hours in advance of a trip. How long would the non-disabled rider put up with that silliness?

Paratransit does not allow for any spontaneity. You can't decide on a moment's notice that you want to go shopping or stay at the office late. There is no flexibility. You awake at 6 a.m., not feeling well, and decide you will stay home in the morning. But there is an important meeting in the afternoon and you must attend. "I'm sorry, but you will have to go in the morning or you won't get there at all because you are prescheduled. Your meeting is over early, but you will have to wait until you are scheduled to be picked up."

Paratransit simply allows you no choices. Rescheduling same-day trips rarely can occur. In order to use most paratransit systems, you have to meet their eligibility standards, meaning that you have to have medical documentation that states you need the services.

Before I became disabled twenty-six and a half years ago, I used public transportation in lots of cities. Never once was I asked for documentation that I needed the service. All I needed to do was to get on the bus, pay the fare, and follow the rules.

Paratransit is not public transportation when a non-resident wishes to use it when visiting a city. Mr. Chairman, I face this problem when I travel on business throughout the United States. I certainly will face this situation when I return to Milwaukee, Wisconsin where I am still a property tax payer. To use the Milwaukee system, one must request an application form from the user-side subsidy which is their paratransit.

Upon completion of the application, the form is then returned to them with a $7.00 fee. They, then, send a form to my doctor who will, then, verify my condition and that I need paratransit. Assuming the doctor adequately responds to the user-side subsidy request, I should, then, receive a letter telling me I am eligible.

Finally, during their regular business hours, I will need to go to their office and have a photo ID made which, then, I will have to carry with me to use the service. Then, of course, I must follow the rules for scheduling

Other visitors just simply go to a corner and get on a bus. No one asks them to document why they are there or why they need the ride. Requiring action to make mainline transportation accessible would eliminate this burden and discrimination.

Paratransit hours of service, areas serviced and fare charges, often do not mirror that of public transportation. When the hours of service and area served differ from the mainline system, this puts a person with a disability at a disadvantage. They can only be employed based on operating hours in the area of paratransit operation.

The system does not offer bus passes, off-peak hour fares and they, in fact, charge more for a trip. The transit operators use this high fare as a way to keep trip demand in control while they are marketing their mainline system. An accessible mainline system could relieve the paratransit system.

The dialogue could go on and on. You need to know that fifteen years ago, there was not any public transportation accessible to people with disabilities. The people with disabilities spoke out. Bus lifts, at that time, were in their infancy, so paratransit came about. It is time, now, to take the next step and make all new mainline buses accessible to the 49 million Americans with disabilities.

The letter Mr. Capozzi mentioned from the Mayor of Oshkosh certainly points that possibility out. The Americans With Disabilities Act would make this happen. Also, as the former Executive Director of the Wisconsin Governor's Committee for People with Disabilities, I would like the record to show that since 1976, they have been on record as supporting accessible mainline transportation and have responded to all of the action, both at the Federal and state level, relative to accessible transportation and have gone on record supporting the Americans With Disabilities Act.

Thank you.

Mr. MINETA. Let me now call on Mr. Harold Jenkins, General Manager of the Cambria County Transit Authority, Johnstown, Pennsylvania.

Mr. Jenkins?

Mr. **Jenkins**. Thank you very much, Mr. Chairman, for allowing me the opportunity not only to come here this afternoon but taking care of my wishes, that I do have to be back early this evening.

As you just stated, I am Harold Jenkins. I am the General Manager of the Cambria County Authority in Johnstown, Pennsylvania. I have been asked to testify before this subcommittee this afternoon in support of the Americans With Disabilities Act of 1989. My support is based primarily upon our experience in Cambria County with operating a small, twenty-seven bus urban transit system which is 100 percent accessible to those persons confined to wheel chairs.

We have been operating a totally accessible transit system since 1983. I want to emphasize from the outset that an accessible transportation system will only be as successful as the commitment behind the decision to provide accessible transit. I believe, from our experience, unless management is firmly committed to the laudable goal of accessibility, persons with handicaps stand to be shortchanged somewhere along the line.

Let me explain what I mean very briefly. The very nature of physical disabilities contributes to the discrimination problems which exist with respect to individuals with handicaps. Many people are uncomfortable in dealing with those who are different. This pattern has contributed immensely to the reluctance of many persons with handicaps to venture out into society and to attempt to join the mainstream.

Consequently, if their fears are met by a transit system which is not seriously committed to providing reliable and safe accessible transit, their fears will only be compounded and the discrimination perpetuated.

In Cambria County, we made a commitment from the beginning to provide the best possible accessible system. We believe that only with this degree of commitment would we be able to overcome the built-in reluctance of many persons with disabilities, especially those in wheel chairs.

Let me outline some of the steps we took which go beyond the simple provisions of wheel chair lifts. From the beginning, we realized the importance of selling the concept of fixed-route accessible transit to potential users. I emphasize the word "selling" for the reasons previously mentioned.

Many folks in our community with disabilities were reluctant to utilize an untested form of public transit. Therefore, we had to sell it. These efforts took many forms. We initially conducted public demonstrations of the accessibility features of the bus. The local media provided extensive coverage, of vital consideration in any public awareness program.

Concurrent with the bus demonstrations, we inaugurated a program to contact all the organizations in the community who worked with persons with handicaps. A very detailed slide show was prepared and presented to those groups showing every step involved in the boarding and exiting of the bus.

We prepared a special publication which highlighted the accessibility components of the bus and the sequence of steps involved in using the vehicle. Thousands of these brochures were distributed throughout the community. All these efforts helped to assure to passengers with a handicap that public transportation can be a safe and reliable means of transportation.

As a result of our educational efforts, we carried an average of 200 passengers in wheel chairs a month during the first eleven months of operation in 1980. That 200 a month with only seven accessible buses. By 1983, our entire fleet of 27 buses was accessible with the result that we now carry over 3,000 passengers in wheel chairs each year.

In addition, we annually transport about 36,000 passengers with other disabilities. And we carry this number despite the inclement weather and hilly terrain. Why? Commitment, a strong commitment to quality transit.

Another important component of our program has been driver training. In addition to receiving basic training in lift operation, all operators receive intensive sensitivity training. Drivers complete a comprehensive course consisting of films, wheel chair familiarity, boarding procedures, securement and emergency evacuation.

Drivers also spend a portion of their training period confined to a wheel chair in order to enhance their sensitivity to the various needs and feelings of passengers with disabilities.

Another vital component of our program is wheel chair lift maintenance. There is no worse experience for a passenger in a wheel chair than to arrive at a bus stop expecting an accessible bus only to find that the lift doesn't work. A quality maintenance program is critical. Drivers are also required by union contract to cycle their lift prior to beginning their work day. This procedure has benefits for the mechanical components of the lift.

It also assures the operator that he or she has a functioning lift. If it does not operate properly, the operator is prohibited from leaving the garage with that bus. All these steps I have discussed go beyond the letter of the law but without them, we believe an accessible system will be doomed to failure.

Finally, let me briefly touch upon several objections to accessibility which are frequently raised. One objection concerns the weather. In Cambria County, we experience about 48 inches of precipitation each year. 30 inches of that precipitation is snow. Compounding this situation is a geography marked by steep hills. Consequently, it would be easy to assume that these apparent obstacles would significantly prohibit the utilization of our accessible system.

However, we have seen no appreciable difference in utilization rates from season to season. We attribute this fact to the tenacity of our wheel chair riders as well as to the community education service discussed earlier. On inclement days, our wheel chair riders have been instructed to call us prior to venturing outside in order to make sure that the bus is on time.

They have already come to trust the fact that when the bus arrives, it will have an operating lift. This combination of education and fidelity to lift maintenance is largely responsible for reducing inclement weather as a utilization factor.

Another objection concerns cost, the cost of the lift and its maintenance. We are in public transit to provide service to the public. It is that simple. Persons with handicaps are members of the public. Therefore, we view the cost of equipping and maintaining buses with lifts as we do our other expenses. It is the cost of doing business.

For example, if a bus' air conditioning breaks, the expense of fixing it is seen as a standard operating expense. It is that simple. Our experience demonstrates that once an honest commitment is made to provide quality accessible service, maintenance costs can be controlled. Our maintenance history over the past nine years has confirmed this point. With respect to lift costs, the cost per lift will go down as lift utilization increases.

Our experience shows that the type of lift use has a major impact on the cost associated with repairing it. Therefore, close attention should be directed to the maintenance track records of the various lifts. Secondly, advances in lift technology should soon reduce the overall maintenance costs. Thirdly, and most importantly, lift utilization will increase as the degree of commitment and quality of service increases. It is the only saying that, "As you sow, so shall you reap."

A third objection centers on the slowing down of the system due to the extra time it takes to unload and load passengers in wheel chairs. We, initially, conducted time studies to document this fear. After six months we discontinued the study because the time factor was seen as insignificant. We have carried about 15,000 passengers in wheelchairs since 1980 and have never received one complaint from ambulatory passengers about time delays due to wheel-chair transport.

The last objection, often raised, cites problems with unions. When a transit system makes an honest commitment from the outset to establish a credible accessible system, union problems will not exist. But if the union senses that management's commitment is lackluster, the door may be open for problems. As I said before, our union contract actually requires operators to cycle their lifts prior to their shift. This was an easy clause to get into the contract because the union understands the degree of management commitment.

The special training received by operators also reinforces this commitment. I would ask this august body to seriously consider the Senate version of the bill and, with some fine tuning, I think this is a piece of legislation that can work not only for Johnstown but work for the rest of the country.

Thank you very much for affording me the opportunity to appear in front of you today.

Mr. MINETA. Thank you very much, Mr. Jenkins. Let me ask the panel first, the ADA assumes that a certain number of disabled will be able to use fixed-route transit service with paratransit services provided for "those who cannot, otherwise, use the fixed-route system." Have any of you been able to determine what percentage of the disability community would be able to use accessible fixed-route service if it were available?

Mr. CAPOZZI. It is hard to determine. You need to look at each community individually. Most communities—Johnstown is a good example; Seattle is a good example—most cities that have a commitment to 100 percent accessible fleets and already have 100 percent accessible fleets, will experience very high ridership.

I analogize it to the Metro system here in Washington. People in wheel chairs know that they can get off at every single subway stop. So there is a very high usage of the subway system. If they knew that they could only get off at maybe half of the stops but they didn't know which half, chances are that people wouldn't use it very much.

So it is hard to say how many people are going to use the transit systems until you know that the system is 100 percent accessible, so that you can predict that when you want to go from Point A to Point B, you can get there.

I wouldn't use the Metro system every day to go back and forth to work if I didn't know that I could get from Shady Grove to Farragut North. If I knew that one stop was going to be out on a particular day but I didn't know which day it was going to be or what stop it was going to be, I might not use that system even though I was able to use it.

So that is very hard to predict. But most individuals can, as Harold explains, with proper training for the transit folks, with proper training for the people with disabilities, most people can use public transportation. It is not a big deal. If you can get to the bus stop, or if you can get to the bus route, in Detroit, you can use it.

Mr. MINETA. Sir, with 96 inches of snowfall annually in Buffalo, they have committed to 100 percent accessibility on their bus and light rail systems. Are you aware of any other cities in the United States which could not meet a 100 percent accessibility requirement because they have more snowfall than Buffalo?

Mr. JENKINS. I don't know what the snowfall is in the other cities, sir. There probably are not too many that get more than that.

Mr. MINETA. Mr. Shuster was suggesting maybe Nome, Alaska.

Mr. JENKINS. Possibly.

Mr. MINETA. Mr. Jenkins, in your statement, you cite the importance of wheel chair lift maintenance. Do you have any figures available on your transit authority's costs on a per-bus basis for lift maintenance?

Mr. JENKINS. Our cost for maintaining the three different types of lifts varies from almost practically zero from one particular manufacturer's type of lift that is not available to any other bus to about I would say $7,000 or $8,000 a year—I would say $7,000 a year—on the lifts that are on the other two models of buses.

I operate a bus system of twenty-seven buses with three different types of buses. The GMC-RTS-4 buses, the Grummon Flexible, or it is called the Flexible, and the Neoplan buses. The RTS lift, in my personal opinion, is the best lift that is manufactured in the industry today. The maintenance costs on that are just about zero. It is part of your normal maintenance program.

The cost on the other two lifts sometimes can get a little higher.

Mr. MINETA. Some of your colleagues in the transit industry have indicated that they would prefer to provide paratransit services for those using wheel chairs rather than making their fixed-route accessible. Cambria County has made their entire fleet accessible, a choice which, in my mind, seems to be the more cost-effective way to carry members of the disabled community who use wheel chairs.

What factors led your system to the decision to have a 100 percent accessible fixed-route system?

Mr. JENKINS. As we went out through the community—we took over from the private carrier in 1976—and started to prepare our planning process to purchase buses beginning in 1982, we went to the community to find out what they needed and what they wanted, as far as public transportation was concerned. One of the major things that they wanted was the handicapped groups, and a lot of non-handicapped groups, said that we should have accessible buses and we should have a transit system that is accessible to everybody in the community.

So we immediately made that commitment. Our Board of Directors voted and adopted that policy back in 1981. As we started purchasing new buses, then we purchased nothing but accessible wheel chair buses. We have found that to be a very simple answer to the question of providing accessible transportation in the community. And it has worked quite well for us.

Mr. MINETA. When you were talking about the figures as they relate to the lift maintenance costs, how does that cost compare relative to the cost of maintaining other bus components such as air conditioning or engines or brakes or transmissions?

Mr. JENKINS. In each and every particular case—each and every bus is an individual bus, by itself. It is just like a person. Some of them work quite well and some of them are breaking down constantly. You buy a lemon in an automobile; occasionally, you get a lemon out of the fleet in a bus. So you really can't pin it down to what each individual costs.

We feel that the cost of maintaining the lifts and the training that was needed to train our mechanics to maintain the lift was just a cost of doing business. We complied with those charges just like we have with any other things that have come up.

But if you try to compare the cost of what you are picking up a passenger for and relating that only to those passengers, then you find that you might have some costs on some particular individual buses that might be a little high.

One thing that I might just add; in 1981, when we made this commitment to buy accessible buses, the former Johnson Traction Company, which was a private carrier, never had a bus with air conditioning on the streets in Johnstown. So that when we made the commitment for the accessible buses, we made a commitment for air conditioning. We knew that there was going to be a cost associated with both, and we have accepted that cost.

Mr. MINETA. Mr. Shuster?

Mr. SHUSTER. Thank you, Mr. Chairman.

We certainly appreciate your testimony. Of course Harold Jenkins is my good friend. I have worked with him closely for many years. I have the highest regard for him. I think your outreach program that you have outlined here today, Harold, indicates if there is anybody in the country that can make it work, you can. It is an example of going far beyond simply providing the lift, but educating the community that it is there so you can maximize your ridership.

As I understand it, the entire fleet of 27 buses has been accessible since 1983 so that is for six years, now. And you have had this outreach program. One of the things that puzzles me a bit; with that kind of an outstanding outreach program, and with six years, now, of experience—and you check me on this arithmetic—with 27 buses, 3,000 passengers in wheel chairs, if you assume only a six-day week, that works out to one rider every three days on each bus; is that accurate?

Mr. JENKINS. Yes, if you do the math like that. But you can also reverse the math and say that where the wheel-chair handicapped passengers live is where the buses that are getting ten and twelve lifts a day. There might not be a person who needs a lift on every route or every block in your community.

But you are absolutely right on your figures.

Mr. SHUSTER. So, per bus, it is one rider every three days which concerns me. The other thing that concerns me is that we talk about 100 percent accessible. But, as I understand it, with Cambria Transit, every bus has a lift, but there is no paratransit system.

Mr. JENKINS. We run a paratransit system and a fixed-route system in our rural parts of Cambria County, not in our urban division.

Mr. SHUSTER. Where these buses run, there is no paratransit.

Mr. JENKINS. There is no paratransit.

Mr. SHUSTER. So to say there is 100 percent accessibility, really, isn't completely accurate. There is 100 percent accessible for people who can get on the bus. There is zero accessible for people in wheel chairs who can't get to the bus. There is no paratransit service.

Mr. JENKINS. There is somebody else in the community that is providing that service. We have never, never had one request for a paratransit trip in the Cambria County Transit Authority and in the urban system.

Mr. SHUSTER. There is somebody else providing that service?

Mr. JENKINS. Yes.

Mr. SHUSTER. Who does that?

Mr. JENKINS. The Human Social Service agencies.

Mr. SHUSTER. How does that get funded?

Mr. JENKINS. They get funded through both Federal and state programs; Area Agency on Aging——

Mr. SHUSTER. Under this law, you will be required—if this becomes law—you will be required to provide comparable paratransit service.

Mr. JENKINS. Under this portion of the law, I would be responsible, under the Senate version, for coordinating that service.

Mr. SHUSTER. So you would be responsible for providing comparable service?

Mr. JENKINS. Right; coordinating it.

Mr. SHUSTER. Well, the bill says comparable service.

Mr. JENKINS. Coordinating it.

Mr. SHUSTER. The bill says you would be responsible for providing comparable service. That is what the language of the bill is.

Mr. JENKINS. The House bill.

Mr. SHUSTER. How would you do that?

Mr. JENKINS. I guess I would have to do it just like I have done with any other federal programs that come along. I would cope and do it. It would be some cost to me and it would be a cost to my system. But we would do just like we have with any other Federal program or state regulation. We would cope and do it.

Mr. **Shuster**. So that would be an additional cost, of course?

Mr. **Jenkins**. Absolutely.

Mr. **Shuster**. Thank you.

Mr. **Mineta**. Mr. Lipinski?

Mr. **Lipinski**. No questions.

Mr. **Mineta**. Mr. Duncan?

Mr. **Duncan**. No questions.

Mr. **Mineta**. Mr. Payne?

Mr. **Payne**. No questions.

Mr. **Mineta**. Mr. Hastert?

Mr. **Hastert**. Thank you, Mr. Chairman. I was doing a little math work and, evidently, Mr. Shuster was at the same time. Mr. Jenkins, it was one rider for every three days on one of those buses at 30 percent. Now, you say there are some buses that get 10 or 12 pickups a day. That means that you have buses that are equipped, that are riding the routes, that never get a rider?

Mr. **Jenkins**. No, not necessarily so. With the 27 vehicles that we have, you have to remember that at least 3 of those vehicles are used for spares. Our peak load is about 21 buses on the street each day—22, 23 buses—as a peak each day. Out of those buses that are out there, there are some that get one lift, but there are some buses that get more than one lift.

Mr. **Hastert**. A day?

Mr. **Jenkins**. There are some days when you have holidays and when you have——

Mr. **Hastert**. Well, the numbers work out, sir, that say you get one lift every three days, average. So, evidently, you have got buses out there that never get lifts.

Mr. **Jenkins**. No. Each and every one of our buses get lifts at sometime or another. There are some buses that get more lifts than others.

Mr. **Hastert**. Every day? Every week? Every month?

Mr. **Jenkins**. I would say on a weekly basis. It depends on where the person is going, shopping or to the medical facilities or going to work.

Mr. **Hastert**. What is the extra cost of maintaining——

Mr. **Jenkins**. There is no extra cost on public service. There is a reduced cost in non-peak hours.

Mr. **Hastert**. I don't think you understood my question. What is the extra cost to put these lifts on your buses? What was the cost to do that?

Mr. **Jenkins**. The cost, when I put them on, was about $12,000 per unit. The federal government paid 80 percent of that. The state government paid 16⅔ percent of that. The local share was about three cents on a dollar.

Mr. **Hastert**. So it is a 3 percent local share. Who is that? Is it the other riders who pick that up or is the taxpayer.

Mr. **Jenkins**. The county government.

Mr. **Hastert**. The taxpayers.

Mr. **Jenkins**. The taxpayers.

Mr. **Hastert**. Then the Federal and state taxpayers pick up the rest of it; is that correct?

Mr. Jenkins. Right. That was in 1983 and 1984.

Mr. Hastert. So it would be more today?

Mr. Jenkins. The federal share has been reduced, somewhat.

Mr. Hastert. So the state and local guys would pick up more of that; right—the taxpayers?

Mr. Jenkins. Yes.

Mr. Hastert. What is that extra amount, do you think, per fare, or per rider, that the federal government and state government and local governments pick up? What is the cost per rider?

Mr. Jenkins. Our cost, per rider, of providing services is about $1.69 for every rider. It is a little less than $2.00 if you divide the handicap lifts and the cost of the maintenance and the work, without the capital investment.

Mr. Hastert. With the capital investment.

Mr. Jenkins. I have never done that calculation, sir.

Mr. Hastert. What part of that does the fare pick up?

Mr. Jenkins. Our fare cost recovery is about 42 percent.

Mr. Hastert. Under this new law, when you will be required to provide paratransit also, in addition to full lifts on your buses, what do you predict that the extra cost would be?

Mr. Jenkins. I don't think the extra cost would be that much. I would just have to divert some of my rural transit that we were already doing, call-in demand or Reserve-a-Ride, as it is called, throughout the entire county rather than just in the rural districts.

Mr. Hastert. So, evidently, there will be a reduction of service to some people?

Mr. Jenkins. There will be something happening somewhere. I can't put my finger on what it going to be, whether it is going to be an increase in the fares, a decrease in the service, or something.

Mr. Hastert. Thank you.

Thank you, Mr. Chairman.

Mr. Mineta. Let me thank the panel very much for their patience and participation at today's hearings; Mr. Capozzi, Mr. Massara, Ms. Daly and Mr. Jenkins.

[Mr. Capozzi's prepared statement, the prepared statement of Mr. Dirks submitted by Mr. Capozzi, and the prepared statements of Mr. Massara, Ms. Daly, and Mr. Jenkins follow:]

STATEMENT OF

DAVID M. CAPOZZI

VICE PRESIDENT

NATIONAL EASTER SEAL SOCIETY

ON THE

AMERICANS WITH DISABILITIES ACT OF 1989

BEFORE THE

COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

SUBCOMMITTEE ON SURFACE TRANSPORTATION

SEPTEMBER 20, 1989

Project ACTION is funded by the Urban Mass Transportation Administration (UMTA) to increase accessibility to public mass transportation for people with disabilities

My name is David M. Capozzi and I am the Vice President for Project ACTION (Accessible Community Transportation in our Nation) of the National Easter Seal Society. Project ACTION is a $3 million research and demonstration grant program funded by the Urban Mass Transit Administration.

The project involves national and local organizations representing public transit operators, the transit industry, and persons with disabilities in the development and demonstration of workable approaches to promote access to public transportation services for people with disabilities.

It will yield a cooperative model program of techniques to identify people with disabilities in the community, develop outreach and marketing strategies, develop training programs for transit providers, and apply technology to eliminate barriers to transportation and accessibility.

Project ACTION was conceived by the Paralyzed Veterans of America, the National Easter Seal Society and the American Public Transit Association.

I. *Introduction*

Without accessible vehicles and stations, persons with disabilities are excluded from the opportunity to use transportation systems. This exclusion affects more than just their ability to travel independently. Most importantly, it effects their ability to be employed. When disabled people are able to depend on an accessible transportation system and join the work force, society as a whole benefits. Public benefit rolls are reduced and income tax revenues enhanced. Accessible transportation also allows individuals with disabilities to enjoy cultural, recreational, commercial and other benefits that society has to offer. Project ACTION is designed to increase transportation opportunities for people with disabilities through cooperation between the transit industry and disability organizations.

II. *Effects of federal transit policies on purchases of fixed route vehicles*

In order to assess the potentials for cooperative model programs for Project ACTION and to determine where the need in various communities exists, we assessed the effect of federal transit polices on the delivery of accessible transit services and then examined the level of accessible services available today.

Over the past 20 years federal transit policies have vacillated from requiring a bare amount of "special efforts" to "full access". The result of these conflicting policies is that transit providers have been confused about what they are required to provide and consumers with disabilities have been frustrated at the level of transit services that have been provided under the federal regulations.

Prior to the Urban Mass Transit Act of 1970 (UMT Act), there was no federal pronouncement on how transportation should be provided to people with disabilities. The UMT Act stated for the first time that it is the national policy that elderly and handicapped persons have the same right as other persons to utilize mass transportation facilities and services ... and that special efforts shall be made in the planning and design of such facilities and services.

Subsequent to this, Congress passed the Federal Aid to Highway Act of 1973 that required projects receiving federal funding to be planned, designed, constructed and operated to allow effective utilization by handicapped and elderly persons. Then shortly thereafter, Congress passed the Rehabilitation Act of 1973. Section 504 of the Act requires that "no otherwise qualified handicapped individual shall solely by reason of their handicap be excluded from participation in, be denied the benefits of or be subjected to discrimination in any program or activity that receives federal financial assistance".

After the passage of this important legislation the Department of Transportation (DOT) began a long process of regulatory activity to interpret the requirements of these federal laws.

The first set of regulations issued by DOT in 1976 were known as the special effort regulations. These regulations required that genuine good faith efforts be made to provide transportation to handicapped individuals that is reasonable in comparison to nonhandicapped persons. In 1979, in response to section 504, DOT issued the full access regulations that required that all buses and train stations be made accessible. As a result of a court decision striking down these regulations, DOT issued interim local option regulations in 1981. Finally, in 1986, DOT issued final comparable service regulations implementing section 504 and the Surface Transportation Assistance Act. The effects of each of these policy changes can be seen in the following table and attached graph. (See Attachment "A").

Policy Era	Inaccessible\Accessible Buses	Percentage
1. Pre-1973	5,308\15	.28%
2. Special effort	13,159\628	4.77%
3. Full Access	9,598\6,310	65.72%
4. Local Option	16,159\6,822	42.22%
5. Comparable service	2,791\1,161	41.60%

According to the 1987 American Public Transit Association (APTA) fleet survey there were a total of 48,264 fixed route buses of which 13,981 were lift-equipped. This represents 29% accessible vehicles. The survey also indicates that there were 3,171 paratransit vehicles in service during 1987. A total of 1,700, approximately 53%, of these special service buses were equipped with ramps or lifts.

III. *Project ACTION initial research*

In addition to reviewing the effects of the various federal policy initiatives, we have undertaken a reconnaissance survey of 130 transit authorities to get a better idea of how transportation is being provided around the country. Although the research is not yet complete, I can report that we have identified fifty nine (59) transit systems that have either 100% accessible fleets or a commitment to achieving a 100% accessible fleet. The ADA requires a multi-modal system combining access to fixed route transit as well as providing paratransit for those who can't use fixed route transportation. Many transit systems in the country offer a multi-modal system of transportation similar to that required by the Americans with Disabilities Act (ADA). (See Attachment "B").

IV. *Project ACTION can provide assistance with the implementation of the ADA*

A common theme that has emerged in our survey is that the demand for paratransit services often exceeds the capacity. Because paratransit is so expensive, it imposes untold limitations -- having to call days in advance for a ride, having a limited number of rides per month, small geographic boundaries, and limited hours of service. Many paratransit systems have waiting lists in the hundreds, people who get no transit at all. Cumbersome registration procedures mean a city's disabled visitors generally get no service.

One of our funding priorities for Project ACTION therefore is developing innovative methods of identifying people with disabilities in the community and target marketing efforts at them in order to move individuals who can use fixed route buses from paratransit onto the accessible fixed route system. There are other important areas where cooperative demonstration projects can improve the way transit services are currently being provided and which can assist in the implementation of the ADA.

1. Lift maintenance

Ten years ago lift maintenance costs were high. With increased usage of access equipment the costs have gone down considerably. We have found that the cost of lift repairs are relative to several factors. Proper care and daily maintenance results in minimal breakdowns, repairs, and cost.

This is well exemplified by the Southern California Rapid Transit District (RTD) serving Los Angeles and surrounding counties which has been dedicated to the goal of 100% accessibility since the early 1970's and has a 93% wheelchair equipment reliability average for 1986 (also a year in which their wheelchair boardings increased by 21%).

The RTD Maintenance Department is responsible for maintaining accessible equipment and accomplishes this through daily lift cycling. Each bus is cycled as it leaves the division. If a lift does not cycle properly, the lift is immediately repaired, preventing further malfunctioning. The RTD also developed a computerized tracking system that monitors daily lift boardings. Detailed information is given on specific breakdowns of accessible equipment and precautionary measures are then taken to avoid a repeat malfunction. The system monitors any operator difficulties with wheelchair boardings and rectifies these with additional operator training. The District also monitors the performance of lifts by different manufactures, information that is useful in making decisions on future lift purchases.

A 1986 DOT Regulatory Impact Analysis estimated that annual lift maintenance cost are $650. Added to this is another $150 per lift for insurance, promotion and marketing costs. These estimates were drawn from National Cooperative Highway Research Program report, Planning Transportation Services for Handicapped Persons--User's Guide, September 1983. Many transit systems have reported maintenance costs below this figure and with help from Project ACTION we hope to lower these even more. Programs such the one in Los Angeles will be improved and replicated in other areas of the country by Project ACTION.

2. Training

Proper operator training in using lift equipment is very important in keeping repair costs to a minimum. Operator training for RTD employees includes specific training on the four types of lifts the District owns along with videos that describe the operation of each lift.

Operators are allowed to maneuver in wheelchairs to develop a sensitivity not only to wheelchair users but also to the lift equipment used. Properly operated lifts have a far lesser chance of breaking down than those that are misused by operators.

Other forms of training are needed to sensitize drivers to the needs of people with various disabilities. And, training programs are needed to encourage disabled individuals to use public transit. **Project ACTION** will be working cooperatively with the transit industry and the disability community to implement better training programs.

3. **Weather conditions**

Weather conditions have been a concern for transit operators when they purchase wheelchair lifts for their buses. A 1987 Accelerated Lift Cycle Testing study conducted in Syracuse,

New York by the Urban Mass Transit Administration simulated conditions a bus lift would be exposed to during a ten-year period, compressing the ten years into nine months by inducing stresses at higher levels than originally designed.

Results from this test indicate that in cold weather, the sand and salt used to break up ice on the roads builds up on the wiring and other mechanisms of the lift, rendering them inoperable. Though salt is highly corrosive and causes an accelerated deterioration and the hydraulic oil used in the pumps that elevate the lift freeze in low temperatures, manufacturers are alleviating this problem in several ways. They are now using a lighter oil, plating ferrous surfaces with a protective coating (reducing corrosion), switching to stainless steel, lubricating and priming components more frequently, and adding shielding devices to prevent salt and sand build up.

Those properties that purchased lifts only to meet state laws or federal requirement have not had a positive experience. This is well exemplified by cities such as Milwaukee that discontinued their lift operations because of lift failures. On the other hand, almost without exception, many transit systems report that daily cycling of the lifts is the best preventive maintenance.

Denver's Regional Transportation District conducts preventive maintenance service on their lifts every 2,000 miles. This service includes lubrication, function tests, a weight test of 600 pounds, a complete cleaning, and adjustments to any of the leveling sensors and protection devices on the lift itself.

These systems are only a sample of those that are accessible and successful in inclement weather conditions. They show that weather does not pose an insurmountable impediment to the success of an accessible transit system. In fact, Denver's Regional Transportation District boasted that in 1986 99% of their 608 wheelchair lifts were kept operable, during both good and bad weather. **Project ACTION** will assist in improving the reliability of lift equipment through the development and demonstration of new programs.

4. Securement devices

Tie down and securement difficulties, especially with three wheeled motorized wheelchairs, has been identified by our initial research as being an area of concern to several transit authorities. Current wheelchair securement devices do not seem to be adequate for the new model of wheelchairs being produced. Although securement devices such as the Q-Straint system do exist that work well with three wheeled motorized wheelchairs, this is an area that is high on the Project ACTION funding priority list so that we can improve and replicate better forms of technology.

V. *Conclusion*

There are several other areas where Project ACTION can improve the accessibility of public transportation through a cooperative process. For example, many cities have bus routes that are hilly or have inaccessible bus stops. One innovative program that we have identified is the "red mitt" program instituted by the Southeastern Michigan Area Rapid Transit District (SMART). Persons with disabilities who can get to a bus route merely hold up their hand with a red mitt on and they become a bus stop. It doesn't matter that the bus stop is ten blocks down the street and up a hill or that there are no curb cuts to get to the bus stop. If you can get to the bus route you can ride the bus. Now people can wait at the end of their driveway and be picked up by a SMART bus. This program has been targeted by Project ACTION to be refined and replicated throughout the country.

Thank you for the opportunity to testify on this historic legislation and I will answer any questions that I can.

STATEMENT OF DAN DIRKS
COMMUNITY RELATIONS REPRESENTATIVE
SUBURBAN MOBILITY AUTHORITY FOR REGIONAL TRANSPORTATION (SMART)
SEPTEMBER 20, 1989

THE STATE OF MICHIGAN HAS MANDATED ACCESSIBLE LARGE BUSES ON STATE FINANCED REGULAR ROUTE SERVICE SINCE 1979. SINCE THAT TIME, SMART HAS WORKED ACTIVELY WITH ITS OLDER ADULT AND DISABLED CUSTOMERS TO IMPROVE SERVICE THROUGH A VERY ACTIVE ADVISORY COMMITTEE.

THERE HAS BEEN MUCH CONCERN ABOUT TRANSPORTING WHEEL CHAIR USERS ON THE LARGE BUS REGULAR ROUTE SERVICE OFFERED BY LOCAL TRANSIT AUTHORITIES. I SUGGEST THAT IMPROVEMENTS CAN BE MADE IN THE SYSTEM TO MAKE THE BUS SYSTEM AVAILABLE FOR ALL THE DISABLED.

APPROXIMATELY FIVE YEARS AGO, MICHAEL PATTEN, A STAFF MEMBER OF THE VISUAL HANDICAPPED SERVICES DEPARTMENT AT THE UNIVERSITY HEALTH CENTER AT WAYNE STATE UNIVERSITY, WHO IS A MEMBER OF THE SMART ADVISORY GROUP, COMPLAINED ABOUT THE DIFFICULTY IN SIGNALING THE SMART BUS IN THE DOWNTOWN DETROIT AREA. THERE ARE TWO TRANSIT PROVIDERS IN DETROIT, THE DETROIT DEPARTMENT OF TRANSPORTATION (FOR DETROIT ONLY TRIPS), AND SMART

(FOR DETROIT TO THE SUBURBS, AND SUBURB TO SUBURB TRIPS). VISUAL IMPAIRED RIDERS COULD NOT DISTINGUISH BETWEEN A DETROIT BUS, A SMART BUS, OR EVEN A TRUCK. MICHAEL WORKED WITH THE STAFF TO DISCOVER A SOLUTION.

TOGETHER WE DEVELOPED A MITT WHICH COULD EITHER BE PLACED OVER THE HAND OR ON A CANE. THE MITT'S DESIGN COORDINATED WITH THE COLORS AND LOGO OF THE TRANSIT AUTHORITY TO MAKE IT EASY FOR THE SMART BUS DRIVERS TO RECOGNIZE. IT WAS AN IMMEDIATE SUCCESS.

THE FIRST ORDER OF MITTS WAS 100. WITHIN SIX WEEKS AN ADDITIONAL ORDER WAS MADE. LAST YEAR PAINT WAS ADDED TO THE LOGO WHICH WOULD REFLECT LIGHT MAKING NIGHT RIDING EASIER.

AFTER USING THE MITT FOR TWO YEARS, A WHEEL CHAIR MEMBER OF THE ADVISORY COMMITTEE COMPLAINED OF THE FRUSTRATION IN SOME CHAIR USERS NOT BEING ABLE TO GET TO THE MAIN LINE BUS STOP WHICH ARE 1/4 MILE OR MORE APART. SMART DRIVERS ARE NORMALLY REQUIRED TO PICK UP ONLY AT SUCH DESIGNATED STOPS, AND AS A RESULT, SOME CHAIR USERS WERE BEING PASSED UP. THE COMMITTEE RECOGNIZED THE MITTS AS A POSSIBLE ANSWER. AGAIN, IT HAS WORKED WELL. COMPLAINTS ABOUT DRIVERS PASSING WHEEL CHAIR CUSTOMERS HAVE BEEN ELIMINATED.

TODAY, SMART WILL PICK UP EITHER WHEEL CHAIR OR VISUAL IMPAIRED CUSTOMERS WHO USE THE MITT AT ANY STREET CORNER. RELIABILITY HAS IMPROVED; CUSTOMER RELATIONS HAVE IMPROVED; AND RIDERSHIP HAS IMPROVED.

IN JULY, 1989, THE ADVISORY COMMITTEE RECOMMENDED THAT SMART EXPAND THIS PROGRAM ON A SPECIAL REQUEST BASIS TO ANY DISABLED RIDER WHO HAS A MOBILITY LIMITATION WHICH COULD BE AIDED BY THE USE OF THE MITT.

A SECOND PROJECT TO ENCOURAGE RIDERSHIP BY WHEEL CHAIR USERS WAS MADE POSSIBLE THROUGH THE VOLUNTEER EFFORTS OF A MEMBER OF THE ADVISORY COMMITTEE. FRANK CLARK, THE CHAIR OF THE DETROIT COALITION FOR THE HANDICAPPED, HAS TAKEN THE PERSONAL RESPONSIBILITY OF TRAINING WHEEL CHAIR

STATEMENT OF

JAMES V. MASSARA, REGIONAL ADMINISTRATOR
EASTERN PARALYZED VETERANS ASSOCIATION

ON

AMERICANS WITH DISABILITIES ACT
1989

BEFORE

THE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION
SUBCOMMITTEE ON SURFACE TRANSPORTATION

SEPTEMBER 20, 1989

USERS ON HOW TO USE THE FIXED ROUTE SERVICE. FOR THE FIRST COUPLE OF TRIPS, MR. CLARK WILL WAIT AT THE BUS STOP WITH THE RIDER AND THEN FOLLOW THE WHEEL CHAIR RIDER IN HIS PERSONAL VEHICLE. MR. CLARK ALSO GIVES HIS PERSONAL PHONE NUMBER TO RIDERS IF A PROBLEM SHOULD DEVELOP. I SUGGEST THAT THERE ARE MANY IN THE WHEEL CHAIR COMMUNITY WHO WOULD BE WILLING TO HELP TRANSIT SYSTEMS MAKE ACCESSIBLE SERVICE WORK.

RIDERSHIP ON THE SMART LARGE BUS SYSTEM BY WHEEL CHAIR USERS IS NOT AT THE SATISFACTORY LEVEL, ONLY ABOUT 10-15 PER DAY. HOWEVER, WHEN THE SMART SYSTEM ACHIEVES 100% ACCESSIBILITY IN THE NEAR FUTURE, AND WHEEL CHAIR USERS KNOW THAT EVERY SMART BUS CAN MEET THEIR TRANSPORTATION NEEDS, RIDERSHIP WILL INCREASE. WE SUPPORT 100% ACCESSIBLE SYSTEMS. WE HAVE LEARNED THAT BY WORKING COOPERATIVELY WITH THE OLDER ADULT AND DISABLED COMMUNITY NOT ONLY WILL RIDERSHIP INCREASE, BUT SUPPORT IN THE COMMUNITY WILL GROW AS WELL.

THANK YOU.

As a wheelchair user and a representative of severely disabled veterans in the Buffalo, NY region, I must say that lift-equipped buses are essential to serve the transportation needs of disabled persons. Further, the lift-equipped buses here have worked very well under inclement conditions, and the bus stops are kept reasonably clear of snow and ice.

For a period of three weeks in January, 1988, my personal vehicle was undergoing repairs for damages which resulted from a collision. During that time I rode buses to and from work each business day and did not experience any problems. In fact, the Metro Bus system was a godsend at that time. Our income, then, was just enough to get by on. If we had been forced to defray the cost of a demand-responsive service, we would have had to either purchase less food or let some bills go for that time. As we were already on a lean budget, the cost of paratransit would certainly have put us in a very unfavorable financial situation.

In my professional capacity, I am in constant contact with severely disabled veterans and a number of non-veteran disabled persons. Approximately 25% of these persons use mass transit whether for employment, medical treatment, shopping, or other personal errands. Virtually all of these people's basic personal needs would be severely curtailed without the use of lift-equipped buses and/or the light rail rapid transit system.

I have observed, first hand, that paratransit systems in Buffalo and Syracuse, NY are not conveniently available at any time a disabled person may require their use. Especially in suburban areas, these systems are only available at certain times of the day or only on certain days of the week. It is both discriminatory and unjust to expect a disabled person's life to revolve around paratransit availability.

From the standpoint of disabled veterans, there is a dire need of transportation to and from V.A. Medical Center appointments for treatment. Cutbacks in the V.A.'s budget have resulted in curtailing beneficiary travel within local areas since June, 1987. When beneficiary travel was drastically reduced, our office was deluged with calls from distressed veterans wanting to know how they could get to and from appointments. Some of the slack was taken up by a very limited voluntary service (provided by Disabled American Veterans) and the rest was absorbed by lift-equipped buses. In every case handled by this office, (a total of 393 cases in the first three months after June 1, 1987) paratransit was out of the question because veterans were not able to tangibly schedule return trips, not knowing how long they would need to remain at the outpatient clinic.

As far as the problem of snow removal is concerned, cities such as Buffalo that experience excessive snowfall, are equipped to handle such snowfall. Obviously the snowfall came before the city and the city's ability to cope with removal evolved accordingly.

Buffalo averages 96 inches of snowfall annually. The average temperature for December, January and February is 15 degrees F. Snow removal here is rapid and efficient. Rock salt is dumped on streets and sidewalks to keep them free of ice. Bus stops are cleared concurrently as streets are cleared. Therefore, the only times that a disabled person would be prevented from getting to a bus stop by snowfall are the same times that virtually all able-bodied persons are also prevented from travelling due to snow.

Finally, I am proud to say that I live in a city which, in spite of severe winter weather, has become a leader among the Nation's cities regarding accessible mass transportation. Despite a desperate need for funding sources, Niagara Frontier Transportation Authority already has successfully operated and maintained a system with more than 50% of its buses equipped with wheelchair lifts and a fully accessible light rail rapid transit line. As further indication of the ability to implement accessible mass transit, in spite of inclement weather, N.F.T.A. has committed itself, through a procurement policy, to having 100% of its buses equipped with wheelchair lifts (See attachments). This clearly sends a message to other "snow cities" that "if we can do it, so can you."

Thank you for affording me the opportunity to speak before the subcommittee. I would be happy to answer any questions you may have.

TO: NFTA Committee on the Disabled

FROM: David J. Franko
General Manager - Planning

DATE: November 9, 1988

SUBJECT: **Accessible Bus Policy**

I am pleased to advise you that the NFTC recently approved an accessible bus service policy. (see attachment). Under this resolution, the local Metropolitan Planning Organization concurs with the NFTA's recommendation that all future new transit bus procurements include lifts for non-ambulatory handicapped persons. In the long run, this will mean the fleet will be 100% accessible. It will also alleviate current scheduling problems, facilitate the allocation of accessible busses to urban transit routes, and generally improve mobility for non-ambulatory handicapped persons throughout Erie and Niagara Counties.

It should be recognized that local decision-makers have gone beyond the letter of the law in providing accessible transit services to the handicapped. It is yet another indication of our commitment to improving access to public transportation facilities in Erie and Niagara Counties. I know you will be pleased with this latest development.

Cordially yours,

David J. Franko
General Manager -
Planning

RESOLUTION 88-12

NIAGARA FRONTIER TRANSPORTATION COMMITTEE

ACCESSIBLE BUS SERVICE POLICY

WHEREAS, the Niagara Frontier Transportation Committee has been designated by the Governor of New York State as the Metropolitan Planning Organization responsible, together with the State, for the comprehensive, continuous, cooperative transportation planning process for the Niagara Frontier Region; and

WHEREAS, Subpart E of the Federal Department of Transportation's Regulations implementing Section 504 of the Rehabilitation Act of 1973 mandated accessible bus service in accordance with a Transition Plan approved by the Metropolitan Planning Organization (MPO); and

WHEREAS, the NFTC's Transition Plan was adopted on June 24, 1980 with the so-called three-year plan identified as the mode of compliance with the Program Accessibility Requirements; and

WHEREAS, the United States Appeals Court subsequently ruled that the Federal DOT's Section 504 Regulations exceeded the statutory authority of the Secretary of Transportation; and

WHEREAS, the NFTC's endorsement of a one-half fleet accessible bus policy was taken reluctantly since studies had shown demand-responsive service to be more effective than accessible bus service in improving mobility for severely handicapped persons; and

WHEREAS, the Secretary of Transportation issued new Regulations on July 20, 1981 which superseded Subpart E of the DOT's 504 Regulations; and

WHEREAS, the new rules rescinded the accessible bus mandate and reverted to locally defined special efforts for the elderly and the handicapped; and

WHEREAS, the NFTC on March 11, 1982, rescinded its 1980 Resolution, endorsing instead a half-fleet accessible policy, to be accomplished via new bus procurements, as the mode of compliance with revised Federal regulations; and

WHEREAS, the present administration has sought a phase-out of Federal transit operating assistance; and

WHEREAS, local governments with limited financial resources are unable to finance demand-responsive services for the handicapped without Federal financial assistance; and

WHEREAS, now that NFTA's bus fleet has reached the goal of being 50% lift-equipped, it is evident that there are many limitations in terms of scheduling, availability of lift-equipped buses, assignment to routes, etc.; and

WHEREAS, these operation problems limit the effectiveness of the Accessible Bus Program; and

WHEREAS, the Niagara Frontier Transportation Authority's Board of Commissioners, on June 13, 1988, adopted a resolution recommending to the NFTC that all future new transit bus procurements include lifts for non-ambulatory handicapped persons in order to alleviate current scheduling problems, facilitate the allocation of accessible buses to urban transit routes, and improve mobility for the disabled in the two-county service area; now

THEREFORE BE IT RESOLVED, the NFTC hereby rescinds its previous resolutions on this question and adopts herewith the NFTA's recommendation that all future new transit bus procurements include wheelchair lifts; and

BE IT FURTHER RESOLVED, the NFTC will consider implementing demand-responsive service in accordance with the service characteristics as defined in the NFTC Resolution of May 3, 1979, when necessary funds from any source other than local Governments become available to cover this program.

Resolved this day NOV 1988

NFTC

NFTA LIGHT RAIL RAPID TRANSIT SYSTEM

RAIL STATION PLATFORM SAFETY USAGE
&
POLICY FOR WHEELCHAIRS ON TRAINS

Rail Station Platform Safety Usage

When using NFTA Metro rail surface stations, all blind and visually impaired riders should use the hand rail located on the right side to guide themselves up the ramp to position themselves to enter the lead car. When deboarding from the lead car, please use the same door to exit in order to position oneself to use the handrail located on the left side; the possible exception being Auditorium Station, where assistance from the operator may be requested.

In addition, all NFTA Metro Rail Stations (both surface and underground) are equipped with a tactile warning strip on the platform surface to serve as a safety marker. This warning strip was designed in such a manner as to be identifiable by blind and visually impaired patrons. All transit riders should use caution when approaching the platform edge.

Policy for Wheelchairs on Trains (effective 5/8/89)

1. Wheelchair users should be encouraged to ride immediately behind the lead cab and to use tie-down devices, but they are not required to do so. However, wheelchair must not be located where they block the aisle or pose hazards to other riders.
2. Brochures and signage in stations will be modified to indicate that wheelchair users are encouraged (not required) to ride behind the lead cab and to use tie-down devices. Signage will note that only the first door of the first car is accessible at Mall stations.
3. Operators will provide assistance to wheelchair users only when they locate themselves immediately behind the lead cab and only when assistance is requested or is obviously necessary.
4. All employees will be advised of this change in policy, as will be NFTA's Advisory Committee on the Disabled. Standard Operating Procedure 107.6 will be revised as appropriate and reissued.
5. Policy shall include the use of Amigo carts.

PREPARED COMMENTS OF

ELLEN D. DALY,

LEGISLATIVE ANALYST

OF THE PRESIDENT'S

COMMITTEE ON EMPLOYMENT

OF PEOPLE WITH DISABBILITIES

BEFORE THE HOUSE SUBCOMMITTEE

ON SURFACE TRANSPORTATION

SEPTEMBER 20, 1989

Mr. Chairman, my name is Ellen Daly. I am a Legislative Analyst with the President's Committee on Employment of People with Disabilities.

Before I joined the President's Committee I was the Executive Director of the Wisconsin Governor's Committee for People with Disabilities. As the Executive Director, I served on several Departments of Transportation and Health and Social Services committees that dealt with transportation issues that affected disabled individuals and rehabilitation programs.

Prior to my move in February 1983 to Madison, I resided and worked in Milwaukee County and was very much involved in the Milwaukee County transportation scene as it pertained to people with disabilities. I was an appointed member of the Milwaukee County 504 Transportation Advisory Committee, which came about following a 1975 law suit which sought to require accessible public transportation services.

I am pleased to be here today to share with this Committee what I have learned over the last fifteen years about the transportation needs of our citizens with disabilities. They need to be able to choose the method of transportation that best suits them. For a small percentage of people paratransit is the only system that will meet their needs. But, for a great many of the disabled population an accessible mainline system can fully meet transit needs.

For those who live in parts of the country served by public transportation, accessible transit can facilitate regular employment. The United States is facing a labor shortage and yet there are people with disabilities wanting to be employed. A 1986 Louis Harris Poll Report states that the lack of accessible or affordable transportation is a significant reason why they are not employed.

The hour is now; there has to be accessible public transportation.

Paratransit, as it operates in most communities today, is very restrictive and not equal to that of public transit. Paratransit systems operate on an advance reservation call-in system. That call may need to be into the schedules anywhere from 16 to 72 hours in advance of the trip. How long would the non-disabled rider put up with that silliness?

These systems often vary widely in their hours of services, fares charged, geographical area served, eligibility requirements, and trip priorities.

There are public mainline transportation systems in this country that do truly service all the public with one system. I have a letter from the Mayor of Oshkosh, Wisconsin, to Senator Kasten that will attest to the fact that accessible mainline transportation works and is used. Mr. Chairman, I would like to share Mayor's Mather's letter. **(READ LETTER).**

Paratransit does not allow one any spontaneity; you can't decide on a moment's notice that you want to go shopping or stay at the office late. There is no flexibility -- you awake at 6:30 a.m. not feeling well and decide you'll stay home in the morning, but there's an important meeting you have to attend in the afternoon, so you will go in at noon -- sorry, either you go in to work as prescheduled or you don't go at all. You have been at a meeting, the meeting ends early, you sit and wait until your ride comes. Paratransit simply allows you no choices; rescheduling same day trips rarely can occur.

In order to use most paratransit systems you have to meet their eligibility standards, meaning that you have medical documentation that states you need the service. Before I became disabled 26-1/2 years ago, I used the public transportation system in lots of cities. Never once was I asked for documentation that I needed the service. All that was required was that I got on the bus, paid the fare and followed the rules.

Paratransit is not public transportation when a non-resident wishes to use it. Mr. Chairman, I face this problem when I travel on business throughout the U.S. I will certainly face this situation when I return to Milwaukee, where I am still a property taxpayer. To use the Milwaukee system, one must request an application form from the User Side Subsidy (USS); upon completion of the application, the form is returned to USS with a $7.00 fee; USS then sends a request to your medical doctor to verify your disabling condition and the need for paratransit services.

Assuming the doctor adequately responds to the USS request, you should then receive a letter of eligibility; finally, during regular business hours, you are required to go to the USS office (one must assume by means other than paratransit) to have a photo I.D. made, which you must have with you when you use the service. Then, of course you must follow the rules for scheduling a trip.

Other visitors just simply get on a bus. No one asks them to document who they are or why they are riding. Requiring action to make mainline transportation accessible would eliminate this burden and discrimination.

Paratransit hours of service, area serviced and fare charges often do not mirror those of the public transportation. When the hours of service and area served differ from the mainline system, this puts a person with a disability at a disadvantage.

They can only be employed based on the operating hours and area the paratransit operates.

This system doesn't offer bus passes, off peak hour fares and may in fact charge more for a trip. Transit operators use the "high fare" as a way to keep trip demand in control, while they are marketing their mainline system. An accessible mainline system could relieve the paratransit system.

And the dialogue could go on and on. You need to know that 15 years ago there wasn't any public transportation accessible to people with disabilities and the people with disabilities spoke out. Bus lifts were in their infancy, so paratransit came about.

It's time, now to take the next step and make all new mainline buses accessible to the 43 million Americans with disabilities. Mayor Mather's letter certainly pointed out that it is possible to have such a system. The Americans with Disabilities Act would do that.

Thank you.

City of Oshkosh

OSHKOSH

CITY COUNCIL

CITY MANAGER

September 7, 1989

The Hon. Robert Kasten
United States Senator
Senate Office Building
Washington, D.C. 20510

Dear Senator Kasten:

I am writing in support of the Americans with Disabilities Act and to dispel the notion that problems with main line transportation for persons with disabilities militates against passage of the legislation. For nearly a decade we in Oshkosh have provided public transportation for persons with disabilities and others having mobility limitations. Our buses are equiped with wheelchair lifts and have "kneeling" capability to accommodate the needs our our traveling public.

Our winters can be harsh and the snow deep and persistent yet we have encountered minimal difficulty in serving our customers. The Oshkosh Public Works Department is sensitive to the special concerns of persons with disabilities and do a yeoman's job in keeping curb cuts free of snow and in maintaining other areas to ensure that all individuals have access to public transportation.

I urge you to support the Americans with Disabilities Act to allow all citizens equal opportunity of access to the quality of life offered by this great nation of ours.

Thank you.

Sincerely,

James A Mather

James A. Mather, Mayor
CITY OF OSHKOSH

TESTIMONY OF

HAROLD C. JENKINS

GENERAL MANAGER

CAMBRIA COUNTY TRANSIT AUTHORITY

JOHNSTOWN, PENNSYLVANIA

BEFORE THE

SUBCOMMITTEE ON SURFACE TRANSPORTATION

SEPTEMBER 20, 1989

THANK YOU, MR. CHAIRMAN, AND GOOD AFTERNOON. MY NAME IS HAROLD JENKINS AND I'M THE GENERAL MANAGER OF THE CAMBRIA COUNTY TRANSIT AUTHORITY HEADQUARTERED IN JOHNSTOWN, PENNSYLVANIA.

I'VE BEEN ASKED TO TESTIFY BEFORE THIS COMMITTEE THIS AFTERNOON IN SUPPORT OF THE AMERICANS WITH DISABILITIES ACT OF 1989. MY SUPPORT IS BASED PRIMARILY UPON OUR EXPERIENCES IN CAMBRIA COUNTY WITH OPERATING A SMALL, 27-BUS URBAN TRANSIT SYSTEM WHICH IS 100% ACCESSIBLE TO THOSE PERSONS CONFINED TO WHEELCHAIRS. WE'VE BEEN OPERATING A TOTALLY ACCESSIBLE TRANSIT SYSTEM SINCE 1983.

I WANT TO EMPHASIZE FROM THE OUTSET THAT AN ACCESSIBLE TRANSPORTATION SYSTEM WILL ONLY BE AS SUCCESSFUL AS THE COMMITMENT BEHIND THE DECISION TO PROVIDE ACCESSIBLE TRANSIT. I BELIEVE FROM OUR EXPERIENCE THAT UNLESS MANAGEMENT IS FIRMLY COMMITTED TO THE LAUDABLE GOAL OF ACCESSIBILITY, PERSONS WITH HANDICAPS STAND TO BE SHORTCHANGED SOMEWHERE ALONG THE LINE. LET ME EXPLAIN WHAT I MEAN.

THE VERY NATURE OF PHYSICAL DISABILITIES CONTRIBUTES TO THE DISCRIMINATION PROBLEMS WHICH EXIST WITH RESPECT TO INDIVIDUALS WITH HANDICAPS. MANY PEOPLE ARE UNCOMFORTABLE IN DEALING WITH THOSE WHO ARE "DIFFERENT". THIS PATTERN HAS CONTRIBUTED IMMENSELY TO THE RELUCTANCE OF MANY PERSONS WITH HANDICAPS TO VENTURE OUT INTO SOCIETY IN AN ATTEMPT TO JOIN THE

MAINSTREAM. CONSEQUENTLY, IF THEIR FEARS ARE MET BY A TRANSIT SYSTEM WHICH IS NOT SERIOUSLY COMMITTED TO PROVIDING RELIABLE AND SAFE ACCESSIBLE TRANSIT, THEIR FEARS WILL ONLY BE COMPOUNDED AND THE DISCRIMINATION PERPETUATED.

IN CAMBRIA COUNTY, WE MADE A COMMITMENT FROM THE BEGINNING TO PROVIDE THE BEST POSSIBLE ACCESSIBLE SYSTEM. WE BELIEVED THAT ONLY WITH THIS DEGREE OF COMMITMENT WOULD WE BE ABLE TO OVERCOME THE BUILT-IN RELUCTANCE OF MANY PERSONS WITH DISABILITIES, ESPECIALLY THOSE IN WHEELCHAIRS, TO USE ACCESSIBLE TRANSIT. LET ME OUTLINE SOME OF THE STEPS WE TOOK WHICH GO BEYOND THE SIMPLE PROVISION OF WHEELCHAIR LIFTS.

FROM THE BEGINNING, WE REALIZED THE IMPORTANCE OF SELLING THE CONCEPT OF FIXED-ROUTE ACCESSIBLE TRANSIT TO POTENTIAL USERS. I EMPHASIZED THE WORD "SELLING" FOR THE REASONS PREVIOUSLY MENTIONED. MANY FOLKS IN OUR COMMUNITY WITH DISABILITIES WERE RELUCTANT TO UTILIZE AN UNTESTED FORM OF PUBLIC TRANSIT. THEREFORE, WE HAD TO "SELL" IT. THESE EFFORTS TOOK MANY FORMS.

WE INITIALLY CONDUCTED PUBLIC DEMONSTRATIONS OF THE ACCESSIBILITY FEATURES OF THE BUS. THE LOCAL MEDIA PROVIDED EXTENSIVE COVERAGE, A VITAL CONSIDERATION IN ANY PUBLIC AWARENESS PROGRAM. CONCURRENT WITH THE BUS DEMONSTRATIONS, WE INAUGURATED A PROGRAM TO CONTACT ALL THE ORGANIZATIONS IN THE COMMUNITY WHO WORKED WITH PERSONS WITH HANDICAPS. A VERY

DETAILED SLIDE SHOW WAS PREPARED AND PRESENTED TO THESE GROUPS, SHOWING EVERY STEP INVOLVED IN THE BOARDING AND EXITING OF THE BUS. WE PREPARED A SPECIAL PUBLICATION WHICH HIGHLIGHTED THE ACCESSIBILITY COMPONENTS OF THE BUS AND THE SEQUENCE OF STEPS INVOLVED IN USING THE VEHICLES. THOUSANDS OF THESE BROCHURES WERE DISTRIBUTED THROUGHOUT THE COMMUNITY. ALL THESE EFFORTS HELPED TO ASSURE THE PASSENGER WITH A HANDICAP THAT PUBLIC TRANSPORTATION CAN BE A SAFE AND RELIABLE MEANS OF TRANSPORTATION.

AS A RESULT OF OUR EDUCATIONAL EFFORTS, WE CARRIED AN AVERAGE OF 200 PASSENGERS IN WHEELCHAIRS A MONTH DURING THE FIRST ELEVEN MONTHS OF OPERATION IN 1980. THAT'S 200 A MONTH WITH ONLY SEVEN ACCESSIBLE BUSES. BY 1983, OUR ENTIRE FLEET OF 27 BUSES WAS ACCESSIBLE, WITH THE RESULT THAT WE NOW CARRY OVER 3000 PASSENGERS IN WHEELCHAIRS EACH YEAR. IN ADDITION, WE ANNUALLY TRANSPORT ABOUT 36,000 PASSENGERS WITH OTHER DISABILITIES. AND, WE CARRY THIS NUMBER DESPITE OUR INCLEMENT WEATHER AND HILLY TERRAIN. WHY? COMMITMENT. A STRONG COMMITMENT TO QUALITY TRANSIT.

ANOTHER IMPORTANT COMPONENT OF OUR PROGRAM HAS BEEN DRIVER TRAINING. IN ADDITION TO RECEIVING BASIC TRAINING IN LIFT OPERATION, ALL OPERATORS RECEIVE INTENSIVE SENSITIVITY TRAINING. DRIVERS COMPLETE A COMPREHENSIVE COURSE CONSISTING OF FILMS, WHEELCHAIR FAMILIARITY, BOARDING PROCEDURES, SECUREMENT, AND EMERGENCY EVACUATION. DRIVERS ALSO SPEND A

PORTION OF THEIR TRAINING PERIOD CONFINED TO A WHEELCHAIR IN ORDER TO ENHANCE THEIR SENSITIVITY TO THE VARIOUS NEEDS AND FEELINGS OF PASSENGERS WITH DISABILITIES. ANNUAL REFRESHER COURSES ARE ALSO PROVIDED.

ANOTHER VITAL COMPONENT OF OUR PROGRAM IS WHEELCHAIR LIFT MAINTENANCE. THERE IS NO WORSE EXPERIENCE FOR A PASSENGER IN A WHEELCHAIR THAN TO ARRIVE AT A BUS STOP EXPECTING AN ACCESSIBLE BUS, ONLY TO FIND THAT THE LIFT DOESN'T WORK. A QUALITY MAINTENANCE PROGRAM IS CRITICAL. DRIVERS ARE ALSO REQUIRED, BY UNION CONTRACT, TO CYCLE THEIR LIFT PRIOR TO BEGINNING THEIR WORK DAY. THIS PROCEDURE HAS BENEFITS FOR THE MECHANICAL COMPONENTS OF THE LIFT. IT ALSO ASSURES THE OPERATOR THAT HE OR SHE HAS A FUNCTIONING LIFT. IF IT DOESN'T OPERATE PROPERLY, THE OPERATOR IS PROHIBITED FROM LEAVING THE GARAGE WITH THAT BUS.

ALL THESE STEPS I'VE JUST DISCUSSED GO BEYOND THE LETTER OF THE LAW. BUT WITHOUT THEM, WE BELIEVE AN ACCESSIBLE SYSTEM WILL BE DOOMED TO FAILURE.

FINALLY, LET ME BRIEFLY TOUCH UPON SEVERAL OBJECTIONS TO ACCESSIBILITY WHICH ARE FREQUENTLY RAISED.

ONE OBJECTION CONCERNS THE WEATHER. IN CAMBRIA COUNTY, WE EXPERIENCE ABOUT 48 INCHES OF PRECIPITATION EACH YEAR. THIRTY INCHES OF THAT PRECIPITATION IS SNOW. COMPOUNDING THIS

SITUATION IS A GEOGRAPHY MARKED BY STEEP HILLS. CONSEQUENTLY, IT WOULD BE EASY TO ASSUME THAT THESE APPARENT OBSTACLES WOULD SIGNIFICANTLY PROHIBIT THE UTILIZATION OF OUR ACCESSIBLE SYSTEM.

HOWEVER, WE HAVE SEEN NO APPRECIABLE DIFFERENCE IN UTILIZATION RATES FROM SEASON TO SEASON. WE ATTRIBUTE THIS FACT TO THE TENACITY OF OUR WHEELCHAIR RIDERS AS WELL AS TO THE COMMUNITY EDUCATION PROGRAM DISCUSSED EARLIER. ON INCLEMENT DAYS, OUR WHEELCHAIR RIDERS HAVE BEEN INSTRUCTED TO CALL US PRIOR TO VENTURING OUTSIDE IN ORDER TO MAKE SURE THE BUS IS ON TIME. AND THEY'VE ALREADY COME TO TRUST THE FACT THAT WHEN THE BUS ARRIVES, IT WILL HAVE AN OPERATING LIFT. THIS COMBINATION OF EDUCATION AND FIDELITY TO LIFT MAINTENANCE IS LARGELY RESPONSIBLE FOR REDUCING INCLEMENT WEATHER AS A UTILIZATION FACTOR.

ANOTHER OBJECTION CONCERNS COSTS. THE COST OF THE LIFT AND ITS MAINTENANCE. WE ARE IN PUBLIC TRANSIT TO PROVIDE TRANSIT TO THE PUBLIC. IT'S THAT SIMPLE. PERSONS WITH HANDICAPS ARE MEMBERS OF THE PUBLIC. THEREFORE, WE VIEW THE COSTS OF EQUIPPING AND MAINTAINING BUSES WITH LIFTS AS WE DO OUR OTHER EXPENSES. IT'S THE COST OF DOING BUSINESS. FOR EXAMPLE, IF A BUS AIR CONDITIONER BREAKS, THE EXPENSE OF FIXING IT IS SEEN AS A STANDARD OPERATING EXPENSE. IT'S THAT SIMPLE. OUR EXPERIENCE DEMONSTRATES THAT ONCE AN HONEST COMMITMENT IS MADE TO PROVIDE QUALITY ACCESSIBLE SERVICE, MAINTENANCE COSTS CAN BE CONTROLLED. OUR MAINTENANCE HISTORY OVER THE PAST NINE YEARS HAS CONFIRMED THIS POINT.

WITH RESPECT TO LIFT COSTS, THE COST PER LIFT WILL GO DOWN AS LIFT UTILIZATION INCREASES. AND, OUR EXPERIENCE SHOWS THAT THE TYPE OF LIFT USED HAS A MAJOR IMPACT ON THE COSTS ASSOCIATED WITH REPAIRING IT. THEREFORE, CLOSE ATTENTION SHOULD BE DIRECTED TO THE MAINTENANCE TRACK RECORDS OF THE VARIOUS LIFTS. SECONDLY, ADVANCES IN LIFT TECHNOLOGY SHOULD SOON REDUCE THE OVERALL MAINTENANCE COSTS. AND THIRDLY, AND MOST IMPORTANTLY, LIFT UTILIZATION WILL INCREASE AS THE DEGREE OF COMMITMENT AND QUALITY OF SERVICE INCREASES. IT'S THE OLD "AS YOU SOW, SO SHALL YOU REAP" APHORISM.

A THIRD OBJECTION CENTERS ON THE SLOWING DOWN OF THE SYSTEM DUE TO THE EXTRA TIME IT TAKES TO LOAD AND UNLOAD PASSENGERS IN WHEELCHAIRS. WE INITIALLY CONDUCTED TIME STUDIES TO DOCUMENT THIS FEAR. BUT, AFTER SIX MONTHS, WE DISCONTINUED THE STUDY BECAUSE THE TIME FACTOR WAS SEEN AS INSIGNIFICANT. WE HAVE CARRIED ABOUT 15,000 PASSENGERS IN WHEELCHAIRS SINCE 1980 AND HAVE NEVER RECEIVED ONE COMPLAINT FROM AMBULATORY PASSENGERS ABOUT TIME DELAYS DUE TO WHEELCHAIR TRANSPORT.

THE LAST OBJECTION OFTEN RAISED CITES PROBLEMS WITH UNIONS. WHEN A TRANSIT SYSTEM MAKES AN HONEST COMMITMENT FROM THE OUTSET TO ESTABLISH A CREDIBLE ACCESSIBLE SYSTEM, UNION PROBLEMS WILL NOT EXIST. BUT, IF THE UNION SENSES THAT MANAGEMENT'S COMMITMENT IS LACKLUSTER, THE DOOR MAY BE OPENED FOR PROBLEMS. AS I SAID BEFORE, OUR UNION CONTRACT ACTUALLY REQUIRES OPERATORS TO CYCLE THEIR LIFTS PRIOR TO THEIR SHIFT. THIS WAS AN EASY CLAUSE TO GET INTO THE CONTRACT BECAUSE THE UNION UNDERSTANDS THE DEGREE OF MANAGEMENT COMMITMENT. THE SPECIAL TRAINING RECEIVED BY OPERATORS ALSO REINFORCES THIS COMMITMENT.

I THANK YOU VERY MUCH FOR THIS OPPORTUNITY TO PRESENT CAMBRIA COUNTY'S EXPERIENCES. IF YOU HAVE ANY QUESTIONS, I'LL BE HAPPY TO ANSWER THEM.

Mr. MINETA. I would now like to call on David Tripp, the Executive Director of St. Cloud, Minnesota Metropolitan Transit Commission; Kathleen Wingen, Director and Founder of Advocacy Plus Action, INC., and Mr. Mark Johnson from Alpharetta, Georgia.

Mr. Johnson? Ms. Wingen and Mr. Tripp, if I could have Mr. Johnson testify first since he has a plane to catch.

Mr. TRIPP. That's fine.

Mr. MINETA. Mr. Johnson, do you have some written testimony or are you going to make an oral presentation?

Mr. JOHNSON. Yes.

Mr. MINETA. Please proceed.

TESTIMONY OF DAVID TRIPP, EXECUTIVE DIRECTOR, ST. CLOUD METROPOLITAN TRANSIT COMMISSION; KATHLEEN WINGEN, DIRECTOR AND FOUNDER, ADVOCACY PLUS ACTION, INC., AND MARK JOHNSON, FOUNDER, AMERICAN DISABLED FOR ACCESSIBLE PUBLIC TRANSPORTATION, ALPHARETTA, GA

Mr. JOHNSON. First of all, thank you for allowing me to go out of order. As mentioned, my name is Mark Johnson. I do live in Alpharetta, Georgia. That is a suburb of Atlanta, Georgia. I am a founder of a group of people called the American Disabled for Accessible Public Transportation. As some people are aware, that is a group of people who feel total access is the only answer. We are totally committed to doing whatever we have to do to accomplish that goal.

First of all, let me make a couple of observations. It is too bad that Representative Shuster just left because one of them is an observation about him. First of all, I was kind of embarrassed by UMTA's presentation. I think after twenty years of dealing with this issue not to be able to provide him the answers to his questions is appalling. I know that I have answered those same questions numerous times.

So I began to feel embarrassed for the Department of Transportation officials when they can't answer such simple questions.

Second of all, although Representative Shuster's questions may have been personally necessary, I found them personally offensive; that after twenty years of answering those questions, he still can't find the answer to those questions. I think those questions, to me, were personally offensive. To imply that I, and people with disabilities, ought to settle for less than total access is offensive. To imply that the cost of implementation of the Americans With Disabilities Act is too much for the taxpayer to bear when I am a taxpayer is insulting and offensive.

So it is too bad that the Representative had to leave at the time he did, but I am sure that he will have access to this testimony. I understand that, after twenty years, he should be able to get the answers to his questions and after twenty years, we ought to quit asking offensive questions.

I was originally scheduled to testify after the American Public Transit Association. The American Public Transit Association, for years, has opposed total access. So I found it kind of enlightening to read their testimony that neither says we are for ADA or against ADA; however, if you decide that we need to do this, we would like a few changes and we would like some money to do it. So it is neither for nor against. For twenty years, they have been adamantly opposed to total access.

One reason why I am returning to the Atlanta area this evening is to continue my efforts in organizing a series of public protests aimed at the American Public Transit Association and the American Bus Association. ADAPT has followed APTA around for six years trying to get them to the point where they want to form a partnership. Year after year, they denied our appeals. Year after year, they have supported local option. Year after year, they have been as offensive as those questions were to me.

What we hope to accomplish, and it is up to APTA if they want to accomplish this, is to see them recognize our resolution of 1983 calling for total access, to see them recognize their own task force's resolution calling for total access. We will see by the 28th of this month whether they are willing to do that. We will see whether the Secretary of Transportation wants to sign an order mandating total access to public transit.

He has that legal authority right now because of the Third Circuit Court of Appeals decision, and he has not chosen to utilize it. So we will see by September 28 whether APTA, or the Department of Transportation, really care and whether they want to provide total access. I think that would be a good-faith gesture by both this administration, Secretary Skinner, and APTA to accomplish that by the 28th of this month.

Let me give you a little history of the struggle. First of all, APTA would have you believe that local option is working. Second of all, they would have you believe that access only affects or benefits people with disabilities. Third of all, they would have you believe that the public participation program, as outlined in the current regulations, worked and is working.

I would encourage you to talk to people with disabilities in Savannah, Georgia, Charlotte, North Carolina, Washington, D.C., Cincinnati, Ohio, Madison, Wisconsin, Rochester, New York, Pittsburgh or Tulsa, Oklahoma, and you will not see the option that the people with disabilities want exercised in their communities being exercised.

You will see the option that the Transit Authorities want exercised in those communities.

Now, some facts. Most people with disabilities don't have access to private transit. If the original mandate had remained in effect, every bus in the country would have been lift-equipped by 1991, a mere two years from now—if the original mandate had remained in effect. Instead, inconsistency in approach, court action, and controversy continue.

Chicago Transit Authority was forced through litigation and over two years of public protest to provide access, regardless of what the Secretary of Transportation says about his role in that. It was pure litigation and pure street action that led to access in Chicago, Illinois.

The city of Portland, Maine was forced through litigation. The city of Detroit was hit with a $2.1 million judgment for failure to provide accessible public transportation. Six people with disabilities filed the original law suit. The number of plaintiffs has grown to

1,100 people. Cincinnati Queen City Metro bought 87 lift-equipped buses in 1981, over 100 in 1986. Over half their fleet is now lift-equipped, but Metro doesn't choose to use their lifts. It is their option and it is legal.

The general manager of San Antonio told a group of people with disabilities, "Lifts? Over my dead body." Well, you heard earlier testimony that someone must have died in San Antonio because San Antonio has made a commitment to total access.

Washington, D.C., continues to insult its disability community, with a 50 percent policy. One out of every two buses will be lift-equipped until they get to 50 percent which added to the insult. To even add to the insult, they raised the 50 to 75 recently. It makes no sense. I can go out to the bus stop with you. You can catch all four. I can catch three of the four. It makes a lot of sense.

Atlanta, Georgia, which I moved to in July of 1986, had no commitment, made a commitment to 100 percent in 1987. However, it will be the year 2000 before I can ride the same buses that you do—the year 2000—twenty-seven years after the passage of 504.

I am not aware of any city whose paratransit-only approach accommodates out-of-town guests. I am only aware of people who, one, haven't taken jobs, have taken certain kinds of jobs, have been denied promotions, or are not looking for work because of paratransit-only approaches.

None of Greyhound's vans or buses—there had been no disussion about the fact that Greyhound has vans—over 4,000 have no lifts. Instead, they have their "helping hands" program. In other words, you bring someone to carry you on and then they can refuse to transport the chair that I am sitting in. That is Greyhound's commitment to people with disabilities and Greyhound's commitment to providing access.

Hotel shuttles from airports don't exist. When is the last time you took a trip on an accessible tour bus?

In summary, clearly local option means no option. Clearly anybody who supports local option believes in inequality.

I am going to summarize, finally, by reading one article that appeared in the Atlanta Journal paper on Friday, July 14, 1989.

> Wheel Chair Rolls into Lake Carrying Man to his Death. A 38-year old man with cerebral palsy, in a rickety motorized wheel chair rolled into a Snellville lake Thursday, drowning him only months before he was to receive a custom-fitted chair purchased with local donations. Gwinnett County rescue teams struggled in vain to resuscitate Dwayne Jones, who was found submerged near the bank of Brisco Park Lake by passers by at about 2:15 p.m., Gwinnett police said.
>
> Mr. Jones, who was almost completely paralyzed, was still strapped in his chair, police said. Mr. Jones was rushed to the hospital in Snellville and pronounced dead at 3:09 p.m. Police said Mr. Jones' wheel chair, which had a history of breakdowns, was examined for signs of malfunction. Staff members at the Snellville Nursing and Rehabilitation Center where Mr. Jones had lived for two years discounted the possibility of suicide but said he had been depressed recently.
>
> They said Mr. Jones had become close to a nurse who moved to Florida two months ago. "He has always gone in and out of depression," said the Director of Nursing, "and he had lots of friends and we loved him."
>
> Mr. Jones captured the hearts of Snellville residents two months ago with his efforts to buy a $9,000 wheel chair to replace his eight-year-old chair. This year's annual Snellville Days Spring Festival raised money for him and caught the attention of several Atlanta Falcons football players. Donations which poured in from all over the county totaled $11,000, enough to have some special features built into the chair, which had already been ordered.

The chair was custom built and delivery was not expected for months. Ms. Cobol said she and other staff members began worrying about Mr. Jones unaccompanied visits to the park after he began having gastrointestinal difficulties this winter. "They feared he might choke without help nearby," she said. But Ms. Cobol said Mr. Jones valued his freedom more than anything else.

The reason I read that article into the minutes is nobody asked "What is a 38-year-old man living in a nursing home for?" Nobody asked, "Why did he have the wrong chair in the beginning?" Nobody asked, "Why did he have to beg his community for $11,000 to buy the chair that is rightfully his?" Nobody asked a lot of questions about Mr. Jones.

If you think your decision about the Americans With Disabilities Act is difficult to come to grips with, wait until you have to answer these questions and wait until you have to provide the kind of support so that we can live in our communities.

Atlanta is not only, and Georgia is not only, blessed with folks that are dying. We have got people who want to commit suicide. Why do they want to commit suicide? It's because they continue to be treated inequal. And it beats you down. And it holds you down. And it makes you feel less than whole.

To pass the Americans With Disabilities Act that is not whole will only continue to perpetuate those personal feelings of inadequacy.

Thank you.

Mr. MINETA. I have no questions. Do any members have any questions? If not, again, thank you, Mr. Johnson, very much. We will go ahead and excuse you so you can get to your plane.

Mr. JOHNSON. May I add one thing?

Mr. MINETA. Surely.

Mr. JOHNSON. If you look at APTA's statement, it says paratransit costs a whole lot of money, and they are the people that have been providing it. Second of all, to imply that if there are not enough of you to ride, we are not going to do it is, once again, offensive.

I can remember the days when building owners would say, "Unless you prove to me that you are going to come into this building, we are not going to build a ramp?" Isn't it interesting today that you cannot build a new building unless it has a ramp.

Mr. MINETA. Thank you very much, Mr. Johnson.

At this time, I would like recognize our colleague from Minnesota, Mr. Stangeland.

Mr. STANGELAND. Thank you, Mr. Chairman. Mr. Chairman, I have a statement that I would like to have made part of the record. I am not going to go through it, in the essence of time.

Mr. MINETA. No objection; so ordered.

[Mr. Stangeland's prepared statement follows:]

STATEMENT OF HON. ARLAN STANGELAND, A REPRESENTATIVE IN CONGRESS FROM MINNESOTA

Thank you, Mr. Chairman. Let me commend you for your leadership in holding today's and next week's hearings on H.R. 2273, the Americans with Disabilities Act. This legislation will affect how we live, work and travel in immeasurable ways. It may be one of the most important bills we address this year.

As the House's Transportation Committee, we need to look long and hard at H.R. 2273's far-reaching impacts on public and private transportation. I recognize the bill is widely supported and, as they say in Washington, on a "fast track." I also support the basic aim of the legislation and many of its proposed reforms. But there are some potential problems and pitfalls in the transportation titles. These hearings should be helpful if we can put aside some of the rhetoric and platitudes and focus on specific concerns raised by a broad spectrum of interests. Then we'll be in a much better position to improve the bill—making it more workable—while not delaying its progress or lessening our commitment to the disabled.

Some of the concerns I have, and that many of our witnesses will explain, involve cost, flexibility, and implementation. This has the potential to become landmark legislation, Mr. Chairman. But if we don't address its far-reaching and controversial transportation provisions, it could eventually undercut our efforts to remove barriers and end discrimination.

Mr. Chairman, I want to personally thank you for accommodating my request to allow two witnesses from St. Cloud, Minnesota, to testify. Because of their expertise and involvement, David Tripp of the St. Cloud Metropolitan Transit Commission and Kathy Wingen of Advocacy Plus Action are in positions to offer valuable insight. They have unique perspectives on the transportation needs of the disability community in rural America—specifically in Minnesota.

David will describe St. Cloud's highly acclaimed paratransit program which is tailored to the disability community's particular needs. St. Cloud's door-to-door, specialized service has a $215,000 annual budget, offers maximum opportunities for increased mobility, and enjoys broad support among the disability and non-disability community. He will also mention some concerns about the House and Senate legislation involving cost and local flexibility.

The Metropolitan Transit Commission fears that a Federal mandate to equip every new fixed-route bus with a wheelchair lift regardless of the localized factors will adversely impact their paratransit program, and ultimately decrease transportation opportunities for both disabled and non-disabled passengers. It becomes a question of cost effectiveness and flexibility of local governments to design programs that the disability community is confortable with and that addressa special factors such as winter conditions and elderly passengers.

Kathy will testify about St. Cloud's disability community and its transportation opportunities. Kathy has a long list of accomplishments. She is the leader and founder of Advocacy Plus Action. She is an advocate for improved transportation and recognizes that mandating both paratransit and specially-equipped fixed-route service may be unrealistic in given circumstances.

So, I want to welcome both Dave and Kathy to Washington and to the Public Works Committee. I think our members can benefit from their views and ultimately improve the Americans with Disabilities Act.

Finally, I want to thank you, Mr. Chairman, for your leadership, cooperation and willingness to listen. This legislation is too important for us not to address the concerns of transportation experts and impacted citizens.

Mr. STANGELAND. But I would like to introduce two of my constituents from Minnesota. I want to thank you personally, for accommodating my request to allow them to be here to testify.

First of all, I would like to introduce Mr. David Tripp, who heads the St. Cloud Metropolitan Transit Commission. I am not going to tell you what he is going to say because he can articulate that far better than I. With him is Ms. Kathy Wingen. Let me say that I have known Kathy for about seven, going on eight, years, now, when I first got St. Cloud into my district as a result of redistricting.

Kathy Wingen is one of the people in St. Cloud that heightened my consciousness and my sensitivities to the problems of the handicapped. St. Cloud has an extremely active, extremely aggressive, handicapped community. Kathy Wingen is a leader in that community and has been for years, and in Minnesota as well.

I am going to ask unanimous consent as well to submit for the record Kathy's resume so that you know that she comes here with very, very high credentials.

I think they are going to give you some testimony that is a little different than what you have heard as to what St. Cloud has done and, possibly, to what this legislation could do to a program such as St. Cloud where the handicapped community created a sensitivity to the city government of St. Cloud fifteen years ago.

The City of St. Cloud has been providing for fifteen years good transportation for the handicapped. It is a real success story, and I hope the committee will take note of what they say, certainly ask them any questions you would like. They are here to give you a very candid view of what St. Cloud has done and how they feel that, without some exceptions, exemptions or recognition of what some small rural, northern communities have done to provide service to the handicapped, this legislation could cause some irreparable harm to the handicapped and to the transit commissions in northern parts and in small towns.

So, with that, Mr. Chairman, I would certainly welcome the testimony of Mr. Tripp and Ms. Wingen.

Mr. MINETA. Ms. Wingen, we have your statement for the record. Mr. Tripp, proceed in your own fashion. Then we will hear from Ms. Wingen.

Mr. TRIPP. Good afternoon, Chairman Mineta, Congressman Stangeland, distinguished members of the subcommittee. I believe a written copy of my testimony is now being presented.

Again, my name is David Tripp. I am the Executive Director, Chief Executive Officer, of the St. Cloud Metropolitan Transit Commission, a political subdivision of the state of Minnesota. As the expression goes, every coin has two sides. I guess I am here, today, to talk about the other side, of some concerns that we have in Minnesota.

For your information, the St. Cloud MTC, as we call it, serves a three city service area of about 54,000 population with two services; a fixed-route fleet, seventeen peak hour, 21 buses with nine routes transferring in downtown and a specialized service fleet of four buses for mobility-impaired citizens utilizing driver-assisted door-to-door service.

More specifically, our MTC special service was Minnesota's very first door-to-door system in 1974. The six service criteria for a specialized service as established by the United States Department of Transportation have been exceeded by far means and including the 3 percent minimum expenditure, has been far exceeded by an almost 13 percent expenditure of the total operating budget of the MTC.

Not included within that 13 percent operating budget are two very modern state-of-the-art accessible minibuses from a photograph that you will be seeing soon. Also, for your information, there are approximately 1,100 registered passengers in our service. We carry about 190 passenger trips each weekday for an annual total of 50,000 trips.

These are not necessarily eldrly trips. However, the great majority of registered passengers 65 and over, are elderly. You have got to be transportation-disabled in regards to utilizing the fixed-route service to be eligible for the specialized service.

But 50,000 trips a year is a pretty good figure when you consider we have a 54,000 population area. The average fully-allocated, (including the cost of the vehicle) cost per trip for 88–89, is $4.10 per trip, which I think is a relatively low figure from figures you have, perhaps, heard of elsewhere. The total annual operating budget is $210,000. That compares to the total annual operating budget for the fixed-route system of $1,430,000.

The fixed-route has an annual ridership of 1.4 million at a fully-allocated cost-per-trip of $1.09. The reason I am here today is that I am concerned about the mobility of all citizens of the St. Cloud area. I, as a public transit professional, having worked with the disabled communities and the non-disabled communities, citizenry, in our area, to design their transportation programs that are requested, that they request, that they need, I am here to inform you of some facts that I believe are being overlooked or overshadowed by discussions to date on mainline transit accessibility.

In particular, some factors regarding small urban cities such as the size that St. Cloud has, and I will have to refute or, at least, disagree with some earlier comments in regards to some of the climatal conditions of the North and how we see that in St. Cloud.

St. Cloud MTC and—and I put an emphasis on "and"—its disabled citizenry has continually, in the last fifteen years, put its money and its efforts into the specialized service system because in Minnesota we all feel that a fixed-route accessible transit system would, realistically, be unaccessible five months of the year.

St. Cloud does have some very real conditions that laws are not able to change. For example, the very health-endangering frigid temperatures that Minnesota does experience; neighbors who don't shovel their sidewalks one or two or three or even more days after heavy snowfalls or even light snowfalls and make mobility very difficult to impossible; snow-plow hills and ridges that border every street and every intersection among our three cities.

If a disabled citizen depends on public transit for their job, for school, for college, for physical therapy or for whatever on a daily basis, they need reliable and safe mobility, the type of mobility our specialized service provides and a fixed-route accessible system in St. Cloud, we feel, cannot provide: reliability.

St. Cloud's disabled citizenry realizes this statement and, since 1980, with the meetings and public hearings on 504, has argued that with the limited governmental subsidies and local efforts, monies and efforts should be expended on the mobility service needed and requested by St. Cloud's great majority of disabled citizens.

Accessible fixed-route transit will cost additional local funds for lift purchase, lift maintenance, driver training and whatever. There is a very legitimate fear that, with this additional fixed-route expenditure, decisions in the future to either decrease or to not increase the specialized service may be made.

I do realize that in the ADA bill, fixed-route accessibility also requires a level of paratransit or a level of specialized service; but, at what level? Again, we are providing 13 percent right now, with a federal minimum of 3 percent. If the Commission, in future years, decided with an accessible fleet, and the budgets are tight, that maybe we can drop the specialized budget 3 percent, to go to 10 percent; that $45,000 to $50,000 means a lot of mobility. It would definitely decrease the mobility for disabled citizens with that kind of a decision.

You will see in front of you pictures I distributed of Mrs. Elodie Brengman of St. Cloud, shown here being picked up at her Northside home for a trip to the St. Cloud clinic. Mrs. Brengman is 80 years old and lives independently in her Northside home.

Once the user of our fixed-route, prior to her disabling accident in 1983, Mrs. Brengman uses our specialized service to go to the doctor, buy groceries and other staples, see her husband in a nursing home: basically remaining independently in her home. She is familiar with our fixed-route system because she once used it. She flatly states that if there was not a specialized service system—a door-to-door service from her alley to the door of the clinic, and that the only option was to go out to a route and use an accessible fixed-route bus, that she would hardly get out.

We all know, socially, what happens to the elderly when they start to stay at home too much and not get out and be active. As stated earlier, the great majority of our passengers, utilizing our service, are over the age of 65 and many share the same concerns and needs as Mrs. Brengman. As a transportation professional, I just hope that with all this discussion on accessibility and mobility that the Mrs. Brengman's of this country are not forgotten about and allowed to slip through the cracks. I do question if their mobility needs are really being adequately represented.

I then, also, must express some very genuine concerns about the negative impacts we see with mandated accessibility on the small fixed-route system like St. Cloud. Again, St. Cloud has a total of twelve routes, but only nine come into the downtown.

Most transit systems the metropolitan city size of St. Cloud have what is called a pulse or a time-transfer system. It is like a wagon wheel with the routes being the spokes and the transfer terminal being the hub. St. Cloud has that. We have thirty-minute and one-hour routes. They come downtown every thirty minutes at 15 and 45 minutes after the hour. We have three minutes for transferring.

Believe me, there are many times when those transfer conditions can be very, very tight. When transfers are missed, the system breaks down. It totally breaks down, at least for that passenger that is missing their transfer. From experiences from other lift-equipped cities, we feel that the boarding, the tie-down and the deboarding time required for our accessible route, that there would have to be some hard decisions and some changes made to our route system.

We have three options; one, we take our 30-minute route system and we extend it to 35 or 40 minutes. In other words, we add slop time, to accommodate the wheel chair trip. This lengthens the transit travel time for all passengers, makes transit less convenient and, we believe, results in a passenger loss or the ability to not attract as many choice riders in the future.

The current 30-minute system is also very, very easy to understand. We can tell people on the phone for information that, "Your bus will be there at 7 after, or 37 after, every hour on the hour." When you go to 35 or 40, all of a sudden, now, it is 7 after and 42 after and 17 after, etc.

That doesn't seem to be a big deal for my staff. It doesn't seem to be a big deal for me because I can understand schedules and maps quite well. It is amazing, when you are standing along a dispatch counter and you hear your dispatcher talk to the general public, answering their information calls, that the simpler you make your system, the more successful you will be, and people's mobility will be. People have a hard time understanding schedule times.

The second option is to cut off the far ends of that 30-minute route so as to still have a 30-minute route. That is kind of silly because then you reduce availability of public transit to all citizens.

Your third option is just to leave your 30 minute route structure the same, don't do a thing with it. But then, in the case of a missed transfer because of the boarding and tie-down and deboarding time, you are going to have a bus with some bitter people. Minneapolis just finished a two-year demonstration project and has released their study. And they show about rider reactions. They will state that, generally, fixed-route passenger—able-bodied fixed-route passenger reactions—have been pleasant. But when they start missing their transfers, then the opinions start to become very, very negative.

In either one of those cases, as far as our fixed-route situation, I feel we are in a lose/lose situation. We are spending $210,000 on a service which meets the mobility needs. If we were in the South, or in a better climatal condition, we could, literally, have a $60,000 door-to-door service and take $150,000 and put it into the fixed-route system to accommodate 15-minute service instead of 30-minute service. Would that bring more mobility? I think it would to able-bodied passengers because, now, you have made your fixed-route even more convenient with more frequent service. But it would not bring more mobility to the disabled in St. Cloud. That is a strong statement, and I will stand behind that.

Our commission requests that this committee realize that what St. Cloud is currently practicing and committed to is superior to what most of the transit systems are practicing and that our disabled citizenry be allowed to decide what type of transit service best meets their mobility needs. We respectfully request some sort of amendment with regards to a waiver or local option be seriously requested and written into this historic legislation.

Mr. Chairman and members of the Committee, thank you for your consideration. I am more than happy to answer questions. However, I would like to hold off questions until after Ms. Wingen has her testimony.

Mr. MINETA. Than you very much. Ms. Wingen?

Ms. WINGEN. Thank you very much, Mr. Chairman, and other members of the Subcommittee on Surface Transportation. I am here today as both a person with a disability and an advocate for persons with disabilities in the St. Cloud, Central Minnesota, area.

I am currently the founder and executive director of a non-profit organization by the name of Advocacy Plus Action, INC. I am here in support, basically, of what Mr. Tripp has already outlined. The ability to get from one place to another, as well as to get there inexpensively and quickly, has become a necessity for any American who wants the opportunity to be employed, to participate in recreational activities, to enjoy a full and stimulating life. However, the reality is that a significant minority of the nation's population does not have the mobility that most people take for granted. To be a person with a disability and disadvantaged can mean exclusion from the social and economic mainstream of American society. Until December of 1974, most people with disabilities, in the St. Cloud area, had to rely almost entirely on friends and relatives for travel.

Because of advocacy efforts on the part of the local disabled population, along with nondisabled individuals, the St. Cloud Metropolitan Transit Commission realized this basic transportation need and has since provided disabled persons who are not able to use fixed-route transit service with door-to-door service. In fact, St. Cloud Specialized Transit Program for people with disabilities was the first of its kind to be developed in the state of Minnesota and, I am very proud to say, it is, perhaps, one of the first established in the United States. I just want to interject, here, that you keep in mind that this happened without the existence of enforceable rules and regulations, either on the state or federal level—504 had been passed but had not been enforceable at that point.

Even with the passage and enforcement of Section 504 of the Rehabilitation Act of 1973, some communities, municipalities and/or entities throughout the country still provide little or no transportation services for citizens with disabilities.

Certainly, in areas where this is true, the Americans With Disabilities Act of 1989 addresses the discrimination faced by disabled persons who are attempting to live normal and independent lives. This landmark legislation affords citizens with disabilities the same equality of opportunity which our nation values so highly, but sometimes, takes for granted.

Disabled citizens of St. Cloud, Minnesota, however have one particular concern about the Americans With Disabilities Act of 1989. Locally, persons who are disabled, have often discussed door-to-door transportation versus on-line accessible, transit. Within these discussions, several pertinent issues have come to surface. First, the existing Specialized Service Program is providing an excellent and necessary service to local disabled persons who are mobility-impaired. The program features two Orion II buses with front and rear ramps, an air-suspension kneeler, front-wheel drive, forward-facing wheelchair positions and an extremely flexible seating plan. These are backed up with two older-model buses which have conventional lifts, located in the rear of each vehicle, and are able to accommodate three people in wheelchairs and six seated passengers. In addition, a back-up service, through use of taxi cabs, is available for persons who are semi-ambulatory. Currently, well over 1,000 citizens who are disabled and mobility-impaired utilize the service to get to and from different functions, social activities, work, etc. On the average, 4200 trips are provided, per month, to persons, with disabilities, by this service.

Secondly, because inclement weather conditions are the "norm" in this part of the United States, during six months of each year, just the act of getting to and from regular pickup points in the winter is an insurmountable barrier. Too many individuals with disabilities experience just as many difficulties in warm climates as in cold.

Thirdly, if a disabled person were able to make it to a regular bus stop or pick-up point, he or she would not necessarily be assured of a place to sit on the next available bus. According to the present text of the Americans with Disabilities Act, not all vehicles, within a fixed-route public transportation system, need to be readily accessible to individuals with disabilities. Furthermore, vehicles, which are determined to be accessible, will only be able to accommodate a certain number of people with disabilities. This is especially true with respect to people who use wheelchairs. If I were able to get to a regular route, pick-up point, the next available bus might already be filled with people who are mobility impaired and would not have room to pick me up because of lack of tie downs. If this kind of situation should arise, what then happens? Do I wait for the next available bus to come through? Do I go back to my home or wherever I came from? This is especially pertinent with respect to people who utilize wheelchairs for mobility.

Operational problems relating to lift or ramp reliability, transfers and maintaining fixed-route schedule flexibilitas could be extremely difficult to resolve. If such a situation should prevail, persons with disabilities would, once again, be perceived as the "bad guys."

If the Americans with Disabilities Act passes into law, as it presently is written, St. Cloud's Specialized Service Program for persons with disabilities could, eventually, be greatly diminished. True, the Americans With Disabilities Act does not create an either/or situation that forces transit agencies to choose between fixed-route accessibility and paratransit service. The bill mandates both types of service. When a body such as the St. Cloud Metropolitan Transit Commission is required to spend thousands of dollars in making the on-line service accessible, it only makes sense that it would not want to continue spending X amount of dollars to provide the current level of door-to-door service. At the same time, if the same body is mandated to provide both services, it will first look at its budget, and cut costs, whenever possible. If the latter is the case, it could very well happen that costs will be cut whenever possible and necessary and, in the end, both the regular route service and the paratransit would be ineffective.

My one question to you is why should cities such as St. Cloud, Minnesota be penalized for complying with existing laws in regard to providing accessible transportation for persons with disabilities and, at the same time, has a proven track record of success? Rather, members of the Subcommittee on Surface Transportation are encouraged to support an amendment to ADA which would encompass a waiver for existing door-to-door service.

I want to stress that throughout the whole process, from 1974 to this present day, people with disabilities have continually been involved in making the decisions that have been made. They are the people that have said, "We want the door-to-door service. We don't want the regular route service to become accessible."

I have one other letter that I would like to be recorded into the record to support my testimony.

To Whom It May Concern:

The Disabilities Council - St. Cloud Area is an organization comprised of disabled individuals, agencies that provide services or products to people with disabilities and other interested citizens. The stated purpose of the Council is to enhance the quality of life for all people with disabilities. Our current membership consists of eighty-two (82) members.

As president of the Disabilities Council - St. Cloud Area, it is my firm belief that the transportation section of the Americans with Disabilities Act, as introduced, would not benefit the disabled community in the St. Cloud area and could cause adverse effects on the disabled population who must rely on public transportation. I have had conversations with numerous disabled people who use the door-to-door service in our area and no one has indicated that they thought mainline accessible transportation would be beneficial to them.

I would like to tell you about my personal situation. I am a T-6 level paraplegic with average arm strenght. I use a manual wheelchair. I do drive my own car but on rare occasions do use public transportation (i.e., when my car is inoperable or the winter weather is severe).

Recipient of the 1984 Minnesota Human Rights Award
Decade of Disabled Persons 1983 - 1992

If mainline accessible transportation were available, I could use it in good summer weather. However, on rainy days I would not use it. It is impossible to hold an umbrella and manuever a manual wheelchair. Ponchos are not practical for wheelchair users. In winter months I would not attempt to use it. I would never know if I could get to or from a bus stop due to unshoveled snow or snow ridges. Since I do not have any sensation or mobility from the chest down, I would not dare to risk the chance of frost bite should it become necessary to wait outside for more than ten minutes.

The Disabilities Council - St. Cloud Area has not taken a position on the transportation section of the ADA bill, at this point. However, the topic will be discussed at our regular membership meeting scheduled for September 25, 1989. At that time we do plan to present a resolution in opposition to this section of the bill. We would like to have the opportunity to submit the results of the vote on the resolution to you before you make any further decision on the bill.

It is my feeling, and I believe the clear consensus of the disabled community in this area, that each local community should have the option of deciding wheter or not they wish to expend funds for accessible mainline buses.

Respectfully,

Richard M. Visser

Richard M. Visser, Pres.
Disabilities Council - St. Cloud Area

I thank you very much.

Mr. Mineta. Thank you very much, Ms. Wingen for your testimony, and Mr. Tripp. Mr. Tripp, what are your costs per ride in providing paratransit services? You mentioned it in the testimony. What was that figure?

Mr. Tripp. Mr. Chairman, that is a fully-allocated cost of, I believe I said, $4.10 per passenger trip.

Mr. Mineta. Would it be less expensive to provide many of these rides on your fixed-route system or use your paratransit vehicles to feed riders to a fixed-route system?

Mr. Tripp. Mr. Chairman, I have seen usage figures and costs according to lift purchase and lift maintenance and what not that have an enormous range, an enormous range of costs. Obviously, our current fixed-route ridership cost is $1.09. The specialized service is $4.10. It is cheaper in that analogy to have more fixed-route ridership. But I think the point is that you have got to get out to the route. In St. Cloud, that is five, six months of the year, not realistic.

Mr. Mineta. In this picture that has been provided to the members of the Committee, is this vehicle now in its fully-retracted position, or is that the level at which——

Mr. Tripp. Yes; the picture of Mrs. Brengman in front of the St. Cloud Clinic is where the rear end has kneeled or deflated to within four inches of the street. The one of her getting into the vehicle in the alley, it looks like that is, probably, also kneeled at about eight inches from the street.

Mr. Mineta. What would be the clearance in its normal driving——

Mr. Tripp. Twelve inches.

Mr. Mineta. Your regular buses would be what kind of clearance?

Mr. Tripp. I am not that sure, on my regular fleet.

Mr. Mineta. So this would not get impaired, given your snow fall, et cetera? You don't have problems with it in the snow fall in getting around?

Mr. Tripp. No, we really haven't had any problems because we do, again, go through a lot of alleys and into people's driveways with the vehicle and have never experienced those problems.

Mr. Mineta. Earlier, you may have heard some testimony regarding the operation of wheel-chair lift equipped buses in cities with heavy snowfall. Of course, we heard about Buffalo and their 96 inches a year. Why do you think that you will have a problem with providing accessible service when Buffalo has committed to 100 percent accessibility?

Mr. Tripp. Mr. Chairman, if the mandate was there—the transit system, or the agency, was to provide accessible service, I don't feel there would be a problem in providing the accessible service. I question the use of the accessible service. I think if we take a look at use figures everywhere, even the most successful systems—Seattle or wherever—that you will see that door-to-door has much better ridership figures.

Mr. Stangeland. If the gentleman would yield. I think, Mr. Tripp, you have not quite explained it. I understand the Chairman better than you do. You can provide the service, but the user can't use it. Buffalo can provide that service but the Kathy Wingen's aren't going to be able to use it.

If you comply with the law to provide the service, that's great. But what have you done for the handicapped if they can't utilize the system. That is the point these people are trying to make.

Mr. **Mineta**. Has there ever been an occasion on which paratransit service has been denied to anyone because of snow fall at a time when your regular bus service was still operating?

Mr. **Tripp**. No. In fact, Mr. Chairman, it is almost the counter. There are times when, in icy conditions, the large rear-engine rear-wheel drive buses start slipping and sliding on the crowns of the road. We will pull off our fixed-route fleet before the special-service fleet because they are front-wheel drive and the traction is that much better.

Mr. **Mineta**. Very well. Thank you.

Mr. Stangeland?

Mr. **Stangeland**. Mr. Chairman, I don't have any questions. I think both have given excellent testimony, as I knew they would. I have to tell you something just a little bit humorous. I have known Kathy and, as I said, she heightened my sensitivity to the handicapped. I have known her for a long time. I suspected—and I looked through her resume today—that she might be a Democrat. I see on her resume that she is an active Democrat.

I would like to ask you one question, Kathy.

Ms. **Wingen**. Sure.

Mr. **Stangeland**. You, certainly, are in full agreement with the current law and the thrust of this legislation, which is to be certain that the handicapped are provided transportation as well as the non-handicapped.

Ms. **Wingen**. That is correct.

Mr. **Stangeland**. Thank you.

Mr. **Mineta**. Mr. Laughlin.

Mr. **Laughlin**. Mr. Tripp, I come from a rural district. I appreciate the fact that the population of St. Cloud is around 40,000. If that is the case, I have one community out of a very large area that is about 40,000. All the rest are in the area of 10,000 or smaller.

Do you have any feeling—I notice you testified that you did not recommend mandated services on all the fixed-routes. Do you have some suggestion what we in rural areas of towns of 2,000 and 5,000 population might do to help those with mobility problems?

Mr. **Tripp**. Congressman Laughlin, Minnesota has a very extensive rural and small-town transit program. There are about 65 various contracts that the Minnesota Department of Transportation has with a variety of counties and very small cities that then extend five miles or so out from their little 2000 population city.

Basically, all of those vehicles are smaller minibus, twenty-one-foot-sized vehicles and are accessible. So some of them have defined routes but with a route deviation ability so that if someone does call in that lives one or three or whatever miles from that normal route, the bus can then leave the route and go pick up that rural resident. I am hoping that is answering your question that again, in Minnesota, when we start getting out into the rural areas, those systems that do have some type of form of public transportation, that those minibus vehicles are lift-equipped.

Mr. LAUGHLIN. As I think through my district, I think there are two communities with inter-city transit systems out of 253 communities. I can think of two where there is intracity transportation and very little other inter-city transit systems within this area.

I was just wondering what your experience was in the St. Cloud surrounding area for providing transit services to those with mobility problems. Do you rely upon a call-in system out in these small communities outside of St. Cloud?

Mr. TRIPP. Again, the small communities around St. Cloud, all three counties that surround St. Cloud, do have established rural transit systems. So there is a call-in opportunity. Those counties or small towns that do not have an organized public transit system usually go through a county social-service program and a volunteer-ride program or something like that.

That still doesn't address the question of the intercity, the Greyhound if we want to call it by name, transit service. To my knowledge, it is not a severe problem, but I am not educated enough, really, to give you the best answer on that with regards to Greyhound and Minnesota.

Mr. LAUGHLIN. Thank you very much. I appreciate the testimony both of you have given us. It has been very informative to me. Thank you, Mr. Chairman.

Mr. MINETA. Thank you.

Mr. Lipinski?

Mr. LIPINSKI. I have no questions.

Mr. MINETA. Nothing? All right.

Mr. Tripp, Ms. Wingen; thank you, again, very, very much for your eloquent testimony here and suggestions that you have made. I appreciate very much your being here and we will be taking that into very serious consideration.

Mr. TRIPP. Thank you.

Ms. WINGEN. Thank you.

[Mr. Tripp's and Ms. Wingen's prepared statements follow:]

ST CLOUD METROPOLITAN TRANSIT COMMISSION
WAITE PARK SAUK RAPIDS ST CLOUD MINNESOTA
[illegible] FRANKLIN AVE N.E. ST CLOUD MN 56304 (612) 251 1499

STATEMENT BY
DAVID W. TRIPP, ST. CLOUD, MINNESOTA
BEFORE THE
SUBCOMMITTEE ON SURFACE TRANSPORTATION
OF THE
PUBLIC WORKS AND TRANSPORTATION COMMITTEE
U.S. HOUSE OF REPRESENTATIVES
HONORABLE NORMAN Y. MINETA, CHAIRMAN

SEPTEMBER 20, 1989
2167 RAYBURN HOUSE OFFICE BUILDING
WASHINGTON, D.C.

COMMISSIONERS [illegible] CHAIRMAN/SECRETARY [illegible] VICE CHAIRMAN [illegible] TREASURER [illegible] MEMBER
EXECUTIVE DIRECTOR DAVID W. TRIPP

Good Afternoon Chairman Mineta, Mr. Shuster, my own Congressman Mr. Stangeland, and distinguished members of the sub-committee. My name is David Tripp. I am the Executive Director and Chief Executive Officer of the St. Cloud Metropolitan Transit Commission, a political subdivision of the State of Minnesota. I'd like to thank you for the opportunity for me to appear before you today.

St. Cloud Metropolitan Transit Commission, or MTC, serves a 3 city service area of approximately 54,000 people with two services: a fixed route fleet of 21 diesel buses with 12 routes, nine of which pulse out of a downtown transfer location every 30 minutes, and a Specinlized Service fleet of 4 buses for mobility impaired citizens utilizing driver-assisted, door-to-door service.

More specifically, the MTC's Specialized Service system was Minnesota's first door-to-door service. The six service criteria for specialized services as established by the U.S. Department of Transportation in 1986 have all been exceeded by the MTC. Furthermore, the 3% minimum expenditure is far exceeded with 12.8% of its total annual operating budget expanded on Specialized Service. The MTC has further invested into several modern, state of the art accessible mini-buses. For your information, there are approximately 1,100 registered passengers in our program, and the great majority are over the age of 65. There are an average of 190 passenger trips per day for an annual total of 50,000 trips. The average fully allocated, cost per trip in 1988-1989 is $4.10. Total annual budget is $210,000.

The fixed route system, for your information, has an annual ridership of 1.4 million, or 28 passengers per hour, at a fully allocated $1.09 cost per trip. Total annual operating budget is $1,430,000.

The reason I am before you today is that I'm concerned about the mobility needs of all citizens in the St. Cloud area. I, as a public transit professional, having worked with the disabled and non-disabled citizenry in designing their transportation programs that are requested and utilized, am here to inform you of some facts many believe are being overlooked or overshadowed by discussions to date on mainline transit accessibility, in particular some factors regarding small urban cities in northern states with winter conditions.

St. Cloud MTC and its disabled citizenry has continually put its money and efforts into its Specialized Service because in Minnesota, a fixed route accessible transit system would realistically become unaccessible to disabled citizens for 5 months of the year. St. Cloud has very real conditions that laws are not able to change: e.g.

1) health endangering frigid temperatures
2) neighbors who don't shovel their sidewalks within a day or two or three after snowfall
3) snow plow hills/ridges that border every street and intersection in our cities

If a disabled citizen depends on public transit for their job, for school or college, or physical therapy or whatever, they need reliable and safe MOBILITY- the type of mobility our Specialized Service provides and a fixed route accessible cannot.

St. Cloud's disabled citizenry realizes this and since 1980, from the meetings and public hearings on 504, has argued that the limited governmental subsidies and local efforts should be expended on the mobility service needed and requested by the tremendous majority of disabled citizens. Accessible fixed route transit will cost additional local funds for lift purchase, lift maintenance, driver training and other operational features. There is a very legitimate fear that with this additional fixed route expenditure decisions in the future to not increase Specialized Service may be made.

I'd like to have distributed among the Committee some photographs of Mrs. Elodie Brengman of St. Cloud, shown being picked up in her back alley for a trip to the St. Cloud Clinic. Mrs. Brengman is 80 years old, and lives independently in her northside home. Once a user of our fixed route, prior to her disabling accident in 1983, Mrs. Brengman uses our Specialized Service to go to the doctor, buy groceries and other staples, and to visit her husband in the nursing home. As stated earlier, the great majority of our registered passengers are over the age of 65 and many share the same needs as Mrs. Brengman. As a transportation professional, I just hope that with all this discussion on accessibility and mobility that the Mrs. Brengman's of this country are not forgotten about and allowed to slip through the cracks; I do question if their mobility needs are being adequately represented?

I must also express some very genuine concerns about the negative impacts mandated accessibility will have on small urban fixed route systems like St. Cloud's. As remarked earlier, St. Cloud has a timed-transfer, pulse routing system; picture for example, a wagon wheel with spokes and a hub. The current system has 30 minute and 1 hour routes, or "spokes" which meet every 30 minutes (15 and 45 after the hour) for a "timed transfer" at the downtown terminal, or "hub". There are three minutes in the schedule allotted for transferring, and believe me, transfer conditions can frequently be tight. If the fixed route system was made accessible, boarding-tiedown-deboarding time requirements would necessitate changes to the route and schedule system. The options are:

1. Extend all 30 minute routes into 35 or 40 minute routes to accommodate limited number of disabled riders.
    A. Lengthens transit travel time for all transit passengers, making transit even less convenient and resulting in patronage loss.

B. Current 30 minute system is easy to understand; changing it to 35 or 40 minutes would complicate schedule understanding.

2. Cut off far ends of each route to be able to still make a 30 minute pulse.

   A. Reduces availability of public transit to all citizens, resulting in patronage loss.

3. Leave 30 minute route structure the same and when a disabled citizen rides, transfers are probably missed downtown.

   A. Would result in bitterness from non-disabled passengers missing transfers with a 30 minute minimum and possible 1 hour layover, and would also result in decreased fixed route patronage.

In either one of the above three options it turns out to be a lose, lose, lose situation for current fixed route ridership. If St. Cloud was in a southern or milder climatic location, we could realistically offer fixed route accessibility, and lessen the amount of Specialized Service with the "savings" to be put back into fixed route's added costs for accessibility. But we are not in a southern or mild area, and to see reduced fixed route mobility for what's been documented as low usage of accessible transit is totally counterproductive to transit's goal to get people out of their cars so to clean up the air, reduce traffic congestion and gridlock and provide sensible land use.

The St. Cloud Metropolitan Transit Commission requests that this committee realize that what St. Cloud is currently practicing and committed to is superior to what most other transit systems are practicing, and that our disabled citizenry be allowed to decide what type of transit service best meets their mobility needs. We respectfully request that an amendment allowing for local option, or at a minimum, the ability to request a waiver to the Secretary of

Transportation, be written into this historic legislation.

Mr. Chairman, members of the Committee, thank you for your consideration. I would be happy to answer any questions whatsoever, however I ask that Ms. Kathleen Wingen from St. Cloud be allowed to give her testimony first.

TESTIMONY BEFORE THE MEMBERS
OF THE SUB-COMMITTEE ON TRANSPORTATION

Wednesday, September 20, 1989

Submitted By:

Kathleen T. Wingen
Executive Director
Advocacy Plus Action, Inc.
P.O. Box 5001
St. Cloud, Minnesota 56302
Phone: (612) 253-9062

MR. CHAIR AND MEMBERS OF THE SUBCOMMITTEE ON TRANSPORTATION -

The ability to get from one place to another, as well as to get there inexpensively and quickly, has become a necessity for any American who wants the opportunity to be employed, to participate in recreational activities, to enjoy a full and stimulating life. However, the reality is that significant minority of the nation's population does not have the mobility that most people take for granted. To be a person with a disability and disadvantaged can mean exclusion from the social and economic mainstream of American society.

Until December of 1974, most people with disabilities, in the St. Cloud area, had to rely almost entirely on friends and relatives for travel. Because of advocacy efforts of the local disabled population, the St. Cloud Metropolitan Transit Commission realized this basic transportation need and has since provided disabled persons, who are not able to use fixed route transit service, with door-to-door service. In fact, St. Cloud's Specialized Transit Program for the people with disabilities was the first of its kind to be developed in the State of Minnesota and I am very proud to say, perhaps one of the first established in the United States.

Even with the passage and enforcement of Section 504 of the Rehabilitation Act of 1973, some communities, municipalities and/or entities throughout the country still provide little or no transportation services for citizens with disabilities. Certainly, in areas where this is true, the Americans with Disabilities Act of 1989 addresses the discrimination faced by disabled persons who are attempting to live normal and independent lives. This landmark legislation affords citizens with disabilities the same equality of opportunity which our nation values so highly, but sometimes, takes for granted.

The disabled population of St. Cloud, Minnesota, however, has one particular concern about the Americans with Disabilities Act of 1989. Locally, persons with disabilities have often discussed door-to-door transportation versus on-line, accessible transit. Within these discussions, several pertinent issues have come to surface.

1) The existing Specialized Service Program is providing an excellent and necessary service to local disabled persons who are mobility impaired. The program features two Orion II buses with front and rear ramps, an air suspension kneeler, front wheel drive, forward-facing wheelchair positions and an extremely flexible seating plan. Two older model buses have conventional lifts, located in the rear of each vehicle, and are able to accommodate three people in wheelchairs and six seated passengers. In addition, a back-up service, through use of taxi cabs, is available for persons who are semi-ambulatory. Currently, well over 1,000 individuals are registered for the Specialized Service Program in St. Cloud. On the average, 4,200 trips per month, are provided to persons with disabilities by the program.

2) Because inclement weather conditions are the "norm" in this part of the United States, during six months of each year, just the act of getting to a regular bus pick-up point in the winter is an insurmountable barrier. Too, many individuals with disabilities experience just as many difficulties in warm climates as in cold.

3) Even if a disabled person were able to make it to a bus stop, he or she would not necessarily be assured of a place to sit on the next available bus. According to the present text of the Americans with Disabilities Act, not all vehicles, within a fixed-route public transportation system, need to be readily accessible to individuals with disabilities. Furthermore, vehicles, which are determined to be accessible, will only be able to accommodate a certain number of people with disabilities. This is especially true with respect to individuals who use wheelchairs.

4) Operational problems relating to lift or ramp reliability, transfers and maintaining fixed-route schedule reliability could be extremely difficult to resolve. If such situations should prevail, persons with disabilities would, once again, be perceived as the "bad guys".

5) If the Americans with Disabilities Act passes into law, as it is presently written, St. Cloud's Specialized Service program for persons with disabilities could, eventually, be eliminated or greatly diminished. True, the Americans with Disabilities Act of 1989 does not create an either/or situation that forces transit agencies to choose between fixed-route accessibility and paratransit service. The bill mandates both types of service. When a body, such as the St. Cloud Metropolitan Transit Commission, is required to spend thousands of dollars in making the on-line service accessible, it only makes sense that it would not want to spend x amount of dollars to continue providing the door-to-door service. At the same time, if the same body is mandated to provide both services, it will first look at its budget, and cut costs, wherever possible. If the latter is the case, both services will, most likely, prove to be inaccurate in meeting the needs of disabled citizens.

Why should cities such as St. Cloud, Minnesota, be penalized for complying with existing laws in regard to providing accessible transportation for persons with disabilities and, at the same time, has a proven track record of success? Rather members of the sub-committee on Transportation are encouraged to support an amendment to ADA which would encompass a waiver for existing door-to-door service. In the United States Senate, an amendment in the nature of a substitute to the Americans with Disabilities Act of 1989 is being proposed.

RESUME

KATHLEEN TERESA WINGEN
1553-14th Street Southeast
St. Cloud, Minnesota 56304
PHONE: 612/253-9062

PERSONAL INFORMATION:

Date of Birth: April 28, 1949

Place of Birth: St. Cloud, Minnesota

Marital Status: Single

Social Security Number: 470-64-8915

JOB OBJECTIVE:

With fifteen years of experience, in working with children and adults who are physically and mentally challenged, to my credit, I am seeking a position which utilizes my present skills and talents. My interest is particularly in the availability of educational, governmental, rehabilitation or agency positions, which focus on advocacy, health or social welfare organization management, promotion and public relations.

PROFESSIONAL BACKGROUND:

ADMINISTRATIVE/ORGANIZATIONAL

Organized, managed and administered two innovative public service programs, in the Central Minnesota area, which instituted a number of initiatives to help disabled children and adults assimilate into their social and economic environments. Was responsible for writing the job description which started the first program, the Handicap Services Program at Tri-County Action Programs, Inc., in St. Cloud/Sauk Rapids, Minnesota, and applied for Comprehensive Employment and Training Act (CETA) funds. CETA money supported the Program for its first eighteen months. From 1979-1985, it was funded by local fundraising events, foundation grants and state supplemental grants.

BEST COPY AVAILABLE

ADMINISTRATIVE/ORGANIZATIONAL (Continued)

Because of funding from the Division of Rehabilitation Services in Minnesota, during 1985, Handicap Services became an independent program. Thus PEOPLE, TOO! - Central Minnesota Center for Independent Living, was incorporated. In both positions, I worked with a Board of Directors to help establish and implement program goals and objectives, as well as to formulate and follow through with budget planning. Was responsible for training of staff and volunteers at various program levels, and supervised staff and volunteers in all levels of program activities and fund raising.

ADVOCACY

As both a volunteer and professional, advocacy services were provided to many children and adults with disabilities. Advocated, numerous years, on behalf of the total disabled population, and more importantly, assisted on a one-to-one basis, individual people with disabilities. Advocacy services have been provided relative to accessibility, attendant care, education, employment, health, housing, information and referral, legislation, public awareness, recreation and transportation. One of my most successful attempts at advocacy has been my involvement in getting the Specialized Transit System for people with disabilities started, in St. Cloud, in December of 1974. Many disabled individuals require accessible housing in order to lead "normal" lives. After advocating long and hard, regarding the dire need for such housing in the local area, LaPaz Community, a thirty-six unit, totally barrier-free complex, finally became a reality.

DEVELOPMENT/FUND RAISING

Along with organizing, managing and administering two public service programs, in the Central Minnesota area, to provide assistance to children and adults with disabilities, was responsible for both the short and long range financial planning for these programs. Handled all foundation, corporate and individual fundraising, and coordinated the planning and implementation of local special events. These kind of events have included the following: a Trivia Pursuit Tournament; raffles; roll-a-thons; a dance-a-thon; benefit dinners; a benefit jam session; and the selling of ballons, T-shirts and bumper stickers. Most often, these types of activities required the involvement of volunteers. Began with a small volunteer base and was responsible for recruiting and training hundreds of volunteers in various fund raising/development activities. Have written numerous grant proposals and letters of inquiry to foundations, United Way agencies and corporations on a statewide basis, as well as for Federal and State grants, in an effort to raise monies for the "cause".

MEDIA/PUBLIC RELATIONS

During the past ten years, served as a spokesperson for the area's disabled population, as well as on behalf of the programs I directed, before groups, from pre-school age to adults, the press and public officials, to explain necessary programs and to act as an advocate for disabled people. With regard to public relations, have participated in the following: coordinated relationships between appropriate agencies; developed a newsletter, which described available programs and services for children and adults with disabilities; designed and updated brochures; prepared and distributed news releases; took part in media interviews; conducted informal meetings; fulfilled hundreds of speaking engagements; and acted as a contact person for inquiries from other agencies, for speakers, presentations, etc.

In 1983, assisted in the writing and producing of a slide/tape presentation which illustrated the need to change attitudes toward the disabled. Developed and organized a Speakers Bureau to further spread the "word". This Bureau provided community, school and business groups with speakers who addressed a variety of issues pertinent to disabled individuals and interested, informed volunteers. With the help of a local cable station and a volunteer, established a Cable Access Program in early 1987. This half-hour program focused on services and concerns of individuals, within a ten-county area of Central Minnesota, who have disabilities.

SPECIAL EVENTS (COORDINATION & PLANNING):

Over the years, have developed special promotions for the purpose of community-relations programs. My responsibilities have dealt with opening ceremonies, to development of community relations, benefits, publicity, display and volunteer implementation, as well as organization, to carry these out. Special events, which I have planned and implemented, include, but are not limited to, the following: coordinated a Seminar on Employment of People with Disabilities, in St. Cloud, on October 8, 1975; chairperson of the State Picnic for the Service Club for the Handicapped, Inc., in 1975; chairperson of the State Convention of the Service Club for the Handicapped, Inc. in October of 1976; coordinated and planned Handicap Awareness Week activities, in the Central Minnesota area, from 1976 through 1987; coordinated the Region 7 Conference on Handicapped Individuals in June of 1976 and, again, in October of 1977; coordinated activities in recognition of the 1981 International Year of Disabled Persons and the 1982 National Year of Diabled Persons, for the St. Cloud area; coordinated all activities in recognition of the "Decade of Disabled Persons", 1983-1992, for the local area, from 1983-1987; developed the People's Protector Fire Safety Program for St. Cloud in early 1979; co-chairperson for the Opening/Closing Ceremonies, Minnesota State Summer Olympic Games, June 2, 3, & 4, 1982, at St.

SPECIAL_EVENTS (Continued)

Cloud State University, and , again in 1983; planned and coordinated two Job Fairs for People with Disabilities, in the St. Cloud area, in 1985; coordinated the Ms. Wheelchair Minnesota Pageants, from 1984 through 1987; and planned and coordinated the 1987 Ms. Wheelchair America Pageant, which was held in Bloomington, Minnesota, from August 19-23, 1987.

EMPLOYMENT_RECORD:

January 1, 1986 - December of 1987

People Too - Central

QUALIFICATION SUMMARY:

Capable of working well under pressure and communicating and coordinating work with others. Take considerable pride in the quality of my work, and am prepared to work long hours to meet whatever deadlines are imposed.

EDUCATION:

Campus Lab School in St. Cloud; 1955-1965
Sauk Rapids High School; 1965-1968
College of St. Scholastica; 1968-1972;
    B.A. Degree in Sociology
    Minor: Library Science
St. Cloud State University; 1972-1973
    Graduate Work in Information Media

COMMUNITY ACTIVITIES:

President of the St. Cloud Area Council for the Handicapped from January of 1975 through 1978, and 1980 through 1982.

President of the St. Cloud Chapter of the Service Club for the Handicapped, Inc., from the Fall of 1976 through 1979, and from 1984 through 1986.

Secretary of the St. Cloud Chapter of the Service Club for the Handicapped, Inc., from the Spring of 1974 through the Fall of 1976, and from October 1979 to 1980.

State President of the Service Club for the Handicapped, Inc., 1976-1977 and 1977-1978.

Member of the Board of Directors of United Cerebral Palsy of Central Minnesota.

Chairperson of the Board of Directors of United Cerebral Palsy of Central Minnesota from October 1986 through present.

Active in District 17 DFL.

Member of the National Advisory Board on the Handicapped in 1983.

Member of the Vocational Rehabilitation Ombudsman Project Operating Board. Represent the issues and viewpoints of consumers in the Northern Area of Out-State Minnesota, April of 1980 through 1981.

COMMUNITY ACTIVITIES (Continued)

Member of the St. Cloud Advisory Committee for the Minnesota Epilepsy League, April of 1980 through 1986.

Serve on the Eligibility Committee which approves applications for Special Transportation Services to handicapped individuals, provided by the St. Cloud Metropolitan Transit Commission and Yellow Cab Company, December of 1978 through present.

Member of the Community Task Force with the Minnesota State Council for the Handicapped from December of 1979 through April of 1980.

Member of the District 742 Community Education Advisory Council from Spring of 1980 through 1986.

Member of the Independent Living Advisory Committee in Minnesota, September of 1985 through December of 1985.

Member of the Zonta International of St. Cloud, 1981 through 1983.

Patron Member of the St. Cloud Community Arts Council in 1982.

Member of VFW Post 47-48 Women's Auxiliary, 1982 through present.

Member of the Mayor's Advisory Board for Disabled Persons from 1982 through present.

Chairperson and member of the Ms. Wheelchair Minnesota Board of Directors from September of 1984 through present.

Member of the St. Cloud Eagles, Aerie 622, from February of 1985 through present.

Member of the Minnesota State Council for the Handicapped, 1986 - present.

AWARDS:

St. Cloud Chapter of the Service Club for the Handicapped, Inc. in 1975 and 1976.

Outstanding Officer of the Year in 1975.

Outstanding Member of the Year in 1976.

One of eight individuals to receive the Volunteer Activist Award, in Minnesota, in September of 1976.

AWARDS (Continued)

Humanitarian Award, from United Cerebral Palsy of Central Minnesota, in October of 1976.

"Good Neighbor of the Day Award", on WCCO Radio, in November of 1976.

Received a National Citation for Volunteer Activist in April of 1977.

Citation of Honor, from Governor Rudy Perpich, in August of 1977.

Certification of Appreciation, from the State of Minnesota and the Minnesota State Council for the Handicapped, in April of 1978.

Notable Americans Award, from 1978-1979, from the American Biographical Institute, in April of 1979.

Received United Cerebral Palsy Bill of Rights for the Disabled in October of 1979.

Humanitarian Award, from United Cerebral Palsy of Central Minnesota, in October of 1978.

Named one of five Handicapped Persons of the Year in the Midwest, by the Department of Health, Education and Welfare, in October of 1979.

Also, selected as an Outstanding Young Woman of 1979 in November of 1979. Included in the 1979 edition of the Outstanding Young Women in America.

Chosen Outstanding Young Citizen of 1979 by the St. Cloud Jaycees.

Selected as one of ten Outstanding Young Minnesotans for 1980, by the Minnesota Jaycees - February 9, 1980.

Received the Outstanding CAA Program Award for 1979-1980. Presented to the Tri-County Action Program, Inc., for its Handicapped Services Program. Presented by the Minnesota CAP Association.

Selected to receive the 1980 Leadership Recognition Award, from the Minnesota State Council for the Handicapped and the St. Cloud Chapter of the Service Club for the Handicapped, Inc., at the 1980 Minnesota Governor's Conference on Disabled Persons - October 11, 1980.

Received the Honorary Citizenships Award, from the St. Cloud Chamber of Commerce, on May 26, 1981.

AWARDS (Continued)

Inclusion in the third edition of Notable Americans -May of 1981.

The recipient of the Rose and Jay Phillips Courage Center Award, for achievement in employment and community involvement, in October of 1981.

Service to Mankind Award, presented by Sertoma of St. Cloud, in January of 1984.

One of eleven individuals to receive the Eleven Who Care Award, from KARE Television, on April 10, 1984.

Recipient of the Sister Alice Lamb Alumni Award, from the College of St. Scholastica, in October of 1986.

Recipient of the Herberger's Outstanding Community Leadership Award - 1987.

Mr. MINETA. I would now like to call forward a panel representing the American Public Transit Association; Mort Downey, Executive Director and Chief Financial Officer of the Metropolitan Transportation Authority of New York accompanied by Janis V. Pierce, Board Member, Memphis Area Transit Authority, Dennis Louwerse, Executive Director, Berks Area Reading Transportation Authority.

TESTIMONY OF MORTIMER DOWNEY, CHAIRMAN, APTA LEGISLATIVE SUBCOMMITTEE, FEDERAL POLICY AND PROCEDURE, EXECUTIVE DIRECTOR AND CHIEF FINANCIAL OFFICER, METROPOLITAN TRANSPORTATION AUTHORITY, NEW YORK, NY, ACCOMPANIED BY JANIS PIERCE, APTA VICE PRESIDENT, GOVERNING BOARDS, BOARD OF DIRECTORS, MEMPHIS AREA TRANSIT AUTHORITY, AND DENNIS LOUWERSE, MEMBER, APTA LEGISLATIVE COMMITTEE, APTA ELDERLY AND DISABLED SERVICES TASK FORCE, EXECUTIVE DIRECTOR, BERKS AREA READING TRANSPORTATION AUTHORITY

Mr. DOWNEY. Thank you for the opportunity to appear before the Subcommittee. As you indicated, my name is Mort Downey from New York. I will be providing APTA's testimony. I am accompanied by Janis Pierce from the Memphis Area Transit Authority and Dennis Louwerse from Berks Area Reading Transportation Authority, Reading, Pennsylvania,

Mr. Robinson is stuck in Michigan due to the flight conditions today. He could not get out of Grand Rapids.

Mr. Chairman, I would ask your permission to put our full statement in the record and merely summarize so that we can get on to your questions.

Mr. MINETA. I do not object.

Mr. DOWNEY. The transit industry which APTA represents, we believe, has achieved substantial progress in meeting and serving the needs of persons with disabilities and the elderly. Even as federal funding for transit has declined in recent years, the proportion of lift-equipped buses in the national fleet has grown from 11 percent in 1981 to more than 30 percent in 1987.

Individual systems are providing service to persons with disabilities through either the use of lift-equipped buses or supplementary paratransit, or a combination of both. New fully-accessible rail systems are now operating in many cities and accessibility improvements are being made to older rail systems as they are being modernized.

In our own system in New York City, the MTA and representatives of the disabled community reached agreement embodies in the state legislation designating a number of the stations within our system as key stations. These are being made fully accessible in conjunction with our station modernization program over a period of years.

The provision of bus lifts for our bus fleet and a city-sponsored paratransit system was also made part of this plan. Within each community, transit has worked with disability groups to meet the transportation needs of the disabled as best they can be met. Obviously, some systems have done a better job than others. Some have

2712

done it one way, some have done it another. Some have done it with less money.

It is clear that if everyone felt the needs of the disabled had been met, this legislative initiative might not be necessary. But we believe it is, and we pledge, today, to do everything possible to successfully implement the ADA when it is enacted into law.

The transit industry wants the business of disabled persons. We sincerely hope we can work with and enlist the support of persons with disabilities. But we must remember we are in the business of providing mobility to the entire community and we do not want to reduce service in other areas in order to fully fulfill our responsibility to this group of users.

We, thus solicit your support in helping us to implement this historic legislation. As the authorizing committee for public transportation, we ask that you recognize the cost to transit of this bill as you have recognized other costs in the past.

It is difficult to determine what those precise costs will be. But I think everyone would agree the measure will result in additional costs for most transit systems and that these costs could be substantial in all aspects; in the provision of lifts, in the cost of paratransit and in the cost of station access.

Without getting into the specifics of these costs which are covered, at least in general terms in our statement, and there are a range of costs in various cities, let me just comment on a few areas of particular concern.

In terms of the Act's requirement that systems provide comparable paratransit as supplement to fixed-route service, many small systems such as St. Cloud that we heard from just recently who stretched their minimal resources to provide the general use service through time transfers or a pulse system functioning around a common hub have real problems, since they operate with virtually no money to spare, requiring them to supplement their bare-bones service with fully-comparable paratransit could inevitable, or would inevitably, lead to elimination or reduction of some other service.

We would, therefore, request that the committee consider more specific criteria for consideration of exemption from the comparable paratransit requirement than just the "undue financial burden" exemption currently included in the bill. I might note from looking at other testimony that will be given this afternoon, this is a concern for large systems as well as small.

We must also note our concerns regarding the safety of transporting individuals in wheel chairs and the responsibility our transit operators will have for their safety while riding on the bus or rail vehicle. Mr. Robinson would have covered this in more detail in his statement, and we would like to provide that at a later time to the committee.

Currently, persons in wheel chairs cannot meet the governing NHTSA standard for safety unless they are fully strapped in with a three-point harness which could well create both operational and other problems.

The Easter Seal Society is now conducting a demonstration program which you heard of earlier which Congress funded and APTA has vigorously supported. This study, among other issues it addresses, is intended to deal with means by which persons in wheel chairs can be transported safely and with dignity on mass transit vehicles.

We would ask that the ultimate legislation address these concerns including appropriate provisions for standardization and compatibility in securement of wheel chairs.

Finally, we ask that you, as members of the authorizing committee, and the people with disabilities recognize there will be costs, there will be a great deal of work, there will be obstacles involved in successfully implementing the act, and in serving, over time, the needs of the disabled at the same time we serve the needs of the rest of the population.

Thus, we request your continued and, we hope, your expanded commitment to the availability of mass transit for all of our nation's citizens. As we expand our mission to better serve the needs of disabled citizens, we should not reduce our commitment to others.

Mr. Chairman and members of the committee, we thank you for your attention to the statement and we would be happy to answer any questions you may have. Mr. Chairman, Ms. Pierce, who is with me, may have a time problem with respect to a flight and I would ask if she might say a few words before we get into questions, in case she has to leave.

Mr. MINETA. Surely. Please, Ms. Pierce, feel free to proceed.

Ms. PIERCE. Thank you very much. I appreciate the opportunity to be here. I have been asked to outline the Memphis system and the effect that the Americans With Disabilities Act would have on our system. I have been a member of the Board for approximately eight years now. We have an extensive paratransit system.

One of the most difficult things that we have done in our deliberations on the Board has been to decide how best to allocate rather meager funds. This committee is probably more aware than most of the constant struggle that our public transit providers have with funding. Memphis is not unique. We are a metropolitan area of approximately a million. We are rapidly approaching a million.

Federal funding has, essentially, been frozen since 1981 with a resulting 50 percent reduction in purchasing power. Each year, we go head in hand to the federal, state and local government for funding. The federal funds have been cut. The state funds have increased, and local funds have, in fact, pretty much kept up with inflationary costs.

We do not have a dedicated source of funds. We do not have any means of levying a tax, instituting bonds or even borrowing money independently. Our state, constitutionally, cannot levy an income tax. Consequently, those tax funds that are those funds that would be necessary in order to implement this would come from the regressive taxes which would, in fact, hit those people who are our transit-dependent riders most heavily, from gasoline tax which, I think is already the highest in the nation. We have a 7.75 percent sales tax and user fees. All of these are very regressive.

At our current budget level, as, I think, everybody here has said, it is very difficult to estimate exactly what impact the ADA would have on systems, but we have, in fact, made a projection and a conservative, very conservative, estimate that takes in only the operating costs and does not include any local capital share which we have assumed would come from other capital sources.

At our current budget level, the Memphis Area Transit Authority would have to eliminate 2.8 percent of its services or 193,626 miles annually. That is approximately 272,000 one-way trips, or 1.9 percent of our total ridership, would be lost due to required service cutbacks. We are, right now, on the verge of having to make either cutbacks or increased fare. Our fare is now 85 cents.

This is based only on additional operating costs which we have projected to be $363,000 per year. I think that is fairly conservative, considering that we have got 238 buses on the street and some 20 paratransit vehicles.

We have worked very closely during the time that I have been on the board, and this was already in place when I came on, with the handicapped community. Last month, for example, to answer some of the questions that came up earlier, or anticipate some of them, we had 10,300 handilift rides. We have an average of 20 wheel chair rides per day. The addition of lifts to our mainline service would not, in fact, probably provide service for the majority of our handicapped community.

The disabled community and the handilift service carries about 4 percent elderly, 10 to 12 percent are in wheel chair and the remaining 84 to 86 percent are, basically, cognitive disability people who go to sheltered workshops and the lifts would not help them.

We have, in the past years, worked with social service agencies to train some 188 of the cognitive disability people to ride our mainstream buses. This has been very helpful in financing and in providing space for additional people to use our handilift service.

In this current year, we will spend over 3 percent. We are not only meeting but surpassing the regulations under the 504 plan. An additional 2 percent, roughly, would be added by the Americans With Disabilities Act if, in fact, we have to provide comparable paratransit service.

In order to continue to provide maximum service while complying with the legislation, we would ask that Congress not require the operation of comparable paratransit, but that it should supplement or coordinate with the fixed-route buses, that the establishment of paratransit eligibility standards and service be left to the local communities and developed in conjunction with the disabled community and that those requirements that are established by Congress be funded by Congress.

The flexibility in determining—several people, including Mr. Capozzi, mentioned that it is difficult to pinpoint the number of people who would, in fact, move to mainline buses. We would, probably, have more riders if we did have mainline bus service. I think, even if we tripled our current wheel chair passengers, that would be 60 per day. That is two ways.

We would ask that there be standard criteria for wheel chair design in order to facilitate the accommodation of wheel chairs on mass transit vehicles and in mass transit facilities and to insure the safety of wheel chair passengers. The number of passengers who would be affected—I told you the percentages—but the numbers of passengers who would be affected if this goes into effect in its present form would be 272,000 rides for our people. Memphis is

50th in a list of 50 cities that are approximately this size in per capita income. We are not a wealthy area. Seventy-eight percent of our people do not have any other means of transportation. Those 272,000 rides would, in fact, probably deprive those people of means of getting to their jobs as well and would, in fact, put them on welfare.

We have tried over the years to provide a balance of the most effective service for the most people in both areas.

I thank you for your interest and for allowing me to participate.

Mr. MINETA. Thank you very much, Ms. Pierce. Mr. Downey, in your testimony, you asked the committee to consider using a more specific rationale than undue financial burden for exempting public transit operators from the paratransit provisions in the bill. As the MTA Chief Financial Officer, I am surprised that you have a problem with the concept of undue financial burden.

But more seriously, from your current view as well as your past experience as Assistant Secretary for Budget and Policy at the Department of Transportation, how would you suggest that we clarify this term or define it more precisely?

Mr. DOWNEY. I think it need to be defined both in terms——

Mr. MINETA. Ms. Pierce, thank you very, very much. I appreciate your being here as well as your service as a Board member there in the Memphis area.

Ms. PIERCE. Thank you, very much. I would be glad to answer any questions in writing.

Mr. MINETA. Thank you. Mr. Downey.

Mr. DOWNEY. I think the criteria have to be both financial and operational. I think the real concern is that paratransit service truly be supplementary, targeted for where it is needed and not offered so broadly as to create a real burden. That has been the approach, for example, in New York under the state legislation. We are offering both lift-equipped buses on our regular routes, and a paratransit service managed by the city.

It is clearly specified in our state legislation that that paratransit service is not to be duplicative of the trips that can be provided by the lift-equipped buses.

Mr. MINETA. Mr. Louwerse?

Mr. LOUWERSE. If I may, I am basically here to speak on behalf of the small operators throughout the country. I think one of our greatest concerns is this clause that says we need to provide comparable paratransit service. There are a number of small operators throughout the country who wonder about the wisdom of having to put lifts on their buses. There are many, for example my own system—I have been since in the 1970's operating a paratransit system that does about 25,000 rides a month, over 4,500 of which are for non-ambulatory persons.

We took an order of buses last month, and 10 of the 15 buses are lift-equipped. We are opening bids on Thursday for another 15 buses. 10 of those buses will be lift-equipped. We operated what is known as a coordinated service; that is, using our resources in our community—we have 170,000 people—the fixed-route buses stay in the urban area. The paratransit does some urban work, but mainly goes to the rural areas.

We send a bus 40 miles to pick up Mary Jones because she has to go to the hospital. This is a van, a specialized van. Now, if I have to run comparable service, I am going to have to take that van which goes to get Mary Jones and run it on a system where now I have already decided, before you have passed the law—that has a lift. So Mary Jones is going to lose service.

So a bill which is supposed to require greater mobility for the citizens of our country will have a negative impact. Specifically, I would suggest from the small operator's point of view, that you allow us to coordinate lift-equipped fixed-route system with specialized or demand-responsive system. I emphasize the word "coordinate," as opposed to comparable because comparable means you have increased my cost, I need more vehicles, and I am going to have to cut service someplace and some people are going to get very disappointed and very hurt.

But if I am allowed to coordinate those two types of service, I think we will see greater mobility needs being met. I think that is the kind of specific situation we would recommend to you.

Mr. MINETA. Can you use your paratransit to feed your fixed-route system?

Mr. LOUWERSE. Yes, we do, as a matter of fact.

Mr. MINETA. It doesn't preclude you from doing that; right?

Mr. LOUWERSE. No. Our system, for example, our specialized transportation system is open to the public, not just people who have special needs. It is open to the public. For example, in our case, the cost of the ride is $6.00. The fare is $4.50.

Mr. MINETA. Is that for operating as well as capital?

Mr. LOUWERSE. That is operating only.

Mr. LOUWERSE. Now, the cost for a fixed-route ride costs me a dollar, and my fare is 75 cents. So our system has agreed to subsidize both the fixed-route system and the specialized transportation system. Why? Because we are in the business of providing transportation to the citizens of our area.

They know me. I know them. I am saying you have this broad ranging Federal mandate. There are a lot of human people who are going to be bypassed. If I may give you just one other good example. Three years ago, in cooperation with our specialized system, our fixed-route system, and the social service agencies in our community, we took 160 people who go to work—these are people with disabilities who go work every day, some to the sheltered workshop, some to other places.

They previously had ridden specialized service. The cost of that ride was around $6.00. We, together, worked and trained these individuals to ride the regular fixed-route bus because the fixed-route bus went by their house. Now, a cost of service that was $960 a day, I reduced to $160 a day, thereby saving my system $800 a day.

We didn't say, "Isn't this wonderful? We saved $800 a day." We said, "Now, we have $800 a day to invest in providing service where there was no previous service." My point to you is that with the opportunity for coordination, not mandated comparability—the idea of getting together and working with your people and providing the best service—whether this is a right, a regulation, that is a debatable philosophical question. What is the reality? We are trying to provide the most mobility with the most effective manner.

Whether you think it is a civil right or whether you think it isn't a civil right, you still want to achieve the same thing; the most amount of mobility for the most appropriate amount of funds. So we would emphasize this coordination of our efforts.

Thank you.

Mr. MINETA. Mr. Downey, regarding the rail provisions of the bill, what criteria were used in New York to identify key rail stations to be made available or accessible?

Mr. DOWNEY. The process, Mr. Chairman, was one of negotiation, partially in conjunction with litigation that was going on and partially in conjunction with prospective state legislation. We sat down with representatives of the disabled community, identified the stations that showed the greatest promise for serving large numbers of people, those stations that were downtown locations, those that were good transfer sites, those that were out at the ends of lines, and we created some flexibility in the process.

The legislature specified 38 of our 465 stations by name and set up a further process where each side, so to speak, would designate another 8 stations or 9 stations. In fact, as it worked out, we jointly designated the remainder and retained some flexibility, as time goes on, to make substitutions and changes in that list.

But it is a relatively small number of stations that cover a wide portion of the system. It will be done over time. There is a timetable for expenditures in the legislation, but not a specific deadline by which the process would be finished. But the cooperative work that went into it has really served us well.

We are now at the point, four years or five years after the bill passed, that the first of those stations are now complete. We will be seeing, within the next year, increasing numbers of stations available and, hopefully, increasing numbers of disabled riders using them.

Mr. MINETA. What has been the experience of the New York MTA in the usage of wheel chair lift-equipped buses in fixed-route service in the metropolitan area?

Mr. LOUWERSE. We operate two separate systems within the metropolitan area. One, of course, is the large system serving New York City. One is a smaller suburban system. In the city system, we have a bus fleet of 3,800 buses. As of today, about 2,900 of them are lift-equipped or 76 percent. We should have that closer to 84 percent when our next bus order is complete. As we have gotten closer to the point of a full lift-equipped fleet, we have seen the rate of increase in the usage go up dramatically.

Four years ago, we were carrying about 11,000 people per year on lift-equipped buses. We are now carrying at a rate of about 40,000 persons per year. That works out to somewhere in the neighborhood in 150 rides a day. But the point is, it is growing very rapidly now that that service is perceived as one that is fully reliable, that basically all buses in the off-peak hours and weekend hours, and the vast majority of buses in the peak hours are lift-equipped, people are coming out and using it.

Mr. SHUSTER. Let me follow up on the 150 rides a day. How many lift-equipped buses do you have?

Ms. PIERCE. We have, as of this point, about 2,900 lift-equipped buses in the fleet.

Mr. Shuster. Which provide 150 rides a day?

Mr. Downey. Per day, yes.

Mr. Shuster. It has been mentioned that the demonstration project raises the problem of the lack of universal applicability of securement devices. How do most transit authorities with experience with lift-equipped buses currently deal with this problem?

Mr. Downey. We have a standard fleet of buses. They all have the same lift and the same securement device. It functions well with the majority of wheel chair users. To the extent that it does not secure any of the existing wheel chairs, it is a point of concern to us, and we instruct the passenger to do whatever they can to assure that their wheel chair is not going to move around.

But we would be more comfortable if we knew that there was a device that all those who present themselves to us could make use of.

Mr. Shuster. You talked about the need to redefine the exemption from comparable paratransit. We had testimony earlier today from the Cambria Transit Authority, which has selected to go the route of lifts on all their buses. I believe if that is the decision that they feel is the best decision for that area, then they should be able to make that decision.

Right across, on the other side of the mountain from Johnstown, Cambria County, is Altoona, Pennsylvania where they have no lifts on the buses but a very extensive paratransit program. What is your view about the various transit authorities being able to make those decisions? Should the transit authorities have the flexibility to decide all lifts and no paratransit, all paratransit and no lifts, or somewhere in between, or should we mandate at the Federal level what this should be?

Mr. Louwerse. I would say that you are finding in the industry, even in the small systems, an increase in the purchase of fixed-route buses with lifts. For example, I know there is some consideration in Altoona right now to look at potentially some vehicles with lifts. The question is like, in my case, we ordered 20 out of 30 with lifts because that is what we feel we need to do the job.

So do we need to spend additional money for the 10 which we don't think we really need? The emphasis I would, again, make is, obviously, there are unique and individual circumstances. I will give you an example of a system in Pennsylvania that has four vehicles. They have a bus, a specialized van, and two station wagons. What is the ADA going to say to that system? Are they going to say, "Well, now are going to get a bus with a lift on," which might be all right, but your specialized van has to run comparable service. So that means you are going to have to cut service for some of your people because now you only have three vehicles instead of, practically, four.

I think what you will find is that there are a lot of systems out there. I think that is being really missed. We hear about the people that are struggling, and there are some places where there is some turmoil. But there are a lot of places where there is a lot of agreement, where you have local people reaching proper decisions on how to best serve their people.

I would say that the greater the amount of flexibility you can provide to the local people to make their own determination, the more responsive that situation will be. I don't think you will find a major outcry if you say, "We think you need to seriously need to look at putting lifts on all new purchases of buses." But I think if you demand comparability, you are going to demand reductions in service. But if you say lifts on buses and coordination with your specialized transportation system, you will see increased mobility.

Mr. **Downey**. I would concur in the same view and draw attention to some special issues like commuter railroads where, as the Chairman indicated, the use of the paratransit as a feeder may be a very appropriate way to make use of both modes. But the parallel 100 mile trips on commuter rail is, probably, a good use of resources.

Mr. **Shuster**. Let me come back to the lift issue again, because I am having great difficulty with it. I mentioned Cambria County which testified earlier today and, indeed, was presented here as the great example of a success story because of all the promotion that went far beyond the issue of simply providing lifts, by providing 100 percent lift, six years in operation.

Yet the statistics they presented was one ride every three days, per bus. Check me on your arithmetic in New York, Mr. Downey. You have 2,900 lift-equipped buses and 150 rides a day. That is one ride per day for every 19 buses.

Mr. **Downey**. I think that is the right arithmetic, yes.

Mr. **Shuster**. I am just astonished by those statistics and how that can be presented as having satisfied the needs of the disabled, when you only have one disabled person on every 19 buses. For every 19 buses out there, one disabled ride a day. It seems to me, there have got to be more disabled people out there who are not being served, it seems to me.

Mr. **Louwerse**. If I may, I ran these numbers last night before I came down here because I think it raises the issue that you have pointed out so succinctly, and that is, we have 14 specialized transportation vehicles that are lift-equipped. We did, last month, 4,547 wheel chair rides on those 14 vehicles.

If you figure five days a week, some days six, depending on how days fell and so on and so forth. Those vehicles cost about $25,000 apiece as opposed to $150,000-some for a transit vehicle. I have, personally, severe reservations that if I took these specialized vehicles off the street and put all lifts on my vehicles, that I would be carrying 4,574 wheel chair users in a little town like Reading, Pennsylvania.

I have made a conscious decision and recommendation to my board, which they approved to put lifts on some of my buses. I am doing the same program that—as you know, Harold Jenkins and I are good personal friends. We are now beginning the program. We are marketing it. We are training our drivers.

I have some severe reservations about whether I made an investment of probably $10,000 to $15,000 a bus plus all that training, and I keep wondering how many of my people really want it. I know from my public, they said, "If we take our vans away, we are going to send you out of town."

Your question is very well taken, I think.

Mr. **Shuster**. This raises a very fundamental—almost a dichotomy, I believe. And I draw on my own personal family experience which I referred to here earlier. It is one thing, entirely, for what I would describe as my good friends, Viet Nam vets who are paralyzed, for example. These are healthy guys who can't walk. And they have the ability to get around, to move those wheel chairs around, to get to the bus stop, to get up on the bus.

They have great mobility, although limited in one respect, as opposed to a senior citizen in a wheel chair who simply doesn't have the strength, the capacity, to get from the house to the bus stop. There is an enormous difference here.

I would say with great respect to my friends who have testified here, mostly from the Washington area, the Viet Nam vets for whom I have the greatest respect, that this represents one category, one point of view—those people who are vigorous, in their youth, yet, and who have the ability to move about, which is entirely different from our senior citizens in wheel chairs.

I think we have got to be very careful here that we not only give great weight to the testimony of these healthy people who happen to have a disability, but also the people who are senior citizens and who don't have that same vigorous health.

I think it is enormously important that we don't skew our thinking because I believe most of the testimony we have received is from the category of what I would say is the healthy person with a disability.

Do you disagree with that?

Mr. LOUWERSE. I would agree 100 percent. I would certainly invite you to come to Reading any time, or any members of the committee. I think that is one of the problems. There has been the discussion about this being a national crisis. I am not saying it isn't a crisis for certain individuals in their life, and there are some major metropolitan areas where the whole idea of mainline accessibility is different.

As you said, you have different types of people who have professional mobility. But there is Mrs. Jones that I have to take 40 miles one way—that is 80 miles a day—to go to the hospital. I have to deal with that realistically every day. And there are other services exactly the same way. I am afraid that this broad-range brush is really going to result in less mobility, and you are not going to hear from—I hate to sort of use this term, but I will—the silent majority who want curb-to-curb service.

Mr. SHUSTER. Thank you very much.

Thank you, Mr. Chairman.

Mr. MINETA. Mr. Lipinski?

Mr. LIPINSKI. Thank you, Mr. Chairman.

Mr. Downey, the rail service that you were referring to: is that commuter rail or is that inside New York City Rapid Transit System?

Mr. DOWNEY. The key station concept agreement that I referred to had to do with our subway system inside New York City. We also operate two commuter railroads; the Long Island Railroad and Metro North. While we have no current legislative vehicle or settlement agreement that covers those railroads, we have also proceeded considerably towards making them accessible.

Each of those two railroads has about 50 accessible stations as of this time.

Mr. **Lipinski**. That is 50 out of how many, sir?

Mr. **Downey**. Fifty out of each of them is about 120, 130 stations, so we are——

Mr. **Lipinski**. 260, 250?

Mr. **Downey**. Yes; close to half of our commuter rail stations have become accessible.

Mr. **Lipinski**. Wait a second. You said you made 50 of them accessible?

Mr. **Downey**. Fifty on each of two railroads.

Mr. **Lipinski**. So you have 100 out of about 250 or so?

Mr. **Downey**. Yes.

Mr. **Lipinski**. On your rapid transit system within New York City, itself, how many stations do you have, total?

Mr. **Downey**. 465.

Mr. **Lipinski**. How many have you managed to make accessible so far?

Mr. **Downey**. So far, five under the program that was agreed to four years ago; three more to be completed within the next few weeks; five or six others that were constructed as part of our new routes program, so we are currently, or by the end of this year, should be at about fourteen or fifteen accessible stations.

Mr. **Lipinski**. How long have you been working on that?

Mr. **Downey**. Aggressively since 1985 when the legislation in the State of New York passed.

Mr. **Lipinski**. So about five years?

Mr. **Downey**. We have been at it about four years.

Mr. **Lipinski**. Four years, and you have managed to convert eight of them, plus you have built six new ones?

Mr. **Downey**. Six new stations, yes.

Mr. **Lipinski**. I assume that the 100 that you have made accessible on your commuter rail has been in the last four years, also?

Mr. **Downey**. Most of those have been in the last four years with the remarkable exception of Grand Central Terminal which is seventy-five years old and through planning at the time, other than good architectural design, was an accessible terminal.

Mr. **Lipinski**. Discounting the six new stations that you built that were built accessible, do you have any idea what the cost was of converting these 118 stations?

Mr. **Downey**. The conversion costs within the New York City system have run—it depends on the station and on its own architecture, but they have run from $2 million to $5 million each. The costs on the commuter railroads have been far less because, in most cases, we have been able to do that with ramps leading to the high-level platforms that we use in conjunction with commuter trains.

Mr. **Lipinski**. Do you have any idea what that figure is on the commuter railroad?

Mr. **Downey**. No. I could provide that for the record. I think we have spent, perhaps, $15 million or $20 million in the last five or six years. In many cases, it was in conjunction with the construction of high-level platforms, really at no additional cost because the ramp is used by all of the riders.

Mr. **Lipinski**. Of these stations that you have on your rapid transit line, these stations that you have made accessible, have there been any of these stations that are elevated stations?

Mr. **Downey**. Yes.

Mr. **Lipinski**. How many have there been?

Mr. **Downey**. Of the ones that are completed to date, I believe two or three are elevated stations.

Mr. **Lipinski**. Do you know what the cost has been in regards to those?

Mr. **Downey**. I could provide that for the record.

Mr. **Lipinski**. I would appreciate it.

Mr. **Downey**. They were within that range of the $2 million to $5 million. We had to put elevators up direct from the street. One of those is at 125th Street and Lexington Avenue in Harlem.

Mr. **Lipinski**. If this legislation passes in the form that it is in at the present time, and you have 465 stations, total, and you have probably got 450, we will say, left to make accessible, do you think you can do that in twenty years?

Mr. **Downey**. It would not be our expectation that all 465 or any number like that would be made accessible. We would continue the process, we believe, at the pace we have been undertaking it. We are heartened by the comments in the report on the Senate bill as well as the Administration's view that the current program we are undertaking, in their judgment, would satisfy the goals of this legislation.

Mr. **Lipinski**. Do you have a paratransit operating in New York City, also?

Mr. **Downey**. It is not our system, but under the same legislation, the state required that a Transportation Disabled Committee be set up including representation from the city, from ourselves, from the state and from the disabled community. They have managed the process of implementing a city-sponsored paratransit system.

It has been operating on a pilot basis in the borough of Manhattan and, within a few weeks, will begin on a city-wide basis. As I said, it is run by the city. Under the legislation, they diverted some of the taxes that otherwise would have gone to us to fund this system. Their budget is somewhere in the neighborhood of $10 million a year to provide this paratransit service.

Mr. **Lipinski**. The system, could you give me a little more detail on how it operates?

Mr. **Downey**. It would be a contracted system with private operators. It would provide trips on a subscription basis for regular uses and on a reservation basis for occasional users. There would be some limitation on time. It would operate eight to twelve hours per day, would have approximately 130 vehicles, and would charge fares comparable to the fares charged for regular users, $1.00 to $2.00 for a trip.

Mr. **Lipinski**. Do you have any figures on the pilot program, in Manhattan?

Mr. **Downey**. I don't. I have figures estimated by the city that their expectation is that this aggregate of four burroughs would serve about 500,000 trips a year on a budget of $10 million, which works out something like $20 per trip.

Mr. **Lipinski**. That would take in four burroughs.

Mr. **Downey**. That would cover four burroughs. Later on, Staten Island would be added. I think the plan is to add them early next year.

Mr. **Lipinski**. Thank you very much.

Mr. **Mineta**. Thank you very much, Mr. Downey and Mr. Louwerse. I appreciate your appearing here and look forward to working with you on this.

Mr. **Louwerse**. Thank you.

Mr. **Downey**. Thank you, Mr. Chairman.

[Mr. Downey's prepared statement follows:]

STATEMENT OF THE
AMERICAN PUBLIC TRANSIT ASSOCIATION
BEFORE THE
SUBCOMMITTEE ON SURFACE TRANSPORTATION
OF THE
PUBLIC WORKS AND TRANSPORTATION COMMITTEE
U.S. HOUSE OF REPRESENTATIVES
HONORABLE NORMAN Y. MINETA, CHAIRMAN

SEPTEMBER 20, 1989
2167 RAYBURN HOUSE OFFICE BUILDING
WASHINGTON, D.C.

American Public Transit Association
1201 New York Avenue, N.W.
Suite 400
Washington, D.C. 20005

APTA WITNESS TEAM

SUBMITTING STATEMENT ON H.R. 2273, AMERICANS WITH DISABILITIES ACT

Mortimer Downey
Chairman, APTA Legislative Subcommittee on Federal Policy and Procedures
Executive Director and Chief Financial Officer, Metropolitan Transportation Authority, New York, N.Y.

Janis Pierce
APTA Vice President, Governing Boards
Board of Directors, Memphis Area Transit Authority

Dennis Louwerse
Member, APTA Legislative Committee; APTA Elderly and Disabled Services Task Force
Executive Director, Berks Area Reading Transportation Authority, Reading Pa.

Claude Robinson
Chairman, APTA Board of Governors Legislative Committee; Former APTA Chairman of Associate Member Board of Governors

STATEMENT OF THE AMERICAN PUBLIC TRANSIT ASSOCIATION BEFORE THE PUBLIC WORKS AND TRANSPORTATION SUBCOMMITTEE ON SURFACE TRANSPORTATION OF THE U.S. HOUSE OF REPRESENTATIVES

GOOD AFTERNOON CHAIRMAN MINETA, MR. SHUSTER, AND DISTINGUISHED MEMBERS OF THE SUBCOMMITTEE. MY NAME IS MORT DOWNEY. I AM CHAIRMAN OF THE AMERICAN PUBLIC TRANSIT ASSOCIATION'S FEDERAL POLICY AND PROCEDURES SUBCOMMITTEE. I AM EXECUTIVE DIRECTOR AND CHIEF FINANCIAL OFFICER OF THE METROPOLITAN TRANSPORTATION AUTHORITY IN NEW YORK CITY. I'D LIKE TO THANK YOU FOR THE OPPORTUNITY TO APPEAR BEFORE YOUR SUBCOMMITTEE ON BEHALF OF THE AMERICAN PUBLIC TRANSIT ASSOCIATION, OR APTA. I WILL TRY TO BRIEFLY PRESENT APTA'S VIEWS ON H.R. 2273, THE AMERICANS WITH DISABILITIES ACT. OUR PANEL, WHICH IS REPRESENTATIVE OF THE TRANSIT INDUSTRY IS PREPARED TO ANSWER ANY QUESTIONS FROM THE SUBCOMMITTEE.

APTA IS A NON-PROFIT ORGANIZATION REPRESENTING LOCAL MASS TRANSIT SYSTEMS. APTA REPRESENTS MORE THAN 400 PUBLIC AND PRIVATE TRANSIT SYSTEMS, AND MORE THAN 430 MANUFACTURERS, CONSULTANTS, ACADEMIC INSTITUTIONS, AND GOVERNMENT AGENCIES INVOLVED WITH MASS TRANSPORTATION.

THE TRANSIT INDUSTRY HAS ACHIEVED SUBSTANTIAL PROGRESS IN MEETING AND SERVING THE NEEDS OF PERSONS WITH DISABILITIES AND

THE ELDERLY. EVEN AS FEDERAL FUNDING FOR TRANSIT DECLINED IN REAL TERMS BY SOME 50 PERCENT OVER THE LAST EIGHT YEARS, THE PROPORTION OF LIFT EQUIPPED BUSES IN THE NATIONAL FLEET GREW FROM 11 PERCENT IN 1981 TO MORE THAN 30 PERCENT IN 1987.

INDIVIDUAL TRANSIT SYSTEMS HAVE PROVIDED BUS SERVICE TO PERSONS WITH DISABILITIES THROUGH EITHER THE USE OF LIFT-EQUIPPED BUSES, SUPPLEMENTARY PARATRANSIT SERVICE, OR A COMBINATION OF THE TWO.

NEW, FULLY ACCESSIBLE RAIL SYSTEMS ARE NOW OPERATING IN SAN FRANCISCO; WASHINGTON, D.C.; ATLANTA; MIAMI; SAN DIEGO; PITTSBURGH; BUFFALO; SACRAMENTO; PORTLAND; AND SAN JOSE. ACCESSIBILITY IMPROVEMENTS ARE BEING MADE TO OLDER RAIL SYSTEMS AS THEY ARE BEING MODERNIZED. IN MY OWN SYSTEM IN NEW YORK CITY, THE MTA AND REPRESENTATIVES OF THE DISABLED COMMUNITY HAVE AGREED, UNDER STATE LEGISLATION, TO DESIGNATE A NUMBER OF "KEY STATIONS" WHICH ARE BEING MADE FULLY ACCESSIBLE IN CONJUNCTION WITH OUR STATION MODERNIZATION PROGRAM OVER A PERIOD OF YEARS.

THE INDUSTRY HAS COMPLIED WITH FEDERAL MANDATES GOVERNING ACCESSIBILITY TO TRANSIT SERVICES BY THE DISABLED. AS AN INDUSTRY, WE SEEK TO SERVE THE TRANSPORTATION NEEDS OF ALL MEMBERS OF THE COMMUNITIES IN WHICH WE OPERATE.

WITHIN EACH COMMUNITY, TRANSIT HAS WORKED WITH DISABILITY

2728

GROUPS TO MEET THE TRANSPORTATION NEEDS OF THE DISABLED AS BEST IT COULD. OBVIOUSLY, SOME SYSTEMS HAVE DONE A BETTER JOB THAN OTHERS, AND SOME HAVE DONE IT WITH LESS MONEY. IT IS CLEAR THAT, IF EVERYONE FELT THAT THE NEEDS OF THE DISABLED HAD BEEN MET, THIS LEGISLATIVE INITIATIVE MIGHT NOT BE NECESSARY.

WE PLEDGE TODAY TO DO EVERYTHING POSSIBLE TO SUCCESSFULLY IMPLEMENT THE AMERICANS WITH DISABILITIES ACT OF 1989 WHEN IT IS ENACTED INTO LAW. THE TRANSIT INDUSTRY WANTS THE BUSINESS OF DISABLED PERSONS. WE SINCERELY HOPE WE CAN WORK WITH, AND ENLIST THE SUPPORT OF, PEOPLE WITH DISABILITIES TO ADVOCATE THE IMPORTANCE OF INVESTING IN THE TRANSIT INFRASTRUCTURE. ADDING THEIR SUPPORT ON BEHALF OF A VIABLE NATIONAL TRANSIT PROGRAM WILL BE INVALUABLE TO OUR SUCCESS IN SERVING ALL TRANSPORTATION NEEDS.

BUT WE ARE IN THE BUSINESS OF PROVIDING MOBILITY TO THE ENTIRE COMMUNITY, AND WE DO NOT WANT TO REDUCE SERVICE IN OTHER AREAS TO FULFILL OUR RESPONSIBILITY TO THE DISABILITY COMMUNITY. WE WANT TO OFFER MORE AND BETTER SERVICE TO ALL OF OUR RIDERS AS AN INDUCEMENT TO GET PEOPLE OUR OF THEIR CARS AND ON TO MASS TRANSIT. IN THAT REGARD, WE SOLICIT YOUR SUPPORT IN HELPING US TO IMPLEMENT THIS HISTORIC LEGISLATION. AS THE AUTHORIZING COMMITTEE FOR PUBLIC TRANSPORTATION, WE ASK THAT YOU RECOGNIZE THE COSTS TO TRANSIT OF THIS BILL AND CLEAN AIR LEGISLATION. IT IS DIFFICULT TO DETERMINE THE PRECISE COST OF THIS ACT FOR TRANSIT, BUT I THINK EVERYONE WILL AGREE THAT THE MEASURE WILL

RESULT IN ADDITIONAL COSTS FOR MOST TRANSIT SYSTEMS. THESE COSTS COULD BE SUBSTANTIAL.

THE COST OF LIFTS FALLS SOMEWHERE BETWEEN $10,000 AND $15,000 PER BUS, WITH AN ADDITIONAL $1,000 TO $8,000 PER YEAR, PER BUS, IN OPERATING AND MAINTENANCE COSTS.

THE TWENTY YEAR CAPITAL AND OPERATING COSTS OF MAKING KEY RAPID RAIL STATIONS AND COMMUTER RAIL STATIONS ACCESSIBLE COULD RUN TO BILLIONS OF DOLLARS. IN THIS RESPECT, WE WOULD RECOMMEND THAT THE BILL EXPLICITLY DELEGATE TO A LOCAL PLANNING PROCESS WHICH INCLUDES REPRESENTATIVES OF THE DISABILITIES COMMUNITY, RESPONSIBILITY FOR DEFINING THOSE "KEY STATIONS" TO BE MADE ACCESSIBLE AS PART OF MAKING A RAIL SYSTEM ACCESSIBLE WHEN VIEWED IN ITS ENTIRETY.

THE COST OF PARATRANSIT IS SUBSTANTIAL. APTA HAS CALCULATED THAT IT COSTS SOME $3.32 PER TRIP IN CAPITAL AND $6.13 PER TRIP IN OPERATING COSTS FOR PARATRANSIT. MORE THAN 70 MILLION PARATRANSIT TRIPS WERE PROVIDED IN 1987. IT IS DIFFICULT TO PROJECT HOW THE BILL WILL AFFECT PRECISELY THE NUMBER OF PARATRANSIT TRIPS PROVIDED. ALTHOUGH, SHOULD SYSTEMS BE REQUIRED TO CONTINUE TO OPERATE BOTH THIS TYPE OF SERVICE AS WELL AS FULLY ACCESSIBLE FIXED-ROUTE SERVICE, ONE COULD PRESUME AT LEAST NO FEWER RIDES.

IN TERMS OF THE ACT'S REQUIREMENT THAT SYSTEMS PROVIDE COMPARABLE PARATRANSIT TO SUPPLEMENT THEIR FIXED ROUTE SERVICE, MANY SMALL SYSTEMS PROVIDE EITHER "TIMED-TRANSFERS," UNDER WHICH VEHICLES FROM DIFFERENT ROUTES ARE SCHEDULED TO MEET SIMULTANEOUSLY AT COMMON STOPS IN ORDER TO FACILITATE MINIMUM - WAIT PASSENGER TRANSFERS, OR THEY OPERATE WHAT IS KNOWN AS A "PULSE SYSTEM," WHEREBY NUMEROUS VEHICLES ARE ROUTED SO THAT THEY ALL ARRIVE SIMULTANEOUSLY AT A COMMON HUB, PASSENGERS CAN CHANGE ROUTES, AND THE VARIOUS BUSES THEN DEPART AT THE SAME TIME. BOTH SYSTEMS PERMIT TRANSIT OPERATORS TO PROVIDE MORE SERVICE, WITH LESS INVESTMENT IN ROLLING STOCK, AND HAVE THE BENEFIT OF INCREASING RIDERSHIP ON THE SYSTEM'S BUSES BY EXPANDING THE AREA OF SERVICE. SINCE MOST OF THESE SYSTEMS OPERATE WITH VIRTUALLY NO MONEY TO SPARE, REQUIRING THEM TO SUPPLEMENT THEIR "BARE BONES" SERVICE WITH COMPARABLE PARATRANSIT WOULD INEVITABLY LEAD TO ELIMINATION OF "PULSE" OR "TIMED-TRANSFER" SERVICE OR TO THE REDUCTION OF SOME OTHER SERVICE. WE WOULD THEREFORE REQUEST THAT THE COMMITTEE CONSIDER A MORE SPECIFIC EXEMPTION FROM THE COMPARABLE PARATRANSIT REQUIREMENT THAN THE "UNDUE FINANCIAL BURDEN" EXEMPTION WHICH IS CURRENTLY INCLUDED IN THE BILL.

WE MUST ALSO NOTE OUR CONCERNS REGARDING THE SAFETY OF TRANSPORTING INDIVIDUALS IN WHEELCHAIRS AND THE RESPONSIBILITY OUR OPERATORS HAVE FOR THEIR SAFETY WHILE RIDING ON THE BUS OR RAIL VEHICLE. WITH REGARD TO BUSES, RECENT NATIONAL HIGHWAY TRAFFIC SAFETY ADMINISTRATION (NHTSA) STANDARDS REQUIRED THAT

SEATS BE CUSHIONED OR COLLAPSIBLE SO THAT INDIVIDUALS CAN WITHSTAND AN EIGHTEEN MILE PER HOUR CRASH WITHOUT SUSTAINING CERTAIN INJURIES. CURRENTLY, PERSONS IN WHEELCHAIRS CANNOT MEET THE NHTSA STANDARD UNLESS THEY ARE STRAPPED IN WITH A THREE-POINT HARNESS. STRAPPING-IN MULTIPLE WHEELCHAIR USERS IN A "TIMED-TRANSFER" OR "PULSE" SYSTEM MIGHT JEOPARDIZE THE COORDINATION REQUIRED FOR SUCH AN OPERATION. BUT MORE IMPORTANTLY, WE DO NOT WANT TO SUBJECT PEOPLE IN WHEELCHAIRS TO A LESSER DEGREE OF SAFETY THAN THAT PROVIDED TO OTHER RIDERS.

THE EASTER SEAL SOCIETY FOR DISABLED CHILDREN AND ADULTS IS NOW CONDUCTING A DEMONSTRATION PROGRAM, WHICH CONGRESS FUNDED AND APTA HAS VIGOROUSLY SUPPORTED. THE STUDY, AMONG OTHER ISSUES IT ADDRESSES, IS INTENDED TO DEAL WITH HOW PEOPLE IN WHEELCHAIRS CAN BE TRANSPORTED SAFELY AND WITH DIGNITY ON MASS TRANSIT VEHICLES. WE WOULD ASK THAT THE BILL ADDRESS OUR CONCERNS IN THIS RESPECT, AND THAT IT MANDATE SPECIFIC DESIGN STANDARDS FOR WHEELCHAIRS WHICH ARE COMPATIBLE WITH WORKABLE SAFETY RESTRAINTS AND WHICH FACILITATE THE ACCOMMODATION OF WHEELCHAIRS IN TRANSIT VEHICLES AND FACILITIES.

WE FURTHER ASK THAT YOU, AS MEMBERS OF OUR AUTHORIZING COMMITTEE, AND THAT PEOPLE WITH DISABILITIES, RECOGNIZE THE COSTS, WORK, AND OBSTACLES INVOLVED IN SUCCESSFULLY IMPLEMENTING THE ACT AND IN SERVING THE NEEDS OF THE DISABLED AT THE SAME TIME THAT WE SERVE THE NEEDS OF THE REST OF THE POPULATION. WE

REQUEST YOUR CONTINUED -- AND WE HOPE, EXPANDED COMMITMENT TO THE AVAILABILITY OF MASS TRANSIT FOR ALL OF OUR NATION'S CITIZENS. WE SEEK YOUR COMMITMENT TO TRANSIT IN LARGE CITIES AND SMALL TOWNS, IN RURAL COMMUNITIES AND URBAN AREAS. TRANSIT IS THE SOLUTION TO REDUCING TRAFFIC CONGESTION AND AIR POLLUTION. IT IS A CRITICAL INGREDIENT TO THE ECONOMIC VITALITY OF EVERY COMMUNITY. IT CAN PROVIDE OUR CITIZENS WITH THE ABILITY TO PARTICIPATE FULLY IN OUR SOCIETY AND STIMULATE ECONOMIC DEVELOPMENT NATIONALLY AND LOCALLY. AS WE EXPAND OUR MISSION TO SERVE THE NEEDS OF DISABLED CITIZENS, WE SHOULD NOT REDUCE OUR COMMITMENT TO OTHERS.

MR CHAIRMAN, MEMBERS OF THE COMMITTEE, THANK YOU FOR YOUR CONSIDERATION. WE ARE HAPPY TO ANSWER ANY QUESTIONS WHICH YOU MIGHT HAVE REGARDING OUR PARTICULAR PERSPECTIVES ON IMPLEMENTING THE AMERICANS WITH DISABILITIES ACT.

Mr. Mineta. At this time, I would like to call a panel forward: Mr. John Hudson of the National Rehabilitation Hospital, Washington, D.C.; Mr. Jim Weisman, Program Counsel, Eastern Paralyzed Veterans Association, Queens, New York; and Mr. Henry Mayer, I understand, has a time problem and would like to come forward at this time. So if I could have Mr. Hudson, Mr. Weisman and Mr. Mayer come forward at this point. Mr. Weisman, do you have testimony for submission?

Mr. Weisman. Yes, I do.

Mr. Mineta. All three statements will be received for the record. Mr. Hudson, you may proceed in your own fashion, sir.

Mr. Hudson. Thank you, Mr. Chairman. I would like to defer to Mr. Weisman, if I could, for right now. He would like to present first.

Mr. Mineta. All right, Mr. Weisman

TESTIMONY OF A PANEL, CONSISTING OF JOHN HUDSON, SOCIAL WORK COORDINATOR, NATIONAL REHABILITATION HOSPITAL, JAMES WEISMAN, PROGRAM COUNSEL, EASTERN PARALYZED VETERANS ASSOCIATION, AND HENRY M. MAYER, TRANSIT CONSULTANT, MILWAUKEE, WI

Mr. Weisman. Thank you, Congressman. I have looked forward all day to the opportunity to speak because Congressman Shuster has been asking questions about bus ridership which I don't think have been answered adequately. I think they are fair questions and should be addressed.

I think one of the problems with answering the questions is that the experts should be USDOT. They are, really, new when it comes to advocating for accessibility. They are rookies, essentially, and don't know the right answers to the questions. I think you have to talk about ridership in the context of alternatives.

For example, these people in Seattle that we talk about who are not using the bus. We also talked about the people that are using the bus. If the alternative is to take lifts off buses, to not have lifts on buses and to provide paratransit, the question is what would it cost Seattle to provide those people with rides who are currently using the bus. Would it be cheaper than the current system or more expensive. It would be dramatically more expensive.

This is the way to illustrate it. You heard Mr. Downey say that in New York the paratransit cost is $19.00. The reason that there is no contract in Staten Island is that the bids are all too high, higher than $19.00 a ride. Paratransit costs that sound $4.00 and $6.00 are because they are giving old ladies taxi money.

But lift-equipped van services cost big money. So to substitute people lift-equipped bus rides with paratransit rides is $15.00 a ride, average, nationally in the country. In New York City it is higher because everything is higher. However, New York City's bus lift maintenance cost is about $700 a year. You should know that since we pay the highest labor costs in the country.

If you took a person to work and the subsidy was $15.00 each way, five days a week, 50 weeks a year, the cost is $7,500 a year for one person to go to work. If you took him off the paratransit vehicle and put him on the bus, in two years, he has paid for even the most expensive lift equipment. That means you run that bus free for the next ten. That lift equipment is free for the next ten years if only that one person leaves paratransit.

If you think about paratransit in the abstract, you will find that you have another driver, in addition to the driver who drives the mainline transit, either more self insurance or new insurance problems, maintenance cost, fuel costs, dispatching personnel, routing personnel. It is a very labor-intensive system that does not go down with demand. The more people that use public transportation, the less the cost per ride. The more people that use paratransit, the cost is a relative constant except that the cost of dispatching and routing becomes, perhaps higher, because it is more complicated.

In addition to that, I think that we have the same desires as the gentleman from Reading, Pennsylvania and that this bill addresses his needs and as Congressman Shuster who talked about the elderly wheel chair user. There are no paratransit systems in this country that have enough capacity to provide rides for all disabled people. They just don't. They can't take you where you want to go when you want to go.

So the thing to do is get as many people as possible off of them and into public transportation to provide rides for those who truly need paratransit because, if these healthy Viet Nam veterans that you were describing are clogging paratransit vehicles, the elderly can't go.

In addition to that, these healthy people want to work. And they want to go to work when I do, 8 o'clock, and go home when I do—or before I do, in fact, most days. And that means that there won't be enough paratransit capacity to say nothing of the time in commuting because of surface transit and things like that.

But people want to travel at 8 o'clock and 5 o'clock, or 9 o'clock and 5 o'clock. And you need to use public transit to do that.

The thing that was unsaid about New York City's settlement—I am the lawyer, by the way, that did the settlement with Philadelphia and New York that brought this stuff about—the thing that was unsaid—there are several things unsaid, in fact, that are important—but one is that even though we settled this law suit in 1985, January 1985, I think New York City's paratransit program is beginning operation this week even though our mayor, who was adamantly opposed to accessible transportation, as was every t.v. and radio station and the MTA, because paratransit was easier to accomplish.

The expensive folly, the nightmare, the impossibility of retrofitting existing rail stations with elevators happened before a single paratransit ride was provided. The reason for that is the nature of paratransit. It is tough to deal with. Who is eligible? There is not a politician worth his salt that wants to look at a frail elderly old man or woman and say to them, "You have the ability to use mass transit; therefore you are not eligible for paratransit. Just because you are afraid to use mass transit is not a good reason to be eligible for paratransit.

So the demand is overwhelming for it. It is a demand-creating mode of transportation. A lot of transit systems leave it to their disabled committee to set eligibility which is a convenient way of avoiding responsibility of saying no to old people.

But this is a real mess. And New York City has this mess, to say nothing of the fact that the bigger the geographic area, the more difficult it is to coordinate paratransit trips. If you are familiar with New York City, you will know that New York City has the North Bronx, which is the furthest, most north, point. It has Eastern Queens, which is probably 30 miles away. You could live next door to a person who works in South Manhattan, on Wall Street, in the North Bronx which is also 30 miles in an opposite direction. You need two vans. You need two hours of travel time. You need two drivers.

The vans last three to five years. The bus lasts twelve years. You have capital vehicle replacement costs. There are all kinds of things that were not discussed.

The other thing that you should know is that there are no magic numbers on rail with key stations. The reason we settled for it will probably be about forty-five stations in the end that get made accessible pursuant to our settlement agreement in New York, and the reason we settled for the number you heard in Philadelphia is that because since 1968, every rail station that is renovated in this country with Federal financial assistance has to be made accessible.

This is not a new concept. It has been violated. But it has been the law. Since 1968, every bus terminal built in the United States with Federal financial assistance has to be accessible and here we are, twenty-one years later, deciding whether or not the buses that pull into them should be accessible because of the Architectural Barriers Act.

We knew, and because in New York and now in Pennsylvania as well, and in many states, local laws require stations to be made accessible as they are renovated, that this is not the end, this 45. Just as stations are renovated, they will be made accessible.

So what we are getting is up-front spending to provide a skeletal network of usable rail stations for disabled people which can be supplemented by accessible bus and paratransit services so that disabled people can go to work. If you look at our system in New York City, you see a system in which 3.5 million people a day ride it—I don't know if Mr. Downey is still here—but not one of them likes it. Not one rider likes it, of the 3.5 million.

The reason they ride it is because they want to go to work as cheaply and quickly as possible. If you go down there on the weekend, you will know that is true because ridership is dramatically reduced and the only people down there are poor people without any alternative to using it.

We knew that in New York City, if disabled people were going to get off benefits and go to work, they were going to need cheap, efficient transportation. The more I have worked around the country with disabled groups, the more I find this to be the identical situation.

In the United States only 16 percent of the people who go to work use transit to go. Most of those people are New Yorkers because 80 percent of us use public transportation to get to work. So we are talking, really, in most cities, about probably 10 percent or less of the people that use public transportation. So, of course, ridership is low.

Ridership is low among the able-bodied. Nine out of ten of your neighbors are taking their car to work. Yet we are subsidizing the heck out of mass transit because we think it is worth it, because we listen to the business community and the transit community tell us it is vital to their economic interest to have transit.

It is no less vital to disabled people. In fact, it is more vital because they do not have, either because of severity of disability or poverty or both, the alternative of private transportation. They can't operate their own car, that is.

In addition to that, I don't have to tell you gentlemen what you have done in the last few years for disabled people. Since 1975, disabled children have been mainstreamed into the public school system. There is a new class of disabled person that is graduating high school now; an educated, trained, employable class of disabled persons who need transportation to get to and from work, who are going to join us as living longer than any generation that ever lived before us, who are not going to depend on government benefits to provide them with subsistence level existences.

The likelihood is that I will have to work well into the my 70's or 80's, if I live long enough, to support myself because the benefit system won't provide me with a decent lifestyle. And I am going to have mobility impairments even if I am healthy.

So we have passed laws to make job sites accessible, and housing accessible. This seems like the link. Years ago, we talked to a group of Broadway theater owners about making their theaters accessible. They said, "Well, if we did it, how would you people get here?" And there was no answer to that. There is now. There was no answer to that then.

Transportation is the answer. It is as vital to disabled people as it is to the public. In fact, there is no distinction. I thought Harold Jenkins' approach was the right approach. It is part of transit. You serve the public. When you look at the transit industry newsletters now, you find that transit is acknowledging special populations for several reasons.

It is losing ridership. The public is disenchanted with it. New York City has no graffiti cars now. There is not a single car with graffiti on it in the system. Yet if you asked most New Yorkers who see it every single day, "Do the cars have graffiti on them?" they would say they are loaded with them because it is perception.

That lady's perception from St. Cloud, Minnesota that she can't use the bus, is right. She cannot. But if she lived in Buffalo and her neighbor, who is just as disabled as she was riding it, she would be riding it. This is all perception. Those kids who graduate school are going to expect to ride the bus, and their able-bodied peers who went to school with them since they are five-years old are going to expect them to ride it.

That kid is going to be student-body president. He is not going to expect to stay home when he graduates high school. He is going to be the straight-A student, the superachiever. He is also going to be a moron. It runs the gambit. And they are going to have the identical transportation needs as the rest of the population.

In fact, I have spent time—I am the only one, I think, in the United States, at this point who has reviewed the 504 plans that have been submitted to DOT. I spent some times two weeks ago on a room surrounded by them. This comparability thing on paratransit we have to address.

First of all, comparability does not mean equal. Comparability has been, essentially, the law since 1982, 1983, when you passed the Surface Transportation Assistance Act Amendments calling for minimum service criteria. The only thing is that DOT copped out, and rather than—they mandated same geographic area, comparable fare, comparable service hours.

But rather than really mandate it, they said, "Spend 3 percent and you don't have to do it." It is not a new concept. And DOT has known for years, and does APTA. I am surprised to hear them saying this today, that comparable doesn't mean equal. They will never have to duplicate the commuter rail system with 100-mile paratransit trips, nor will they have to have 3-minute headways on paratransit if bus systems have 3-minute headways.

They have always argued that it is specialized service, it costs more to provide, as door-to-door and bus service isn't. There should be some leeway. And the disabled community is practical and only wants to ride. It doesn't want to bankrupt the system. So I don't think anyone expects comparable to mean equal.

I thank you for your time.

Mr. MINETA. Thank you very much, Mr. Weisman.

Mr. Hudson.

Mr. HUDSON. Mr. Chairman, members of the subcommittee. My name is John Hudson. I am a resident of Montgomery County, Maryland. I am currently employed as a social-work coordinator to the National Rehabilitation Hospital in Washington, D.C. I have used Montgomery County paratransit from November, 1985 to the present.

On April 10, 1989, at 6:30 a.m., I was informed that I would no longer be able to use the paratransit bus because my wheel chair could not be secured. Since April 10, I have become acutely aware of the inadequacies, the inaccessibility, and the inability of the paratransit system to meet the needs of the physically disabled in Montgomery County.

I am a person with a physical disability and consider myself handicapped when placed in an environment that I cannot manage, and I am now handicapped.

I would like to review my experience with paratransit. In August of 1987, I relocated in Gaithersburg, Maryland. This was done only after I coordinated my move with the dispatcher of paratransit to make sure that I would be able to get a bus that would be able to take me to the Metro. My home is located within one block of a fixed-route, now.

Here I was picked up at 6:30 a.m., and transported to the Silver Spring Metro for thirteen months. My return trip was to Shady Grove Metro where I was picked up by Barwood taxi, a minivan with a portable ramp, operated by a private company under contract with Montgomery County paratransit. I had the good fortune, immediately, of finding a driver on whom I could depend to show up and to make me aware of his variations in his schedule.

On April 10, 1989, I was faced with an unannounced change. I left the apartment at 6:15 to find no vehicle waiting. At 6:30, when the Office for Paratransit opened, I contacted them and found that

I had been transferred to Barwood Taxi for the morning trip, as well. At this time, I was assured that Barwood was aware of the change.

I contacted Barwood. They had no knowledge of such an arrangement and I was told that they could not accommodate me that morning. I recontacted paratransit. A vehicle was dispatched and I arrived at Shady Grove Metro at 7:00 a.m., forty-five minutes behind schedule. This meant that I missed my bus at Fort Totten, thus making me approximately an hour and forty-five minutes late for work.

In the evening, I was able to make arrangements with a Taxi-Plus driver to transport me both ways in the future. This was necessary because my regular dependable driver was no longer available. The rest of the week, I was picked up and dropped off within fifteen minutes; I am told that this was an allowable amount of time.

On April 18, 1989, no Taxi-Plus arrived. I contacted Barwood. The regular driver was unavailable, but I was reassured that a cab was minutes away. They dispatched another cab which arrived forty-five minutes late. That evening, I was required to wait an hour for a taxi, again after being told the cab was minutes away.

On April 19, the cab was one hour and forty-five minutes late in the morning. In the evening, it was a thirty-minute wait. On April 20, the taxi was fifty-five minutes late in the morning. On April 21, I was transferred to another taxi company. The driver assured me that he wanted the fare in the morning and the evening and would be reliable.

Between April 24 and April 26, the service deteriorated. I began with a thirty-minute wait and culminated with no service, at all, provided on April 26. On April 26, I was transported by Montgomery County paratransit, since neither Barwood nor Montgomery County taxi had available accessible service.

Throughout this time, I have maintained contact with the Paratransit Office. On April 27, at approximately 4:30 p.m., Montgomery County Paratransit contacted me to report that the transportation for the 28th was questionable. Barwood Taxi contacted me that evening at home, at 7:30, to inform me that I could be transported if I could be ready at 5:30 a.m.

This left me unclear if this meant I would be picked up at 6:00, 7:30, 9:00 and if, in fact, the 5:30 time was accurate, I would have to start getting ready at 4 o'clock to meet the 5:30 time. I refused the offer. I was not transported.

Service was, again, begun with Montgomery County Taxi on May 1. The service was, again, unreliable with no service being provided on the first day. The same was true for May 8 and May 11. Not once from April 10 to April 20 was I secured properly in the taxicab, even though this is why I was transferred, because they had adequate tie-down systems. Yet, this was not done. It seems that the drivers did not receive adequate training and they were unfamiliar with the tie-down systems and would use them only at my insistence.

On or about June 1, 1989, the original, dependable, driver returned and my transportation again stabilized. The scars of this experience run deep. My livelihood was threatened, as was my sanity. It was a constant struggle and the memory lingers on.

I am never quite sure that I will arrive on time at work or at home. This is not a healthy way to greet the day. How many able-bodied citizens would tolerate a fixed-route bus system which was this unpredictable? I need equal access if I am able to compete in the work place and to meet my employer's expectations. I need a system that permits recreational outings and permits spontaneity in my life. How many people arrange their leisure outings or shopping outings twenty-four hours in advance?

This means that buses need to be equipped with hardware that can accommodate wheel chairs. It means that a paratransit system would be available to augment the fixed-route system. It means that drivers would be trained and required to use tie-down equipment in their vehicles. This means that transportation would be available to physically disabled individuals at the same times on the same days and for the same reasons as able-bodied people.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much, Mr. Hudson.

Mr. Mayer, we will receive your statement for the record. Please proceed.

Mr. MAYER. I am going to summarize this in the interest of time.

Mr. MINETA. We appreciate it.

Mr. MAYER. My name is Henry Mayer. I am a resident of the City of Wauwatosa, which is a suburb of the city of Milwaukee. Today, I hope to bring two perspectives to this issue of providing public transportation to the disabled.

I offer you the perspective of a person who has devoted thirty-six years as a career employee of the transit system serving metropolitan Milwaukee, the last sixteen years as operations manager, general manager and managing director of this 600 bus operation carrying some 65 million riders each year.

But of equal importance, I offer the perspective of a disabled citizen. I suffered from necrosis of my two hips. My hips had crumbled. They were replaced by artificial hips in June of 1977 and, thanks to medical science, I am no longer dependent on a wheel chair. But I do believe that my job experience and my disability have made me particularly aware of the needs of the disabled in transportation.

As an aside, I should say one of the problems of myself as a handicapped person was the necessity to park around the corner in my wheelchair while my wife would hail a taxicab at the curb, because a New York cab driver was reluctant to pick me up. So I am somewhat aware—very much aware—of the problems of handicapped people.

There has been a great deal of rhetoric exchanged between the transit providers and the disabled people over the last ten or fifteen years on this subject. It now appears that lift-equipped buses may be mandated, rather than the local option that we have been operating under for the last seven years.

Milwaukee has been providing a successful paratransit program for a number of years. In addition, we also had accessible buses for several years. To that extent, Milwaukee can be considered a test case of the two programs. In 1978, the state of Wisconsin made funds available to improve transportation for the elderly and disabled. A committee of public officials, disabled persons and the transit operator was formed to determine the most effective method for accomplishing this end.

The program ultimately agreed upon was a user-side subsidy program for wheel chair users. This is where the existing providers of lift-equipment taxicabs were used to provide service for these people. The user-side subsidy program did not, and does not, limit trip making by purpose or frequency, thereby allowing individuals to pursue their own interest in shopping, educational, social or recreational areas rather than rely on group activities sponsored by social agencies.

Initially, each program participant paid a dollar for each one-way trip and Milwaukee County paid the remaining cost. By 1981, 15,000 trips each month were being provided under the user-side subsidy program of which some 10,500, or 70 percent, were trips by wheel chair users.

While the user-side subsidy program was developing, the Milwaukee County Transit System, in answer to a court injunction, instituted wheel chair lift-equipped bus service on seven routes in April of 1979. A sixth route was added in May of 1979 with a total bus requirement on those six routes of 59, out of the 100 buses that we had.

In 1980, an additional 150 lift-equipped buses were delivered, and lift service was expanded to 17 routes. At that time, we had a total of 250 lift-equipped buses. Usage of the lift-equipped buses by wheel chair users was minimal. On the other hand, the ridership on the user-side subsidy program grew rapidly and was, clearly, the choice of eligible, disabled individuals.

The fact that usage of a fixed-route transit system requires that an individual must independently transport himself or herself to a bus stop appears to have more to do with the inaccessibility of a transit system than the entrance steps of the bus.

The user-side subsidy program, by providing door-to-door service, even at greater cost per ride to the individuals, was clearly the preferred transportation mode of the mobility-impaired of Milwaukee County. In fact, the total ridership on lift-equipped buses during it's two and three-quarter years of operation was equal to less than four days ridership on the user-side subsidy program.

In a typical month, approximately 60 one-way rides were taken on lift-equipped buses by wheel chair users. On the other hand, over 10,000 trips were being taken monthly by wheel chair users in the user-side subsidy program.

Approximately 5,600 persons with disabilities were registered for the user-side subsidy program on which 4,200 were wheelchair users. Based on the origins and destinations by users of accessible buses, it is estimated that fewer than 25 different individuals ever use the accessible buses in almost three years of operations.

The conclusions were apparent. The use of taxis and vans and door-to-door service did, in fact, provide effective mobility for wheelchair users while lift-equipped buses provided only a symbolic accessibility which can be utilized effectively by only a very small number of persons in wheel chairs.

2741

In Milwaukee, the acquisition and the utilization of lift-equipped buses and fixed-route service resulted in significantly increased capital and operating costs while having no real effective impact on the mobility of wheel chair users. Based on the figures that the UMTA representatives gave this morning, to reinstitute lifts on our buses would involve a capital outlay of approximately $8 million and a maintenance outlay of approximately $1 million each year.

In April, 1982, an agreement was reached with the disability community to discontinue the lift-equipped bus operation and to concentrate our efforts on the user-side subsidy program. Today, in 1989, a monthly average of 30,000 disabled riders, of which 80 percent, or 24,000, are wheelchair users, are using the user-side subsidy program.

7600 persons are registered to user service of which 6100 are wheel chair users. The average subsidy has been $7.98 per ride so far this year. Cost-wise and service-wise, this program has proven to be an effective means of mobility for the disabled community in Milwaukee.

The annual cost of providing this service, this subsidy, is approximately $3 million, equal to 4 percent of the transit budget. The lifts in the 250 lift-equipped buses had an original cost of $2,500,000. Because of the hostile environment, the lifts which were located in the step wells and exposed to the elements, which is not an insignificant consideration in Milwaukee, there were frequent and chronic maintenance problems.

Maintenance costs per lift are approximated at $2,000 annually and, according to what UMTA said today, that appears to what it is still running. On a per-ride basis, maintenance costs, alone, approximated $1,000. The user-side subsidy program, on the other hand, requires no public capital investment and the public cost, per ride, averages $8.00.

The user-side subsidy program has increased the participation of disabled Milwaukeeans in our community even though the method used may be a separate transit service and not considered mainstreaming.

This program, however, to me, represents what may be termed "effective mainstreaming," eliminating those aspects of using a transit system which prevents access to that system but providing the individual with actual mobility so that he or she can be in the mainstream of society and take advantage of the educational, medical, social, shopping and whatever other needs he or she might want to do.

Although improvements have certainly been made in bus-lift technology since the Milwaukee experience, the point is that only a relatively few disabled persons have real effective access to accessible transit vehicles.

The accessible bus provides, bus-stop-to-bus-stop mobility and, perhaps, with experience, technology will overcome the difficulties we had with the lift and a much-improved lift, certainly, is possible. However, the unfortunate truth of the matter is that, however perfect the technology, lift-equipped buses cannot provide effective mobility for many or most disabled persons in areas such as Milwaukee County.

The barriers for the typical disabled person in a wheel chair to get to a bus stop are, oftentimes, much more severe than the bus steps, themselves. This can include the lack of sidewalks, the lack of curb cuts, wide streets, distance, hills and, of course, the snow, ice and cold for which Milwaukee is famous.

I might add that inclement weather in Milwaukee, with snow plows throwing up snow and with the individual homeowners responsible for the cross walks where, if they clean them at all, is maybe a foot-wide path, the obstacles to the wheel chair user with the Milwaukee snowfall, which averages 40 to 42 inches a year and a mean winter temperature of 28 degrees, can be significant.

Based on the Milwaukee experience, persons with disabilities prefer, if not require, door-to-door service. Don't take my word for it. The disabled of Milwaukee have expressed themselves in the most dramatic way, not by politician pressure, not by demonstration or letters, but by actually using paratransit over accessible buses when both are available.

I have attached a ridership count on the accessible buses, by month, showing how ridership varied.

There is no question that the disabled deserve true mobility and the Milwaukee area is dedicated to the fact that there will be mobility for the disabled. There is also no question that the bus, as we know it, can be made more accessible to many disabled people. But we feel we should be expending our efforts to having larger destination signs, signalling devices to aid visually-disabled people, visual aids to help the disabled with hearing problems.

Instead, we are spending large amounts of money, large amounts of time and energy on lifts that, if operated perfectly, would only serve a few people.

A transit vehicle, be it bus or rail, is but one means of accessibility to reach facilities. It is my belief that persons in Milwaukee need accessibility to work, to school, to recreation and to all the other riding objectives the same as any other person. The symbolic mobility provided by a bus lift is a cruel joke for the disabled when, in fact, it is unusable by the great majority of these individuals.

If the Milwaukee experience is at all indicative of the problem of transportation for the disabled, there is no real question of choosing alternatives. One program meets the mobility needs of the disabled, the other program makes buses, but not necessarily the bus system, accessible.

In the two-and-three-quarter years of lift bus operation, the user-side subsidy program provided an excess of 280,000 trips of which 195,000 are wheel chair users. The lift-equipped buses, in this same time period, provided 1,495 trips for wheel chair users.

Door-to-door service is not simply preferable to lift-equipped buses, but it is essential if true mobility rather than symbolic accessibility is the desired effect. Few communities can afford both. Local option and cooperation with the disabled community has been working in Milwaukee.

Thank you for your attention. I would be pleased to answer any questions.

Mr. Mineta. Thank you very much.

Mr. Weisman, in your testimony, you had indicated that the Eastern Paralyzed Veterans Association was successful in bringing suits against MTA as well as SEPTA; is that correct?

Mr. WEISMAN. Yes.

Mr. MINETA. In those instances, the suit was based on what?

Mr. WEISMAN. In New York City, it was based on the Public Buildings Law of New York State which required that when it defined a public building as a state or municipal structure, or buildings renovated with state or municipal money, and included transportation stations and terminals in the definition of public building, and said that when they were renovated or newly constructed, that they had to follow the New York State building code for facilities used by the physically-handicapped.

That law had been enacted in 1974 but was never followed by MTA. We sued them in 1979. Luckily, MTA had raised $5 billion for capital improvements to revitalize the system, and MTA was refusing to obey the state law and put ramps and elevators in as they renovated subway stations.

They were choosing to renovate, of course, key stations, the ones the public wanted to use most. We were lucky enough to be able to get a court to order them to put elevators in as part of the scope of the project. They refused. This was State money, for the most part, not Federal money that was being used.

They tried to hold the State legislature hostage by saying, "We are not going to renovate the station in your district, Senator, or Assemblyman, unless you change the law and get this disabled monkey off our backs," so to speak. The radio and TV stations and editorials, in fact, supported MTA's position.

But the legislature did not because Governor Cuomo kind of led the charge with us and he, in fact, distinguished himself as the only politician willing to say he agreed with us. When they actually did a cost analysis, they decided it was cheaper to get as many people in public transit as possible.

We have no public paratransit, so there was a choice to be made. And they sat down, when Cuomo got elected, and did an analysis and decided it was cheaper to make transit accessible and forced MTA to do it. We did a settlement agreement with MTA which was then enacted into law and made the law of the state.

If MTA chooses to violate it now, then they are not allowed—the injunction comes back into place, so to speak, and they can't renovate any more stations.

In Philadelphia, we used Section 504 of the Rehabilitation Act because the United States Department of Transportation indicated that even though rail is not a required component of a 504 compliance plan under the existing regulations, the May '86 Regulations, as you renovate stations, they have to be made accessible to be consistent with Section 504's mandate, non-discrimination mandate, and, of course, to be consistent with the requirements of the Architectural Barriers Act, as well

Philadelphia had renovated several stations in violation of that act in that they didn't provide access. So we kind of waived the violations in favor of prospective relief rather than force Philadelphia to tear out new work they had already done.

That is why I pointed out, there is no magic to key stations. You just need enough access to use the system and then you hope that, over the years, as stations are renovated, you will gain more and more and be able to duplicate the travel patterns of the able-bodied.

What we envision in New York and Philadelphia is disabled people using the rail system for long-haul transportation and the bus and paratransit systems, if necessary, for the shorter trips. Surface transit takes a long time so you would use the rail system to get great distances and you probably would have to use a combination of rail and bus to make the system work.

Mr. **Mineta**. Mr. Hudson or Mr. Weisman, are there any elements of what you heard APTA saying that causes any alarm or any concern about "commitment" to ADA?

Mr. **Weisman**. They are better than they have ever been, you know that.

Mr. **Mineta**. Given that, yes.

Mr. **Weisman**. I will tell you, I really feel like—they say they are all for the act. Mort Downey highlighted the St. Cloud system about having these problems of this pulse system and 3 minutes to make a transfer. But the same fellow from St. Cloud told you that disabled people would screw up his transfers, but the six months of bad weather that they experience doesn't screw that up; only handicapped people would.

So you have really got to separate the wheat from the chaff. When we had this out with MA, for example, we sat in Governor Cuomo's office. They brought charts and easels and talked about headway times. And they picked Bowling Green Subway Station which is down by Wall Street and said, "Do you realize that during rush hour,"—I am just going to remember to the best of my memory—"four trains come in every ten minutes on the express track, and five trains on the local track during rush hour? What if a disabled person were to slow that down, what would happen, because they are all scheduled, these nine trains, in ten minutes?"

I said, "Well, you know, I hate asking questions I don't know the answer to in advance, but I live in New York City. I know that doesn't happen. How many trains really came in on that day on time?"

And the answer was four out of nine were on time.

This is not a perfect science. It exists to serve people transit. Buses are late because elderly people go down the steps slowly. No one pushes them out of the way. Even in my city, the most callous indifferent city, with the cab drivers Mr. Mayer had to hide from when he was there—in my city, we have old people using the bus every day and no one shoves them because it is human nature to be accommodating.

When the lifts work on our buses—when we first got those buses working a few years ago, bus loads of callous, indifferent New Yorkers would break into spontaneous applause when disabled people would get on the bus and say, "It is good to see the city doing something for somebody."

It is a nice thing. People feel good about it. They don't feel bad. The fellow from St. Cloud who was worried about losing some of his—these were the words he used—losing some of his "choice ridership." In transit, by the way, choice ridership is people with the fare. So I am not sure who he was referring to.

Transit is for everybody. It is public transit. There is no such thing as choice ridership. I think that is really the message. The problem is I think that APTA is trying to serve too many masters, already. When APTA was saying local option, they meant transit-operator option.

Now there is a mandate for both, which really should satisfy everybody. It doesn't threaten anybody's existing paratransit program to require lifts on buses. That guy from St. Cloud that is worried about it, he is already spending 13 percent of 16 percent of his budget on paratransit. They are decent people. They are spending a lot of money on paratransit. Their heart is in the right place.

How many buses does he buy at a time? He probably buys one bus at a time. He has got a tiny bus system. The lift equipment will cost him $12,000. It will last him twelve years. It will cost him $1,000 a year to buy it and it is going to reduce his paratransit budget, even if he took it right out of his paratransit budget, by merely $1,000.

But, at the same, time, it will reduce the demand for his paratransit. So it might even be a wash. It is tough when you have 437 recipients of UMTA funds for one organization that addressed the needs of the consultants and the manufacturers and the operators and, sometimes, the riding public, even, to represent all that in one testimony.

They are up against it. They had four people at the table saying four different things. That lady from Memphis talked about if they put lifts on their buses that able-bodied people would lose their jobs and go on welfare. She really said that.

Mr. Mineta. Mr. Hudson, what about you?

Mr. Hudson. The thing I think is needed, is a catalyst to bring it all together. I think Mr. Weisman has made a good point in the fact that we have mainstreamed children for a number of years in special education. We are doing our best, for example, in rehabilitation now with spinal-cord and brain-injured folks, people who have had strokes, getting them back in the community.

We know that the key to success is getting people in the community and getting them active. What we need, I think, in my situation, for example, is some meat behind it that is going to cause people to stand and pay attention and try to coordinate a system and try to make something happen.

I think this Act, if it goes through, is going to have that opportunity.

Mr. Mineta. Mr. Mayer, the monthly wheelchair rides on your lift-equipped buses increased from 48 in July of 1979 to 59 in July of 1980 and then it went on to 152 in July of 1981.

Mr. Mayer. That's correct.

Mr. Mineta. Do you think that these increases in ridership would have continued if Milwaukee had not discontinued the purchase of wheelchair accessible buses?

Mr. Mayer. I believe there would have been some increase over the years, but, again, even using the 1981 figures of a yearly total of 832, which is less than three trips a day, is really a very minimal amount at a time when we were, probably, carrying 1.5 million passengers in our regular service each week.

Mr. **Mineta**. In reading your testimony, it appears that in 1980, lifts were available on 17 of your bus routes?

Mr. **Mayer**. Right.

Mr. **Mineta**. What percentage of your routes did this represent?

Mr. **Mayer**. In number of routes, it was, probably about 40 percent. The 17 routes that were chosen were principal routes, the ones that we thought, in working with the handicapped community, would have the principal destinations, the ones with the colleges and universities, the ones with the medical centers, the shopping centers, downtown, of course, the employment opportunities.

It was the 17 principal routes. I should point out that we printed a special map showing these routes. We had special brochures for the riders explaining to them how to make use of the service and that sort of thing.

Mr. **Mineta**. If we had ADA at that point, and all 100 percent of your routes were required to be accessible, would not the use of lifts have increased?

Mr. **Mayer**. Yes, I believe it would have, but I think, instead of three per day, maybe it might have been 30 per day. It would still be a relatively small number compared to the use that we have of the paratransit. The relative use would have still been very small. For the typical handicapped person, I think the door-to-door service provided by paratransit is just a superior service.

Mr. **Mineta**. But wouldn't it have been less costly than paratransit?

Mr. **Mayer**. Yes. Paratransit is more expensive. Milwaukee County made the decision that, despite the expense, we were attempting to provide service to the handicapped community and we did not believe that lifts, by themselves, were really providing transit service to the handicapped community.

Getting to the bus appeared to be a more serious problem than getting on it. Many areas of Milwaukee do not have sidewalks, have no curbs. It is a difficult problem to get to a bus stop in many instances, in the middle of the summer.

Mr. **Mineta**. Mr. Lipinski, do you have any questions?

Mr. **Lipinski**. Thank you, Mr. Chairman. Mr. Weisman, does Philadelphia have a paratransit system?

Mr. **Weisman**. Yes, they do.

Mr. **Lipinski**. Is it very extensive?

Mr. **Weisman**. It is pretty big; yes, sir.

Mr. **Lipinski**. How long has it been in operation?

Mr. **Weisman**. I am not sure; a long time. They are going to testify next, I know, so they can answer that.

Mr. **Lipinski**. You don't happen to know how many riders they have, do you?

Mr. **Weisman**. No, I don't. But I could make it available. I know the fellow who will testify will know exactly how many riders they have. I know him well.

Mr. **Lipinski**. Thank you. It seemed to me that at the beginning of your testimony—and your testimony was very articulate and very forceful—but perhaps I didn't quite pick it up right off the bat. Were you maintaining that to make stations accessible, put the lifts on buses, do anything else that you might have to do with commuter rail or other rail, is less expensive than running a paratransit system?

Mr. Weisman. Yes, it is.

Mr. Lipinski. It is.

Mr. Weisman. I think USDOT agrees with that, and so does APTA. The May 1986 fact-finding record for the 504 Regulations that DOT prepared proved that paratransit is far more expensive than accessible transit. The only issue that was debatable is the effectiveness of one system versus the other.

Mr. Lipinski. How did that come out?

Mr. Weisman. At that time, USDOT said that paratransit is more effective. I should tell you, though, the story of this record. In 1979, when USDOT required essentially what the ADA requires, lifts on buses, accessible retrofitted key rail stations and commuter rail stations and paratransit programs, the Congressional Budget Office did a report saying that paratransit is cheaper than mass transit and made, essentially, a fool of Secretary Goldschmidt and his staff and embarrassed them, terribly.

Secretary Goldschmidt issued a rebuttal, criticizing the fellow who wrote that report and said that it was politically-oriented and transit-operator-controlled and that transit operators were trying to just avoid meeting any mandate. When President Reagan was elected, APTA had won a lawsuit which Secretary Goldschmidt and President Carter would have appealed, but then President Reagan was elected and decided to live with it and they had to write new 504 Regulations, they hired the same consultant USDOT did who used to work for CBO, who they criticized only a year before, to write the new Committee report, the new record, to do the fact finding because they liked the result of it.

So this is like any other beast. It is really political.

Mr. Lipinski. I thought maybe you were going to tell me that he has come up with new results, the second time around.

Mr. Weisman. He did. He came up, now, with paratransit is more expensive but more effective. So paratransit still was more desirable. But the real goal here was to get this away from public-transit operators.

Richard Ravitch, who just ran unsuccessfully for mayor in New York City and ran on MTA for years, is essentially a liberal Democrat. He believed—he doesn't, now, by the way. I wish he were here today to say that—he believed that the transportation problems of disabled people were Social Services problems, they were not public transportation problems. And he fought us tooth and nail because of that. I think that right-thinking transit folks felt that way, too.

Mr. Lipinski. I don't mean to interrupt you, but it has been a long day and I just have one more question, here. If the disabled community prefers mass transit and mass transit is less expensive than paratransit, do you think it is fair, also, to impose upon transportation agencies in this country the dual transit systems, then?

Mr. Weisman. The answer is yes, but you want to know why, too.

Mr. Lipinski. Obviously.

Mr. Weisman. Because you are clearly doing more than you are doing for the able-bodied, if you do that. But it is because transit doesn't exist in a vacuum. That's why. Because it is meeting a need, and the need is to get people, in the case of disabled people—with able-bodied people, to get them to work and to socialize and recreation, but more importantly, in the case of disabled people, to get them off of benefits.

The status quo, doing nothing, is not free to government. Remember 80 percent of the capital and 50 percent of the operating money is federal dollars. So we are talking about government money.

Mr. LIPINSKI. It is all government money, to the best of my knowledge, except the money that comes in at the fare box.

Mr. WEISMAN. Right; and maintaining the status quo or doing nothing, even, doing less than we are doing, is not free. It is very expensive, because disabled people don't die from things they used to die from. They live. And we support them at barely subsistence levels.

Mr. LIPINSKI. We all live a lot longer today.

Mr. WEISMAN. But we support them, and we can't afford to do it. So you have to get people self-sufficient and out there and independent and in the community.

Mr. LIPINSKI. I appreciate very much your answer. Once again, it was a very articulate answer. I would like to discuss this with you further at a later date.

Mr. WEISMAN. I would be happy to.

Mr. LIPINSKI. It is a very late hour, and I have to go someplace and there is a group waiting to testify who I have been waiting to have testify all day, so we had better get to it.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much. Mr. Weisman and Mr. Hudson, thank you very much.

Mr. WEISMAN. Thank you.

[Mr. Weisman's, Mr. Hudson's, and Mr. Mayer's prepared statements follow:]

TESTIMONY
OF
THE EASTERN PARALYZED VETERANS ASSOCIATION

House Public Works - Transportation Committee
Sub-Committee on Surface Transportation
Hearings on the Proposed
AMERICANS WITH DISABILITIES ACT

Prepared By:

James J. Weisman, Esq.
Program Counsel

September 20, 1989

The Eastern Paralyzed Veterans Association (EPVA) is a membership organization comprised of 2,000 veterans of the armed services who have incurred spinal cord injury or disease. Virtually all of our members are wheelchair users and are unable to use inaccessible transit vehicles and facilities. EPVA appreciates the opportunity afforded us by the U. S. Department of Transportation (USDOT) to participate in this forum concerning the future of the nation's transportation systems.

For many years, EPVA has advocated for the right of disabled passengers to gain access to public buildings and transit facilities.

In 1979, EPVA sued New York City's Metropolitan Transportation Authority (MTA) because it purchased 900 inaccessible buses only weeks before USDOT's first set of Section 504 regulations would have required these buses to be accessible. This was a purchase three times the size of any previous MTA purchase and, at the time, the largest single bus order in United States history.

Moreover, MTA raised 5 billion capital dollars to engage in, among other things, a massive subway station renovation program. MTA refused to include accessibility improvements in their station renovation program.

After 5-1/2 years of litigation, in which EPVA obtained an injunction preventing station renovation unless accessibility components were included, and despite the opposition of New York City's mayor and major newspapers, radio and television editorial boards, MTA decided to settle with us. The result is the retrofitting of key subway stations with elevators, a lift-equipped bus system and a paratransit program.

Recently, EPVA settled a lawsuit with the Southeastern Pennsylvania Transportation Association (SEPTA) and achieved a result similar to that which we achieved in New York City. Key subway and commuter rail stations are being retrofitted with elevators. All newly purchased buses will be accessible and the paratransit system will continue to operate.

Perhaps most significantly, EPVA's lawsuit challenging USDOT's 1976 504 regulations, which was consolidated with another suit brought by Americans Disabled for Accessible Public Transportation (ADAPT), invalidated USDOT's arbitrary and capricious "safe harbor" which allowed transit operators to discriminate on the basis of disability provided they spent an amount equal to 3% of their average annual operating budgets on disabled persons.

The aforementioned references to EPVA's involvement in transit is appropriate because we are not transit experts, we are passengers and potential passengers. We are people who want to get from point A to point B inexpensively and quickly; who want to use transit facilities ostensibly available to the public for all of the reasons that the public chooses to use transit facilities.

For far too long, transit has operated despite the needs of its constituency - the riding public. This generation of Americans will live longer than any generation which preceded it and the next generation of Americans will live longer than this generation. The population will be top heavy with older people with mobility impairments who will be unable to retire and maintain their life-styles since increases in the cost of living will out-pace their pension plans and Social Security retirement benefits. They will need to stay in the labor force and need accessible transportation systems to carry them to and from work. Persons with disabilities, who would have died years ago, are alive today due to advances in medical research and technology. Because of the passage of the Education For All Handicapped Children's Act, in 1975, these disabled individuals are educated and trained and employable. Nevertheless, too many transit systems, which exist to serve the public, would keep this newly educated, trained, ready-to-work population out of the labor force by remaining inaccessible. The public needs these disabled people to work, to contribute to the tax base, instead of depending on it for support. Many levels of government require newly constructed buildings to be accessible, insuring accessibility of the workplace as we enter the twenty-first century. Unfortunately, unless transportation to work is available, these disabled persons will remain homebound and dependent on government benefits to maintain only subsistence level life-styles. The proposed Americans With Disabilities Act will at least insure that disabled Americans have the ability to enter the American mainstream by entering the labor force.

The statute envisions a future in which those who can use accessible buses will use accessible buses, and those who cannot can use paratransit vehicles in lieu of accessible transit to reach accessible transit.

The retrofitting of key rail stations with elevators and ramps is not a new idea. USDOT's 1979 Section 504 regulations required exactly this. Transit operators intimidated the Congress, with outrageously inflated cost systems, into believing that this idea was an expensive folly. Nevertheless, retrofitting is occurring in New York City and in Philadelphia in the subway as well as at commuter rail stations all over the United States, and transit is being benefited, not burdened.

As an able-bodied New Yorker, I know that if I were to fly to St. Louis, Missouri, I would be able to access their bus system. Were I disabled, I would not know until I arrived whether I would be able to use the bus system and, in fact, in St. Louis I would not be able to use the bus system since it is inaccessible.

St. Louis, despite its size, has a very unsophisticated plan for the delivery of paratransit services. St. Louis spends an amount equal to 3% of its operating budget on paratransit services for the disabled. This is St. Louis' Section 504 compliance effort and until new regulations are imposed on transit operators pursuant to our victory in the ADAPT and EPVA v. Skinner case, St. Louis can continue to keep disabled people homebound or under-employed at great cost to taxpayers.

Transit systems exist to serve people who live within the communities in which they operate. Government provides huge subsidies to offset the capital and operating costs of these systems because there is an understanding between the citizens-taxpayers and their elected officials that adequate transportation insures economic vitality. The converse of this principle is obviously true when one considers the economic plight of mobility impaired persons, since without a means of getting to and from work, these individuals are unemployed and depend on taxpayers for subsistence. It is imperative that an economic alternative be available to this population since tens of billions of dollars are spent annually on needs-based disability related programs.

It is important to consider lift-equipped bus costs in light of the costs of the paratransit alternative. The entire capital and operating costs of a lift-equipped bus are offset in two years if one disabled person leaves paratransit and uses the bus to go to work since paratransit work trips cost government approximately $7,500 per person, per year. Since the lift will last approximately 12 years, and its amortized capital cost is $1,000 per year, the government will realize substantial savings in an extremely short period of time by providing lift-equipped bus service. Moreover, the operation of paratransit vehicles as opposed to lift-equipped buses is far more expensive. Paratransit vehicles need drivers - buses already have drivers. Paratransit vehicles need fuel - buses already have fuel. The same can be said for insurance, dispatching, routing and maintenance personnel. Additionally, paratransit vehicles only last 3-5 years compared to approximately 12 years useful life of transit coaches.

EPVA urges the Congress to act quickly to pass the Americans With Disabilities Act. This bill's transportation provisions are desperately necessary to millions of disabled Americans without the ability to travel.

Statement of John Hudson
to

Committee of Public Works and Transportation
Sub-Committee on Surface Transportation
on the
Americans With Disabilities Act

September 20, 1989

I am a resident of Montgomery County, Maryland who is currently employed as a Social Work Coordinator at the National Rehabilitation Hospital in Washington, DC. I have used the Montgomery County Paratransit System from November, 1985 to the present. On April 10, 1989 at 6:30 a.m. I was informed that I would no longer be able to use the Paratransit bus, because my wheelchair could not be secured in the Paratransit vehicles using existing hardware. This came as quite a shock, since I had used this wheelchair from November, 1987 to that date, or approximately five months. Safety was never an issue for me or the system until April 10, 1989.

Since April 10, I have become acutely aware of the inadequacies, the inaccessibility, and the inability of the Paratransit system to meet the needs of the physically disabled in Montgomery County. I am a person with a physical disablity and consider myself handicapped only when placed in an environment which I cannot negotiate. I am now handicapped!

A review of my experience with Paratransit is in order. From November, 1985 to August, 1987 I was transported from 1401 Blair Mill Road, Silver Spring MD to the Silver Spring Metro station a distance of approximately three blocks. I was picked up in the morning at 6:45-7:00 a.m.. The service was consistent and reliable. In the evenings, I was required to wait approximately 45 minutes for the Paratransit vehicle to travel the three blocks. While this was not ideal, especially in winter months, it was tolerable.

In August of 1987, I relocated to Gaithersburg, MD, only after I coordinated with the Paratransit dispatcher to insure that I would be able to continue my service at this new location. (My new residence was located one block from the fixed route Ride-On bus line) Here I was picked up at 6:30

a.m. and transported again to the Silver Spring Metro station for 13 months. My return trip was to the Shady Grove Metro station where I was picked up by Barwood Taxi Plus(a mini van with a portable ramp operated by a private company under contract with Paratransit). I had the good fortune of finding a driver I could depend on to show up each day and to notify me of variations in his schedule.

In September, 1988, with no notice, my morning pick up time was changed to 6:15 a.m. and I was taken to the Shady Grove Metro station. Since I must meet a bus at the Fort Totten station in the District of Colombia to complete my journey to work, this sudden change was disconcerting. Although users are required to notify Paratransit of changes in their schedules at least 24 hours in advance (this advance notice does not insure that accommodations can be made), it is not a practice of the Paratransit system to provide the same courtesy to it's passengers. At this time the schedule for the return trip was not changed.

On April 10, 1989 I was again met with an unannounced change. I left the apartment at 6:15 a.m. to find no vehicle. At 6:30 I contacted the Paratransit office to find that I had been transferred to the Barwood taxi for the morning trip. At this time I was assured that Barwood was aware of this arrangement. I contacted Barwood. They had no knowledge of such an arrangement, and I was told that they were unable to accommodate me that morning.

I recontacted Paratransit, a vehicle was dispatched, and I arrived at the Shady Grove Metro at 7:00 a.m. (45 minutes behind schedule). This meant that I missed my bus at Fort Totten, thus making me approximately 1 hour and 45 minutes late for work. In the evening, I was able to make arrangements with a Taxi Plus driver to transport me both ways in the future. This was necessary because my regular, dependable driver was no longer available. The rest of that week I was picked up and dropped off within 15 minutes of my scheduled times. I was informed by the Paratransit system that a 15 minute wait was considered reasonable.

On April 18, 1989 no Taxi Plus arrived. I contacted Barwood. The regular driver was unavailable but I was reassured that the cab was minutes away. They dispatched another cab which arrived 45 minutes late. That evening I was required to wait one hour for a taxi, again after being told the cab was minutes away.

On April 19, the cab was one hour and 45 minutes late in the morning. In the evening there was a 30 minute wait.

On April 20, the taxi was 55 minutes late in the morning.

On April 21, I was transferred to Montgomery County Taxicab Company. The driver assured me that he wanted the fare in the morning and evening, and that he would be reliable.

Between April 24 and April 26 the service deteriorated. I began with a 30 minute wait and culminated with no service provided on April 26 at all. On the 26th I was transported by Montgomery County Paratransit, since neither Barwood nor Montgomery County Taxicab had an available, accessible vehicle.

Throughout this time I maintained constant contact with the Paratransit office. On April, 27 at approximately 4:30 p.m. Montgomery County Paratransit reported that the availability of transportation for April 28 was uncertain. Barwood Taxi contacted me at 7:30 p.m. to inform me that I could be transported if I could be ready at 5:30 a.m.! This left me unclear if this meant that I would be picked up at 6, 7:30 or 9:00 and if the 5:30 pick up was accurate I would have to get out of bed at 4:00 a.m. to be ready in time I therefore refused this unreasonable offer. I was not transported. Service was again begun with Montgomery Taxi on May,1. This service was again unreliable with no service being provided on the morning of the first day. The same was true for the mornings of May 8 and May 11.

Not once from April 10 to April 20 was I secured properly in the cab or mini van. I informed the Paratransit office of this fact, since I lost the opportunity to be transported on the Paratransit bus for safety considerations. I also reported these serious safety violations to Barwood Cab Company. This had no effect. It seems that the drivers do not receive adequate training since many were unfamiliar with the tie-down mechanism and would only use them at my insistence.

On or about June 1, 1989 the original dependable driver(August 1987-March 1989) returned and my transportation has again stabilized. The scars of this experience run deep. My livelihood was threatened as was my sanity. It was a constant struggle and the memory lingers on. I am never quite sure that I will arrive on time at work or home. This is not a healthy way to greet each day.

How many able-bodied citizens would tolerate a fixed route bus system which was as unpredictable? I need equal access if I am to be able to compete in the workplace and meet my employers expectations. I need a system that permits recreational outings and permits spontaneity in my life. How many people arrange their leisure or shopping outings 24 hours in advance?

This means that buses be equipped with hardware which accommodates wheelchairs. It means that a paratransit system would be available to augment the fixed route bus system. This means that drivers would be trained and required to use the tie-down equipment in their vehicles. This means that transportation would be available to physically disabled individuals at the same times, on the same days, and for the same reasons that it is available to able bodied individuals.

TESTIMONY OF

HENRY M. MAYER

on

AMERICANS WITH DISABILITIES ACT OF 1989

H.R. 2273

Before the

SURFACE TRANSPORTATION SUBCOMMITTEE OF THE
HOUSE PUBLIC WORKS AND TRANSPORTATION COMMITTEE

September 20, 1989

MY NAME IS HENRY MAYER. I AM A RESIDENT OF THE CITY OF WAUWATOSA IN MILWAUKEE COUNTY, WISCONSIN. I HOPE TO BRING TWO IMPORTANT PERSPECTIVES TO THE ISSUE BEFORE YOU -- WHAT IS THE BEST MEANS BY WHICH TO PROVIDE PUBLIC TRANSPORTATION TO THE DISABLED. I OFFER YOU THE PERSPECTIVE OF A PERSON WHO HAS DEVOTED MY 36 YEAR CAREER AS AN EMPLOYEE OF THE TRANSIT SYSTEM PROVIDING PUBLIC TRANSPORTATION FOR METROPOLITAN MILWAUKEE (1947 - 1983). THE LAST 16 YEARS WERE SERVED SUCCESSIVELY AS OPERATIONS MANAGER, GENERAL MANAGER AND MANAGING DIRECTOR OF THE 600 BUS OPERATION CARRYING SOME 65,000,000 RIDERS EACH YEAR.

OF EQUAL IMPORTANCE, I OFFER THE PERSPECTIVE OF A DISABLED CITIZEN. I SUFFERED FROM AN AILMENT KNOWN AS NECROSIS OF MY TWO HIPS. IN ESSENCE MY HIPS HAD CRUMBLED AND FOR EIGHT LONG YEARS MY PERSONAL MOBILITY WAS DEPENDENT UPON A WHEELCHAIR, WITH THE ABILITY TO USE CRUTCHES FOR SHORT DISTANCES. THANKS TO MODERN MEDICAL SCIENCE, MY DEFECTIVE HIPS WERE REPLACED WITH ARTIFICIAL HIPS OF STAINLESS STEEL AND PLASTIC IN JUNE, 1977. THIS PROCEDURE WAS REMARKABLY SUCCESSFUL AND, AS YOU CAN SEE, I AM NO LONGER DEPENDENT UPON A WHEELCHAIR.

I DO, HOWEVER, BELIEVE THAT MY JOB EXPERIENCE AND MY DISABILITY HAVE MADE ME PARTICULARLY AWARE OF THE MOBILITY NEEDS OF PERSONS WITH DISABILITIES AND THE ATTEMPTS OF TRANSPORTATION PROVIDERS TO MEET THOSE NEEDS AS WELL AS THE EFFORTS OF THE

CONGRESS, THE URBAN MASS TRANSPORTATION ADMINISTRATION AND STATES SUCH AS WISCONSIN TO ENCOURAGE AND REGULATE SUCH EFFORTS.

THE PROVISION OF PUBLIC TRANSPORTATION TO THE DISABLED IS A SENSITIVE AND EMOTIONAL ISSUE THAT HAS BEEN BEFORE THE TRANSIT INDUSTRY FOR SOMETIME NOW. A GREAT DEAL OF RHETORIC AND VITUPERATION HAS BEEN EXCHANGED BETWEEN VARIOUS GROUPS CONCERNING THE APPROPRIATE METHOD OR METHODS FOR SERVING THE DISABLED. IT NOW APPEARS THAT LIFT EQUIPPED BUSES MAY BE MANDATED ACROSS OUR NATION -- WHETHER OR NOT THAT METHOD IS PRACTICAL OR PREFERRED BY THE LOCAL DISABILITY COMMUNITY.

MILWAUKEE HAS BEEN PROVIDING A SUCCESSFUL PARATRANSIT PROGRAM FOR YEARS. IN ADDITION, WE ALSO HAD ACCESSIBLE BUSES FOR SEVERAL YEARS. TO THAT EXTENT, MILWAUKEE COULD BE CONSIDERED A TEST CAST OF THE TWO PROGRAMS.

IN 1978, FUNDS BECAME AVAILABLE FROM THE STATE OF WISCONSIN TO IMPROVE TRANSPORTATION FOR THE ELDERLY AND DISABLED. AN AD HOC COMMITTEE OF PUBLIC OFFICIALS, DISABLED PERSONS AND THE TRANSIT OPERATOR WAS FORMED TO DETERMINE THE MOST EFFECTIVE METHOD FOR ACCOMPLISHING THIS END. THE PROGRAM ULTIMATELY AGREED UPON WAS A USER-SIDE SUBSIDY PROGRAM FOR WHEELCHAIR USERS. THIS TYPE OF PROGRAM WAS CHOSEN TO ACCOMPLISH THE FOLLOWING OBJECTIVES:

1. TO PROVIDE EFFECTIVE MOBILITY TO WHEELCHAIR USERS.
2. TO PROVIDE THE MOST TRIPS FOR THE LEAST MONEY AT A REASONABLE COST TO THE DISABLED PERSONS.

3. TO KEEP ADMINISTRATION OF THE PROGRAM SIMPLE AND ECONOMICAL.
4. TO ALLOW PROGRAM PARTICIPANTS TO EXERCISE AS MUCH CONTROL AS POSSIBLE OVER THEIR OWN TRANSPORTATION.

THE ADMINISTRATION OF THE PROGRAM WAS ASSIGNED TO THE MILWAUKEE COUNTY TRANSIT SYSTEM AND BEGAN OPERATION IN JUNE, 1978. BECAUSE THERE WERE PRIVATE COMPANIES WHICH PROVIDED BOTH TAXICAB AND LIFT-EQUIPPED VAN SERVICE IN MILWAUKEE COUNTY, IT WAS DETERMINED THAT MILWAUKEE'S PROBLEM WAS NOT SO MUCH THE LACK OF TRANSPORTATION FACILITIES THAT COULD BE USED BY PERSONS IN WHEELCHAIRS, BUT RATHER THAT THE COST OF THAT TRANSPORTATION TENDED TO BE PROHIBITIVE ON AN INDIVIDUAL BASIS. AT THAT TIME, USE OF LIFT-EQUIPPED VANS WAS ALMOST ENTIRELY LIMITED TO MEDICAID SUBSIDIZED TRIPS FOR MEDICAL PURPOSES. IT WAS CONCLUDED THAT A SUBSIDY PROGRAM UTILIZING THE VEHICLES AND DISPATCHING SERVICES OF EXISTING COMPANIES WOULD EFFECTIVELY REDUCE THE COST TO THE RIDER TO A REASONABLE LEVEL AND COULD MEET THE NEEDS OF THE DISABLED PARTICIPANTS.

INITIALLY, BASED ON THEIR PAST EXPERIENCE, THE TAXICAB COMPANIES DID NOT EXPECT THEIR SERVICES TO BE UTILIZED BY PERSONS IN WHEELCHAIRS. HOWEVER, ONCE THE PROGRAM BEGAN, THEY DISCOVERED THAT WHEELCHAIR USERS COULD AND DID USE TAXIS WHEN THE TRIP COST TO THE PASSENGER WAS REDUCED. THE WHEELCHAIR USER MUST BE ABLE TO ACCESS AND EXIT THE TAXICAB INDEPENDENTLY. THE DRIVER, HOWEVER, STOWS THE WHEELCHAIR AND SETS IT UP AGAIN UPON REACHING THE USER'S

DESTINATION. THE LIFT-EQUIPPED VAN COMPANIES ALSO EXPERIENCED LARGE INCREASES IN DEMAND, WHICH WERE EXPECTED, AND DEMAND ALSO INCREASED DRAMATICALLY DURING EVENING AND WEEKEND HOURS.

THE USER-SIDE SUBSIDY PROGRAM DOES NOT LIMIT TRIP-MAKING BY PURPOSE OR FREQUENCY, THEREBY ALLOWING INDIVIDUALS TO PURSUE THEIR OWN INTEREST IN SHOPPING, EDUCATIONAL, SOCIAL OR RECREATIONAL AREAS RATHER THAN RELY ON GROUP ACTIVITIES SPONSORED BY SOCIAL AGENCIES. INITIALLY, EACH PROGRAM PARTICIPANT PAID $1.00 FOR EACH ONE-WAY TRIP AND MILWAUKEE COUNTY PAID THE REMAINING COST.

IN NOVEMBER OF 1978, THE PROGRAM WAS EXPANDED TO INCLUDE PERSONS WHO USE WALKERS OR CRUTCHES OR WHO ARE LEGALLY BLIND. THE PROGRAM USAGE GREW RAPIDLY AND IT WAS NECESSARY TO PLACE MAXIMUM LIMITS ON THE AMOUNT OF SUBSIDY PROVIDED FOR EACH TRIP OF $10.00 FOR PERSONS IN WHEELCHAIRS AND $7.00 FOR OTHER ELIGIBLE PERSONS. BY 1981, 15,000 TRIPS EACH MONTH WERE BEING PROVIDED UNDER THE USER-SIDE SUBSIDY PROGRAM OF WHICH SOME 10,500, OR 70 PERCENT, WERE TRIPS BY WHEELCHAIR USERS.

WHILE THE USER-SIDE SUBSIDY PROGRAM WAS DEVELOPING, THE MILWAUKEE COUNTY TRANSIT SYSTEM, IN ANSWER TO A COURT INJUNCTION, INSTITUTED WHEELCHAIR LIFT-EQUIPPED BUS SERVICE ON SEVEN ROUTES IN APRIL, 1979. ALTHOUGH THESE BUSES HAD BEEN DELIVERED IN MID-1978, LIFT SERVICE WAS NOT INITIATED EARLIER BECAUSE OF MECHANICAL FAILURES AND RETROFIT NECESSARY TO MAKE THE LIFTS OPERATIONAL.

THE LIFTS WERE FINALLY CONSIDERED OPERABLE AND READY TO BE PLACED IN SERVICE ON JANUARY 29, 1979. BUT WITH 34 INCHES OF SNOW ON THE LEVEL IN MILWAUKEE COUNTY, RESULTING IN IMPASSABLE STREETS

AND SIDEWALKS, TO PLACE THE LIFTS IN OPERATION WOULD HAVE BEEN FUTILE. MEANWHILE, THE BUSES CONTINUED TO BE OPERATED THROUGHOUT THIS PERIOD DESPITE THE FACT THAT THE LIFTS THEMSELVES WERE NOT BEING USED. ABOUT TWO WEEKS LATER, IT WAS DECIDED THAT THE LIFTS SHOULD BE CYCLED AT LEAST ONCE A DAY TO PREVENT SALT OR OTHER CORROSION FROM PERMANENTLY DAMAGING THE LIFTS. UNFORTUNATELY, CONSIDERABLE DAMAGE HAD ALREADY BEEN DONE AND, OF THE FIRST TEN BUSES THAT WERE CYCLED, SEVEN OF THE LIFTS DID NOT WORK AND DISABLED THE BUSES. IT WAS NECESSARY TO STOP THE CYCLING EFFORT AND COMPLETELY REWORK EVERY LIFT AND MAKE SURE THAT FROM THEN ON THEY WERE CYCLED EVERY DAY AS THEY WENT THROUGH THEIR TAKING AND WASHING PROCESS EVEN THOUGH THEY WERE NOT ACTUALLY IN USE. ON APRIL 18, 1979, 50 BUSES WITH OPERABLE LIFTS WERE PLACED IN SERVICE ON FIVE ROUTES. ON MAY 28, 1979, A SIXTH ROUTE WAS ADDED BRINGING THE TOTAL BUS REQUIREMENT TO 59.

IT SHOULD BE NOTED THAT IN MAY, 1979, UMTA ISSUED REGULATIONS REQUIRING THAT 50% OF A BUS FLEET BE LIFT-EQUIPPED WITHIN TEN YEARS. IN 1980, AN ADDITIONAL 150 LIFT-EQUIPPED BUSES WERE DELIVERED AND LIFT SERVICE WAS EXPANDED TO 17 ROUTES.

USAGE OF THE LIFT-EQUIPPED BUSES BY WHEELCHAIR USERS WAS MINIMAL. ON THE OTHER HAND, THE RIDERSHIP ON THE USER-SIDE SUBSIDY PROGRAM GREW RAPIDLY AND WAS CLEARLY THE CHOICE OF ELIGIBLE DISABLED INDIVIDUALS. THE FACT THAT USAGE OF A FIXED ROUTE TRANSIT SYSTEM REQUIRES THAT AN INDIVIDUAL MUST INDEPENDENTLY TRANSPORT HIMSELF OR HERSELF TO A BUS STOP, APPEARS TO HAVE MORE TO DO WITH

THE INACCESSIBILITY OF A TRANSIT SYSTEM THAN THE ENTRANCE STEPS OF THE BUS.

THE USER-SIDE SUBSIDY PROGRAM, BY PROVIDING DOOR-TO-DOOR SERVICE, EVEN AT GREATER COST PER RIDE TO THE INDIVIDUALS, WAS CLEARLY THE PREFERRED TRANSPORTATION MODE OF THE MOBILITY-IMPAIRED OF MILWAUKEE COUNTY. **IN FACT, THE TOTAL RIDERSHIP ON LIFT-EQUIPPED BUSES DURING ITS 2 3/4 YEARS OF OPERATION WAS EQUAL TO LESS THAN FOUR DAYS RIDERSHIP ON THE USER-SIDE SUBSIDY PROGRAM. IN A TYPICAL MONTH, APPROXIMATELY 60 ONE-WAY TRIPS WERE TAKEN ON LIFT-EQUIPPED BUSES BY WHEELCHAIR USERS. ON THE OTHER HAND, OVER 10,000 TRIPS WERE TAKEN MONTHLY BY WHEELCHAIR USERS IN THE USER-SIDE SUBSIDY PROGRAM.**

APPROXIMATELY 5,600 PERSONS WITH DISABILITIES WERE REGISTERED FOR THE USER-SIDE SUBSIDY PROGRAM AT WHICH 4,200 WERE WHEELCHAIR USERS. BASED ON ORIGINS AND DESTINATIONS OR USERS OF ACCESSIBLE BUSES, **IT IS ESTIMATED THAT FEWER THAN 28 DIFFERENT INDIVIDUALS EVER USED THE ACCESSIBLE BUSES IN ALMOST THREE YEARS OF OPERATIONS.**

THE CONCLUSIONS WERE APPARENT. THE USE OF TAXIS AND VANS IN DOOR-TO-DOOR SERVICE DID, IN FACT, PROVIDE EFFECTIVE MOBILITY FOR WHEELCHAIR USERS WHILE LIFT-EQUIPPED BUSES PROVIDE ONLY A SYMBOLIC ACCESSIBILITY WHICH CAN BE UTILIZED EFFECTIVELY BY ONLY A VERY SMALL NUMBER OF PERSONS IN WHEELCHAIRS. IN MILWAUKEE, THE ACQUISITION AND UTILIZATION OF LIFT-EQUIPPED BUSES IN FIXED ROUTE SERVICE RESULTED IN SIGNIFICANTLY INCREASED CAPITAL AND OPERATING COST WHILE HAVING NO REAL, EFFECTIVE IMPACT ON THE MOBILITY OF WHEELCHAIR USERS.

IN APRIL, 1982, AN AGREEMENT WAS REACHED WITH THE DISABILITY COMMUNITY TO DISCONTINUE THE LIFT-EQUIPPED BUS OPERATION AND TO CONCENTRATE OUR EFFORTS ON THE USER-SIDE SUBSIDY PROGRAM. IN 1989, A MONTHLY AVERAGE OF 30,000 DISABLED RIDERS, OF WHICH 80 PERCENT OR 24,000 ARE WHEELCHAIR USERS, ARE USING THE USER-SIDE SUBSIDY PROGRAM. 7,600 PERSONS ARE REGISTERED TO USE THE SERVICE, OF WHICH 6,100 ARE WHEELCHAIR USERS. THE AVERAGE SUBSIDY HAS BEEN $7.98 PER RIDE. COSTWISE AND SERVICEWISE, THIS PROGRAM HAS PROVEN TO BE AN EFFECTIVE MEANS OF MOBILITY FOR THE DISABLED COMMUNITY.

THE LIFTS IN THE 250 LIFT-EQUIPPED BUSES HAD AN ORIGINAL COST OF $2,500,000. BECAUSE OF THE HOSTILE ENVIRONMENT, THE LIFTS WHICH WERE LOCATED IN THE STEPWELLS AND EXPOSED TO THE ELEMENTS (NOT AN INSIGNIFICANT CONSIDERATION IN MILWAUKEE), THERE WERE FREQUENT AND CHRONIC MAINTENANCE PROBLEMS. MAINTENANCE COSTS PER LIFT APPROXIMATED $2,000 ANNUALLY OR A TOTAL OF ALMOST $500,000 PER YEAR. **ON A PER RIDE BASIS, MAINTENANCE COST ALONE APPROXIMATED $1,000.** THE USER-SIDE SUBSIDY PROGRAM, ON THE OTHER HAND, REQUIRES NO PUBLIC CAPITAL INVESTMENT AND THE PUBLIC COST PER RIDE AVERAGES $8.00.

THE USER-SIDE SUBSIDY PROGRAM HAS INCREASED THE PARTICIPATION OF DISABLED MILWAUKEEANS IN OUR COMMUNITY EVEN THOUGH THE METHOD USED MAY BE A SEPARATE TRANSIT SERVICE AND NOT CONSIDERED MAINSTREAMING. THIS PROGRAM, HOWEVER, REPRESENTS WHAT MAY BE TERMED "**EFFECTIVE MAINSTREAMING,**" ELIMINATING THOSE ASPECTS OF USING A TRANSIT SYSTEM WHICH PREVENTS ACCESS TO THAT SYSTEM, BUT

PROVIDING THE INDIVIDUAL WITH ACTUAL MOBILITY SO THAT HE OR SHE CAN BE IN THE MAINSTREAM OF SOCIETY.

ALTHOUGH IMPROVEMENTS HAVE BEEN MADE IN BUS LIFT TECHNOLOGY SINCE THE MILWAUKEE EXPERIENCE, THE POINT IS THAT ONLY A RELATIVELY FEW DISABLED PERSONS HAVE EFFECTIVE ACCESS TO ACCESSIBLE TRANSIT VEHICLES.

THE ACCESSIBLE BUS PROVIDES, AT BEST, BUS STOP TO BUS STOP MOBILITY. PERHAPS WITH EXPERIENCE, TECHNOLOGY WILL OVERCOME THE DIFFICULTIES WE HAD WITH THE LIFT AND A MUCH IMPROVED LIFT IS POSSIBLE. HOWEVER, THE UNFORTUNATE TRUTH OF THE MATTER IS THAT HOWEVER PERFECT THE TECHNOLOGY, LIFT-EQUIPPED BUSES CANNOT PROVIDE EFFECTIVE MOBILITY FOR MOST DISABLED PERSONS IN AREAS SUCH AS MILWAUKEE COUNTY. THE BARRIERS FOR THE TYPICAL DISABLED PERSON IN A WHEELCHAIR TO GET TO A BUS STOP ARE OFTENTIMES MUCH MORE SEVERE THAN THE BUS STEPS THEMSELVES. THIS CAN INCLUDE THE LACK OF SIDEWALKS, THE LACK OF CURB CUTS, WIDE STREETS, DISTANCE, HILLS AND, OF COURSE, THE SNOW, ICE AND COLD FOR WHICH MILWAUKEE IS FAMOUS.

AS A SOCIETY, WE MAY BE WILLING AND ABLE TO BUILD SIDEWALKS WITH CURB CUTS THROUGHOUT RURAL AND URBAN COMMUNITIES AND TO REDUCE DISTANCES TO THE BUS STOPS. HOWEVER, IT IS SAFE TO SAY WE WILL NEVER BE ABLE TO CONTROL OR MODIFY THE INCLEMENT WEATHER THAT CREATES A NATURAL BARRIER TO WHEELCHAIR TRAVEL IN LARGE PORTIONS OF THE UNITED STATES. SNOW, ICE AND COLD ARE PART OF LIFE IN MILWAUKEE FROM THE END OF NOVEMBER TO THE BEGINNING OF APRIL. OUR

AVERAGE ANNUAL SNOWFALL IS 40 TO 42 INCHES AND THE MEAN WINTER TEMPERATURE IS ABOUT 28 DEGREES.

ANY WISCONSIN RESIDENT KNOWS AND UNDERSTANDS THE DIFFERENCE BETWEEN A DENVER POWDER SNOWFALL WHICH MELTS OFF IN A DAY OR TWO AND OUR WET, HEAVY ACCUMULATION WHICH COVERS THE GROUND AND PILES HIGHER AND HIGHER INTO THE WINTER. WHEN WE GET A MILD MELT DOWN DURING A RARE ABOVE FREEZING DAY, THE SLUSH MELTS FROM UNDER THE SNOW COVER ONLY TO FREEZE INTO SLICK ICE AS TEMPERATURES DIP DURING THE NIGHT. IF EACH HOUSEHOLD HAS NOT SHOVELED THAT SLUSH ON THE VERY DAY OF THE SNOWFALL, A HAZARDOUS PATH OF ICE BUILDS AND MAY REMAIN UNTIL A TOTAL MELT OCCURS IN APRIL.

IN ADDITION, WHEN THE WIND BLOWS ACROSS THE SNOW SURFACE IT CREATES WHAT WE KNOW AS WINDCHILL. THE ACTUAL TEMPERATURE MAY BE 28 DEGREES. HOWEVER, THE WINDCHILL ON THE SAME DAY MAY BE CLOSER TO 10 DEGREES. TRAVAILING THE SNOW AND ICE TO WAIT 15 OR 20 MINUTES IN 10 DEGREE WINDCHILL FOR A BUS CHALLENGES THE SOUL OF EVEN THE MOST DETERMINED WISCONSINITE.

BASED ON THE MILWAUKEE EXPERIENCE, PERSONS WITH DISABILITIES PREFER, IF NOT REQUIRE, DOOR-TO-DOOR SERVICE. BUT DON'T TAKE MY WORD FOR IT. THE DISABLED OF MILWAUKEE HAVE EXPRESSED THEMSELVES IN THE MOST DRAMATIC FASHION -- NOT BY POLITICAL PRESSURE, NOT BY DEMONSTRATIONS OR LETTERS -- BUT BY ACTUALLY USING PARATRANSIT OVER ACCESSIBLE BUSES WHEN BOTH WERE AVAILABLE. OUR RIDERSHIP COUNT ON ACCESSIBLE BUSES (ATTACHED) SHOWS THE SHARP DECLINE DURING WINTER MONTHS.

I MIGHT ADD THAT MILWAUKEE IS NOT THE ONLY INCLEMENT WEATHER JURISDICTION WITH THIS EXPERIENCE. IT HAS BEEN REPEATED AGAIN AND AGAIN IN OTHER INCLEMENT WEATHER JURISDICTIONS. IF THE SUBCOMMITTEE WOULD LIKE, I WOULD BE GLAD TO PROVIDE A VARIETY OF SURVEYS OF THE DISABLED COMMUNITIES' PREFERENCES AND RIDERSHIP FROM OTHER SUCH JURISDICTIONS.

THE TRANSIT INDUSTRY IS IN GREAT FINANCIAL DIFFICULTIES. THE FAREBOX PROVIDES ONE-THIRD OR LESS OF THE COSTS OF OPERATION. THE FINANCIAL BURDEN OF PROVIDING AN ACCESSIBLE BUS SYSTEM FOR A VERY FEW, AS WELL AS AN EFFECTIVE PARATRANSIT SERVICE MAY PROVE TO BE TOO MUCH TO BEAR WITHOUT SUBSTANTIAL REDUCTIONS IN PARATRANSIT SERVICE AND/OR SERVICE TO THE GENERAL PUBLIC.

THERE IS NO QUESTION THAT THE DISABLED DESERVE TRUE MOBILITY. THERE IS ALSO NO QUESTION THAT THE BUS, AS WE KNOW IT, CAN BE MADE MORE ACCESSIBLE TO MANY DISABLED PEOPLE. WE SHOULD BE EXPENDING OUR EFFORTS TO HAVE LARGER DESTINATION SIGNS AND SIGNALING DEVICES TO AID VISUALLY DISABLED PEOPLE AND VISUAL AIDS TO HELP THE DISABLED WITH HEARING PROBLEMS. INSTEAD, WE ARE SPENDING LARGE AMOUNTS OF MONEY, LARGE AMOUNTS OF TIME AND ENERGY ON LIFTS THAT, IF OPERATED PERFECTLY, COULD SERVE VERY FEW PEOPLE. A LIFT-EQUIPPED BUS, AT BEST, SERVES BUT A SMALL FRACTION OF THE MOBILITY-DISABLED POPULATION. A LIFT CANNOT BE USED BY USERS OF CRUTCHES, WALKERS, THE BLIND, AND MANY OTHER DISABLED PEOPLE WHO ARE NOT DEPENDENT UPON WHEELCHAIRS. AN ALTERNATIVE SERVICE, SUCH AS WE OFFER TODAY IN MILWAUKEE, CAN SERVE ALL DISABLED PEOPLE.

A TRANSIT VEHICLE, BE IT A BUS OR RAIL, IS BUT ONE MEANS OF ACCESSIBILITY TO REACH FACILITIES. IT IS MY BELIEF THAT PERSONS IN MILWAUKEE NEED ACCESSIBILITY TO WORK, TO SCHOOL, TO RECREATION, AND TO ALL THE OTHER RIDING OBJECTIVES OF ANY OTHER PERSON. THE SYMBOLIC MOBILITY PROVIDED BY A BUS LIFT IS A CRUEL JOKE FOR THE DISABLED WHEN IN FACT IT IS UNUSABLE BY THE GREAT MAJORITY OF THESE INDIVIDUALS.

IF THE MILWAUKEE EXPERIENCE IS AT ALL INDICATIVE OF THE PROBLEM OF TRANSPORTATION FOR THE DISABLED, THERE IS NO REAL QUESTION OF CHOOSING ALTERNATIVES. ONE PROGRAM MEETS THE MOBILITY NEEDS OF THE DISABLED, THE OTHER PROGRAM MAKES BUSES, **BUT NOT NECESSARILY THE BUS SYSTEM,** ACCESSIBLE. IN THE 2 3/4 YEARS OF LIFT BUS OPERATION, THE USER-SIDE SUBSIDY PROGRAM PROVIDED IN EXCESS OF 280,000 TRIPS OF WHICH APPROXIMATELY 195,000 WERE WHEELCHAIR USERS. THE LIFT-EQUIPPED BUSES IN THE SAME TIME PERIOD PROVIDED 1,495 TRIPS FOR WHEELCHAIR USERS. DOOR-TO-DOOR SERVICE IS NOT SIMPLY PREFERABLE TO LIFT-EQUIPPED BUSES IN INCREASING THE MOBILITY OF DISABLED PERSONS, BUT IT IS ESSENTIAL IF TRUE MOBILITY, RATHER THAN SYMBOLIC ACCESSIBILITY IS THE DESIRED RESULT. FEW COMMUNITIES CAN AFFORD BOTH. LOCAL OPTION IN COOPERATION WITH THE DISABLED COMMUNITY HAS BEEN WORKING IN MILWAUKEE.

THANK YOU FOR YOUR ATTENTION. I WILL BE PLEASED TO ANSWER ANY QUESTIONS.

TAB A

A Summary of Monthly Ridership Statistics on the Wheelchair Lifts

1979 Month	No. of one-way Trips	Average Delay

Mr. MINETA. I would now like to call forward a panel made up of Kathleen Parker, Board Member of the Regional Transportation Authority of Chicago; Douglas Donenfeld, Board Member and Chairman of the Finance, Audit and Budget Committee, Chicago Transit Authority; Lou Gambaccini, General Manager of SEPTA and Dick Sandaas, Executive Director of METRO in Seattle.

Ms. Parker, we have your prepared statement. It will be made a part of the record. Ms. Parker, if you will proceed in your own fashion, please.

TESTIMONY OF A PANEL, CONSISTING OF KATHLEEN PARKER, BOARD MEMBER, REGIONAL TRANSPORTATION AUTHORITY, CHICAGO; DOUGLAS DONENFELD, BOARD MEMBER AND CHAIRMAN OF THE FINANCE, AUDIT AND BUDGET COMMITTEE, CHICAGO TRANSIT AUTHORITY; LOUIS GAMBACCINI, GENERAL MANAGER, SOUTHEASTERN PENNSYLVANIA TRANSPORTATION AUTHORITY; AND DICK SANDAAS, EXECUTIVE DIRECTOR, METRO, SEATTLE

Ms. PARKER. Thank you, Mr. Chairman. You do have our statements, so I will summarize it. Mr. Chairman, members of the subcommittee, my name is Kathleen Parker. I serve on the Board of the Northeastern Illinois Regional Transportation Authority which serves a six-county Chicago metropolitan area. The RTA is responsible for overseeing a transportation network which serves approximately 2.5 million riders per day in our area.

That number includes 3,100 daily paratransit riders for the disabled. I have served on the RTA Board since 1983 and have been Chairman of our Committee on the Mobility Limited since 1984. I am here today on behalf of our board and our chairman, Gail Franzen, who was unable to be in Washington today. I am testifying for the RTA, CTA, METRA and PACE.

I appear before you to express support for the broad goals of the ADA. But these broad goals can only be achieved if certain changes are made in the ADA. We applaud the House and Senate sponsors of this legislation for addressing long perpetuated civil wrongs and seeking to replace them with civil rights.

However, in several instances, we would maintain that the legislation before you as it emerged from the Senate will lengthen implementation time and add to the difficulty of achieving its stated objectives. As a local agency, which has sought to comply with a variety of federal regulations in this area, the RTA has some experience to bring to your deliberations.

In particular, I would like to acquaint you, briefly, with the regional plan for the Mobility Limited which we have just developed after a ten-month policy process. This local plan was developed in consultation for our Mobility-Limited Advisory Committee, MLAC, which includes representatives of the key groups representing the disabled in our region.

Further, our plan is consistent with the recommendations of the Illinois Governor's Task Force on Disabled Transportation completed in 1985. The result of these efforts is a realistic and compassionate plan for providing mobility to those who, until now, have felt excluded from the service provided by transit providers.

In summary, the plan calls for the following; full performance mainline accessible service, paratransit service to supplement mainline service at the level which we can afford; region-wide eligibility and certification for the paratransit service; financial perimeters for meeting the goals of the plan within our statutorily-required 50 percent fare box recovery ratio.

Mr. Chairman, we are aware that some parts of our plan may not comply with the final version of the ADA. However, it is important to point out that this plan was developed to comply with existing requirements. The plan is flexible and we will attempt to make whatever changes are necessary to comply with any new ones.

The principal challenge of the ADA to the RTA is reconciling our responsibilities to our disabled consumers with the needs of the $2.5 million daily riders who rely on us to deliver safe, timely and efficient service every day. Unfortunately, the bill approved by the Senate gives us reason to be concerned that, as we meet this challenge, unrealistic federal standards may be substituted for realistic and workable local action.

We are particularly concerned with three aspects of the Senate bill; those are, the requirements for comparable paratransit service, commuter-rail accessibility and key station accessibility. Allow me to discuss each one very briefly.

Concerning the paratransit requirement, the Senate bill requires that a comparable level of service be provided to those who cannot use mainline accessible service. The word comparable can be too easily interpreted to mean duplicative services we simply cannot afford. There is a provision allowing a somewhat reduced level of service to be provided if meeting the full requirement would pose an undue financial burden.

Unfortunately, key questions relating to the definitions of comparable service and undue financial burden, and to the eligibility for paratransit service are left unanswered in the statute. With regard to commuter-rail vehicle accessibility, the Senate bill fails to recognize the operational differences between commuter rail and rapid rail service.

METRA has now determined that it will make each cab car accessible by equipping it with a lift, thereby making each train accessible. However, the requirement to make every rail car accessible to the disabled would be unnecessarily costly.

On key stations, neither the Senate bill nor the committee report defines its terms. This welcomes legislation at the local level over how that term is defined for each system. This issue of key stations is a crucial area of local operational decision making. Mr. Chairman, the well-intentioned efforts of the Senate have resulted in a complicated and ill-defined set of requirements which are likely to result in a long delay in the implementation of the bill and put the implementation in the hands of judges.

We want to see our mobility limited population on our buses and trains, not in court. What we need is a law which relies on local processes like the one we have pursued in our region to make important definitional and operational decisions. Congress should set the broad standards and set the perimeters for a local process to flesh out the details.

In closing, allow me to state that we share with you a desire to enact a bill on transit for the disabled which will work. We will be charged with making it work at the local level, a charge, I might add, which will come from the federal government with no new dollars to help make it work. While we prepare to assume the financial and operational responsibility for compliance with the ADA, we urge Congress to recognize that our system of federalism works best when each level of government is allowed to do what it does best.

The federal government is best suited to develop broad national standards, particularly those designed to help the less fortunate. Local and regional government is best suited to implement such standards in a way which recognizes local conditions.

Mr. Chairman, the ADA will be a triumph if the federal government and local authorities each do what they do best. We hope to celebrate that triumph with you and our disabled community in the coming years.

Mr. **MINETA**. Thank you very much. Mr. Donenfeld.

Mr. **DONENFELD**. I am a board member with the Chicago Transit Authority, better known as the CTA, and Chairman of its Finance Audit and Budget Committee. It is a pleasure to be before the Subcommittee today. I would like to also request that we be given an opportunity, before the record is closed on this legislation, to submit written testimony.

CTA is the second largest operating agency in the United States and is responsible for providing 581 million rides on the bus and rapid transit system along with 800,000 paratransit rides each year. Our paratransit service is the largest in the United States.

In addition, we will shortly be receiving the first order on 791 buses with lifts. I would like to elaborate on a point made in the RTA's testimony. Our concern relates to the operational impacts the legislation will have on older rapid transit systems like the CTA. The rapid transit system is a vital part of our system which provides over 1.9 million rides to people in the Chicago area each weekday.

CTA's rapid transit system is large and very old. The core system dates back to the turn of the century. The system consists of six lines covering 215 miles of track and 142 stations. Two independent engineering studies have found that CTA should spend over $4 billion during the next ten years to bring our infrastructure up to good condition.

While the CTA will be hard-pressed to absorb the Congressional mandate to fund an accelerated accessibility program for rail stations, in addition to maintaining the rail system in a safe and efficient manner, we recognize that the legislation includes a twenty-year compliance period that provides some relief for the extraordinary cost problem.

Ultimately, the extent of such cost burdens, as well as other operational difficulties, will be determined by the number of key stations that must be made accessible. The Senate's Committee report states that key stations will be determined locally with the cooperation of the disabled community.

While the CTA has in place an agreement on accessible bus service with the disabled community, it does not have an agreement similar to those in New York and Philadelphia which accommodates the needs of those older rapid transit systems. Therefore, we are not certain how many key stations we will have to make accessible.

We agree that key stations should be made accessible. However, in setting a timetable for compliance, the Congress should take into account the unique problems associated with older rapid transit systems. Most CTA stations will need extraordinarily expensive structural changes to make them accessible. For elevated stations, it means modifying the structures to install elevators. In subways, it means tunneling elevator shafts.

Operating factors limit the amount of work CTA can perform on a line at one time. Disruptions in service caused by capital projects, accessibility-related or not, result in slow zones or single tracking zones which could mean as much as twenty to thirty minute delays for able-bodied passengers.

Since our main concern is to take people in a timely manner, CTA must carefully plan capital projects to minimize disruptions to service. Otherwise, riders will look forward towards other alternatives like the automobile.

Increased use of the automobile will, in turn, exacerbate the other problems urban areas are facing. Air pollution and compliance with the Clean Air Act and congestion are questions and issues debated and handled by Congress in various forums. We, therefore, recommend that special consideration be given to the serious operational impacts caused by compliance with the rail system accessibility provisions by allowing the Secretary of Transportation the ability to extend the time period longer than twenty years where there is undue operational difficulty.

Thank you very much for the time. I would be very happy to answer any questions the committee might have.

Mr. MINETA. Thank you. Mr. Gambaccini.

Mr. GAMBACCINI. Thank you, Mr. Chairman. Mr. Chairman, my name is Lou Gambaccini. I am Chief Operations Officer and General Manager of the Southeastern Pennsylvania Transportation Authority, more familiarly known to most as SEPTA. I am pleased to be here to have the opportunity to present this testimony with respect to the Americans With Disabilities Act of 1989.

While we support the intention to provide improved service to the disabled, we do have a number of cost and operational concerns with the Senate bill. Mr. Chairman, you have before you a nine-page statement. I will not read the entire thing. I will try to hit the highlights and, perhaps, even elaborate on one or two points.

I do have some passion on the subject. I have been involved in transit for some thirty years and involved in elderly and disabled matters for some twenty, including active participation at the national scene some twenty years ago.

I have been on the SEPTA scene for a little over a year, and I find the SEPTA system magnificent in some respects and awesomely difficult to rehabilitate in others. The system embraces five counties, an area with a population of some 3.5 million. We handle 1.2 million day. The extent and reach of the system is probably without comparison in the country proportionate to the size of the region and in consideration the inadequacy of the highway system and in the face of economic growth and prosperity that has marked the region. Yet we are facing $4 billion to $5 billion, in 1988 dollars, in needed rehabilitation to make up for the neglect over the last several decades, more than half of it in the divested Conrail passenger services.

On the one hand, this is a major asset that offers great potential for the region, for the nation and the future. On the other hand, it is a context in which we have great difficulty facing the financial needs and getting on with the job.

In parallel with that, our operating budgets, federal, state and local, have not kept pace with the combination of both inflation and needed improvements in service. We have overcrowded routes. We can't handle the pressure of growth of people presenting themselves for service. And we simply cannot accommodate the additional service.

So we have a financial crunch. Last year, SEPTA provided service to some 1.2 million passenger trips for disabled persons by accessible bus, accessible rail and paratransit. We were an early, active participant in working with the handicapped community, having set up an advisory committee in 1974 and having commenced paratransit in 1981.

This past summer, the Eastern Paralyzed Veterans Association of the City of Philadelphia and SEPTA entered into an agreement to guarantee the purchase of only accessible buses in the future and to expand the number of key rail stations to 42—I would note that my testimony that you have before you shows 45. That is a typographical error. It should be 42—or approximately 16 percent of the system.

By November of this year, 48 percent of our bus fleet will be lift-equipped. As I indicate, we have committed to the purchase of only lift-equipped buses in the future.

Mr. Chairman, I won't go through point by point. We have several points listed in the remainder of the testimony that go to what we think are serious problems requiring technical correction in the legislation. I will hit them, at least a couple of them, in highlights.

For example, the first point has to do with existing rail vehicles. We agree that, to the extent reasonable, rail vehicles should be made to accommodate the handicapped. We have removed seats. However, there are limits. Indeed, there should be specific language in the legislation precluding the necessity to modify existing rail vehicles when major structural change is required.

It is, in some cases, completely unfeasible or the costs are prohibitive. We do tend to agree, at least in our case, that future bus purchases should be handicapped equipped as should rail cars. To that end, we have purchased our most recent fleet, the Bombardier cars, each with rail accessibility—that is, wheel chair accessibility—and the cars in production for the Norristown High Speed line are similarly being accommodated.

The next point: we have street car operations twice as large as the next largest system in the country. We believe there should be explicit language exempting street cars from accessibility. To do otherwise would be to provide great safety hazards. Most of our streetcar routes are in the middle of streets requiring the handicapped to cross active lanes of traffic, where there is not sufficient room to accommodate both the lift devices intruding into the active lanes of traffic and room for wheel chairs to maneuver to get onto those vehicles.

We think it is utterly unrealistic to require accessibility to our street trolley routes where they exist in concert, or at grade level, with traffic on the streets as well.

We agree with the Senate Committee that it is best to leave the selection of which stations are key to each locality. We are pleased that we reached agreement through negotiation with our handicapped community and we think that that decision about which are key stations must be a local determination.

The criteria that guided us in our discussions with our handicapped community had to do with ridership volumes, major transfer points, balanced regional coverage, some of the physical constraints that involved some of the stations, the costs and funding availability.

I believe that the handicapped community was sensitive to the cost and funding availability problem and, therefore, was realistic about schedule and timing of some of the key station improvements and, indeed, further have actively joined our political coalition to seek additional funding at all levels of Government, Federal, State and local, to help both operating and capital.

The Senate bill creates a requirement requiring full bus and key rail station accessibility plus extensive paratransit service. We would raise a major concern and caveat about what is intended about the parallel and additional paratransit service. As we read the bill, it could also be read to require transit operators to deal with extraneous—that is extraneous to the transit system—commitments such as curb cuts, sidewalks, and to make up for deficiencies and underfunding of human service agency programs.

We think that, certainly, should not be an enlargement of the transit operator's burden.

In the bill, as we read it, it is possible to assume, and indeed it may even be the intent, that comparable response time on paratransit be required. That, in our opinion, is utterly unrealistic. We have routes that are providing intervals of service of five to ten or fifteen minutes. The volumes, under the most extreme projections of potential handicapped demand, simply cannot justify that and, in my opinion, I share Hank Mayer's view that there is no way that that kind of service can be provided in parallel with fully-accessible buses and accessible rail.

So some balancing must be required and the mandate cannot be from the Federal Government with respect to the specifics, thereto.

On Page 7, we cite the overall concern about undue financial burden. It can be said that virtually any requirement of additional service, whatsoever, can be said to be an undue financial burden in the context that I described at the outset, particularly in consideration of the fact that the Federal Government in the last ten years has reduced, on an annual basis, to Philadelphia, operating assistance by more than 50 percent cumulatively, capital assistance in constant dollars by more than 64 percent and has frozen the flow of funds from the Transit Trust Fund.

There is no further capacity from any current or projected funding source to significantly expand service. So, in effect, what we are saying is that if, indeed, the Federal Government presumes to expand mandates of any sort, there must be concomitant funding or, at least, a participation in the solution of how we accommodate the additional requirements.

In conclusion, I think the act can provide for major improvements and, indeed, the thrust to continue to work to improve the lot of the handicapped is a good one. We support it, but the language must be corrected and clarified to prevent lengthy and expensive court battles following the issuance of regulations pursuant to this act. Changes must be made to provide for realistic implementation requirements and schedules, and funding must be included for public-service providers who will be forced to expand and improve such services to the disabled.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much. Mr Sandaas, before we proceed, what were the results of your elections for mayor yesterday?

Mr. SANDAAS. The results, as we have them are, Doug Jewett was one of the two and also Norm Rice. So, Norm Rice and Doug Jewett will be in the final in November.

Mr. MINETA. Norm Rice was the School Board member?

Mr. SANDAAS. Norm Rice is the present City Councilman and Doug Jewett is the present City Attorney.

Mr. MINETA. Dolores came in where?

Mr. SANDAAS. She was kind of tied for third. There were thirteen total people running.

Mr. MINETA. Okay, Dick; go ahead.

Mr. SANDAAS. Good afternoon. I, too, will be brief and summarize. But there are several topics I would like to quickly run over here. Again, I am Richard Sandaas, Executive Director of the Municipality of Metropolitan Seattle in Seattle, Washington.

Our agency operates a fleet of 1091 buses which makes it the ninth largest bus-operating agency in the country. METRO supports passage of the Americans With Disabilities Act. More than eleven years ago, our governing board decided to make our regular fixed-route service fully accessible to persons with disabilities. Since that time, eleven years, all of our new bus purchases and all of our new facilities have been designed to accommodate wheelchair users and individuals with other disabilities.

I am also personally familiar with wheelchair lift technology and can assure you that it works. I was one of two staff members who were involved some eleven years ago in working out the implementation program for our wheelchair lift program.

With proper maintenance, newer lifts should last twelve years or more and have 98 percent in-service reliability. We believe that number is doable. In fact, we are doing that now. But it takes more than just a functioning lift to make accessible bus service a success. A citizen with disabilities must be involved in designing service. Drivers must be trained. Persons with disabilities must also take some initiative in familiarizing themselves with how to use an accessible bus service.

Finally, policy makers and senior management must continue to assist on accessibility as a fundamental given in the design, construction and implementation of all facilities and services.

METRO's positive approach to mainline accessibility has produced continuing increase in use of our services. In 1988, we carried 139,430 wheelchair lift users on a regular fixed-route service. And that was on 130 routes. The average weekday use was 481 per day. The weekend use is less, bringing the total seven-day average to 382 trips.

Our average operating cost per ride was $3.89. Since we have heard a little bit about cost today, let me digress briefly on maintenance costs. We did hear a variety of numbers thrown out, and there is a big range out there. We have a variety of series of lifts in our fleet. We have several bus purchases over time that have incorporated wheelchair lifts.

The annual maintenance cost, per bus, per year, varies from a low in one particular fleet from $155 per year up to as much as $1,149 per year. The average, over the whole entire 773 buses with lifts is $585 a year for maintenance.

The highest number is of the very oldest lifts and the first generation of Lift-U-Lifts were rather crude by today's models. So that is the range of maintenance costs that we experience.

Last year, 1988, METRO was honored to receive the Distinguished Service Award from the President's Committee on Employment of People with Disabilities, for our pioneering efforts in the fixed-route accessibility.

We want to reiterate our support of the Americans With Disabilities Act, but we do have some concerns about the paratransit issue. And you have heard that from others today. METRO, currently, does operate a specialized demand-responsive program for low-income elderly and disabled adults. That program carried some 113,000 riders in 1988 at an average operating cost of $7.43 a trip.

The Senate-passed bill was ambiguous about who should be eligible for this type of special supplemental service. The Senate committee implied everyone who had some difficulty reaching a bus stop should have a legal right to specialized service. This subjective standard may open up a right to costly specialized service to many who simply prefer door-to-door service.

The report language almost guarantees this right to dual service when it makes it clear that eligibility for specialized service cannot be used as grounds for excluding individuals from the very mainline accessible services they are supposedly unable to use.

We recommend that local transit boards be given the responsibility of determining who should be eligible for supplemental service through individualized certification programs. These types of hard service allocation decisions should be made by local transit boards once the basic civil-rights obligation to individuals with disabilities has been satisfied with accessible mainline service.

The Senate version was also somewhat ambiguous as to how to judge the comparability of fixed-route and specialized demand-responsive services. METRO believes fixed-route and demand-responsive services each have inherent advantages. We cannot, for example, design a demand-responsive paratransit system that matches the excellent frequency and travel times of our most heavily used bus routes.

On the other hand, a fixed-route system can never match the waiting comfort of a door-to-door demand responsive system. A local process involving all elements of the disabled community should be used to design services that are comparable with viewed in their entirety.

In closing, we applaud the main thrust of the Americans with Disabilities Act. With the exception of ambiguity in the Supplemental Services Section, we wholeheartedly support this legislation.

Thank you for the opportunity to come before you today.

Mr. MINETA. Thank you very much, Ms. Sandaas. Ms. Parker, in your statement, you indicated that the RTA experience suggests that many disabled riders who can use mainline service still prefer paratransit service. Since the RTA has not provided accessible mainline service for individuals with disabilities, how can you use your experience to determine the preference of the individuals with disabilities?

Ms. PARKER. Mr. Chairman, one of the things that we did as far as the Mobility Limited Committee for the RTA was to do an extensive survey of the people who were using paratransit service at that time, and others in the disabilities community. Ninety-five percent of the people that responded said that they did prefer paratransit over using a lift vehicle.

I think, though, what is important to understand is that with our disabled plan, we have agreed with the disabled community and the transit operators for full performance accessibility for putting lifts now on the buses in the Chicago metropolitan area.

The difference between the full performance accessibility that we are discussing, and your talking of the 100 percent accessibility, is the flexibility of the local transit agency—for instance, the CTA could accommodate the demand because the peak times, the high peak, was 60 percent of their bus system—if that were lift-equipped, instead of going the full 100 percent.

But we have, through our experience and through the riders that we have in our system, a good feeling for what they do prefer. What we are concerned about in this particular bill is the term "comparable paratransit." The reason for that is that we want the people to, when we do when get the lifts on this system to use that system and to be able to have the independence that they have sought to have.

Part of being able to do that is having the flexibility within our region to be able to determine the eligibility and to determine the amount of paratransit that we actually can afford to use and that we can use for the demand in our area.

We have found, now, that we spend $12 million a year just on our paratransit service. If we were to continue to do the paratransit service without any lifts, to try and let the people have the opportunity of using the lifts, we would be spending $50 million a year in five years, and it would just keep escalating.

So what we are looking forward to is being able to have the people use the lifts. But the most important thing is—and this is what the disabled community is very concerned about—letting the people who really need paratransit, making sure that that service is available to them.

Mr. MINETA. Mr. Donenfeld, regarding the rail provisions of the bill, what specific criteria do you think should be used to identify key rail stations to be made accessible there in Chicago?

Mr. DONENFELD. First of all, we do feel that there ought to be some criteria expressed in the bill because, as far as we can tell, in looking at the bill, the only thing we have got to look to now are the 1979 regulations promulgated pursuant to Section 504.

If we are looking at that, we are looking at, perhaps, a number of stations. I think you have to look at the total system and, with respect to our system, you have to determine what routes are being adequately served by our existing bus service. There are many stations which, for example, are part of our mainline service which are paralleled with the bus system.

One thing you would want to be careful about, I would think, is not to duplicate your efforts. If you have got a fully-viable bus system, servicing the people of a particular community, there would be no necessity for making certain that you had an accessible key station because it may not be necessary, since you have got the parallel system.

We would want to make sure that the demographics were carefully studied, that you didn't overdo the system, and that you looked at the costs attendant to that. Some of our structures, as you can imagine with a hundred-year-old system, are extraordinarily old. When it comes to retrofitting those for accessibility, it becomes quite expensive.

We would, though, agree with others who have spoken today that there ought to be some objective criteria in determining what key stations there ought to exist in our system for purposes of retrofitting for accessibility. Certainly demographics, usage, location; all of these are important criteria in determining whether or not you have got key stations.

We have on our system, 145 stations. Certainly, all of these would not be viewed as key.

Mr. MINETA. Currently, what are those costs per ride in providing paratransit services?

Mr. DONENFELD. We are, currently, costing out at about $15.50 per ride on paratransit. Our budget is $12.5 million.

Mr. MINETA. Capital and operating?

Mr. DONENFELD. With respect to paratransit, we are employing a contracting service. We do not own our own special service equipment. We are contracting out with special transit carriers. That is what it is costing us, per ride, pursuant to our contracts.

Mr. MINETA. Would it be less expensive to provide as many of these paratransit rides as possible on our fixed-route system or use your paratransit vehicles to feed riders to the fixed-route——

Mr. DONENFELD. To compare lifting bus costs with special service paratransit costs, one would have to look at the usage that would be made of the lifting of buses. If you have a very sparse use of your lift, then you are probably talking about a very high per-ride cost. One reason we are anticipating and excited about our pilot project is that we will be able, with the lifting of 791 buses, to establish some hard data as to what usage of a very effective, fixed-route lifted system will be vis-a-vis the cost of paratransit in order to get a better handle on how we compare those costs.

But, of course, it would really depend on the usage. And we don't have that data, currently.

With respect to having buses feeding into the system, again we would need some more data to see how the lifted bus would be effective with respect to feeding into mainline rail service. And we will have that data over the five-year period.

Mr. MINETA. In that key station program, how long a period of time do you have to make the stations accessible?

Mr. DONENFELD. We are currently making stations accessible to the extend we are doing a certain level of rehabilitation of those stations. We anticipate that in the next twenty-year period, without the legislation being passed, we probably will make accessible 14 to 15 stations without the legislation.

Whether or not those would, necessarily, meet the criteria of key stations, we are unable to determine because we don't have the statute before us nor do we have the regulations pursuant to the statute.

Mr. MINETA. You have a total of how many stations?

Mr. DONENFELD. One hundred forty-five stations. Currently, I would say, 10 percent of our stations are accessible to the disabled.

Mr. MINETA. Mr. Gambaccini, with approximately 48 percent of your bus fleets lift-equipped, how soon will SEPTA have a fully-accessible bus fleet?

Mr. GAMBACCINI. 1999, sir.

Mr. MINETA. I wanted to make reference to the safety problems that you referred to that could result from mandating lifts on trolleys which are boarded in mixed traffic. Could you elaborate on why you think this poses a threat to the safety of riders?

Mr. GAMBACCINI. We have trolleys in the centers of streets, some of which are three lanes wide; that is, one lane on each side of the trolley. In some ways, that is easier because the lane would be blocked, although you would have to trust to the judgment of drivers, in fact, not to try to get by the attempt of a handicapped person to approach a trolley, assuming a lift device on the trolley.

I think it is even a worse condition to contemplate in cases where we have trolley routes in the middle of larger streets where you may have two or three active lanes.

But if you can visualize a lift device that would intrude beyond the vehicle into an active lane and then the jockeying of a wheel chair to approach that lift device, it does not add up to a very safe environment for access to vehicles, particularly in peak periods of heavy traffic congestion as well as heavy demand on trolley routes.

Mr. MINETA. In the Senate Committee Report, it makes reference to the existing agreement that you have with the Eastern Paralyzed Veterans Association, and it says that that is, in effect, compliance with the ADA. Do you consider that a good model to be followed, then?

Mr. GAMBACCINI. I guess I have, generally, been of the view that national government should set broad goals and, to the extent that the unique situation in each region obtains. I think our situation is different than any other city. I think it is a model, and I feel very good about it.

In fact, it was one of the first things that I tried to move on when I first took office, to try to come to some kind of accommodation and cooperative agreement with the handicapped community rather than constantly meeting in court, beating up on each other, costing large sums in litigation and, typically, reaching conclusions that were more driven by legal judgments than, let's say, the significant improvement of transportation mobility.

Many of the stations, for example, that were directed to be accommodated were, probably, not key stations in measuring them against the criteria that I mentioned before.

So, in short, I think it was, indeed, a model given the reality of our situation, and, happily, it represents a negotiated result, as I said earlier, wherein the handicapped community, I think, believed that we were genuine in our purpose, moving in the right direction and, yet, saddled with some very severe, unique financing problems.

Mr. **MINETA**. Mr. Sandaas, I agree with you that the best means of meeting the transportation needs of almost all persons with disabilities is through mainline accessible bus service. However, as you also note in your statement, there is a need for supplemental paratransit service for individuals who cannot use mainline service.

From your experience of operating paratransit services, what percentage of individuals with disabilities would be unable to use wheel chair-accessible mainline service?

Mr. **SANDAAS**. That is difficult to answer because the paratransit service that we have now is designed for low-income, elderly and disabled people. Perhaps if I answered it in a slightly different way. I think that, if one were to look at two aspects of it, one being, does our system ever exist in an area where these people would live or are there some significant infrastructure barriers that would prevent them from getting to our bus system. That would be one way to establish the number of those people.

The other way would be to also have, where there was actual bus service available, were they particularly severely disabled or have some other condition that would prevent them from using our mainline service. I can't give you a percentage or a number of what those customers might be. I really don't know that.

Mr. **MINETA**. All right. Let me thank—oh, I'm sorry; Ms. Parker?

Ms. **PARKER**. May I just add a couple of answers to the question you gave Mr. Donenfeld as far as METRA and PACE go, because they also do have paratransit service.

METRA's cost of their service is $60 a trip compared to $3.60 that they normally subsidize to a person who rides on the train. So, in addition, that would be a concern to us if we were to have to go with comparable paratransit service. What we are asking for is supplemental service for paratransit. We recognize a need for paratransit.

In PACE, their rides can go from $15.00 to $20.00 a trip. So we, really, need that flexibility. It is extremely important because that would be $120 a trip for METRA, round trip. And it doesn't, really, even get the person where they want to go. It only gets them to the train station, downtown. In addition, over all, we have 400 key stations which include METRA, also. They have gone ahead. Every new station that they build, now, is accessible. But we feel it is important, particularly with their commitment to accessibility on their trains that we have the opportunity to work with our disabled community in figuring out which key stations they should be going to and how we should best put forward our capital dollars so they would work for them.

METRA's system is extremely different than any other system in the country because they are the only one that has the low-entrance to the high car. We have commissioned a $500,000 rail accessibility study that has designed an accessible for METRA. They have agreed that they will go ahead and have one cab car per train because the cab car is always on the train. So that train would be accessible.

Our disabled community has agreed with that. They agreed with that in 1985. And we have their agreement now that that would be sufficient for the demand that they see. Later on, we would have the flexibility if we were to see that demand increase where we could add on other cars that had the lifts.

But it is important for us to have that local decision so that nothing is a burden, so that we can really serve our people well.

Thank you.

Mr. Mineta. Thank you very much, to the panel for your endurance, I guess I might say.

[Ms. Parker's, Mr. Gambaccini's, and Mr. Sandaas' prepared statements follow:]

STATEMENT OF KATHLEEN PARKER, DIRECTOR
NORTHEASTERN ILLINOIS REGIONAL TRANSPORTATION AUTHORITY

REGARDING THE

AMERICANS WITH DISABILITIES ACT, H.R. 2273

BEFORE THE

SUBCOMMITTEE ON SURFACE TRANSPORTATION

COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

U.S. HOUSE OF REPRESENTATIVES

SEPTEMBER 20, 1989

Mr. Chairman and members of the Committee, my name is Kathleen Parker. I am a member of the Board of Directors of the Northeastern Illinois Regional Transportation Authority (RTA). I have represented Cook County on the RTA Board since 1983. I have been Chairman of the authority's mobility limited committee. For the past ten months, that committee has worked to produce a regional policy for transportation for the disabled. I have also served on the Governor's task force on this topic.

The RTA is responsible for overseeing a transportation network serving approximately 2.5 million riders daily in the Chicago metropolitan area. Service in our region is provided by three service boards: The Chicago Transit Authority (CTA) which operates city and nearby suburban buses and rapid rail service, the Suburban Bus Division (PACE), which operates bus service throughout our service area, and the Commuter Rail Division (METRA), which operates our suburban commuter rail network throughout the six-county metropolitan region.

I appear here today in support of the broad goals of H.R. 2273, to rid American society of discriminatory practices toward the disabled in employment, transportation, public accommodations and communications. The RTA applauds the sponsors of the ADA for addressing long perpetuated civil wrongs, replacing them with vitally important civil rights. However, we believe these broad goals can only be achieved if certain changes are made to the ADA.

Almost since the enactment in 1984 of state legislation which gave the RTA planning and financial responsibility for public transit in the Chicago region, we have been working with the service boards and the mobility limited community to improve transit service for disabled citizens in our region. Under the leadership of our former Chairman, Sam Skinner and our current Chairman Gayle Franzen, I have, as I mentioned earlier, had the honor of chairing the RTA's Committee on the Mobility Limited.

RTA has every confidence that this plan will provide a framework under which the goals of the ADA can be achieved by affording the mobility limited population in the six-county region with mainline access to public transportation services.

The Plan calls for the following key policies to be provided by each of our service boards, the Chicago Transit Authority, Metra, and Pace:

- There will be regional coordination and eligibility so that the disabled can travel throughout the region with coordinated connecting services.

- Each service board will provide a full performance accessible mainline service as the foundation of an accessible regional system.

- Special services will supplement accessible mainline services at levels that are determined by policy and would be offered only in areas that are served by fixed route transit.

- Use of the lowest marginal subsidy service will be encouraged using eligibility criteria. This will promote lift usage and enable paratransit to be available for those who really need it.

- A convenient regionwide certification process will be initiated.

- The RTA and service boards will foster competition between providers of special service and encourage other groups, companies and organizations to become involved in the marketplace.

- Finally, the Plan provides financial parameters. The minimum funding level by each service board is set at the cost of providing full performance accessibility and the maximum level for all modes of transportation of the disabled is set at locally determined cost limits.

I should note that this plan was devised to comply with existing laws and regulations. In those cases in which our plan does not conform to the provisions of the bill before you, RTA will attempt to comply with the intent of the Americans With Disabilities Act. However, in several instances, we would maintain that the legislation before you, as it emerged from the

Senate, will lengthen implementation time and add to the difficulty of achieving its stated objectives, objectives we embrace.

Mr. Chairman, the Americans With Disabilities Act poses a challenge to American society generally and to providers of public transportation specifically. RTA accepts that challenge. The ADA confers new rights upon disabled Americans and new responsibilities upon employers, places of public accommodation and providers of public transportation services. The principal challenge of the ADA for the RTA is reconciling our responsibilities to our disabled consumers with the needs of the 2.5 million riders who rely on us to deliver safe, timely and efficient service every day.

Mr. Chairman, there are three areas of this bill with which we have particular concerns: the requirement for comparable paratransit service to accompany mainline accessibility, the 100% accessibility requirement for diesel commuter rail trains and the mandate to retrofit key transit stations.

It should be stressed, Mr. Chairman, that public transit authorities do not come to this debate over the rights of the disabled without experience. In fact, we have had ample experience with the vagueness of Section 504 of the Rehabilitation Act of 1973. The ADA legislation should provide a new and clear definition of the rights and responsibilities contained in this bill. We should not substitute the vagueness of Section 504 with the vagueness of the ADA bill as it emerged from the Senate.

Paratransit Service

Mainline accessible public transit service is a goal which we share with the authors of the ADA legislation. We believe in Chicago that the goal of accessibility could be satisfied by our commitment to 50% or more accessibility on our bus fleet. The ADA requires without exception 100% bus accessibility. We have the flexibility to meet that standard under our plan.

But the ADA also requires the provision of paratransit service comparable to the service provided on fixed routes. The RTA believes that those portions of the ADA which address the relationship of mainline service to paratransit are seriously flawed and must be addressed by this committee.

The RTA fully understands and accepts the present and future role of paratransit in serving the needs of the disabled. In fact, Chicago area providers currently service 3,100 disabled riders daily with paratransit service. In serving these riders we've seen the cost of the service increase from $500,000 to $12 million, or 2300%, over the past ten years. We understand that there will always be some individuals so seriously disabled that mainline service is not an option for them. It is implied in the

Senate report that as mainline accessibility grows, the need for paratransit services will decline. However, our experience suggests that many disabled riders who can use mainline service still prefer paratransit for a variety of reasons.

While indicating that "comparable" paratransit service is required, the Senate bill does provide for some relief from that requirement if meeting it would impose an "undue financial burden" on the transit operator. This represents some recognition of reality, but the Senate bill leaves several important questions unanswered. Here are a few of the questions for which we still seek answers:

- What is "comparable" service? Does the Senate intend "comparable" service or "supplemental" service?
- Who is eligible to receive paratransit service?
- What constitutes "undue financial burden?"

By leaving these questions unanswered, the Senate bill insures the transition from special services for the disabled to mainline accessibility will be painful. The vagueness of the language will guarantee lengthy litigation. We want to see our disabled customers on our trains and buses. We do not want to see them in court.

In the absence of further clarification and flexibility, we feel the requirement for "comparable" paratransit service will, in practice, become a requirement for duplicative service. We do not think that our 2.5 million riders will accept the cost of a service which in large part will be intended as an insurance policy against lawsuits.

Mr. Chairman, if Congress intends that we provide "comparable" service, as outlined in the Senate ADA bill, it would need to accept the responsibility of defining in precise terms who is eligible for the service, how much service should be supplied, and how much transit operators should be expected to spend. Our view is that this cannot be effectively accomplished on a national level. Alternatively - and preferably- Congress should give substantial flexibility to local authorities to resolve these issues.

Commuter Rail Vehicles

The RTA through its METRA commuter rail operations provides extensive commuter rail services on diesel trains. The ADA requires that within 5 years one car per train be accessible to the disabled and that ultimately all cars be accessible. RTA can appreciate the requirement for full accessibility on light rail, rapid rail and high platform electric commuter rail vehicles. By incorporating accessibility into the design of those vehicles, operational problems currently effecting accessibility will be addressed and solved.

Extending the 100% accessibility requirement to diesel commuter trains ignores the difference between high-platform operations and diesel operations. Because diesel commuter trains do not operate off high platforms, they do not have the same problems associated with closing the gaps between trains and platforms as do high-platform trains. Therefore, RTA's plan for accessibility would require that the cab car of each diesel commuter be accessible. Because every train must have a cab car, one car per diesel commuter train would be accessible. We believe that this approach to accessibility on our suburban commuter rail trains will meet the needs of our disabled customers while posing little or no operational difficulties. The alternative - putting a lift on each car would require significant and unnecessary costs to be borne at the local level.

I should re-emphasize, Mr. Chairman, that our plan, which calls for one-car-per-train accessibility is consistent with the Illinois Governor's Task Force on transportation for the disabled a representative group of handicapped organizations. It represents a realistic solution to the difficult problems presented by the need to make commuter rail operations accessible.

Key Stations

The RTA's first priority has been and will remain to maintain, rehabilitate and preserve the mass transit infrastructure throughout the metropolitan Chicago region. Like many older mass transit systems around the country, the Chicago area faces a massive deficit in resources devoted to infrastructure improvements. It is absolutely imperative that we spend our scarce infrastructure dollars in the most strategic, cost effective manner possible.

We are concerned with the language in H.R. 2273 as regards the retrofitting of key transit stations. Once again, the Senate bill lacks a precise definition of "key stations". Such a lack of precision in the bill's language welcomes litigation to determine just what the Congress meant by "key" station. The RTA believes that the determination of which stations will most facilitate the use of the system by the disabled is a decision best left to the local service areas to resolve in consultation with their local mobility limited community.

In closing, I want to point out that we at the RTA feel that as public officials we and the members of the sub-committee share a responsibility to help pass a bill on transit for the disabled which will work. For our part Mr. Chairman, we will comply with the Americans with Disabilities Act even though Congress is providing no new funds whatsoever to help us meet this mandate. While we prepare to assume the financial and operations responsibility for compliance, we urge Congress to give local transit operators the ability to make important definitional and operational determinations within the parameters of the ADA.

We at the RTA have demonstrated our ability and willingness to serve our disabled riders through the development of the regional policy I discussed earlier. The policy complies with existing federal and state laws and was developed to be consitent with the Governor's Task Force. We believe it is a realistic, compassionate plan.

When the Americans with Disabilities Act becomes law, we hope the final product of your efforts will allow us to play the role for which we are best suited - continuing our new plan for meeting the financial and operational challenges posed by the act. It is our hope Congress will not produce a bill which creates ill-defined standards and iron-clad requirements to comply with them.

Local decision-making works best when it is allowed to address local issues. Federal policy making works best when it addresses broad national goals - particularly in the area of redressing wrongs done to the less fortunate.

Mr. Chairman, the ADA will be a triumph if both the federal government and local authorities do what they do best. We hope to celebrate that triumph with you and our disabled community in the coming years.

Thank you, Mr. Chairman. I would be pleased to answer any questions you might have.

U.S. HOUSE OF REPRESENTATIVES

PUBLIC WORKS AND TRANSPORTATION COMMITTEE

The Subcommittee on Surface Transportation

TESTIMONY ON

THE AMERICANS WITH DISABILITIES ACT, H.R. 2273

Presented By

LOUIS J. GAMBACCINI
CHIEF OPERATIONS OFFICER/GENERAL MANAGER
SOUTHEASTERN PENNSYLVANIA
TRANSPORTATION AUTHORITY

SEPTEMBER 20, 1989

Good morning, Mr. Chairman and members of the Subcommittee on Surface Transportation, I am Louis J. Gambaccini, Chief Operations Officer and General Manager of the Southeastern Pennsylvania Transportation Authority, or SEPTA. I am pleased to have the opportunity to present testimony before you today on the Americans with Disabilities Act of 1989. While we support the intention to provide improved services to the disabled, we do have a number of cost and operational concerns with the Senate bill.

SEPTA operates the fourth largest public transportation system in the United States. SEPTA provides over 1.1 million passenger trips each weekday by commuter, light and rapid rail, bus and trackless trolley in metropolitan Philadelphia. In addition, we contract for the provision of paratransit service in Philadelphia, primarily for disabled people.

Last year SEPTA provided approximately 1.2 million passenger trips for disabled persons by accessible bus, accessible rail and paratransit. The Authority set up an elderly and handicap advisory committee in 1974, and began working with the disabled community to improve services for them. We have been meeting many of the transportation needs of the disabled in Southeastern Pennsylvania with accessible bus and rail service since 1980. The Authority began contracting paratransit service in 1981. In 1988, accessibility was extended to all of SEPTA's Suburban Transit Division bus routes through the implementation of our Suburban On-Call service, which allows a disabled person to call one day in advance to request an accessible bus to be assigned to any route. By November of this year, 48% of our bus fleet will be lift equipped.

This past summer, the Eastern Paralyzed Veterans Association, the City of Philadelphia and SEPTA entered into an agreement to guarantee the purchase of only accessible buses in the future and to expand the number of key rail stations to 45, or approximately 16% of the system.

As a result of our own experience and the broad impact of this legislation on SEPTA, I would like to provide the following specific comments on the Senate bill:

1. Section 203(b)(3) should specifically state that structural modifications to existing rail vehicles are not required. We agree that only accessible buses and rail cars should be obtained in the future when purchasing or leasing new vehicles. Furthermore, we concur with the idea of making rail vehicles accessible "to the maximum extent possible" for disabled persons, including wheelchair users, within three years. SEPTA has already removed seats in all its commuter rail trains to make space for wheelchairs, and our rapid rail cars are wheelchair accessible. SEPTA has on order replacement

cars for its Norristown High Speed Line, which include wheelchair securements.

While our commuter rail fleet is generally accessible, these cars do not precisely meet Uniform Federal Accessibility Standards regarding doorway width and turning radius. It would be very expensive to undertake the major structural modifications necessary to change these dimensions because of limited space in the car entry area; such modifications could affect the structural integrity of the cars. We also agree with the Senate Labor and Human Resources Committee report language which indicates that accessibility modifications must only be made to remanufactured vehicles when the remanufacturing effort involves stripping the vehicle to frame prior to rebuilding.

An additional concern relating to rail accessibility relates to streetcar operations in mixed traffic. Philadelphia has an extensive surface streetcar network, which features trolley operations in the middle of several major city streets. Lift deployment and wheelchair boarding in the middle of a busy street present a serious safety hazard; therefore, streetcar operations in mixed traffic should be specifically from accessibility requirements.

Since many areas, particularly older cities, have unique or unusual aspects of transit operations, the final legislation should contain waiver provisions for safety considerations.

2. Key stations are not defined in the Section 203(i)(1) of the Senate legislation. We agree with the Senate Committee that it is best to leave the selection of which stations are key to each locality. While our own negotiations with the disabled community generally involved such criteria as high ridership, major transfer points, and balanced regional coverage, they also considered physical constraints, cost and funding availability. We believe that the relative importance of such criteria should be locally determined, and that specific key station criteria are unnecessary and would be difficult to administer.

3. Section 203(c) of the Senate bill creates a requirement for full bus and key rail station accessibility plus extensive paratransit service. This will be very expensive to provide, and no funding is available for additional services.

The Senate Labor and Human Resources Committee Report interprets this provision of the act to require supplemental paratransit service to meet extensive service criteria.

The Senate Committee report effectively provides that public transportation operators are responsible for overcoming all mobility barriers faced by the disabled. Public transportation operators would be required to compensate for lack of adequate municipal facilities such as curb cuts and sidewalks; and ineffective or underfunded human service agency transportation programs.

Eligibility for supplemental paratransit service is not well defined in the Senate bill. The phrase "unable to use mainline transportation" can be broadly or narrowly interpreted. Our experience has been that people often prefer to use paratransit because it is difficult, but not impossible, for them to use accessible fixed-route service.

Congress should avoid mandating a broad eligibility criteria for supplemental paratransit because it will perpetuate costly dual services for the disabled. We believe the majority of the disabled would opt for the convenience of door-to-door services and the expenditure to retrofit our nation's public transit systems will only serve a small segment of the disabled population.

4. The Senate Committee report calls for developing programs to provide mobility training for people with diverse disabilities, such as visual and hearing impairments and mental retardation. Transportation of large numbers of people is the business of public transit operators. The industry does not have the expertise to understand the needs and provide mobility training for people with such a variety of special needs.

5. Short response time requirements for paratransit service can create expensive vehicle requirements and scheduling inefficiencies. The Senate report language raises questions as to what is intended as a comparable response time. It is totally unrealistic to require that paratransit response times be equivalent to fixed route headways, and the committee report language should be revised to clearly reflect this. SEPTA operates many bus routes with headways between five and fifteen minutes. Such a response time requirement is clearly impossible to meet; similar response times are not even available with taxi service. If paratransit service is intended to be truly supplemental, we recommend a response time

no shorter than twenty four hours, to permit efficient scheduling and routing of vehicles, in many cases utilizing existing computerized systems which have been developed at considerable expense.

6. While supplemental paratransit services are only required to the extent that they do not "impose an undue financial burden," the term "undue financial burden" is not clearly defined. We are greatly concerned about the increased cost of compliance with this bill at a time when the federal government is continuing to reduce assistance to public transit. For example, in the last ten years

   o Operating assistance has been reduced by 50%.

   o Capital assistance is down by 64% in terms of real buying power.

   o The transit trust fund is frozen.

   In this context, public transit authorities must resist any mandates which are unfunded, especially in the face of demands for expanded service of all types.

   For many transit authorities, any additional expense for which new funding is not provided constitutes an undue financial burden, insofar as fares must be raised or other services cut in order to provide new services. We would point out that fare increases and service reductions cause serious hardship to other low and fixed income riders, many of whom have no alternative means of transportation. Therefore, we strongly urge the Congress to fund the increased cost of compliance with the Americans with Disabilities Act.

7. Finally, we endorse the employment provisions of the Senate bill, with one minor exception. SEPTA has employed the disabled for many years, some of whom are employees who were injured on the job. The Authority has already made "reasonable accommodations" at a number of work locations for its employees.

   However, we take exception to the requirement to hire qualified readers for the blind and interpreters for deaf employees. Such a requirement makes it necessary to hire two individuals in order to obtain the production of one person. In a public service expense environment which is constrained by diminishing subsidy and pressure to improve productivity, such a rule would be exceedingly burdensome.

In conclusion, I believe that this Act can provide for major improvements to the lives of many disabled Americans. However, the language of the proposed legislation must be revised and clarified to prevent lengthy and expensive court battles following the issuance of regulations pursuant to the act. Changes must be made to provide for realistic implementation requirements and schedules, and funding must be included for public service providers who will be expanding and improving their services to the disabled.

Thank you for the opportunity to testify before you today.

TESTIMONY OF RICHARD K. SANDAAS
EXECUTIVE DIRECTOR, MUNICIPALITY OF METROPOLITAN SEATTLE
CONCERNING THE AMERICANS WITH DISABILITIES ACT
PRESENTED TO THE HOUSE PUBLIC WORKS AND TRANSPORTATION
SUBCOMMITTEE ON SURFACE TRANSPORTATION

SEPTEMBER 20, 1989

Good afternoon, Chairman Mineta and members of the Surface Transportation Subcommittee. I am Richard K. Sandaas, Executive Director of the Municipality of Metropolitan Seattle (METRO). Metro operates bus and other public transportation services throughout the 2,128 square miles of King County in the state of Washington. Our active fleet of 1,091 buses makes us the ninth largest bus operating agency in the United States.

Metro supports passage of the Americans with Disabilities Act. More than eleven years ago, our governing board decided to make our regular fixed route service fully accessible to persons with disabilities. Since that time, all our new bus purchases have included wheelchair lifts and all of our new facilities including our $425 million downtown transit tunnel, have been designed to accommodate wheelchair users and individuals with other disabilities.

We have found mainline accessible bus service to be the best means of meeting the transportation needs of almost all persons with disabilities.

I am personally familiar with wheelchair lift technology and can assure you that it works. One of our own mechanics helped design the initial Lift-U company wheelchair back in the late 1970's. Those initial lifts were the best available at the time and lasted from eight to eleven years in active service before they were replaced due to excessive wear-related malfunctions.

Wheelchair lift mechanisms have been improved considerably since then. With proper maintenance, newer lifts should last twelve years or more. We also expect to maintain our current level of 98% in-service reliability with the latest generation of lift technology.

But it takes much more than a functioning lift to make accessible bus service a success. Citizens with disabilities must be involved in designing service. Passenger shelters must be installed with curb cuts and sufficient setbacks. Drivers must be trained to be sensitive to the special needs of individuals with disabilities so that they feel welcome. For example, our drivers call out bus stops for blind persons and we give blind persons large route number signs so drivers can help direct them to the proper bus at crowded downtown stops. While Metro also offers some individualized training, persons with disabilities must also take initiative in familiarizing themselves with how to use an accessible bus service. Finally, policy makers and senior management must continue to insist on accessibility as a fundamental given in the design, construction and implementation of all facilities and services.

Metro's positive approach to mainline accessibility has produced continually increasing use of our services by individuals with disabilities. In 1988, we carried 139,430 wheelchair lift users on our regular fixed route service. Average weekday use was 481 per day. Our average operating cost per ride was $3.89. Our average operating and capital cost per ride was $5.88. That same year, Metro was honored to receive a Distinguished Service Award from the President's Committee on Employment of People with Disabilities for our pioneering efforts on fixed route bus accessibility.

Mr. Chairman, let me reiterate Metro's support of the Americans with Disabilities Act. Persons with disabilities should have a legal right to ride the same buses, planes and trains and enter the same buildings as their fellow citizens. I must share with you, however, our serious concern with the supplemental paratransit service provisions of the Senate-passed bill.

While mainline accessibility can be viewed appropriately as a civil rights issue, only that very small percentage of individuals with disabilities so severe that they can not use a wheelchair lift-equipped bus should be vested with a legal right to special supplemental service. Currently, many communities provide specialized demand responsive services to meet their legal obligations under Section 504 of the Rehabilitation Act of 1973. Metro currently operates a specialized, demand responsive program for low income elderly and disabled adults even though we are not required to by Section 504. That program carried 113,000 riders in 1988 at an average operating cost of $7.43 per trip. People who could use our accessible fixed route service often call first to see if a demand-responsive van is available, because they prefer the comforts of door-to-door service.

The Senate-passed bill was ambiguous about who should be eligible for this type of special, supplemental service. The Senate Committee Report implied everyone who had some difficulty reaching a bus stop should have a legal right to specialized service. This subjective standard may open up a right to costly specialized service to many who simply prefer door-to-door service. The report language almost guarantees this right to dual service when it makes clear that eligibility for specialized service can not be used as grounds for excluding individuals from the very mainline accessible services that they are supposedly unable to use.

We recommend that local transit boards be given the responsibility of determining who should be eligible for supplemental service through individualized certification programs. If Metro is forced to meet demands from individuals with disabilities for door-to-door service, utilization of wheelchair lifts on our mainline service may decrease while the cost of our current specialized program could increase tenfold. Trips for low income seniors may be limited to make room for the service preferences of individuals with disabilities. These types of hard service allocation decisions should be made by local transit boards once the basic civil rights obligation to individuals with disabilities has been satisfied with accessible mainline service.

The Senate version was also somewhat ambiguous about how to judge the comparability of fixed route and specialized demand responsive service. Metro believes fixed route and demand responsive services each have inherent advantages. The following table lists some of those comparative advantages:

Comparative Advantages of Fixed Route and Demand Responsive Service

Fixed Route	Demand Responsive Paratransit
--Regular, predictable schedule, allowing spontaneous tripmaking and no phone call for reservation	--Door-to-door service eliminates travel to bus stops
--Superior response and travel time for trips with origins and destinations near a fixed route	--Superior waiting environment in terms of climate, security and familiarity
--Greater capacity	--Drivers often can provide more help with boarding and packages
--No segration from individuals disabilities	--Goes to any without destination, even those not well-served by fixed route transit
--Better service on long trips	--Best for short trips
--Lower operating costs	

Metro believes that these comparative advantages should be considered when judging the comparability of fixed-route and demand-responsive service. We can not, for example, design a demand-responsive paratransit system that matches the excellent frequency and travel times of our most heavily used bus routes. On the other hand, a fixed route system can never match the waiting comfort of a door-to-door demand responsive system. A local process involving all elements of the disabled community should be used to design services that are comparable when viewed in their entirety.

If Congress wishes to encourage the provision of supplemental services to give elderly and disabled individuals more mobility choices, we recommend you do so by providing financial incentives. As you know, the transportation component of federal assistance for human services has been cut sharply over the past decade. Federal assistance for public transportation has been cut by 50% in real dollar terms during the decade. Increases in programs like the Section 16 (b)(2) program, which provides $35 million in capital assistance to private, non-profits nationwide would be a very effective means of encouraging the provision of supplemental partransit service.

In closing, we applaud the main thrust of the Americans with Disabilities Act. With the expection of ambiguity in the supplemental services section, we wholeheartedly support this legislation. Thank you for the opportunity to come become your subcommittee today.

Mr. **Mineta**. I would like to now call on Ms. Pat Piras from San Lorenzo, California. Ms. Piras, we have your statement. It will be made a part of the record. If you will proceed in your own fashion in a summary of the statement.

TESTIMONY OF PAT PIRAS, CONSULTANT, SAN LORENZO, CA

Ms. **Piras**. Thank you, Mr. Mineta. I appreciate the opportunity to speak on behalf of the ADA and, in particular, I would like to concentrate on the fact that, in general, this legislation will be quite reasonable to implement in rural areas.

As way of introduction, I have been involved in the public transit field for about eighteen years, now. I have run paratransit systems, both on the East Coast and on the West Coast, both general public paratransit and specialized paratransit systems.

I was on the staff of the Metropolitan Transportation Commission in the San Francisco Bay Area for seven years and was responsible for funding and liaison for all paratransit and accessible fixed-route services within the Bay Area. I would point out for those of you who think that San Francisco is big—it is, indeed, a very large metropolitan area, but the Bay Area contains 10 percent of the rural population of the state of California. So we have a wide variety of terrains that are experienced there.

Since 1986, I have been a consultant, working on my own, primarily in the fields of both rural specialized transportation and have dealt with a number of public and private-non-profit agencies, both on the East Coast and the West Coast.

First of all, I guess, I would like to reiterate a couple of comments that have been made before, because there seems to be a great amount of concern about this comparable paratransit issue. As a paratransit provider, and having dealt with paratransit systems throughout the country, the concept that comparable does not necessarily mean equal is important.

The operation of a paratransit system is very different from the operation of a fixed-route system. The scheduling, operations, dispatching concerns, are very different and they are handled on a more immediate day-to-day kind of basis. One concern that comes up in many cases is the advanced reservation requirement for paratransit is, in many cases, for the convenience and, perhaps, the sanity of the people operating the system.

An immediate response is, the paratransit program is very difficult to operate and, theoretically, an advance-reservation system is more productive because you can preschedule all the trips, you will group rides. That way, you will be able to transport more people with a limited number of vehicles.

What happens, in practice, is that somebody cancels, somebody no shows. You have the vehicle scheduled to be out in one corner of the service area, possibly coming back in to drop off a passenger. On a fairly regular basis, several times a day, that ends up being a non-trip. So there is a fair amount of vehicle-wasted utilization that results from an advanced reservation system.

Because of some of these issues, this is one of the things as to why a fixed-route accessible service can be so much more cost-effective in the long run. It is not as labor-intensive and you can get a much higher utilization of your capacity by having accessible fixed-routes.

In rural areas, many systems are providing both fixed-route and paratransit, some of each. Sometimes both are done directly by the transit property, sometimes in coordination with a non-profit or another public agency. Demand-responsive tends to work fairly well in low-density areas, and so for many rural properties, the paratransit side of the ADA is relatively moot. They are already meeting those requirements.

There has been, throughout the county and over a long period of time, a fair amount of concern about the costs and the resulting ridership of fixed-route accessibility. As Mr. Mineta is well aware, California has had a requirement under state law since 1971 that all fixed-route buses be bought accessible. It took a while for that to be actually enforced and even with this very long-standing commitment, there is still a relatively low number of 100 percent accessible systems throughout California, just because of the time lags involved in buying and replacing fixed-route vehicles.

One example that I have cited in my testimony is the city of Santa Rosa. They became fully accessible in FY '88-89 and, that year, were carrying about 160 trips a month, actually relatively comparable to Milwaukee, which is a much larger system.

By Fiscal Year '88-89, Santa Rosa was carrying 910 trips a month. Over that whole period, total ridership on the bus system increased about 34 percent; lift usage increased by 450 percent. This is with a very good paratransit program in the area. So if a system is allowed to be developed, to remain in place over time, to be marketed, to be maintained, to have a good public information system, to have training of both users and drivers, you can have a system that works.

But to put into effect an accessible fixed-route system and then to pull it back, you are not going to have time to develop ridership. Another reason for this is because, in many cases, you can only make a few routes accessible at any one time. Often it would involve a transfer.

If you can only make half the trip, you are not going to make the first half of the trip. So ridership needs time to be able to be developed.

The issue of cost of accessibility has come up with a number of other speakers. It is the belief of many of the systems, perhaps in California—and we are, sometimes, perceived as an alien nation by the rest of the country—because the market for accessible equipment on transit buses has fluctuated so irregularly over time because of flip-flops in national policies, this has an impact on the cost of the equipment.

The manufacturers don't know how many to make from year to year. They don't know what they are going to be designing for a market that is going to be there three years from now because they don't know what the regulations are going to be, who is going to be buying buses.

One of the members, earlier, asked about how many lift manufacturers there are. There are only about three or four right now. When the prior regulations were in effect, that required full accessibility, there were seven or eight manufacturers, and several of them, actually, went out of business when the regulations were withdrawn because the market dried up.

So, in effect, part of the reason that the cost of accessible fixed-route has been relatively high in the past is because a small group of transit operators who have been committed to fixed-route accessible are paying for the profits that are not being derived from the other systems.

I would also like to note that is it important, in a way, to have a mandate for accessibility because left on their own, most transit operators have not voluntarily assumed the burdens of responsibility.

I believe it was Mr. Lipinski who asked about reactions to APTA's testimony. Part of why APTA may be—and this is speculation on my part—but part of why they may be, now, not being quite so adamant against the ADA is that their own membership has been trying to make the point to APTA that many systems want to be accessible. They are trying to. They are tired of explaining to their own constituencies that they are not in the same position as a national organization that alleges to represent them.

APTA has about 400 members, nationwide. Of the rural transit systems in the country who receive Section 18 from UMTA which is non-urbanized areas under 50,000 population, there are about 1100 systems of that size in the country. They are not represented by APTA.

There was a study, recently done in North Carolina, that looked into the UMTA Section 15 reports which was where all the transit operators report how much they are spending, what kind of service they are delivering, what is happening. The 1983 report of transit operations across the country which, actually, referred back to about two years prior so it was right at the point where the 1979 regulations, which required full accessibility, were really just coming into plan.

Operators were planning full accessible systems and, at that point, there were only about 112 UMTA receipients who were delivering demand-responsive service. By the time the regulations had been relaxed in the mid-1980's, and the report was compiled for a few years later, the number of demand-responsive systems had grown to 250 with a flexible regulatory process.

So it is incumbent upon this body, if accessible services are to be delivered throughout the country, to have a national mandate.

Cost reports where, in many cases, the cost per ride comparisons that you may be given throughout a variety of systems which show very low cost per trip for paratransit, relatively higher trips for fixed-route, are not comparable because they are not looking at the same kinds of systems.

Most paratransit services have a very large elderly, non-disabled ridership, and that skews the cost per trip. You are adding in a lot more trips that are not subject to the calculation when that is applied to fixed-route accessible services.

As far back as 1982, when I was on the MTC staff, we tried to really look at, what were the costs of only those trips relating to persons with mobility disabilities, such as wheel chair users. At that point, when lifts were being very badly designed, there were horrible maintenance problems—they have improved significantly since then—but, at that point, we estimated that the capital costs of fixed-route accessible were about 6 percent of capital costs and about 1/10 of 1 percent of operating costs.

The situation has improved significantly since then.

A couple of other comments I was requested to refer to: Inter-city bussing is an issue that comes up in rural areas. I was not able to find it in my copy of the record so far, but the Department of Agriculture held a series of symposiums that have led to Congresswoman Virginia Smith's bill, and the issue of non-accessibility of common carrier intercity buses came up several times.

As somebody else pointed out, Greyhound is running vans as well as large buses. In fact, many of them are, to use a brand name, the El Dorado Falcon. The exact same bus that is being run as a small-city or rural local community public transit system is what Greyhound is running in some rural areas. They have gone to small buses because they are not using all the seats in some of these areas.

Tracking down complaints regarding this is difficult because there is no central place to send complaints. If people have complaints, most of the time, they send them to Greyhound so they are not readily available. There is no central repository for concerns on intercity bus problems in rural areas.

One anecdote I might bring in; in Southern California, I have been working with a system that is working to improve both—primarily, it is paratransit programs. The public transit system is 100 percent accessible, but it doesn't reach all areas of the county. The paratransit has a severely constrained capacity. There is an individual with developmental and physical disabilities who is going to a workshop that is twelve miles from his house.

The coordinating agency for developmental disabilities is spending $150 a day to transport this individual because they can't get on to the paratransit program.

Finally, in conclusion, in support of the ADA which does require both fixed-route accessible and paratransit as a supplement and complement to those services, the experiences that we have found throughout California and other parts of the country is that, indeed, both are needed. When they work together, you can provide a much higher level of service for all persons in the area.

Thank you. I would be glad to answer any questions.

Mr. **Mineta**. Thank you very much. There are going to be some things that we are going to have to consider. Let me ask you, what kind of criteria do you think we ought to look at in order to define comparable paratransit service? What kind of criteria should we be looking at to determine who in the disabled community is eligible to use paratransit services? Thirdly, what kind of criteria should we be looking at to determine what constitutes an undue financial burden to a public-transit entity?

Ms. **Piras**. I might try and cop out of that, somewhat, by saying I think that the legislation leaves a lot of that to a regulatory process. But that can be dangerous, too. Part of the problem we have had so far is, perhaps, leaving too much to a regulatory process.

I believe the gentleman from Seattle made some very good points. Although one would have to be cautious, I guess, a truly committed public transit agency—Mr. Jenkins made the comment, the individual from Seattle made the comment—a transit property that is really working with its local community, rather than telling its local community what the community wants, can develop a process and a resulting level of service that is probably far more likely to meet needs than an imposed kind of approach.

One of the interesting things, in the North Carolina study I mentioned, one of the other questions that was asked was, "What is your local handicapped population; what is your local wheel-chair user population? What percentage of those people are you serving?"

Of the 200-some demand-responsive systems that reported, something like 70 percent of them, the answer was, "We don't know." Well, how can they be having a collaborative working relationship with the local community if they don't know who those people are?

So, the public participation involvement of it is critical. I think, in terms of criteria, the so-called service criteria that were attempted to be used in the current DOT regulations provides some guidelines. Time of response, fare, service area are concerns that most users do seem to want to have some input into.

I missed your second question, by now.

Mr. **Mineta**. Who would be eligible for paratransportation?

Ms. **Piras**. Again, a lot of that is familiarity with the transit system. It is hard to learn to use public transit. Most people, anywhere, don't use it. A transit mentality to understand that you might have to transfer, that you have to be at a bus stop before the bus gets there or you are probably not going to make it—it takes time to learn that.

User training; with adequate user training, the number of people who really can use public transit would be higher. A lot of people can't use transit because they think they can't use transit. Medical certifications have been a mode of convenience in a number of areas because that, also, puts the burden on a doctor who says, "Okay, this person has qualified under some medical basis."

Again, in many cases, the doctor just says, "I want this person out of my office. Let them ride transit and get them out of here. Let it be the transit system's problem." I think the disabled community, in many cases, is very able to police themselves and, again, working with a good collaborative process can impose some of those restrictions on themselves.

In terms of undue financial burden, I believe the provision that is on the Senate side which allows for a credit, so to speak, for a paratransit program that is in existence that may be getting funding not only from the public transit side but from a variety of human services fundings can help to ease that burden.

While it is not directly the subject of either this Committee's deliberations in general, or the ADA, specifically, the whole issue of coordination of funding for transportation purposes throughout Federal and state governments is one that is probably going to have to be addressed over the next few years as resources continue to tighten.

Mr. **Mineta**. Thank you very much, Ms. Piras. I appreciate your testimony and your being here to help us deliberate on this issue.

Ms. **Piras**. Thank you.

[Ms. Piras' prepared statement follows:]

INITIAL TESTIMONY TO

HOUSE COMMITTEE ON
PUBLIC WORKS AND TRANSPORTATION

REGARDING
AMERICANS WITH DISABILITIES
ACT OF 1989

Submitted By:
PAT PIRAS
San Lorenzo, California

September 20, 1989

AMERICANS WITH DISABILITIES ACT OF 1989
Testimony by Pat Piras

These comments are submitted with a focus on transit systems in rural and small city areas. Additional written testimony will be forthcoming.

Public transportation is a crucial service in rural areas, providing lifeline as well as socialization and community connections. For persons with disabilities, this may be doubly important.

Public transit is provided through a variety of modes, and many systems utilize multiple service delivery methods. There are currently approximately 1,100 agencies which are recipients of UMTA Section 18 funding. The most recent information available, for FY 1984-85, indicates that 68.5% provide demand-responsive (paratransit) service, 54.5% provide fixed-route service, and 32.9% provide some variation of fixed-route service. Funding is often also provided from various human services and state and local sources.

It should be recognized that, given a choice between fixed-route and demand-responsive service, virtually everyone would prefer the conveniences that the latter can provide. In a low-density area, demand-responsive is often the preferred service due to the spread-out distribution of the population. However, by comparison to fixed-route, paratransit is generally more labor-intensive and therefore can incur relatively higher costs. Further, the efficiency and productivity of the service is more dependent on human factors on the supply side. In particular, advance reservation paratransit services often do not experience the increased productivities that theory would suppose, due to the inflexibility that such scheduling incurs (e.g., an unexpected cancellation or "no-show" by a passenger often results in a now-empty vehicle deadheading along a pre-determined route, rather than re-arranging planned stop assignments as would occur in an "on-call" or "immediate response" mode.

In many rural areas and small cities, fixed-route transit is generally more efficient and cost-effective than specialized services. However, to be truly usable by persons with disabilities, considerations in addition to lift or ramp accessibility must be taken into the transit system's planning and funding -- including routing, scheduling, bus stop access, training, maintenance, and marketing/information services. If a transfer is required to complete a trip, and only one of two or three route segments is accessible, the trip is not likely to be taken at all. This is seldom taken into account in ridership projections or reports.

In California, new bus purchases have been required to be accessible to wheelchair users under the provisions of Government Code Section 4500, enacted in 1971. Even with this long-standing commitment, only a relatively small number of systems have reached 100% accessibility, due to the long life-span of transit vehicles. As one example, Santa Rosa CityBus became fully accessible in FY 1983-84. That year, wheelchair ridership was 1,966 trips, or about .2% of total. By FY 1988-89, wheelchair ridership had grown steadily to 10,920 trips, or .8% of total. Over that time period, total transit ridership increased 34%, while lift usage increased by 456%.

If accessibility were a standard feature on transit buses, manufacturers would be more able to predict market levels, and it is likely that unit costs could be lower. The "flip-flop" policy at the national level has negatively impacted the pricing, selection, and reliability of lift equipment. Frankly, many California transit properties are tired of the attitudes shown by other systems. Studies in Seattle and Oakland have indicated that the attitude of management and policy Board members has a significant effect on how well accessible services are delivered and used. Over time, and given a fair chance, accessibility does work! The attached letter from the Fresno County Rural Transit Agency exemplifies this perspective.

In contrast, the lack of a strong and consistent national mandate for accessibility has affected transit operators' choices on how service is delivered to persons with disabilities. A recent study from North Carolina A&T University surveyed transit properties submitting UMTA Section 15 reports for demand-responsive services. In the 1983 Section 15 Report, under USDOT's original (1979) "full accessibility" regulations, there were 112 systems reporting demand-responsive services; by the 1988 Section 15 Report, which (due to compilation and publication lags) covers operations under the more lenient "special efforts" interim rules, the number had grown to 250 such systems.

Cost reports which compare fixed-route and paratransit services for persons with disabilities are also often misleading. Most specialized services are available to "E&H" riders, and thus transport a significant number of elders, with eligibility based on age rather than difficulty or inability to use other public transit. This skews reported ridership levels and results in a lower cost per trip than if only disabled riders were calculated. A 1982 study by staff of the Metropolitan Transportation Commission (San Francisco Bay Area) concentrated only on trips made by wheelchair users and concluded that "the total cost of accessibility is relatively modest compared to the total cost of all transit and paratransit services." Based on this methodology, it was estimated that the incremental cost of fixed-route accessibility was no more than 6% of capital costs and .1% of operating costs.

In order to effectively implement the intent of the Americans With Disabilities Act of 1989, two additional concerns are raised for the Committee's consideration:

a) In many communities, particularly in rural areas, existing paratransit services receive a significant level of funding support from human services and categorical programs. In order to sustain the levels of available transportation services, these non-UMTA funding sources should be required to be maintained, and coordinated with the public transit services.

b) The wide variety of wheelchairs and powered "scooter"-type mobility aids has created a legitimate safety concern for many transit operators. Although critical for individual mobility, research shows that most "scooter"-type wheelchairs are not designed, and are often unsuitable, for use on a moving transit vehicle. However, the purchaser is seldom informed of this usage constraint. USDOT coordination with the Department of Health and Human Services, which often funds such equipment purchases, is urged.

In conclusion, the denial to persons with disabilities of opportunities for full availability of transit services cannot be allowed to continue. Experience has shown that the combination of fixed-route accessibility, with supplemental paratransit, can meet the widest variety of personal needs and local conditions. Both types of service are needed. The enactment of the Americans With Disabilities Act of 1989, coupled with the appropriation of adequate mass transit funding, can ensure the delivery of these services.

FCRTA

FRESNO COUNTY RURAL TRANSIT AGENCY

September 18, 1989

MEMORANDUM

TO: Pat Piras Consulting

FROM: Jeffrey D. Webster, General Manager

SUBJECT: Rural Transit Response to Americans with Disabilities Act of 1989 - Congressional Testimony

Since its formation ten (10) years ago this month, the Fresno County Rural Transit Agency (FCRTA) has been committed to providing accessible general public transit services to the rural population within Fresno County that lives beyond the urbanized Fresno-Clovis Metropolitan Area (FCMA).

Our emphasis has focused on the needs of the transportation disadvantaged, specifically: elderly, handicapped and low-income residents within thirteen (13) rural incorporated cities that range in population from 2,000 to 15,000 residents and another dozen unincorporated communities as small as 100 residents. These individuals rely on our ninety percent (90%) subsidized services to travel within their communities and to and from the urbanized FCMA.

Our services are provided as sixteen (16) coordinated transit subsystems. Our service area encompasses 6,000 square miles. We operated single and multiple vehicles in both fixed route, with route deviation to pick up the handicapped, and demand response modes. Inter-city transportation is available through a number of cities by non-wheelchair accessible common carrier busses (Greyhound and Orange Belt Stage Lines). We provide accessible back-up services that duplicate their routes to facilitate frail elderly and handicapped individuals that may not be able to negotiate the steps of a common carrier coach bus. Our service routes are up to sixty-five (65) miles in each direction. Once in the urbanized area, our patrons may transfer to urban transit operators, the air terminal, or Amtrak service. Unfortunately, their services are not fully accessible.

From our initial goals and policies development, we have felt that there is no excuse for not planning and budgeting for a fleet of wheelchair accessible vehicles. Our fleet has included a half dozen different makes, models, and sizes. In each case, we found that installation of suitable wheelchair lifts could be accommodated for between $2,500 to $7,000 including any structural engineering modification that may have been necessary. Currently, we operate twenty-nine (29) vehicles consisting of twenty-seven (27), fifteen (15) passenger type domestic vans and two (2), thirty (30) passenger coach busses.

Maintenance of the equipment has not posed any particular problems. We are fortunate to have authorized dealers within the metropolitan area; two of which are qualified Disadvantaged Business Enterprises (DBE) that were founded by handicapped individuals.

Our annual ridership has grown to approximately 250,000 trips. Frail, elderly and handicapped patrons account for forty percent (40%) of our services, and the figures continued to grow in this category by at least three percent (3%) annually. Our handicapped patrons comprise representatives of every disability that can access public services. Alternative social service transportation is also available within our County. A majority of such services are provided, or coordinated, by the Fresno County Economic Opportunities Commission (FCEOC), as the designated Consolidated Transportation Service Agency (CTSA). They are responsible for another 260,000 such trips annually.

In summary, I should emphasize that we are the only alternative for many of our patrons who may wish to travel within and between communities. To be anything but one hundred percent (100%) accessible, would be irresponsible. To contend with such responsibility, is in our opinion, more expensive than the cost associated with full accessibility.

Mr. MINETA. Let me, at this point, call on Mr. Oral O. Miller, national representative, American Council of the Blind.

Mr. Miller, your statement will be made a part of the record. If you will go ahead and summarize in your own fashion, sir.

TESTIMONY OF ORAL O. MILLER, NATIONAL REPRESENTATIVE, AMERICAN COUNCIL OF THE BLIND

Mr. MILLER. Thank you, Mr. Chairman, especially at this late hour. My name is Oral Miller. I am the National Representative of the American Council of the Blind, which is the largest membership organization of blind people in the United States.

The American Council is made up of 50 state or regional affiliates or chapters, as well as 21 national special interest organizations, which are established along professional, vocational or some other common interest line. In short, our members come from throughout the United States, from all age brackets and from all walks of life.

My remarks today are going to focus on three areas; the fixed-route service, special service, and facilities that are to be accessible in connection with transportation.

First, regarding fixed-route service; Title II of the Americans With Disabilities Act considers as discrimination the purchase or lease of fixed-route vehicles if such are not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

Although we certainly do not, and I emphasize—we do not object to any requirements in this act that will make vehicles accessible to people using wheelchairs—we do continue to have some concern about the use throughout the bill of the term, "accessible to and usable by persons with disabilities" including individuals who use wheel chairs simply because we believe that many of those references might, some day, tend to create the impression, when this bill is being construed, that the main purpose of the bill was to remove architectural or similar physical barriers.

We all know here, of course, that that absolutely is not the intent of this bill.

There are, perhaps, no physical modifications that are absolutely necessary in transportation vehicles to enable blind people to use them. However, there are a few simple and extremely inexpensive modifications or accommodations that would immensely improve the usefulness of vehicles for blind people.

Some of these would include such items as loud speakers; that is a loud speaker outside a vehicle that would enable an operator to provide information about route destinations and so forth to a waiting blind passenger or perhaps a loud speaker inside the vehicle in order to enable the operator to inform a blind passenger, or other passengers as well, concerning information they might want.

Another example could be larger and more legible outside signage on the vehicle in order to help visually-impaired people, as well as the general public, in identifying the route destination, et cetera, of that vehicle.

In recent years, we have made a number of recommendations to the Department of Transportation concerning these and other inexpensive accommodations and even simple changes in operating procedures that would make fixed-route service much more accessible and helpful to blind people. But, to date, we have not seen any regulations to achieve these ends.

In order to make it clear that the Americans With Disabilities Act is intended to protect all disabled people, regardless of the nature of the disability, and in order to eliminate the temptation in the future to provide what I am going to call one-size-fits-all service to disabled people, regardless of the nature of the disability; we recommend that clarifying language should be included, preferably in the bill, or if not in the bill, at least in the report, to the effect that the Americans With Disabilities Act is to be construed so as to bar discrimination faced by all disabled people and that nothing in the bill is to be construed to require disabled people to accept any accommodation or service that is inappropriate or which they don't want.

Regarding the second topic, which is the special service, Title II of the ADA would also require a public transit entity to provide special or paratransit service to disabled people who can't use fixed-route service. We have heard a lot of discussion on that today.

The senate report on this subject is very clear in saying that this service should be made available to all disabled people who are not able to use fixed-route service and that local transportation authorities should get meaningful input from all sectors of the disabled community in establishing service eligibility criteria.

Because of some unfortunate wording in the Department of Transportation regulations a few years ago, a number of local transportation authorities, including at least one who testified here earlier today, ruled that blind people, as a class, are automatically not eligible for special service because they are physically able to walk to bus stops or to train stations and then physically able to get on and get off of the bus or the train.

This position ignores the reality, as pointed out, I believe, by the gentleman from Milwaukee, earlier, that there are other factors that may make it difficult, and in some cases almost impossible, and, perhaps, dangerous for some blind people to get to fixed-route stations.

In referring to the difficulty encountered by many mobility-impaired people to get to fixed-route service, it is interesting that the Senate Report on this subject referred to the lack of curb cuts as one of those barriers.

Some of the conditions which could be at least serious obstacles for blind people could include such things as the need to cross, perhaps, a very busy, wide highway having no traffic controls. It could involve something as apparently simple as the unexpected unavailability of a guide dog which the traveler has been accustomed to using, especially if his other travel skills are not as good as they should be. Or it could include such as thing as the existence of a secondary handicap, though maybe a temporary one, such as reduced hearing, that could impair a blind person's mobility skills.

We believe that blind people should be encouraged to live as independent lives as possible. And we also believe they should be given appropriate orientation and mobility training to enable them to do that.

In my written statement, I have given the name and citations of a couple of these studies, and I am sure there are more.

However, since the selection of inappropriate materials and the improper placement of markers could make those markers useless, or even worse, make them dangerous, and since there is a widespread belief among, if not most, certainly of a very high percentage of blind people in the United States that such markers could be helpful, we believe that, pursuant to Title V of the bill, the Architectural and Transportation Barriers Compliance Board should be asked to study this matter thoroughly, carefully, and objectively before issuing minimum guidelines and requirements for accessibility design for the purposes of Titles II and III.

Thank you for the opportunity to speak to you today. If you have any questions, I will be pleased to answer them.

Mr. Mineta. Thank you very much, Mr. Miller, for your very complete and thorough submission. Let me ask whether or not, based on your experience with public mass transit and inter-city transportation services, as to whether the enactment of the ADA bill will provide for the elimination of existing barriers or discrimination for individuals who are blind?

Mr. Miller. Concerning transportation, as I indicated, there are not the enormous obstacles facing blind people that there are, perhaps, facing our mobility-impaired colleagues. Most of the changes, the modifications, accommodations or whatever that I have referred to—and there are many others—would, certainly, make transportation easier. I think they would probably attract more blind people, encourage them, urge them to use, public transit facilities.

In terms of ending all discrimination, all discriminatory acts, and so forth, that is a wonderful ideal. Some of the regulations that are on the book now are not being followed very well, so I guess some of it would depend on how well the law is complied with.

Mr. Mineta. Mr. Miller, do you think there is any chance that there might be any unintended practices that might come from the adoption of ADA that may create more discriminatory practices?

Mr. Miller. That is difficult to say. I can't think of any right off. I referred to the one-size-fits-all approach, earlier, which is a way of saying the providers may think that if they do one thing, then that takes care of their complete obligation toward all disabled people.

I don't think of anything else right off.

Mr. Mineta. Very well. Counsel, any questions? Mr. Miller, thank you very, very much for your very complete testimony but, more importantly, your patience at this late hour of the day.

Mr. Miller. Tenacity pays off.

Mr. Mineta. Thank you very much for being here.

Mr. Miller. Thank you.

[Mr. Miller's prepared statement follows:]

Unfortunately, though, the reality is that there may be some unique features in the community that make independent mobility for even the better-trained and the more mobile blind people difficult. The reality is that there are differences in the levels of independent mobility among blind people.

The reality is that, in some cases—for example, in the case of people who lose their eyesight at an older age—in some cases, such people do not attain the degree of confidence or skill which is attained by other blind people. And, in general, there will always be some cases where special service will, probably, be appropriate.

For these reasons, we believe that the report should make it clear that blind people are either eligible or, at least, that they are not to be automatically considered ineligible, for special service if they choose to use it and if they meet other service requirements.

Regarding my third topic, the question of accessible facilities, Title II of the Americans With Disabilities Act provides that new transportation facilities shall be accessible and, generally speaking, that the transportation activities conducted in connection with them will also be accessible.

There are a number of inexpensive and very useful accommodations that can be made to transportation facilities that will make them far more useful and accessible to blind people. Among these are such things as, much better lighting for the use of visually-impaired people and the general public; clearer and more legible signage for the use of visually-impaired people and the general public; appropriately-placed brain instructions, for example on fare-card machines or other devices in stations; tactile route maps and destination information.

Another example would be appropriately-placed tactile markers in clear, contrasting colors and made of a suitable material in order to give directional or locational information to blind travelers such as along platform edges or, perhaps, near escalators or fare gates or at other appropriate places.

Another simple modification or improvement or accommodation would be greatly-improved information systems, by telephone and by loudspeaker. Such systems, of course, would be extremely helpful to the general public, also.

We recognize that some people believe that tactile markers for orientation and mobility purposes should not be used for a variety of reasons. Again, that reality is that not all blind people have the same degree of mobility skills. Also, there may be temporary conditions such as construction, very loud noises, et cetera, that may temporarily impair a blind person's mobility skills.

And, also, although we wish it were not true, some blind people may not always be 100 percent attentive—this is the same as with all other travelers—may not be 100 percent attentive as to conditions around them, especially when they are in a hurry.

In some cities, in recent years, such as in San Francisco, Washington, New York and Boston, there have been a number of accidents involving an apparently high percentage of blind people falling off subway platforms. Both in connection with this and, perhaps, unrelated to this, too, a number of studies have been undertaken to determine whether appropriate tactile markers would reduce the risk of such accidents.

Introduction

I am Oral O. Miller and I am the National Representative (Executive Director) of the American Council of the Blind, the largest membership organization of blind and visually impaired people in the United States. The American Council of the Blind is made up of 50 state/regional chapters or affiliates as well as 21 national special interest affiliated organizations established along professional, vocational or some other common interest. Among these national special interest affiliated organizations are the American Blind Lawyers Association, National Association of Blind Teachers, Randolph Sheppard Vendors of America, Visually Impaired Data Processors International, Visually Impaired Piano Tuners and Council of Citizens with Low Vision. In short, our members come from all parts of the United States, all age categories and all walks of life. The primary objective of the American Council of the Blind is the advancement of the well-being of blind people and the betterment of our total community.

It has been our pleasure to support the Americans with Disabilities Act since its introduction and we appreciate this opportunity to present our testimony to you today regarding the transportation and related needs of blind people and people with severe visual impairments. My remarks will focus primarily on public transportation provided by public entities--fixed route service, special service and facilities that are to be used to provide public transportation service.

Fixed Route Service

Title II of the proposed Americans with Disabilities Act considers as "discrimination" the purchase or lease of a new fixed route bus, intercity rail vehicle, commuter rail vehicle, etc. if it is not readily accessible to and useable by individuals with disabilities, including individuals who use wheelchairs. The objective of providing transportation with accessible vehicles is also sought in connection with used vehicles and remanufactured vehicles. Although we certainly do not oppose any of the requirements that will make vehicles accessible to people using wheelchairs, we continue to be concerned about the use throughout the bill of the phrase "accessible to and useable by persons with disabilities, including

BEST COPY AVAILABLF

individuals who use wheelchairs" because such references, among others, tend to create the impression that the bill may be intended primarily to remove architectural barriers and we know, of course, that absolutely is not the intent. There are probably no physical modifications that are absolutely necessary in such vehicles to enable a blind person to use them. However, there are a few simple and extremely inexpensive modifications or accommodations that would immensely increase the usefulness of such vehicles--simple things such as a loud speaker outside a vehicle that would enable its operator to identify its route or destination to a waiting blind passenger, a loud speaker inside a vehicle that would enable its operator to give information easily to blind or other passengers needing it or larger and more legible signage outside a vehicle to aid visually impaired and elderly passengers, among others, in identifying its route or destination. In recent years we have made recommendations to the Department of Transportation concerning these and many other inexpensive accommodations or simple changes in operating procedures that would make fixed route service much more accessible to blind passengers, but to date we have not seen regulations issued that would accomplish these ends

In order to make it clear that the ADA is intended to protect all disabled people regardless of the nature of their disabilities and in order to eliminate the temptation to provide "one size fits all" service to all disabled people, regardless of the nature of their disabilities, we recommend clarifying language be included in the Act or at worst in the record to the effect that the Act is to be construed so as to eliminate discrimination faced by all people with disabilities regardless of disability category or type and that nothing in the act shall be construed to require a disabled person to accept an accommodation, service, opportunity or benefit which is not appropriate to or desired by that person.

Special Service

Title II of the Act would require a public transit entity that provides public transportation to provide paratransit or special transportation service for disabled people who can not otherwise use fixed route public transportation and to other individuals associated with such disabled people in accordance with service criteria established under regulations promulgated by the Secretary

BEST COPY AVAILABLE

of Transportation--unless such special service would impose an undue financial burden on the public transit entity. The Senate report on this subject was very specific in stating that such service should be available to all disabled people not able to use fixed route service and that local transportation authorities should obtain meaningful input from all sectors of the disability community in establishing service eligibility criteria. Because of unfortunate wording in regulations issued by the Department of Transportation a few years ago many local transportation authorities have ruled that blind people are not eligible for special service because they are physically able to walk to a bus stop or subway station and then get on and off the bus or train. This position ignores the reality that other factors may make it very difficult, virtually impossible or dangerous for some blind people to get to fixed route stations. In referring to the inability of mobility impaired people to get to fixed route service the Senate report referred to the lack of curb cuts as a barrier. Conditions which could be serious obstacles for blind people could include the need to cross a very busy highway having no traffic controls, the illness of a guide dog that is customarily relied upon or the existence of a secondary handicap, such as impaired hearing, that could reduce a blind persons mobility. We believe that blind people should be encouraged to live as independently as possible and that they should be given proper orientation and mobility training to enable them to do so. However, the reality is that there may be unique features in a community that make independent mobility for even the best trained blind people difficult; that there are significant differences in the level of independent mobility performance among blind persons; that some blind people, especially those who lose their sight in their older years, never attain the confidence or level of independent performance attained by other blind people and that on balance there will always be many cases in which special service is more appropriate for some blind people. For these reasons we believe the record should make it clear that blind people are eligible for special service if they choose to use it and meet appropriate service standards.

Accessible Facilities

Title II provides also that it shall be considered discrimination for a public entity to build a new public transportation facility that is not readily accessible to and useable by individuals with disabilities, including

BEST COPY AVAILABLE

individuals who use wheelchairs; that alterations of existing facilities shall be made in a manner to make the altered portions readily accessible to and useable by individuals with disabilities and that it shall be considered discrimination for a public entity to fail to operate such transportation program or activity in such facilities so that, when viewed in the entirety, it is readily accessible to or usable by individuals with disabilities. There are many inexpensive yet very useful modifications or accommodations that would make transportation facilities such as terminals and stations more "accessible to and useable by" blind people. Among these are better lighting for the use of visually impaired people (as well as members of the general public), clearer and more legible signage for the use of visually impaired people, appropriately placed braille instructions for the use of braille readers (such as on farecard machines and other devices), tactile route maps, appropriately placed tactile markers in clear, contrasting colors and of a suitable material to give directional or location assistance to blind travelers (such as along platform edges, escalators or near fare gates) and greatly improved information systems (by telephone and/or loud speaker). We recognize that some people argue that tactile orientation and mobility markers should not be used for a variety of reasons, but again the reality is that not all blind people have the same degree of mobility skill; that temporary conditions such as construction may temporarily impair a person's mobility skills and that, though we wish it were not true, blind people, the same as sighted people, are sometimes less than one hundred percent attentive to conditions around them. In some cities there have been serious accidents involving an unusually high percentage of blind people in rapid rail facilities and studies have been undertaken to determine whether appropriate tactile markers would reduce the risk of such accidents. (See "Solutions for Problems of Visually Impaired Users of Rapid Rail Transit" by U.S. Department of Transportation, Urban Mass Transportation Administration, Report #UMTA-MA-0036-81-1 and "Tactile Warnings to Promote Safety in the Vicinity of Transit Platform Edges" by U.S. Department of Transportation, Urban Mass Transportation Administration, Report #UMTA-MA-06-0121-87-1, December 1987, Final Report.) Since the selection of inappropriate materials and the improper placement of such markers could make such markers useless or perhaps dangerous and since there is the widespread belief by most blind people that such markers would be helpful, we believe that, pursuant to Title V of the ADA, the Architectural and Transportation Barriers Compliance Board should study this matter carefully and

BEST COPY AVAILABLE

objectively before issuing minimum guidelines and requirements for accessible design for purposes of Title II and III.

* * *

We shall be pleased to consult with members of this subcommittee and members of its staff concerning any of the matters discussed herein. Thank you again for this opportunity to present our testimony.

Mr. **Mineta**. I would now like to call forward Mr. James Gashel, Director of Governmental Affairs, National Federation of the Blind. Mr. Gashel, your statement will be made a part of the record, so go ahead and summarize your testimony, if you would do so. Thank you.

TESTIMONY OF JAMES GASHEL, DIRECTOR OF GOVERNMENTAL AFFAIRS, NATIONAL FEDERATION OF THE BLIND

Mr. **Gashel**. Thank you, Mr. Chairman. You can be sure of a summary at this hour. Let me say that with regard to patience, I think we should all commend you for yours, not that it is not your responsibility, because it is. But I think that this hearing has given all of us an opportunity both to learn more about the Americans With Disabilities Act and learn more about the reality of some of the issues that have to be confronted in this bill.

I really want to commend you for having such a full-blown hearing on this. Thank you very much for that.

Let me just say, concerning something that you can't do anything about, but I need to correct the record on this; Mr. Miller referred to the fact that he represents the largest organization of blind people, I guess, in the U.S. or the world or something like that. I am not sure which. But, anyway, as he knows and my colleagues who are with me here at this hearing know, that simply is not the truth. Mr. Miller will just have to allow his views on it to—let's put it this way, to deal with his own conscience on the subject.

The National Federation of the Blind, in fact, has a membership of over 50,000 blind persons in this country and is the largest organized group of blind transit consumers. For fifty years, the federation has had a history of dealing with civil rights laws and civil rights issues in the area of disability. Jacobus Tenbroek, a distinguished blind law professor at the University of California was the founder of the National Federation of the Blind and the first leader of the organized blind movement in this country.

He authored a model state law—California was one of the first states to enact it—and that law is on the statute books now almost everywhere. It declares forthrightly the following: the blind, the visually-impaired, and the otherwise physically-disabled shall have the right to full and equal accommodations, advantages, facilities and privileges of all common carriers, airplanes, motor vehicles, railroad trains, motor buses, street cars, boats, or any other public conveyances or modes of transportation, hotels, lodging places, places of public accommodation, amusement, or resort and other places to which the general public is invited subject only to the conditions and limitations established by law and applicable, alike, to all persons.

That sets, I think, a very clear standard. It is a standard that is working very well for us. The non-discrimination standard in this model state statute calls for equal access and equal rights, regardless of blindness or of disability.

The Americans With Disabilities Act, on the other hand, calls for a standard which would comply with the regulations issued under Section 504 of the Rehabilitation Act. The non-discrimination under Section 504 is, really, quite a bit different from the Model White Cane Law standard.

The Model White Cane Law talks about equal participation. Section 504 talks about accommodated participation. There is a significant difference in ways that I will describe. First, this background. Paternalism is the most common form of discrimination against blind people. People presume that we cannot do things because we can't see to do them. Accommodation, or in other words creating ways for us to participate, then becomes the reflex response.

But accommodation may be discriminatory. In my written statement, I have some examples. It goes to the question which you were just putting to Mr. Miller. One example is offering a wheelchair to a blind person when the person is traveling through a public facility. It happens to us a lot at airports. I know you used to be chairman of the Aviation Subcommittee, so I had to mention that.

You know, if a blind person rejects the offered wheeichair, the rejection is, often, then, very much resented and the blind person is seen as ungrateful for refusing the offer. Situations such as this inevitably lead to confrontations with the expressed expectation that the blind ought to be happy if someone does something for them.

What starts as an accommodation can soon become discrimination, especially when the accommodation is then required. That happens.

Another example is insistence that a blind person be seated at the front of a public bus because the seats at the front of the bus are supposed to be designated for the elderly and handicapped, another federal regulation. In either example, the blind person who can walk and move as well as anyone else is made to appear as limited, more limited than the person really is. The person may have access to the building or the bus, but the access is certainly on discriminatory terms for that blind individual or for blind individuals as a class, for that matter.

In the example of the bus, Section 504 already prohibits denying service to the blind person, and so does the Model White Cane Law. But it does not clearly prohibit the bus driver from insisting that the blind person sit in one of the front seats on the bus which are designated for the elderly and handicapped. This is an ambiguity.

Some may regard seating disputes as quibbling, but let me tell you that the entire civil rights movement was brought to a national focus in this country because of exactly this type of dispute. By the way, I have a friend who died a few years ago, but he was black and blind and he said he fought his way in the 1960's from the back of the bus to the front of the bus and he would be darned—actually, he didn't say darned—but he would have problems if he now had to turn around and fight his way to the back of the bus.

The Americans With Disabilities Act will require disabled persons to be accommodated on the bus. If blind persons who are capable of sitting anywhere they want to on the bus are forced to accept the accommodation of using the seats designated for the elderly and handicapped, they will be subjected to arbitrary and unreasonable restrictions, restrictions which should not be applied.

Language is needed in the Americans With Disabilities Act to prevent the use of unintended restrictions based on disability in the name of compliance with the act.

This is a lesson which we should have learned from enactment of the Air Carrier Access Act, not to bring up a sore subject or anything. But, you know, this experience tells us that unintended restrictions, things that we never thought would have come about, based on disability, can easily and unexpectedly evolve from a law which you had a lot to do with. That law was forthrightly aimed at prohibiting discrimination. But it hasn't worked that way.

The audible traffic signal is another example of how an accommodation can become discriminatory. The sound made by the signal is a beeping or an electronic chirping noise which is intended to imitate a bird call. That is one of the common forms of the signal. The accommodation has been promoted by persons who assume that blind people will not know when or where to cross the street if they are not given some special audible cue.

But rather than being a form of assistance to blind people, this adaptation falsely presumes that blindness is an impairment to street crossing. It is not, I assure you. The fact is that blind people cross streets by themselves every day. We have been doing so without audible traffic signals and we have been doing it since cars, street crossings, blind people, and traffic lights were invented.

The sound of the traffic and the direction of its flow give us plenty of information. An audible traffic signal adds nothing, and many blind people say that it only confuses them to have the additional sounds.

Most significantly, this modification implies that blind people cannot cross ordinary streets. In this respect, it is a damaging and false public statement that the blind are disabled in ways that we are not.

So-called accommodations such as these come before us in an almost endless stream. Some of the cities in California—and you may have seen this, Mr. Chairman—have the big idea, now, of placing surface coverings called pathfinder tiles at some street intersections. They are doing it quite a bit in Sacramento and some of the other cities out there. Some of these pathfinder tiles even run across the street. The idea is that they are supposed to guide the blind across the street—never mind, you may not want to cross the street, by the way, and then there isn't a guide that just goes somewhere else.

Along a similar line, a college professor in New Mexico thought up the idea and got a federal grant to develop this—to create a cane which would follow an electronic field, provided, of course, that all of the very highly expensive and technical equipment is installed and that it is operating correctly.

Can you imagine the cost to the taxpayers if modifications such as beeping traffic lights, pathfinder tiles and electronic fields become in vogue as the result of the Americans With Disabilities Act? This could happen.

Beyond the needless expense involved in doing this, it is harmful when accommodations are made that falsely imply limitations caused by blindness. Opportunities necessarily depend on public understanding and public and social acceptance. This will be the case with or without the Americans With Disabilities Act

The best accommodation for a blind person in moving about is a long white cane and the training to use it. Both are available in abundance.

Mr. Chairman, from the moment the Americans With Disabilities Act is signed into law, that act will affect blind persons and millions of others in almost every activity of our lives. Think about that. If that act sets accommodation as the standard for using transportation facilities and services, as it currently does, then many thousands of us will be forced to travel and move about even, perhaps, on the public streets under discriminatory conditions.

Accommodation for persons with disabilities is, no doubt, a very necessary standard to provide equal rights for some persons in some instances. However, the right to access for some should not also become the basis for discrimination against those of us who already have access.

If access, under the accommodated terms of the Americans with Disabilities Act is our only choice, then we would have no choice but to oppose that Act. I hope that would not be our choice, however. The law must strike a balance. We are prepared to offer language in the form of an amendment to the act to achieve just exactly this kind of balance.

We are prepared both to be flexible and reasonable about this language. But I can tell you one thing. We are not prepared to endure what could become the practices of legalized discrimination. We are already experiencing that kind of incident in respect to the airlines. It is not real pleasant for us.

Mr. Chairman, discrimination against persons with disabilities is absolutely wrong. The Americans With Disabilities Act should, emphatically, and forthrightly prohibit it in any form. The right of individual choice to participate with or without accommodation is a central, unresolved ambiguity in the act, but it is a principle that the act should uphold. I gather that Mr. Miller agrees with that.

If that ambiguity is not resolved by specific, statutory language, then the act could become a civil rights fiasco. We have a chance to prevent that from happening. I think that with your help, we can do it.

Thanks a lot.

Mr. MINETA. Thank you very much, Mr. Gashel, for a very fine statement. The National Federation of the Blind supports the principle of the right of the individual to choose to use surface transportation services with or without special accommodations. From the testimony that we have heard today from other representatives of the community of people with disabilities, including the American Council of the Blind, there are, obvious disagreement on whether or not special accommodations are needed to achieve accessibility.

How would you propose to balance the individual's desire or need for special accommodations against another individual's desire or need to not be specifically accommodated?

Mr. GASHEL. I think we have to balance that by what the Americans With Disabilities Act is seeking to do. The Americans With Disabilities Act is seeking to end discrimination. The kinds of things that we are talking about in respect to blind people using transportation are—that is, the accommodation items that may be discussed—are really not discrimination issues.

For example, let's take not a bus example but a street-crossing. I use the beeping traffic light. It is a plain fact that a street crossing is not discriminatory against a blind person if it doesn't have a beeping traffic light. You can cross the street without it. As a matter of fact, it is a different situation than what you have if you are in a wheel chair.

You see, if you have got a street crossing that doesn't have a curb cut and you are in a wheel chair, you can't make that street crossing. You have got a barrier, and that barrier should be removed. And that is the social policy that would be set by the Americans With Disabilities Act, and very appropriately so.

It is a different situation for us. We don't really face that kind of barrier in crossing the street. As Mr. Miller said, it is really not that kind of issue. You can still cross the street or ride the bus or do any of the things without those things being done.

So those are things, Mr. Chairman, which might fall in the category—even if we agreed that they should be done—they might fall in the category of things that are nice to do. Quite frankly, we happen to think that some of those things should not be done, that they are not nice to do and, in fact, to install them is discriminatory rather than the other way around.

In the case of the beeping traffic light, it is discriminatory because it conveys a false public message to the public about blind people. It says that we can't cross the street, God forbid, if it wasn't for the beeping traffic light. That limits me. If somebody believes that I depend upon some device that, all of a sudden Congress in 1989 decided to order somebody to install, they leave out the whole rest of my life, the ability that I have shown to do things.

Our ability comes from the training we have and the tools we can use. So I don't think that we are dealing with the same situation. I think the focus of the Americans With Disabilities Act has to be on ending discrimination in all forms, attitudinally as well as otherwise.

If these special beepers and so forth discriminate attitudinally, we ought to outlaw them.

Mr. **Mineta**. Again, Mr. Gashel, thank you very, very much for your fine testimony. I look forward to working with you on resolving this issue and making sure that we don't have any unintended results.

Mr. **Gashel**. We just don't want to replay the airlines.

Mr. **Mineta**. That is for sure. Thank you very, very much.

Mr. **Gashel**. Thank you.

Mr. **Mineta**. Thanks to everyone who has so patiently listened or been participating up to this point. Again, there being no further business before the Subcommittee, we stand adjourned until the 26th when these hearings will continue.

Thank you very much

[Whereupon, at 8:18 p.m., the subcommittee recessed.]

[The prepared statement of Mr. Gashel follows:]

BEFORE THE SUBCOMMITTEE ON SURFACE TRANSPORTATION
COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION
UNITED STATES HOUSE OF REPRESENTATIVES
WASHINGTON, D.C.
STATEMENT OF THE
THE NATIONAL FEDERATION OF THE BLIND
JAMES GASHEL
DIRECTOR OF GOVERNMENTAL AFFAIRS
SEPTEMBER 20, 1989

Mr. Chairman, I am James Gashel. I am Director of Governmental Affairs for the National Federation of the Blind. My address is 1800 Johnson Street, Baltimore, Maryland 21230; telephone: (301) 659-9314. Thank you for giving me the opportunity to participate in this hearing today.

In this hearing you are examining the proposed Americans with Disabilities Act and its effects on programs within the jurisdiction of the Surface Transportation subcommittee. This is a vital subject to blind people. We are transit consumers. Our lives will be greatly affected every day in the future by what you decide to do with respect to the provisions of the Americans with Disabilities Act. We have some specific advice to offer and lots of experience (the experience of our own lives) to support our recommendations.

The Federation's national membership exceeds 50,000. We have an affiliate in each state and the District of Columbia. There are local NFB chapters in most sizable population areas in the United States. All of our officers and the vast majority of our members are blind. The Federation is not an organization speaking for the blind; it is the blind speaking for themselves. The members of the National Federation of the Blind represent the largest single organized group of blind transit consumers in the United States. We depend heavily on public mass transit and inter-city transit. Most of these services are currently provided without discrimination against the blind. Even so, the Americans with Disabilities Act will have an inevitable impact on the provision of transit services and the relationship between transit providers and blind consumers.

The National Federation of the Blind was organized in 1940. Since that time we have worked hard to insure (by law and otherwise) that blind persons will not be the victims of discrimination when they use public streets, public buildings, public accommodations, and public transportation facilities. Jacobus tenBroek, the principal founder and first president of the Federation, authored a law designed for use by states. We call it the Model White Cane Law. Most states have enacted it in one form or another. California, Mr. Chairman, was one of the first states to enact the Model White Cane Law. For most of his academic career Dr. tenBroek was a distinguished professor of law at the University of California at Berkeley.

The standard for nondiscrimination is stated succinctly in the Model White Cane Law: "The blind, the visually handicapped, and the otherwise physically disabled are entitled to full and equal accommodations, advantages, facilities and privileges of all common carriers, airplanes, motor vehicles, railroad trains, motor buses, street cars, boats or any other public conveyances or modes of transportation, hotels, lodging places, places of public accommodation, amusement or resort, and other places to which the general public is invited, subject only to the conditions and limitations established by law and applicable alike to all persons." This standard is clear, and it works well for us. It is now the law of the land almost everywhere in the United States. The Model White Cane Law was placed on the statute books in California five years before Congress enacted section 504 of the Rehabilitation Act to prohibit discrimination against handicapped individuals in federally assisted programs.

Mr. Chairman, you are going to receive a great deal of information about the need for a comprehensive nondiscrimination law. I plan in this statement to do more than simply add the weight of another major group. We are affected, as I have said, and we do believe that there is a need for a comprehensive nondiscrimination law. However, we do have some specific concerns that we would like you to consider. We believe that, at least in the case of people who are blind, the Americans with Disabilities Act could result in practices that are discriminatory even though intended to comply with the law. Our greatest fear is that the Americans with Disabilities Act will become the basis for more discrimination against us than now exists.

This may be a surprising statement. How could a nondiscrimination law have the unintended effect of causing more discrimination? Our experience indicates that this does happen. Let me explain. I am going to discuss this problem in terms of the condition of blindness since I am blind, and I represent the collective views of the blind in this matter. It may be that blind persons uniquely face the form of discrimination that I am about to describe.

Discrimination against the blind comes from the false assumption that sight is essential for successful performance of most tasks. Blindness is the inability to see, but it is not generally disabling. Alternative techniques used by blind persons work as well, and as efficiently, as visual techniques used by sighted persons in most instances. Some blind techniques work better than sighted techniques, and some sighted techniques work better than some blind techniques. Unwanted accommodations for the blind discriminate by falsely portraying us as limited in ways that we are not.

Increased attention to civil rights for the disabled has actually led to required accommodations that are unwanted and even detrimental to full integration. One example is offering a wheelchair to assist a blind person through a facility. If the offer is rejected, use of the wheelchair may be required. What started as an accommodation is now discrimination. Another example is insisting that all blind people must sit at the front of public buses because those seats are designated for the elderly and handicapped. In either example, the blind person who can walk and move as well as anyone else is made to appear as limited. The person may have access to the building or the bus, but the access is certainly on discriminatory terms for that blind individual or for the blind as a class.

The experience of the blind with section 504 should be instructive. Programs are now established to "take care of" our needs. The folks who establish these programs are often so overwhelmed or uncertain of what to do that they even want to "take care of" needs that we do not have. In the bus example, section 504 clearly prohibits denying service to the blind. It does not clearly prohibit the bus driver from insisting that a blind person sit in one of the front seats designated for the elderly and handicapped. Some may regard seating disputes as quibbling, but the entire civil rights movement was brought to a national focus by exactly this type of issue. Section 504 requires that disabled persons be accommodated on the bus. If blind persons (who are capable of sitting anywhere) are forced to accept seating accommodations and use the seats designated for the elderly and handicapped, they are being subjected to arbitrary and unreasonable restrictions.

It is exactly this type of situation, resulting from intended compliance with section 504, that the blind find objectionable. We are expected to be disabled in ways that we are not. Participation without restriction (other than the conditions applicable alike to everyone) is the proper policy of nondiscrimination. Conversely, it is discriminatory to assume that participation for the blind is made possible only by means of accommodation. I cannot emphasize this point too much--required, unwanted accommodations are acts of discrimination, even if they are kindly meant. Discrimination against the disabled is hardly ever intentional. It is more often the result of human kindness, but the effect is the same as if the motives were ill-intended.

Language is needed in the Americans with Disabilities Act to prevent the use of unintended restrictions based on disability in the name of compliance with the Act. This is a lesson that we should have learned from the experience we are having with the Air Carrier Access Act. This experience tells us that unintended restrictions based on disability can easily evolve from a law that is forthrightly aimed at prohibiting discrimination.

The advent of federal civil rights laws for handicapped individuals brought pressure on commercial airlines to serve persons with disabilities. Physical barriers of aircraft and equipment had prevented service in some instances. This was never a problem for the blind. In our case, air transportation was almost always provided on essentially nondiscriminatory terms. Certainly (in contrast to the situation for some disabled persons) there were no policies to deny or restrict service to the blind. Blindness was not regarded as a disability for purposes of air transportation.

The pressure brought on commercial airlines by persons with disabilities was necessary, but the effect it has had on blind persons has been a civil rights disaster. When the airlines and the Federal Aviation Administration began to plan ways of accommodating the handicapped in order to serve them, they included the blind in the general category. All of a sudden it became unacceptable to think of the blind as not disabled in air travel. So the blind have been regarded as disabled, and restrictions thought to be appropriate for the disabled have been wrongfully imposed on the blind ever since. This policy has now been pursued aggressively by the airlines over the objection of the blind. Ironically, the net effect of the civil rights laws for the disabled has been to place new and unwarranted restrictions on the blind in air travel.

Backed by federal law, the airlines are attempting to make us disabled in ways that we are not. Could the same sort of thing happen in surface transportation? The answer is unmistakably "yes." The Americans with Disabilities Act (as introduced in the House and as passed by the Senate) presumes that disability implies the need for an accommodated form of participation. Covered entities will want to comply with the Act by making accommodations, especially those of minimal cost. As with the airline example, the blind will be expected to accept policies which apply to the generic "disability" class, including accommodated participation and the restrictions that necessarily accompany it.

The accommodated participation standard is no doubt very appropriate for many persons with disabilities. This standard should help to make their participation possible. For blind persons, however, the accommodation standard incorrectly assumes a degree of inability and directs unwanted and even harmful changes. The individual's true abilities are overshadowed by accommodated participation, and the changes made become the focus of everyone's attention. It is assumed that the individual could not participate were it not for the accommodation.

To use another example, some people now assume that blind people cannot cross street intersections without special signaling devices. The devices are audible traffic signals which emit a sound cue to indicate the changing of the traffic lights. The cue is a beeping or electronic chirping noise intended to imitate a bird-call. The modification has been promoted by persons who assume that blind people will not know when or where to cross the street if they are not given a special audible cue. But rather than being a form of assistance to the blind, this adaptation falsely presumes that blindness is an impairment to street crossing. The fact is that blind people cross streets by themselves every day without audible traffic signals. We have been doing so ever since cars, street crossings, and traffic lights were invented. The sound of the traffic and the direction of its flow give plenty of information. An audible traffic signal adds nothing, and many blind people say that the additional sounds only confuse them. Most significantly, this modification implies that the blind cannot cross ordinary streets. In this respect, it is a damaging and false public statement that the blind are disabled in ways that they are not.

It is harmful to us when accommodations are made that falsely imply limitations caused by blindness. Opportunities necessarily depend on public understanding and social acceptance. This will be the case with or without the Americans with Disabilities Act. Blind people want to be accepted on terms of equality with the sighted. This is a proper and realistically achievable objective. Our equality will be blocked, however, if we are faced with a federal law that implies a degree of permanent inequality.

In the area of surface transportation the Americans with Disabilities Act should emphatically prohibit discriminatory physical and social barriers. The standard to use to identify discrimination should be that the individual cannot receive a service because a barrier exists. The Act should not be used to order physical or programmatic modifications in cases where participation is not blocked by barriers. Blind persons can provably cross streets without beeping or chirping traffic lights, so installation of these devices should not be required. If a modification falsely identifies a class of persons with disabilities as more disabled than they are (as in the case of the beeping traffic lights), the modification should be prohibited. The modification itself can become a social barrier if not a physical one.

The language of the Act should also prohibit the formation of new restrictions that may be developed, even if the intent of the restrictions is to comply with the Act. This policy should ward off the tendency for optional accommodations to become mandatory. If this is not the policy of the Act, there is a great danger that we will be forced to accept and use special, accommodated programs and services, whether we like it or not. Blind people are far too familiar with the resentment that occurs when we ask not to be accommodated. We are expected to be grateful for the modifications that are made, even if we do not need or want them. The Act should specifically provide for the right to participate without accommodation. The choice of methods to be used for participation should be a matter of individual discretion.

Mr. Chairman, from the moment it is signed into law, the Americans with Disabilities Act will affect blind persons and millions of others in almost every activity of our lives. If the Act sets accommodation as the standard for using transportation facilities and services, many thousands of us will be forced to travel and move about (perhaps even on the public streets) under discriminatory conditions. The right of access should not also be the right to cause discrimination against those of us who already have access. There must be a balance. We are prepared to offer language in the form of an amendment to achieve that balance. We are prepared to be flexible and reasonable about this language, but we are not prepared to endure what could become the practices of legalized discrimination. We are already having that experience with the airlines.

The right of individual choice to participate with or without accommodation is a central principle that remains unclear in the Americans with Disabilities Act. If that ambiguity is not resolved by specific language in the bill, we are dangerously at risk of having a replay of the civil rights fiasco in commercial aviation. Mr. Chairman, I don't want that, the National Federation of the Blind does not want that, and I am sure that you do not want that. Let us work together to be sure that it does not happen. This is our chance. We will not have another opportunity such as this. On behalf of the National Federation of the Blind, I thank you.

AMERICANS WITH DISABILITIES ACT

TUESDAY, SEPTEMBER 26, 1989

House of Representatives,
Subcommittee on Surface Transportation,
Committee on Public Works and Transportation,
Washington, DC.

The subcommittee met, pursuant to call, at 10 a.m., in room 2167, Rayburn House Office Building, Hon. Norman Mineta (Chairman of the Subcommittee) presiding.

Mr. Mineta. The Subcommittee on Surface Transportation will please come to order.

This is a continuation of a hearing relative to the subject of the Americans with Disabilities Act, and before we begin with our scheduled witnesses, I would like to insert into the record a statement from our colleague from West Virginia, Mr. Nick Rahall.

[The statement of the Hon. Nick J. Rahall, II follows:]

STATEMENT OF HON. NICK J. RAHALL, A REPRESENTATIVE IN CONGRESS FROM WEST VIRGINIA

OPENING STATEMENT
HONORABLE NICK J. RAHALL, II (D-WV)

HEARING, SUBCOMMITTEE ON SURFACE TRANSPORTATION
TUESDAY, SEPTEMBER 26TH, 1989
RE: AMERICANS WITH DISABILITIES ACT

Mr. Chairman I am a cosponsor of H.R. 2273, the Americans With Disabilities Act. I agree wholeheartedly with what many of my colleagues in the House and the Senate have said - that if the American dream is the dream of opportunity for all, then the abililty and the right to realize the dream belongs to the 43 million disabled men, women and children in this country as surely as it belongs to the rest of us.

Without question the ADA is a most critical bill, one which has the power to change the lives of persons with disabilities for all time to come, extending to them the right to employment opportunities in the private sector, public accommodations, activities of state and local governments, public and private transportation, and telecommunications for persons with hearing impairments and other communications disorders.

Obviously, current federal and state laws do not adequately cover the discrimination faced by disabled people in these critical areas, or we wouldn't be here 25 years after passage of the historic Civil Rights Act of 1964. I have finally come to understand what the term "reinventing the wheel" means in terms of civil rights. H.R. 2273 will start us on the road -- finally to the guarantee of civil rights for all people not just those without disabilities.

Needless to say, misleading statements have appeared in both the print and broadcast media concerning the various provisions in H.R. 2273, and many are totally inaccurate. Perhaps through this hearing today and others scheduled by other committees with jurisdiction over the bill, will disspell such notions and help us learn what, if anything, is broke and needs fixing.

Speaking for myself, I have been visited by various concerned groups who have the responsibility to provide transportation throughout the country, including for the disabled. During our subcommittee hearing on the 20th, we heard concerns expressed that certain provisions contained in the Senate bill would, if enacted, threaten the availability of adeqaute rural bus service between cities.

We have heard that the cost of fitting buses with chair lifts and restrooms will cause great financial hardship, particularly on the private intercity bus system.

We have heard that the definitions of terms are not adequate enough to assure transportation providers that they can rest comfortably in the knowledge that "undue financial hardship" means just that, and will be recognized for what it is. Some have said that "demand responsive" has not been defined at all.

Others claim that we are asking far more of bus and train service providers than we are now, or ever have, demanded of the airlines. And they ask why?

The respected and widely-read Wall Street Journal printed an editorial about the contents of the ADA bill that was rife with inaccuracies. The National Federation of Independent Businesses also made statements that were, I am certain misleading only because the bill is complex and comprehensive and therefore subject to misinterpretation and misstatement by well-meaning people such as the Membership in the NFIB.

Those are just a sampling of the claims and charges of unfairness I have heard described to me. Yet every person who met with me began and ended their remarks with assurances that "we support the bill."

I believe they do. Raising questions and making inquiries that are intended to bring everyone to a better understanding of what is expected of transportation services is part of the normal legislative process. I know that I have had some concerns of my own with regard to the transportation provisions. I associate myself with the questions raised by my colleagues during the hearing on the 20th, and will do so yet again today I am sure. And those problems that have been outlined are, for the most part, directed at learning what the impact will be on all transportation providers whether they are intercity rural lines, privately owned and operated, or large urban mass transit areas partly supported by public subsidies.

But lest my last remarks be misconstrued, let me say again that I intend to work with my colleagues on this Committee, and on the Education and Labor Committee, to get this legislation passed. That in no way means that I think this bill is perfect, and where there is room to make it even better, I want to be involved also.

Mr. Chairman I have questions of two of the witnesses, Mr. Picknelly and Mr. Henry.

(Questions attached)

Mr. **Mineta**. I would like to call forward at this time a panel consisting of our very fine colleague from Pennsylvania, a Member of the Banking, Finance and Urban Affairs Committee as well as Post Office and Civil Service Committee. I would like to call forward a panel made up of Mr. Frank M. Henry, Chairman of the Board, American Bus Association and President, Martz Trailways, Wilkes-Barre, Pennsylvania; Mr. C.D. Busskohl, Director, United Bus Owners of America, Washington, DC, and President, Arrow State Lines, Inc., Sioux City, Iowa; Mr. Dan Dipert, President, National Tour Association, Inc, Alexandria, Virginia, and Owner and President, Dan Dipert's Travel Service, Inc., Arlington, Texas; Mr. Peter L. Picknelly, Sr., Chairman of the Board, Peter Pan Bus Lines, Springfield, Massachusetts; and Mr. Fred G. Currey, Chairman and CEO, Greyhound Lines, Inc., Dallas, Texas.

Congressman Kanjorski is a very active and fine Member of our Banking, Finance and Urban Affairs Committee as well as Post Office Civil Service. I would like you to go ahead and introduce your fine guest.

TESTIMONY OF HON. PAUL E. KANJORSKI, A REPRESENTATIVE IN CONGRESS FROM PENNSYLVANIA

Mr. **Kanjorski**. Thank you, Mr. Chairman.

This is unusual for a Member of Congress to come down and introduce a friend and constituent particularly when that friend and constituent happens to be of another party. I wanted to make it a point today because Frank Henry represents the essence of the free enterprise system and the success of that system not only in Pennsylvania but nationally.

His credits are so long that I won't burden this committee with them. Suffice it to say that he is president of many companies but that is not his call to fame. His real call to fame in Pennsylvania, particularly northeastern Pennsylvania, is his participation on so many charitable organizations and trusteeships one of which I share, Board of Trustees on Wilkes-Barre College. He is a free enterprise individual who also has sympathy and common sense of what this nation needs.

I recommend him to the committee today and ask the committee to pay great heed to his statement, not that I endorse it nor anticipate what it will be, but I know what he says will come from his heart and will be rationed and reasoned and will represent the best thinking for the industry and a good part of the traveling public of this country.

With that, I am very pleased to introduce to the committee Frank M. Henry, one of the leading citizens of Pennsylvania.

Mr. **Mineta**. Thank you. Let me yield to my fine colleague, Mr. Shuster, in Pennsylvania.

Mr. **Shuster**. I want to join in welcoming my fellow Pennsylvanian and the entire panel.

Mr. **Mineta**. Mr. Henry, your statement will be made a part of the record. You may proceed in your own fashion.

TESTIMONY OF FRANK M. HENRY, CHAIRMAN OF THE BOARD, AMERICAN BUS ASSOCIATION AND PRESIDENT, MARTZ TRAILWAYS, WILKES-BARRE, PA; C.D. BUSSKOHL, DIRECTOR, UNITED BUS OWNERS OF AMERICA, WASHINGTON, DC, AND PRESIDENT, ARROW STATE LINES, INC., SIOUX CITY, IA; DAN DIPERT, PRESIDENT, NATIONAL TOUR ASSOCIATION, INC., ALEXANDRIA, VA, AND OWNER AND PRESIDENT, DAN DIPERT'S TRAVEL SERVICE, INC., ARLINGTON, TX; PETER L. PICKNELLY, SR., CHAIRMAN OF THE BOARD, PETER PAN BUS LINES, SPRINGFIELD, MA; AND FRED G. CURREY, CHAIRMAN AND CEO, GREYHOUND LINES, INC., DALLAS, TX

Mr. HENRY. Thank you very much. Thank you, Congressman Kanjorski. For the record my name is Frank Henry, President of the Frank Martz Motor Coach Company in Wilkes-Barre, Pennsylvania and I am Chairman of the American Bus Association representing approximately 700 bus companies in the United States, made up of small companies of two to three buses to the huge bus operations of Greyhound. A few members of ABA provide only scheduled, regular-route service; several hundred members, like three of my own companies, provide both regular-route service and tour services; and the remaining 500 or so members are engaged exclusively in charter and tour operations.

My companies, Frank Martz Coach Company in Wilkes-Barre, Pennsylvania, Gray Line of Washington, DC, and Gulf Coast Gray Line in St. Petersburg, Florida rely heavily on scheduled service and tour operations. Any service that depends on individual fares, such as regular route and special operations tours, price their trips so that they are divided among the number of seats available on the bus. The costs are based on the seats available and therefore we divide the cost of service by the seats available to come up with what would be the pricing to the customers.

This is true also in our tour service. It is obvious that when we lose these seats, we increase quite dramatically the prices of these services and in some cases we would lose enough seats that we would probably have to diminish or do without that service in certain areas.

All members of the bus association and all of us in the industry feel very strongly that our services are provided for all Americans. We feel very strongly the handicapped should have equal access and should be part of America as they are in other areas.

We want that and we welcome that. Our concern is not what we would like to see but how we would like to see it happen. There have been, as you know, some trials where they have tried various types of lift and lift operations and uses of that have been watched closely. We as an industry feel that with the present state of the bus industry and with the costs that appear to be included with this new type of operation, that with the estimated cost of $10,000 to $35,000 per unit to install these lifts on a bus, that if every bus had to be installed, we are talking approximately $20 million per year. This is based on a bus staying in a fleet 10 years and being replaced at 10 percent of the fleet per year.

This could be as a low of $20 million a year up to a high of $70 million. At this time we don't know the exact amount we will be faced with on the capital cost of conversion. When you take this figure, although in some areas this may seem like a small amount, $20 to $70 million but our entire industry, net operating profit for the last five years average was only about $40 million. So you can see it becomes economically unfeasible on a capital outlay alone.

The operating costs of this equipment when put in place is still an issue that has to be decided. It is estimated that the maintenance of this equipment could run from a minimum of $1000 to $2000 per bus. Add this to the capital cost and multiply it by 20,000 buses in our industry and you can see what we as a very small industry are faced with to continue in operation.

As you know, the accessibility has played a large part in other industries. These other industries have been given the mandate to provide the service. But the difference in our particular situation is that we have been told to provide the service, we have even been told how to provide that service. We are asking that we should invest and see how this should be provided.

However, as the bill was presented, there will be a study period but it is mandated that at the end of that study period wheelchair lifts will be installed. This does not indicate to us that it is a free study because the results seem to be concluded before the study has begun.

Our industry wants a solution to this problem. There are other solutions to the problem other than providing each bus with a lift. We run, as I said, scheduled service. Part of the problem with scheduled service is for the general public to rely on that service they want it to be on time, clean and efficient.

Taking it one step further, if we are to make equal accessibility, which we would like to, that would mean equal accessibility to the entire bus including equal accessibility to the restrooms. Then we are into an operating problem here because I don't believe technology has gotten to that point.

We could be losing 15 or 20 percent of the seats on that bus depending on what technology produces. Technology has not caught up with the intent of what we would like to do. There are solutions which have taken place in other states. I know in Massachusetts where there are a certain number of buses that are provided rather than having every bus provided. We can look for that solution. For us as an industry to take on the massive capital outlays that are necessary would be impossible.

In order for us to do this job, if it is to be as presented, it would have to be, I am afraid, a very large subsidization program let alone the operating subsidization to carry out what is mandated. We are open to suggestions. We are here because we want to see what suggestions can come out of it. We want the equal access.

On our own lines we have carried handicapped whenever asked to do so. I appreciate the opportunity to be here. I know the other panel members will speak likewise. At the end of the discussions of any members, we will be open to questions.

Mr. **Mineta**. Thank you, Mr. Henry.

Mr. Busskohl.

Mr. **Busskohl**. My name is Chuck Busskohl with Arrow Stage Lines and a director of the United Bus Owners of America. I ask my written testimony be submitted as written into the record and I will give a condensation of the remarks.

Mr. Mineta. Without objection, the statement will be made part of the record.

Mr. Busskohl. This bill, by requiring full accessibility on all buses would weaken, if not kill, the bus industry. Jeopardizing the industry's economic survival threatens to leave as many as 10,000 communities without any intercity transportation service.

Estimates of lift costs are dangerous to offer. Two seem to be available. MCI lifts in Massachusetts cost about $35,000 and consume one-third of the package express area as well as two to four seats. The Hubmatic lift from Denver costs about $200,000 to $300,000 but has never been used on a coach with a bath area.

There are two seats needed, two for restroom expansion, regulators and that could lead to three across seating rather than four across seating, costing that many more seats.

This bill demands an unnecessarily stringent remedy to achieve full accessibility. The bill requires that every bus must be accessible, every bus, when a simple advance notice principle would be sufficient to meet the needs.

The nature of intercity charter and tour travel states that advance notice does not place an undue and unusual burden on those requiring lift services.

The bill allows virtually every other affected business to escape compliance in a finding of undue burden. Even municipal systems which pay only 20 percent have no concern for profit but the bill declares it discriminatory to purchase a non-accessible bus. So we are discriminated against in the very passage of this act.

The Senate-passed version of ADA, S. 933, contains study language. The three-year study by the OTA as an advisory board will look into the means of achieving full accessibility.

The Senate bill requires mandatory accessibility by two years but is not linked to the study results. It would take another act of Congress to overturn the mandatory compliance even if the study shows 100 percent accessibility to be needed. UBUA and myself urge that Senate ADA study language be adopted and the compliance mandate be dropped from both bills. It should be linked to regulatory action to meet the need and maintain this industry's economic viability.

Thank you very much.

Mr. Mineta. Thank you.

Mr. Dipert.

Mr. Dipert. Mr. Chairman and distinguished Members of the committee, I am Dan Dipert. I am president and owner of Dan Dipert Tours, the largest independent motor coach tour operator in Texas. In addition, I am a bus owner. This year I serve as President of National Tour Association, NTA. This association represents the group travel industry in America with more than 3,500 members. Equal access to all disabled Americans is a goal that has long been embraced and practiced by NTA members for many years.

Today I reaffirm NTA's commitment to this goal as embodied in H.R. 2273. Further, I will state some basic questions and concerns for the mandate of S. 933 as passed by the Senate. Before I do, however, let me provide you with an outlined insight into our association. NTA's backbone is 550 tour operators who develop, package and sell group tours to destinations in the United States, Canada and other locations around the world.

NTA also represents 2,500 tour suppliers, hotels, restaurants, motor coach companies and airlines. We also represent destination marketing organizations whose members represent local, regional, state and provincial travel promotion offices. Because our unique structure covers every facet of group travel, NTA has certainly in part been a spokesman for the entire tour and travel industry.

This summer the National Tourist Association Board of Directors reaffirmed our traditional support for the right of every American to equal access to all forms of public transportation. H.R. 2273 implements the integration of America's disabled into the mainstream of American life and society and we support that.

However, our association would be remiss if we did not have some basic questions and concerns about some transportation provisions in the legislation that could provide extreme financial hardship and possibly could lead to the termination of service of thousands of rural travelers and hundreds of travelers in those communities.

Tour operators and coach operators have made substantial efforts to accommodate the needs of the disabled when asked to travel by motor coach—often far above the demonstrated need. We, however, know from experience that for our organization to survive in the marketplace we must be very efficient managers to be able to use the resources that are available to us.

This legislation, if implemented, will place an unfair burden of economic compliance upon the obviously limited capital of the nation's private bus owners that supply the motor coaches for our association's operators. Only one third of our operators own their own equipment.

You have been told that "There should not be a price tag consideration when instituting a basic civil right." In principle this is desirable. In fact, there is no free lunch. Is the price of compliance reasonable?

Industry estimates show that it will take between $30,000 and $50,000 to install a lift and restructure the seats and restrooms on board the motor coach. These figures are higher than those reported by the Denver official who said the amount was closer to $8,000.

Don't compare apples with oranges. While city buses have no restrooms and no baggage space under the aisles, with seats facing the center aisle on city buses, the motor coaches we use as tour operators have full luggage bins, fully equipped restrooms and forward facing seats.

In the motor coach that tour operators use, a passenger must be risen as much as five feet to clear the level for the luggage compartment.

All these things will take away the seating capacity that the motor coach tour operator uses with a loss of 15 to 17 seats per motor coach, lowering our revenues by one-third and raising cost by at least that much.

This spring a study was released by a long-time Washington, D.C. based firm, Robert Nathan. They found the transportation buses were the least supported mode of transportation by the Federal Government. Airlines average 70 cents per passenger trip. Amtrak has $33.45 per passenger trip, while the intercity bus system received a pittance of eight cents of federal subsidies per passenger trip.

The tour industry in the form of tours offered to the public is a low margin peak period business that does not operate on fixed routes.

The average return on investment is 9 percent. The slim margin of profit would be lost when the bus owners pass on the cost of mandated lifts to the leasing tour operators. This and the competition of our operators when we face non-profit organizations in our communities who offer discounted tour and travel opportunities means that each month some tour operators will be virtually forced out of business.

The tour industry has always been responsive to the needs of the disabled traveler. We will continue in this effort. I am absolutely confident that all the national tour operators are capable of providing the same demand-response tour for the disabled persons that we have provided for the able bodied.

In most cases, it takes six months to a year to plan, organize and conduct a tour. That time frame will give every operator the ability to lease a lift-equipped coach to accommodate the request of the disabled travelers. Our operators are willing and able to meet the equal access mandate of H.R. 2273 and S. 933.

In my 17 years in the motor coach industry I have packaged and promoted thousands of tours all over North America and beyond. In all those years I have had only approximately 15 requests for service for disabled customers. If I had been required to completely re-equip all the motor coaches I use with expensive and unused lifts and other requirements that may yet be determined by this bill, resulting in fewer seats to sell to my customers, then I may not have been able to remain in business long enough to testify today.

I would like to thank you for the opportunity to be with you today and express the concerns of our industry.

Mr. MINETA. Thank you, Mr. Dipert.

I will now call on Mr. Picknelly. Your statement will be made a part of the record. You may proceed in your own fashion.

Mr. PICKNELLY. Thank you.

My name is Peter Picknelly, chairman of the Peter Pan Bus Lines and a member of the Board of Directors of the American Bus Association. Peter Pan is a class I motor carrier headquartered in Springfield, MA. We provide regularly scheduled inter-city bus service over routes in Massachusetts, New York, New Hampshire and Connecticut.

We have a coach service originated in New England to various points in the United States in our tour service. We have 146 coaches with a seating capacity of between 47 and 49 passengers.

Peter Pan is one of the few privately owned motor coach companies in the country that has experience in lift equipped buses. We installed a lift in a bus we used in the charter service.

The availability of the wheelchair-accessible bus was widely advertised by our company and we received favorable public relations for the installation of the lift. Unfortunately, there was really no demand for the bus as a wheelchair-accessible bus. After about three years we removed the bus from service and converted it back to a conventional bus.

In 1985 the Commonwealth of Massachusetts initiated a program to purchase buses for private carriers operating regular route bus service within the state for the purpose of upgrading regular route service within the commonwealth.

They originally purchased 25 buses and six had wheelchair lifts, two of which were leased to Peter Pan. In this year, 1989, Massachusetts expanded its program to include somewhere around 25 additional buses, all of which have wheelchair lifts.

At the present time there are probably somewhere around 30 to 35 intercity buses in Massachusetts that are wheelchair accessible of which Peter Pan operates seven. The lifts were developed by Motor Coach Industries and installed at MCI at the cost of approximately $35,000 per bus. About half the cargo space was sacrificed for the installation of the lift. The transportation of one passenger in a wheelchair results in the loss of four revenue seats depending on the interior configuration of the bus.

When the bus is leased to Peter Pan the wheelchair passengers have no accessibility to the restroom. The ridership on these buses has been negligible. During the period of time we had two buses like this, each bus was used less than once every two months.

Except for the support of the Commonwealth of Massachusetts, we could not have afforded to own the buses. Peter Pan pays the Commonwealth of Massachusetts $675 per bus per month which is designed to recover the cost of the bus less the cost of the wheelchair installation. The disabled person must give 24 hours notice of his or her intent to use the bus. The purpose of that restriction is to enable the bus operator to position the limited number of accessible buses and have them available.

No such restriction would be available in the Senate bill.

Peter Pan derives approximately 50 percent of its operating revenue from charter and tour services. Even if the arguments advanced for installing lifts on all buses were sound, they would not apply to buses used exclusively on charter and special operations.

These bus charters are planned far enough in advance to allow accessible buses to be available. We are required to guarantee that an accessible bus will be available for all who request one. To require Peter Pan to install lifts on its entire bus fleet would not benefit any disabled person but would cripple Peter Pan.

Thank you.

Mr. **Mineta**. Thank you.

Now I would like to call on Mr. Fred G. Currey, chairman and CEO, Greyhound Lines. Your statement will be made a part of the record. You may proceed in your own fashion.

Mr. **Currey**. Thank you.

It is an honor to be invited to comment on the most important piece of legislation that has impacted the intercity bus business in a large number of years. I appreciate your accepting the written statement for the record.

I wish to make three points in summary of that statement. First, the bill as proposed by the Senate discriminates against inter-city bus companies. I know that is not a very popular thing to say, nevertheless, it is true as my statement shows.

Why it is true is the real question. The Senate bill is a mass of compromises; airlines are excluded, two-story buildings are excluded, movie houses must make only some seats, not all, accessible. Every private entity except the inter-city bus industry gets to take into account good faith, technology, cost, and undue hardship.

For some reason that we cannot determine, the sponsors of this bill seem to believe the entire movement turns on what happens in the inter-city industry. If we are required to be 100 percent accessible, even if it ruins the industry and makes bus transportation no longer available for the poor, somehow the program succeeds.

Considering the fact that the intercity industry carries only 1.5 percent of all intercity passengers, that makes it a real puzzle.

A second major summary point: This bill will initiate and conclude with the collapse of our rural service at Greyhound. Now first I understand the forum that we are in and I understand that business people have a problem in this forum with respect to the credibility of their numbers.

Frankly, there is a very severe penalty for submitting false numbers to the Securities and Exchange Commission. Here are the numbers we have submitted to the Securities and Exchange Commission contained in these documents submitted to the committee.

I am not about to come before Congress this morning, and our bond holders this afternoon that I will appear before, with a different set of numbers. We cannot stay in business as long as we have and do things like that.

Third, I would like to say to those who challenge our numbers to submit theirs and let you decide.

Now in the issue of the collapse of rural service we are not talking about theory. In the last 15 years this industry was cut in half by a retrenchment that touched every single state. The study by Nathan Associates using DOT information found that 20,000 locations were served by intercity buses in 1976 and today we are down to 10,000.

We have been down, at Greyhound and Trailways, this road of cutbacks and lay offs before. We know what happens when the system begins to unravel. Today 32 percent of the miles we operate are operated at a loss.

In the parlance of regulated days, that means that we cross-subsidize 32 percent of our route miles with revenue from positive route miles. Under ADA, as a result of the increased costs, 51 percent of our route miles would become unprofitable. That is a 60 percent increase in the percentage of route miles that become unprofitable.

Obviously, no company can exist with more than half of its routes in the red. We also know from bitter experience and from a lot of non-bitter experience over the past two and a half years of lowering prices, we also know that we cannot raise prices. The poor, old, urban and rural disadvantaged are our core customers.

Fifty percent of our customers are below the average poverty level of $15,000. So to raise prices to pay for the system is not in the public interest. That leaves us with no alternative except to cut unprofitable service, mainly in rural areas. Today we serve 10,000 locations. Under ADA, we will eliminate service to 5,000 of those locations. Today we employ 12,500 employees plus 8,000 working for contractors in terminals.

Under ADA, the retrenchment will bring that down so we will need to eliminate approximately 10,000 of those 20,000 jobs. This is not theory. This has already happened once in this industry.

This first map shows routes that will lose money under ADA. It is very important for you to focus on that map because from West to East it shows the result.

For instance, it shows clearly that in the route between LA and San Francisco, there are three ways to make it, the coast route and the valley routes. Those routes are profitable under ADA. However, go north of San Francisco up the coast and the route is unprofitable. With the elimination of the route, the only method to go from San Francisco to Seattle will be by Route 50, leaving the coastal route without service.

Take another example in my home state of Texas. Fort Worth to Dallas would be profitable under ADA but for those customers who wish to go to El Paso to Del Rio to Brownsville, a low income area, that route will need to be eliminated along with the small towns along that route.

Those are very key facts. Take the route between Memphis and Kansas City. Rather than going directly through Springfield, one would have to go through St. Louis to Kansas City, taking approximately one and one-half the amount of time the direct route takes. This shows the restructure after ADA. The blue area is where our route structure is most dense today. We will continue to have a substantial amount of feed service restructured in this segment of the map.

However, the yellow segment of the map shows the area of the country where the structure is only weakened. We have over the past two and one-half years begun to strengthen this but most feed in this area will be non-existent. The pink area shows the area which we feel today is already the weakest. In some places in this area you could put a point on the map in Nebraska and draw a 300-mile radius and there would be no form of public transportation, bus, subsidized air feeder or truck. All feeder service would get eliminated here.

This is more meaningful when you look at it on a state by state area. What you see here is an example of my home state of Texas. The blue routes are the trunk routes that maintain profitability after ADA. The pink routes are the routes that fall into the unprofitable category as a result of ADA. The yellow routes are not operated by us. They are operated by third party carriers that feed us and feed mostly these pink routes.

Each of the pink and yellow routes would be under massive pressure for discontinuance. Even today many of them are. When we meet to plan our budget for 1990, today our operating executives are saying to me; say, Fred, why are we running this route from Del Rio to Laredo. They will tell me, take a look at the revenue. I tell them look at the difference between the 68 percent positive and the 32 percent negative because the network is what makes Greyhound work overall.

This map shows you how that network will be changed. It is a very, very important concept to understand.

Now the third and final major point is that the rural scenario that I have outlined and this I personally know and understand quite well does not have to happen to provide accessibility. It does not have to happen to provide accessibility. In conjunction with the disabled community we at Greyhound have come up with a five-point program to provide accessibility to Americans with disabilities.

We have listened very carefully to the comments of the disabled community. I myself in hours and hours of conference, both with individuals with disabilities riding our buses—I was riding the bus routes very recently out on the West Coast, two trips interviewing all the customers including Americans with disabilities—we have listened very, very carefully and we have come up with a five-point program.

What we propose is system accessibility as opposed to individual vehicle accessibility. System accessibility is precisely what the ADA Senate bill requires for, for instance, public school bus operators.

System accessibility is the requirement put upon them. That is the requirement we would like to have upon us, system accessibility as opposed to vehicle accessibility. We have a five-point program:

One, extension of our already existing helping hand program, called a transportation assistance program, where we will permit disabled people to travel alone as opposed to having to have a companion accompany them.

Second, we intend to establish an 800 number, an 800 number manned by disabled Americans because we employ them in our telephone answering centers in Charlotte and Omaha. There they can get specific information with respect to their particular and peculiar needs from other disabled Americans. That is one heck of an idea that came out of our conference with disabled Americans.

Third, we would be able to design a new wheelchair lift to make the lift on the bust itself safer and accomplished with a greater sense of dignity. We think that is very important.

I myself have looked at the various chairs. We have visited with a vendor of a chair that has been recommended to us by the members of the disabled community. We have shown them the chair. They like it. We like it. We think it can be redesigned and made to work for us.

Furthermore, we believe that within two years, if this committee will give us the latitude to do so, we can have those chairs available at our 200 major terminals across the country where 85 percent of our boardings occur.

Finally, we will join the technical assistance program advocated in the draft form by the National Council on Disability and we will contribute $100,000 to the advertising campaign that legislation proposes.

The last point of the five-point program: We believe that there should be further tests like the one Mr. Picknelly has done between Boston and Springfield. We believe we should look very carefully at wheelchair accessible buses to see what the frequency of use is and cost of operation to see how it works out before we mandate accessibility on the basis of the vehicle as opposed to the system.

In conclusion, I believe we at Greyhound have a choice and I believe we share in that choice with this committee. Under ADA as passed by the Senate we will be in a situation of needing to spend the next six years scaling back our operations so that it can accommodate a new method and system of operation, so that we can indeed survive in that blue sector, yellow sector and pink sector with a different type of service than we have today but still survive.

That is one choice. The other choice we have is to implement our five-point program where we can spend our time, money, energy, effort at making our entire system accessible to, say, in the same fashion that airlines are accessible, school bus companies are accessible, in the same manner within the context of non-undue hardship. We believe that is the right program to work under because that is relying on the positives, not the negatives.

Thank you very much.

Mr. **Mineta**. Let me start this morning's questioning with our junior members first. Mr. Laughlin, would you like to start the questions from a fellow Texan?

Mr. **Laughlin**. I was not expecting the honor and distinction of going first, Mr. Chairman, but I thank you.

Mr. Currey, I just have one area of questions. I am concerned about the discussion of abandoning rural service. My home town is a town now of about 8,000 people. It does not have any rail track there, it never has. The nearest airport is in Houston, about 75 miles away. The second airport is about 90 miles away, and the only public transportation the people in my home town have is bus service.

When I was a child, Continental Trailways, and I want to call it the Missouri Pacific—is that the other bus? I have been gone so long, I am not sure. They both serviced that town. Your company currently does on what is probably an infrequent basis two times a day. As I think about this congressional district I represent, which is larger than nine of our States, there is no rail service in this district, and there is no commercial air service.

So I am intrigued by your proposal, your five-point proposal. Is that something that you are here committed to implement in your company, and are you satisfied that if it were implemented that you would be able to serve all these pink lines? I noticed one of the pink lines went through West Columbia, Texas. Are you satisfied, are you prepared to commit that if this five-point program were implemented that you would be able to serve the West Columbias and the other communities of much smaller size on those pink lines throughout America?

Mr. **Currey**. Sir, the West Columbias of America are very important to Greyhound Lines and the lines that we acquired from Trailways, Inc. a couple of years ago. They are critical to our continued existence. We wish to continue to serve them. We believe not only should we continue to serve them, but we believe that it is quite important that we extend that service in every way possible.

And I would like to note that we have extended the service through our Greyhound Rural Connection Program in the State of

Texas by connecting up with ten rural providers—I hope soon we are connected up with one in West Columbia—rural providers that are subsidized under section 18 of the Urban Mass Transit Act.

The five-point program that has us providing accessibility to our system through our telephone answering centers, through a chair especially designed to lift the person onto the bus with dignity and with comfort, we believe that that program can be put in place at our 200 major terminals within the next two years and that it will prevent the loss of service to West Columbia and the West Columbias of America. We believe that is in our mutual interest, sir.

Mr. LAUGHLIN. Well, I would like to see more information on your point three about the boarding chair and particularly input from the disabled community on that because, as I think about the Greyhound buses I have been on over the years, the way they are designed, the front entry—and I am no engineer—I find it very difficult to imagine how a person with disabilities in a wheelchair, confined, would be able to make the sharp lift angle after going up the narrow steps.

Mr. CURREY. I understand. I understand.

Mr. LAUGHLIN. I would appreciate you or your company or your staff furnishing me and perhaps this committee the input from the disabled community as you progress with that design and your testing and implementation of that chair.

Mr. CURREY. I understand, sir, and within the past week I sat in such a chair because it troubled me also, and——

Mr. LAUGHLIN. I think that is admirable, but I still think input from the disabled community would have more validity.

Mr. CURREY. The chair we are working with to redesign was recommended to us by the disabled community, specifically by Ken Waltrip there in Dallas that we have had extensive visits with on this problem. He thinks it is the best chair in operation today.

Mr. LAUGHLIN. He is a very eloquent spokesman. He is a former TCU football player.

Mr. CURREY. He is a former TCU football player, he is an eloquent spokesman and a strong-willed man. He has been extremely constructive in working with us to show us the type of equipment that Americans with disability can use with grace and dignity.

Mr. LAUGHLIN. Your point two, I think, would be interesting to have more input about the program at Greyhound using the disabled and how—and input from the disabled community on the implementation of the use of the disabled persons to man the 800 number, that is input as you get it. I would appreciate having that, too.

Mr. CURREY. We would be more than pleased to provide you with that. We have a considerable number of Americans with disabilities that work in our Charlotte telephone answering center. One picture of one man particularly comes to my mind because he doesn't live on a wheelchair, he lives on a cot that is wheeled in every morning when he comes to work, and what work is done for him is to give him dignity and respect, and he is one of our outstanding employees, and it is he who came up with the idea that disabled people be utilized to answer the telephone to distribute information to other disabled people, because they would clearly have the empathy for their need.

Mr. LAUGHLIN. Mr. Chairman, as one last side note, I would like to inquire almost on a personal nature, Mr. Waltrip sustained a broken neck in a game against the University of Alabama, made national news when he went to the Soviet Union for some type of innovative therapy on his spinal cord. Can you describe his mobility for us now?

Mr. CURREY. He is in a wheelchair, and he is able to live a very full and active life. He has taken a very interesting approach. He looked me in the eye and said, "Rather than $40 million a year for wheelchair lifts, I sure wish you would put the $40 million"—I assured Ken I didn't have the $40 million—but he said "Anyway, I would like for you to put the $40 million behind basic research for nerve regeneration", and he was able to inform me in our two meetings that there has been some very major breakthrough in that basic research for nerve regeneration because that man intends to be more mobile in the future rather than less.

Mr. LAUGHLIN. Please pass along my best regards to Ken. He is from my home county, Mr. Chairman. I also served with Continental Trailways and the old Missouri Pacific Lines. Thank you, Mr. Currey.

Mr. CURREY. We look forward to serving new West Columbia for many years to come.

Mr. MINETA. Thank you very much, Mr. Laughlin.

Let me call on our colleague from Idaho, Mr. Craig.

Mr. CRAIG. Thank you very much, Mr. Chairman.

Gentlemen, I appreciate your testimony and the forthrightness and frankness with which you have approached this issue.

Mr. Chairman, let me say at the outset, and I have several questions that I would like to pursue, that those from the disabled community that are present here this morning, I would hope that you would not view this as being opposed to or seeking to be opposed to the kind of legislation that is before us. Several people who have questioned with some degree of criticalness the provisions within this bill get immediately telephoned back to their district that they are now serving as a major obstacle in the movement of this legislation through the United States Congress, and I would suggest that that is not the case.

What is important at this point, I think, for this committee, Mr. Chairman, is that we don't put a business out of business that is currently serving handicapped Americans; that we try to find a way in which they can better serve the handicapped and the disabled community so that there is a service at all. The line of questioning I would like to pursue with you gentlemen this morning, because I have watched this issue very very closely and am extremely concerned that rural districts and rural states like my State of Idaho, that have limited service now for all people, including handicapped people, might in some instances, because of the economic hardships brought about by some of the proposals here, be eliminated from service altogether.

What I would like to talk to you gentlemen about and question you about is a question of equal access, and the whole of the system instead of individual units, as I think many of you have referred to. Certainly, Mr. Chairman, along with the good-faith provisions and undue hardship provisions that are important to all of us and certainly important to the handicapped community, I think the first question that concerns me, Mr. Currey, there are some that are saying—well, it is just another couple of bucks on a ticket, and all you have to do is add a couple dollars more to a ticket and that solves the problem of the kinds of costs we are talking about because we are talking about real costs, and none of us dispute that.

What happens to the nature of the service you provide and the type of person you are providing it to if, in fact, that is the end result of this bill, just another couple of dollars on the average bus ticket? Does that dramatically change the nature of the industry as we know it and the service the industry can provide?

Mr. CURREY. Sir, our service and the use of our service is incredibly price sensitive. The inter-city bus industry, or let me just say Greyhound and Trailways, that is one passenger traveling one mile, the index of real volume in the industry lost real volume every year for 10 years in a row. Those 10 years were interrupted by our purchase of Greyhound Lines and subsequent purchase of some of the Trailways, Inc. assets in July of 1987.

We did two very direct things that have caused usage of inter-city buses to go back, to come back. The first thing we did was we lowered fares 20 percent. The second thing we did is exert every conceivable effort to make terminals clean, safe places. I suppose the third thing we did was put in a lot of technology so we could answer the telephone on time.

But this industry had ratcheted down as a result of airline deregulation and discount air fares and use of automobiles for inter-city travel every year for 10 years, and fares were hiked every year for 10 years in an effort to retain the profitability. We dropped fares, ridership went up.

Further, we have discovered that we can't price generally in our business, that we have to price specifically from point to point, and, for instance, just recently, over the past three weeks, we have seen a diminution in short haul travel. I can tell you exactly why, because we tried to get 50 cents, 75 cents more on a $10 to $12 ticket, and we are reversing those price moves.

So every study we have done, backed up by actual marketplace action, tells us that inter-city bus travel is incredibly price sensitive. Now that also ties to the demographics, because let's look at who our passengers are. They are predominantly passengers whose travel needs are time and sensitive, price needs are very sensitive. Fifty percent of them are people who have incomes below $15,000 a year, many of them rural based, so while another 10 or 15 cents or another 50 cents or $1 on an item might not mean anything to you or to me, it means a great deal to them.

Furthermore, I interview our customers every time I ride the bus, and I try to ride the bus extensively once a quarter, once every three months, and they always mention price as one of the two top items as to why they are riding the bus, and they also are aware of our price changes, no matter how modest, so we are an incredibly price sensitive business, sir.

Mr. CRAIG. Thank you very much.

Mr. Dipert.

Mr. DIPERT. Yes, sir.

Mr. **Craig**. Assuming that this bill's provisions for full accessibility do not drive private bus companies out of business, every bus company does the kind of investment that it would have to make to comply with this proposed legislation; what do you anticipate would be the result on travel and tourism as it relates to price increases that would likely have to result to accommodate the provisions of this legislation? Have you looked at that, estimated, made any consideration?

Mr. **Dipert**. Our business is basically, in fact about 80-90 percent of our business is done with retired Americans who are on limited income. Although they have much time available to them, they have limited income, and the increased cost, as I spoke to earlier, the increased cost on the tour operators where only a third of our members in the National Tour Association own their own bus, the others, the price would be passed on to them and eventually to the customer.

And although no hard data has—we don't have any hard data that we have come up with since this bill has been introduced—it is the feeling of our operators that the cost that would have to be passed, on compared with the cost of cheaper air fares, cheaper destinations that are available through air travel and ground arrangements, would make it impossible for some of our members who are in small rural areas, small communities to package tours for people in those areas that would like to see part of America, and most of our operators do bus tours to two, three days away to other areas that their customers are wanting to visit in the U.S.

Mr. **Craig**. The reason I asked that question, Mr. Chairman, one of the new economies of my State is the growth of the bus tour industry. We see a good many tours coming through rural Idaho today because a good many urban people are wanting to visit Rural America and see if Rural America is still out there, I suspect, along with the beauty that is involved there, and there is, you know, if there is an additional cost at a time when this industry apparently is beginning to flourish and seek new avenues of providing for their customer, I think it would be tremendously damaging to a broad economy of this country, not to a narrow economy.

Mr. Chairman, one last question. I would like to ask this of you, Mr. Busskohl. Is the demand for 100 percent fleet accessibility the only way to meet the needs of handicapped riders? Because we are gaining and appreciating the sensitivity of the handicapped industry that that seems to be the argument today, almost as if they were not currently being served.

Mr. **Busskohl**. No, that is not correct. For example, we do operate also two schedules in the Midwest, mostly in Nebraska, and any time that we have ever been asked to serve a handicapped person, we have. So we do have the ability to serve handicapped persons that can be separated from their chair. If somebody has a chair as part of their life support system, we cannot do that, but that is in place today, and there are other programs on a national basis that are in place today, and they are being served.

I also believe that given a little more time and with the study, we can come up with other means to serve other than fully equipped lifts.

Mr. Craig. In other words, only in unique situations are you having to turn away the handicapped person?

Mr. Busskohl. That is correct.

Mr. Craig. Thank you all. Thank you very much, Mr. Chairman.

Mr. Mineta. Thank you, Mr. Craig. Mr. Parker.

Mr. Parker. Thank you, Mr. Chairman.

To my colleague from Idaho; when I left the house this morning, Rural America was still there.

Mr. Craig. Thank you.

Mr. Parker. In the testimony that we have gotten from this panel, it is interesting that four of you gave testimony that was basically reactive in nature, basically a study of the case that if the bill goes through as proposed, it will destroy your industry or curtail services that can be provided.

Now, being reactive in nature is not something that we as Members of Congress, that we can blame you with because we tend to be very reactive in everything that we do also. The one statement that has been given that is proactive in nature comes from Mr. Currey. Now that is interesting in that everything that he has said basically says there is a problem. And his company is addressing that problem, I think in a realistic fashion.

I would like to know what your comments are as far as the five-point plan that Greyhound has come up with, because I think there is a problem, you know. There is a problem out there as far as getting people where they want to go, total access. There is some type of a problem. If there is not a problem, then the entire program that Mr. Currey is talking about, he is being reactive. It is a situation where he is reacting to something that doesn't need to be addressed.

I would like to have your comments as far as the program that is being initiated by Greyhound. Mr. Dipert.

Mr. Dipert. Mr. Parker, my company can't come up with $100,000 to make a donation to disabled Americans. It would bankrupt my company. I only have 14 buses. So where Greyhound can come up with, because of their size, can put in 800 lines and do many very interesting, creative things, and they are definitely a leader in the industry, leader creatively, leader in the marketing, and very helpful to the rest of the bus inter-city industry. It is hard to conceive there are a lot of "Mom and Pop" small businesses out there that are running two, three, four buses as their livelihood, and it is very hard for them to come up with creative resources to do something in their community.

That is not to say that our members aren't involved in the community and in the human needs of their community. I serve on the Board of Directors for the Salvation Army, I am very active in the human needs in our community. It is very important to me, and what the disabled are asking for. I as an individual am very sympathetic to it, and will do everything in my power in my little area of the world to help accomplish.

But I hope the committee doesn't forget that there are a lot of small businesses out there struggling for their livelihood, and although this may not seem like a big thing in the big picture, in a lot of small areas, it would, for them to get their equipment ready, it would impact them so much that they would have to go out of business.

Mr. HENRY. Yes. I would just like to say one or two things about that. All companies are different and have different methods of operation. As Mr. Currey said, his 200 terminals, he can do those kind of things. We operate a much smaller company. It is a company over 80 years old. I guess you might say we have operated on almost a home-spun philosophy more so than a highly categorized business. We never realized. It was brought to our attention that we had a problem taking care of the handicapped. Maybe it is our fault or maybe it wasn't brought to our attention. We have been carrying the handicapped ever since we started the interstate bus business. The blind are handicapped. We have reduced rates.

We have had people call us, call our terminals, we have met the people at the terminal, we have carried people onto the bus, drivers have called ahead and we have called ahead, we have two-way radios to make sure that a supervisor person was at the other end of the line to help. We are trying to do actively what we can do with what we have, so I think we have been trying to meet the needs, and apparently we have not had someone call us and say we aren't. We are trying to do the best we can with what we have.

As we have seen the problem from a small company, we have faced that problem and tried to help those people that needed help. There are two different styles of operation.

Mr. PICKNELLY. Mr. Parker, my company, Peter Pan, based in Massachusetts, is probably unique to the Massachusetts hologram that leases buses to companies primarily for service within the Commonwealth. We have 146 buses, of which now seven are wheelchair accessible, which is about five percent.

Clearly those buses are being under-utilized at the present time. Maybe the answer is that some percentage of buses should be wheelchair accessible. One of the things I think we are suggesting is that the entire matter be studied. Maybe the results of the study would show that perhaps a certain percentage should be wheelchair accessible. I think that is the reason for the study, sir.

Mr. BUSSKOHL. I don't know whether I can give you a direct answer, but on our schedules, specifically a run between Omaha, Nebraska and Rapid City, South Dakota; in a year's time we operate 300 days out of the year whether it is snowing or not, and we have had approximately 12 requests to handle people that were handicapped, and not a one of those people has been turned down, not a one of those people was not able to take that trip unless, as I stated before, they could not be separated from the chair.

So, once again, this has been going on ever since we have been in business, which is 62 years, and we believe that the handicapped community has been served, and, once again, if there is a perceived need, I believe with a little time and a little study there can be even better methods designed to do this.

If you want to get into just for a minute the tour end of the program, there are tours designed specifically for handicapped. I know of one in Owatonna, Minnesota, and if we have requests of the people, say we have to have handicapped accessible throughout the whole tour, we can recommend that, and I am sure that there is at least one other operator that I know of in the State of Washington.

So even that kind of a statistic, I think, might tell you a little bit about the real requirements of the handicapped when they have only got two that I know of. There may be several others, but there aren't very many that specifically are designed for the handicapped.

Mr. PARKER. Thank you very much.

Mr. Currey, I propose that one of the reasons you are one of the leaders in your industry is because you do come up with innovative ideas like you are doing, and I commend you for that. Thank you very much, gentlemen. Thank you, Mr. Chairman.

Mr. MINETA. Thank you, Mr. Parker. Mr. Duncan.

Mr. DUNCAN. Thank you, Mr. Chairman.

Gentlemen, last week I made the comment that I thought that this legislation might affect small businesses more than the very large businesses, and Mr. Guard was testifying at that time, and he seemed to indicate that he didn't think that was so, that he thought even very small bus companies could comply with this ADA Act.

I take it from your testimony that most of you would question that. I think that much of what we do here in Washington, it ends up helping big business, and we are running small business out of existence at an alarming rate in this country, and I am concerned about that. In the "National Journal" just a few days ago—that is a very nonpartisan magazine—they have an article about this act, and they say, the column says it sounds great, but what does it mean, and it says, "Congress is writing bills that few people, least of all its Members, understand or can explain.

"The latest example is a 1989 Americans With Disabilities Act which the Senate passed by a 76-8 vote on September 7th and which the House is expected to approve before law-makers complete business this year. The bill is well intended, addresses a legitimate and serious national problem and sets goals with which few people could disagree. But its broad prescriptions are so ambiguous and potentially over-reaching that Federal Judges quite likely will struggle for years to define what the law means and how to enforce it."

Do you gentlemen think there has been enough study or enough investigation on this law? Mr. Henry.

Mr. HENRY. No, I do not, and that is one reason, as we said, we welcome a study, but what we don't welcome is a study that has a foregone conclusion. Yes, I would like to have someone help us find ways to better serve those who apparently we are not serving as well as we could. But as the small business, and I think I represent small business, the costs to us, the capital costs would be devastating to us.

Mr. DUNCAN. Mr. Currey made I think one of the finest witnesses I have ever heard before one of these committees. But, Mr. Currey, you seemed to think, of course, from your maps and so forth, that this would have a tremendously harmful effect to the Greyhound Company, is that correct?

Mr. CURREY. Yes, sir, Mr. Duncan, it will. It will indeed, but we see the Greyhound Company with three constituents, and we believe it harms each of the three constituents: our customers, our employees, and our capital providers. But in our customer list I would emphasize that there are thousands and thousands of handicapped people.

Just three weeks ago in the chairman's district I rode the bus and saw an example of what my colleagues here were pointing out. There was a woman who was totally deaf on the bus, and by some mishap of life she didn't have any knowledge of lip reading, and I, of course, attempted to interview her and our driver, Bill Burroughs. Bill says to me, "She is sitting the second row back right next to the seat," Bill says to me, "Don't worry, Fred, we have got her covered, we know who she is. She gets off at Portland, and we have already called her contact to have her met. We take care of her on this trip about eight or 10 times a year."

So, see, people that aren't in the bus business don't understand—people who are not in the bus business don't understand the extent to which we in the business; drivers, commissioned agents, people on driveways, the customers themselves, help one another. Because when you embark upon a bus trip, going from Knoxville to Nashville to Memphis to Texarkana, Arkansas; when you embark upon that bus trip, that is a journey, and you are joining with other people in the journey, and everybody helps one another on that journey, and the driver is sort of the captain of the ship, as it were, on that journey.

So we are out there doing all of that today, but it is important to recognize that people in the disabled community believe that we could service their needs giving them a greater sense of grace and dignity, and so we are going to work very hard to do that if you enable us to do it. If you put us out of business with this legislation, we will have to work on a different problem.

Mr. DUNCAN. Last week, Mr. Shuster, the Ranking Member of this subcommittee, quoted President Bush, I think, when he had lunch with our Ranking Member, Mr. Hammerschmidt. Apparently the President seemed to think that this legislation might not apply to the very small "Mom and Pop" bus operations. Is it your understanding that this legislation would apply to even the "Mom and Pop" operators, the very small private bus companies?

Mr. HENRY. That is my understanding. One thing, Mr. Duncan, I think we might add here; when you talk about large Greyhound and the small "Mom and Pops", many of us, and I am one of them, the small "Mom and Pops" feed into the large Greyhound corporation. If we didn't have that feed both ways from this large corporation, we would be in jeopardy for two reasons. We rely on them to help us and vice-versa, so we are a large part of that. We are a small company, but we rely on that big company, like Mother Nature, to take care of us.

Mr. DUNCAN. None of us want to appear unsympathetic to the disabled, and all of us want to be helpful to them as much as possible. I think that is one reason why this legislation passed the Senate by such a large—76-8, I believe—vote, but I have always found that the severely disabled are very sympathetic people themselves, probably because of what they have been through in life and very recently in their demands, for the most part.

And I am wondering, have your groups, the American Bus Association and the United Bus Owners of America and some of these other groups, have you met with—now, Mr. Currey testified that

Greyhound has met with some of the disabled groups. Have your groups met with the handicapped and some of the main disabled groups that are supporting this legislation, and have you tried to work some of these things out?

Mr. **Busskohl**. I personally have not met with a specific group, but I have met with an individual in Sioux City. His name is Burt Welch, Jr. He is confined to a wheelchair. If this committee had not met on a Tuesday when he has to have a medical appointment, he would have been here and glad to testify and telling you how he believes that this legislation would impact him very negatively. Because being in the Frost Belt, even with this kind of accessibility, with the weather that he has got to contend with, he couldn't get to the bus anyhow.

So there are a lot of things that are not considered in this bill. A study needs to be done to address those sorts of things.

Mr. **Duncan**. Yes, Mr. Henry.

Mr. **Henry**. I was just going to say, the American Bus Association, we have had a number of direct meetings, both at our call and their call. I might also add that our industry is a very small industry. For example, Mr. Currey is also Vice Chairman of the American Bus Association, so his input, as he picks up things, comes directly to the whole industry. We hear those things as his company hears them. So we're involved in two ways, as an association and through the individual members.

Mr. **Duncan**. Just one more question. Some of the legislation we pass here has an exclusion for small business, exclusions for businesses that employ less than 20 people or fewer than 50 people or exclusions like that. Do you gentlemen think that this legislation should include an exclusion for small business of some type; and if so, what? Or have you discussed that?

Mr. **Busskohl**. Well, in my opinion, small business, large business is still using the same piece of equipment. So I don't know that in this industry whether excluding a small business would have the impact that it might in some other type of industry.

For example, small business would be purchasing a used coach from myself or from some other company, and it doesn't make any difference whether it came from a small company or a large company, they are still dealing with that same piece of basic equipment. So small business I don't believe would have that kind of—in this industry—wouldn't need that sort of an exclusion. I mean, if that is the only way to do it, I suppose so, but it would not have the same impact.

Mr. **Henry**. I just have to back that up. The handicapped person, when he gets on a bus at point A, really doesn't care if it is a small business or a large business. If there is an exclusion, there is no bus for him, he doesn't have the wherewithal, so I think it has to be one or all.

Mr. **Duncan**. Thank you very much.

Mr. **Mineta**. Thank you, Mr. Duncan. I would like to call on our colleague, Mr. Skaggs, from Colorado. However, let me just at least recognize the presence of the Ranking Republican on the Full Committee on Public Works and Transportation, our very fine colleague from Arkansas, Mr. Hammerschmidt.

Mr. HAMMERSCHMIDT. Mr. Chairman, I have a statement for the record.

[The statement of Hon. John Paul Hammerschmidt follows:]

STATEMENT OF HON. JOHN PAUL HAMMERSCHMIDT, A REPRESENTATIVE IN CONGRESS FROM ARKANSAS

Thank you, Mr. Chairman.

First of all, I would like to commend you, Mr. Chairman, and Congressman Shuster for scheduling these two days of hearings on the Americans With Disabilities Act.

This proposed legislation is designed to end discrimination against individuals with disabilities and to bring persons with disabilities into the economic and social mainstream of American life. These are certainly goals which I personally support.

Throughout my career I have had the pleasure of working very closely with fine organizations such as the Paralyzed Veterans of America on many issues. My work with these groups has given me a first hand understanding and appreciation of the many barriers facing the disability community.

Nowhere are these goals more important than in transportation, for it is often the key which enables the disabled to become part of the mainstream and take advantage of education, employment and recreational activities. Mobility for the disabled American is our upmost consideration. Testimony from our broad collection of knowledgeable witnesses will help us to determine how best to achieve that mobility.

The proposed legislation offers solutions to the transportation problems of the disabled which are complex and wide ranging in their potential impact. We must be sure that we understand exactly what the legislation would require of the transportation providers. We must understand the variety of ways in which our disabled friends are presently aided in the many communities across our Nation and what effect these requirements would have on current services. We must remember the needs of not only wheelchair bound individuals, but the mentally impaired, the growing population of elderly Americans, and others who benefit from special transportation services. Concerns have been raised as to whether or not the requirements of the proposed bill, as applied to all situations, will result in greater mobility. Until we know the facts, we cannot be assured that our common goal of improved service to the disabled will in fact be achieved.

I look forward to hearing from all our distinguished witnesses and working with the subcommittee on this important legislation.

Mr. HAMMERSCHMIDT. But may I ask unanimous consent to insert a very comprehensive letter from the operator of a small bus line in Arkansas. He makes his point very well, and I would like to make it part of the record.

Mr. MINETA. Without objection, so ordered.

[The letter referred to by Mr. Hammerschmidt follows:]

MOUNTAIN HOME BUS DEPOT
701-D E. Village Center
Mountain Home, Arkansas 72653
(501) 425-2811

Mountain Home Bus Agency, Inc. **Twin Lakes Bus Lines**

September 20, 1989

Honorable John Paul Hammerschmidt
2110 Rayburn House Office Building
Washington, D.C. 20515

Dear Congressman Hammerschmidt,

As President of Twin Lakes Bus Lines, Inc., I am writing to you with concerns about H.R.2273, the Americans with Disabilities Act (ADA). Both the Senate and House versions of the ADA appear to mandate wheelchair lift, multiple wheelchair tie-downs and fully accessible restrooms on all new intercity buses.

As you know, my company provides rural bus service to the North Central Arkansas area between Mountain Home, Harrison and Little Rock. We also provide weekly service from Mountain Home to St. Louis and Chicago along with a bus charter and tour business. We started in the transportation business in 1983 with a dedication to provide rural bus service to our area where no bus service existed. We quickly discovered that daily rural bus service was an expensive service to provide and that it had to be subsidized from profits of our charter business. We have been successful in keeping our service going and plan on providing more needed transportation for our area as we are able.

I don't feel that ADA will have a direct impact on our service for the following reasons:

1. Rural regular route service will probably never support the burden of purchasing new buses and supplying insurance for them, therefor, we are resigned to buying used buses to keep the cost of the service as low as possible. Used buses with wheelchair lifts will not be available to us, the small independent companies for many years even if ADA is passed.
2. Most of our passengers are elderly because our area is a retirement community and yes some of them have handicaps and disabilities, some are even in wheelchairs, but we have delivered all of them to their destination with safety and dignity without wheelchair lifts.

I feel that the future of rural bus service is in the hands of us, the small independent regional bus lines, however, we have a great dependency on the larger bus lines such as Greyhound and this is why I am concerned.

My bus service is completely dependent upon passenger feed to and from the Greyhound Depot in Little Rock and hopefully other locations as we are able to add to our service. I think Greyhound realizes the importance of the small bus companies and have introduced a plan called "Rural Connection" to help us integrate our service into their terminals, a plan beneficial to both.

My concern relates to the bills impact on Greyhound, which estimates a minimum cost of $40 million per year. If that tremendous burden forces a reduction in Greyhound services, it could have a devastating effect on my business and on other small bus lines attempting to restore rural bus service.

In closing, I would like to impress on you that I am not ignoring the plight of our disabled. I understand their problems, but I do think that before you mandate such drastic measures on an already fragile industry, that other less costly options should be more closely studied.

I appreciate your help in the past and with this issue. If you have any questions or if I can be of service in any way, please let me know.

Sincerely,

Robert L. Alexander
President
Twin Lakes Bus Lines, Inc.

Mr. MINETA. Mr. Skaggs.

Mr. SKAGGS. Thank you very much, Mr. Chairman.

I want to thank our witnesses for their time and interest this morning. I think we are all intending to be productive and not counterproductive in addressing this issue. One thing I would like to ask you, and I am not sure who among you would like to comment, it is whether we should attempt to make some distinction between essentially scheduled common carrier type operations and charter type operations and charter/tour operations.

Perhaps the gentleman from Peter Pan involved in both those kinds of activities on a medium-sized scale could speak to it, as well as Mr. Dipert, or if there is an industry position, I am interested in that.

Mr. PICKNELLY. Under the Massachusetts program, buses that we have in our fleet are restricted to service on a regular route and are only allowed to be used in charter service within the Commonwealth on weekends so that we really haven't had the experience, but again our experience basically has been very limited call for the wheelchair accessible vehicle.

Again, I think our main position is that the entire matter should be studied. I think that that should be part of the study; whether or not the accessible vehicle should be confined to regular route or charter.

I guess my first reaction is that the handicapped community would also want to participate in charter as well as tours, so I think the answer——

Mr. SKAGGS. I am sure you are correct in that. It is just whether the cost/benefit considerations are different depending on the kind of service you are talking about in a compelling enough way to make that public policy distinction.

Mr. PICKNELLY. Yes, sir.

Mr. SKAGGS. Mr. Dipert?

Mr. DIPERT. I don't have a regular scheduled route, so to be selfish, certainly I would want you to do it for charters whether you do it for the regular routes or not, but from an industry standpoint and representing our industry, which mainly deals with charters, we feel the biggest problem would be the amount of cost that it would require the senior citizens who are on fixed income to have, and there is no question that would have to be passed on to the customer. And we have, as Mr. Currey mentioned, a 50-cent cost in ticket. You would not think that would make a difference, but there is a perceived benefit. On a charter operation you are dealing with people who want to go to another community and see the beauty, et cetera, of that other State or community, and there is a certain perceived benefit, and we feel that if it goes beyond the benefit to them, they will choose other means of recreation and eventually kill our business.

Mr. SKAGGS. Let me ask if the ABA, could provide some information for us or maybe you have it available. It seems to me if the demographics of your customer group have been correctly described, that one of the effects of this proposed legislation with the cost passthrough would be essentially a regressive tax. I would be interested in how we quantify that and the impacts by income group if that data could be developed and made available.

Mr. HAMMERSCHMIDT. Will the gentleman yield?

Mr. SKAGGS. I would be pleased to yield.

Mr. HAMMERSCHMIDT. I wanted to mention as an aside, I was listening to Mr. Dipert's response to you, and just to say I can personally attest to Mr. Dipert's credibility as a witness. I have known him and his father since they started their business. I have been a great admirer of their initiatives and their service to the public. I just want to make that a part of the record.

Mr. DIPERT. Thank you, Mr. Hammerschmidt. I send my father's great regard for you, and mine as well, I might add.

Mr. SKAGGS. I better cut into this before we get carried away.

It occurs to me that the testimony we have heard about loss of revenue producing seats is relevant only if your collective experience is that you are having relatively fully loaded vehicles most of the time. So I am also interested in data being provided for the record, if you will, as to your average occupancy rates and, therefore, whether or not the loss of two seats, let's say, is going to have a real effect or only a hypothetical one.

Mr. BUSSKOHL. Could I just offer one comment? One of our motor coaches was in Washington yesterday. That very same coach two weeks ago was on our schedule. Therefore, the way we operate that piece of equipment is interchangeable, and if we are not allowed to make it interchangeable, then it makes our operation higher cost, less efficient.

Mr. SKAGGS. That is interchangeable between your scheduled and charter operations?

Mr. CURREY. Yes, and if I may, sir, comment upon that also, that is certainly the case with Greyhound Lines in that the charter fleet during the colder months between peak periods of demand is a charter fleet, but during peak periods of line demand, it is a line fleet. So there is a forced interchangeability of the fleet in order to accomplish the demand responsive service that we offer. Because, for instance, should the first bus be full, we, in general, offer to bring up another bus on the same schedule in order to accomplish the trip for the people.

Mr. SKAGGS. Well, even with that additional insight, perhaps the data could be organized in a way that addresses that which would also deal with how many of your charter operations are fully booked. I am just looking at what percentage of marginal operations are really going to be impacted by this.

Mr. CURREY. Of course. And in conjunction with our regular line service, if you visualize, I can visualize pieces of the map, but if you visualize a route that begins in a major metropolitan area and traverses the country, often the average load on that route would be maybe 20 to 25 people out of 47. But the schedule might, nonetheless, with high frequency, depart the original location with a full bus load. So one has to be careful looking at average load figures.

Mr. SKAGGS. Well, I will count on you to point out those discrete considerations for us.

Mr. CURREY. Indeed.

Mr. SKAGGS. Finally, let me just make an observation. Many of you have referred to the low frequency of requests for service. I, for one, question how much relevance that carries with it in that the habits and expectations of the disabled community, in taking the initiative to make a request, are probably conditioned to some degree by the lack of availability of service. So it tends to be a self-fulfilling kind of thing. And I don't think requests necessarily are the best indicator of need.

Finally, Mr. Chairman, if I may, since I have to leave, if I can welcome in advance, Mr. George Herman, from the Regional Transportation District in Denver, who will be testifying in the next panel, and invite you gentlemen perhaps to stand by to listen to his testimony. I think we have some very hopeful experience coming out of the Denver Bus System as to both cost and frequency of use and other indicators that perhaps we can address these problems at lower costs and with greater impact than may have otherwise been suggested.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you, Mr. Skaggs. Mr. Hancock?

Mr. HANCOCK. As we all know, bus transportation has been in decline for probably 40 years, a very rapid decline, in fact. I am just curious, with this type of an increase in overhead, which would definitely indicate an increase in prices, you indicated that—in fact the entire panel has indicated that this would cause a further decline probably or possibly in bus ridership. Can public bus transportation exist for another 10 years with this type of increased overhead? I am not talking about the tour buses. I am talking about the public buses, the Greyhounds.

It would appear that even though we are definitely concerned about giving people access and mobility of people that suffer handicaps, but is it possible that what we have had for years will go out of existence in a comparatively few years with this type of an increase?

Mr. CURREY. It is certainly possible. For instance, to put it in perspective for our company, the airline industry for the last 12 months reported profits of $611 million, for the last reported 12-month period, $611 million. DOT studies indicate that the cost to the airline industry of the implementation of the accessibility standards is between $5.4 million and $18.7 million, depending upon definitions, et cetera. Our company lost $17 million last year, is expected to earn $10 million this year on a comparable basis to the airlines' $611 million. Our company is approximately the size of the eighth largest airline, that is Swiss Airlines. Our company earns two cents on every dollar this year hopefully. Swiss, the eighth largest airline, earns 10 cents on every dollar.

So we have $611 million profit, cost to implement industrywide of $5.4 million to $18 million as a range. The cost to implement alone to our company is between $40 and $80 million, and I frankly believe the $80 million is more realistic, but no need to argue the cost issue. Even at the lowest possible costs, it is a bolt to the heart. That bolt to the heart will cause the kind of restructuring we attempted to present with the maps.

Mr. HENRY. Thank you.

Mr. MINETA. Mr. Packard.

Mr. PACKARD. Thank you, Mr. Chairman.

I served on a transit district board for some time, and during the period of time when we were not only anxious but required to implement accessibility on public transportation systems across the country, and I recognize the dilemmas and the costs and the problems.

Here we are talking about private companies, though, not public companies, and there is a little bit of a difference, I suspect. I would like to inquire as to your perceptions of how far reaching this piece of legislation would be. Would it require access, for example, on old-fashioned San Francisco-style trolleys? Would it require lifts on D.C. tourmobiles or on London-style double-decker buses or on Disneyland horse-drawn carriages? How far reaching is the bill?

Now, I assume from you, as representatives of small companies that may only operate a few buses, that you are assuming that this piece of legislation will impact your buses, your units. To your understanding, how far reaching will it go? Will it get down into these unique kinds of vehicles that would have to meet the same requirements?

Mr. **Currey**. Yes, we believe it will. We believe that the definition of accessibility as applied to private carriers, Mr. Packard, is a wheelchair lift on each bus, and what you hear us all saying is, that accessibility we are for. You hear us testifying not only on our current process of managing transportation for Americans with disabilities, be they in wheelchairs or the blind or the deaf, but you hear us saying that we have every intent to continue that. But we wish accessibility to be defined for us in the same fashion that it is for the airlines with their $611 million of profit and for private school bus companies. We wish a commonality of that definition.

Mr. **Packard**. Is the regulation in existing law and the proposed regulation in this proposed bill the same for public as it is for private carriers?

Mr. **Currey**. That is the heart of the difficulty, in that there are two sections to this bill. One section applies the private-sector standards of accessibility to us common with the sorts of definitions used for school bus companies and bus companies that transport people from airports to hotels, for instance, airline companies, two-story office buildings, et cetera, et cetera. But then there is another section of the bill that treats us exactly like public transit companies, that is to say it mandates the definition of accessibility to be a wheelchair lift on each vehicle, and it is that second definition to which we are opposed. We are obviously concerned.

I, myself, served, as you did, as Chairman of the Board of Trustees of the Dallas Transit System at the period of time when there was implementation of wheelchair lifts on our DTS system, and what we are dealing with there were 80 percent Federal tax dollars so that the burden was spread not upon the poor who ride inner city buses but across the entire tax base, 80 percent Federal dollars, 15 percent State, in our case, and five percent local. That is the way we did our access at DTS, probably the same way you did yours.

Mr. **Packard**. I don't think there is any question about our commitment to try to solve the problem for our handicapped people. The question is how we do it.

Mr. **Currey**. Of course.

Mr. **Packard**. I think that is the discussion of this hearing. I would like to ask Mr. Henry or Mr. Busskohl, and perhaps Mr.

Dipert, because you represent associations, maybe your information would be helpful in this question. How much of your capital and rolling stock are government subsidized? Being private companies, how much are you receiving and other companies that your association represents?

Mr. HENRY. I represent seven companies, and we receive no assistance.

Mr. PACKARD. No government assistance.

Mr. HENRY. The only assistance we receive would be in the tax on fuel. But we receive no capital assistance and no other assistance.

Mr. PACKARD. Is that true of other companies?

Mr. BUSSKOHL. Individually our company is running a pilot project for rural transportation in the State of Nebraska, so at this point in time we are receiving about $200,000 per year for operation only.

Mr. PACKARD. That is in your company?

Mr. BUSSKOHL. Yes.

Mr. PACKARD. Is that true of other companies that your association represents?

Mr. BUSSKOHL. As far as I know, we are the only pilot project for rural transportation in the country.

Mr. PACKARD. And that $200,000 represents about what percentage of your total operational cost?

Mr. BUSSKOHL. You are talking about the total company?

Mr. PACKARD. Yes.

Mr. BUSSKOHL. I didn't calculate the percentage, but $200,000 out of a $7 million operation isn't much.

Mr. PACKARD. Okay. Now, the question was regarding capital and rolling stock, and apparently there has been no subsidization for your companies in that area. And Mr. Busskohl addressed operating costs. Is there no subsidization generally throughout the industry? That is true of Greyhound also?

Mr. CURREY. That is true of Greyhound.

Mr. PACKARD. Well, then my next question, of course, doesn't apply. My next question is, could you survive without a government support? But if you receive none, you have survived apparently.

Mr. CURREY. I wish to correct myself. We have a number of buses, less than 10, that received some capital subsidy, that is to say we leased these buses from the State of Michigan under a capital subsidy program of the State of Michigan DOT, and that just hit me as I was answering. I wish to correct myself. That is less than 10 out of 4,000 pieces.

Mr. PACKARD. On public equipment, as we know, it is taxpayers' money that is implementing the accessibility requirements, and a significant amount of money is used for that purpose, as some of us know, and it takes a lot of dollars to retrofit 120 buses in a community, public buses.

Your concern and your desire for the study is to determine if, in fact, private companies would be able to survive without some government assistance in retrofitting. What would be your response if there were a proposal that the government would assist private industry in meeting this requirement if, in fact, it became law?

Mr. **Henry**. There again, in a small business perspective, if that was an opportunity whereby we could better serve the public and still survive, we would certainly want to look at that.

Mr. **Packard**. Please be aware, I am not offering any Federal monies for that purpose. We certainly don't have any to spare, at least that I am aware of. In your judgment, do you see that there is a difference between public and private transportation in regard to these kinds of requirements?

Mr. **Busskohl**. Well, I do. Private industry, once again, we are talking about the motor coach industry has survived on a very narrow margin, and we, I believe, pride ourselves in doing that and being able to do that without the government assistance, and within that fabric, we have been able to handle handicapped people at this point.

Now, the most extreme example might not be the best, but it does serve the purpose. So from my standpoint, again, being a free enterpriser from the word go, I believe that the government assistance would be the last thing that I would want to hang my hat on.

Mr. **Packard**. I appreciate it. Thank you. Thank you, Mr. Chairman.

Mr. **Mineta**. Thank you very much, Mr. Packard.

Mr. Henry, if I might ask, you in your statement said that the capital cost for installation would be anywhere from $20 million to $30 million. Roughly how much additional operating costs would be incurred by the inter-city bus industry in order to implement the ADA bill?

Mr. **Henry**. Having no experience in operating this type of equipment, but judging by what our maintenance is on our normal fleet, I would have to take it on a per-bus basis, and I would guesstimate that we would probably allocate in our budget between $1500 to $2500 per year for the maintenance of that vehicle. I have never operated one, so I can't give you an example figure.

Mr. **Mineta**. I take it that given that kind of additional cost that that would make certain inter-city bus routes unprofitable.

Mr. **Henry**. Yes, it would, sir.

Mr. **Mineta**. Now, under the ADA bill, the requirement for wheelchair lifts on all inter-city buses could extend to, let's see, a ten-year replacement cycle, so that would then make these wheelchair lifts on buses take in reality some 15 years to implement the provisions of the ADA bill as passed in the Senate.

What interim policies will the ABA membership implement to provide for individuals with disabilities to get on and off the bus given that kind of a time period for the implementation of the legislation?

Mr. **Henry**. In interim we would be working, for example, with the five-point study Mr. Currey has mentioned. We would continue doing what we have been doing now and, as I said, we have extensive meetings with the handicapped association trying to make the best of what we have, to provide better service.

Mr. **Mineta**. On that score, would there be some specifics? What kind of advertising or public relations or outreach program is there to indicate what is going on right now?

Mr. Currey or any of the others might want to respond.

Mr. CURREY. Mr. Chairman, we have taken a very close look at the demand side. The Department of Transportation did a study in 1978 that states that there were 400,000 persons in wheelchairs as of 1978. We have received information from various disability groups that indicates that that figure may be as high as 700,000 now.

We have projected, therefore, usage consistent with the usage of the intercity bus transportation in the population at large to be usage at approximately 1 percent of Americans. That would mean that figure would range between 400,000 and 760,000. We have projected further the utilization of the intercity motor bus for more than one trip a year so that one must use a multiple of 400,000 or 760,000 people if people in wheelchairs traveled with the same proclivity by bus as the population at large.

We believe people in wheelchairs having a proclivity to travel on inter-city buses is a rational assumption because so many people in wheelchairs have specialty vehicles that can get them not simply from the terminal but from origination to destination, from the place where they live to the place where they are going.

Further, we have taken a careful look at Peter Picknelly's results and we believe those results are consistent with those percentages as well when we take a look at the percentage of people who are in wheelchair lifts within the confines of his system. He has a well-defined test because it is Boston to Springfield. So our objective and our five-point program is desired to enhance the existing service that we do have today.

The dollars of advertising we are suggesting in our five-point program, while they don't sound high, could be target marketed with a rifle shot, if you will. We do a lot of specialty advertising of that type to a very focused group, utilizing media that group particularly reads or sees or hears.

So we believe that we can enhance the service that we provide today and can specially advertise that. Further, we believe that tests, very carefully monitored tests—Peter has carefully monitored his but he is not a federal agency—but a very carefully monitored test like Peter's would either bear out my analysis I just gave you, or will not.

Maybe usership is much higher. Maybe it is up at 2 or 3 percent proclivity to travel as opposed to 1 percent nation-wide. Even at a figure like five, there is no way for the accessibility by providing a single wheelchair lift for each vehicle to be cost effective.

Mr. MINETA. When you say you do that kind of focused advertising, is that in terms of attracting a specific group to your service, or you say we have accessibility or other provisions?

Mr. CURREY. Yes. For instance, we spend about $18 million a year on radio network advertising. When I mentioned reducing fares, cleaning up terminals, answering the telephones, we have spent a lot of money on network radio advertising.

We have said to members of the disabled community that we would be pleased to add a tag line on many of our ads saying, "We welcome disabled America", we do, we do today. We welcome them as an industry and a company.

So we would be pleased to say that as a tag line phrase. But, Mr. Chairman, we cannot pursue the one program if we are under the gun to put lifts on all our buses. If we are under the gun to put lifts on all our buses, what I have to spend my time, money and energy is into reprogramming our route structure so we can survive, so half our customers can have a ride with us, and half of our employees can have jobs, and half our points served can be served.

I have to readjust my thinking. I have to go this afternoon to explain all of this to my bond holders who are looking at the whole process with a very jaundiced eye.

Mr. **Mineta**. The air carrier rules do not mandate wheelchair access to restrooms on airplanes. Is it fair to mandate them on inter-city buses?

Mr. **Currey**. If we are talking full accessibility to the full line service to accommodate a person in the wheelchair, the same type service that you would be giving someone else on that bus, I assume they would have to have accessibility to the restroom.

Mr. **Mineta**. But on the other hand if that exemption were included in it in terms of accessibility to the restroom——

Mr. **Currey**. If that were excluded obviously it would cut down some of the cost of operating that piece of equipment because you would not have to take out an entire row of seats. It would be an assist but not the answer to the overall problem.

Mr. **Mineta**. Mr. Busskohl, you referred to 10 to 15 percent in funding the costs of purchasing lifts for your buses and a 30 percent loss of passenger/package carrying capacity. If a lift were available for only 5 percent of the cost of a new over-the-road bus and no loss in cargo capacity, would you still argue that this cost incurred only once in 10 years or so would drive transportation companies out of business?

Mr. **Busskohl**. Yes, sir. I will give you an example: in the best of years we have made maybe 8 percent profit. In the worst of years, which have come three and four times in a row, we have been minus 3 percent.

So in a minus 3 percent position any additional costs will drive us farther into the road.

Mr. **Mineta**. You mentioned, Mr. Dipert, NTA members have practiced the goals of equal access for disabled Americans. How do NTA members currently provide equal access for individuals with disabilities?

Mr. **Dipert**. There are several. One of the things we have involved in our association, we invite several of the handicapped associations to our conventions and our meetings. One in particular is the Handicapped Travel Association which sends a representative.

Our members offer tours, although they are limited, as to the amount of tours, to handicapped travelers, as one of my colleagues mentioned here earlier. To my knowledge there is no company that is offering both service to handicapped and able bodied at the same time on all the departures of their tours.

Mr. **Mineta**. There are essentially two packages, a package tour for those with disabilities and "others"?

Mr. **Dipert**. Able bodies, yes, sir.

Mr. **Mineta**. In your 17 years in the motor coach industry and having packaged and promoted thousands of tours all over North America, following up on the question that Mr. Skaggs asked about the fact that you have lack of requests for service, what do you attribute that lack of requests to? In other words, as Mr. Skaggs was saying, that may not be an indicator.

You are not getting a lot of requests, but that may not be an indicator of the potential that is out there. What would you say is the background on the lack of requests itself?

Mr. **Dipert**. Mr. Chairman, I don't think anyone on this panel came here today thinking there is not something that needs to be done. We are asking for some relief. We see a problem in our small businesses. I don't know the answer.

Mr. **Mineta**. We have a call of the House for a vote, so we will recess right now and then come back to resume the questioning.

Following the completion of these witnesses, we will break for lunch and probably have about an hour after the completion of this panel before we resume with the next panel.

We break now for 10 minutes for this vote.

[Recess.]

Mr. **Mineta**. The subcommittee will reconvene. This time let me pick up on the questioning.

Mr. Picknelly, let me ask, in your testimony you say that you would guarantee that an accessible bus would be provided for every charter group that requests one. How would this guarantee be implemented, and absent ADA, what recourse would a person with disability have if he or she were denied a charter bus?

Mr. **Picknelly**. That is a hard question to answer, Mr. Chairman. I guess I can answer it only to the extent of the experience that we have had over the last three years in particular. since we have had two buses in our fleet like this.

The requests have been so minimal that we just have not had the problem. Again, we now have seven buses in our fleet because of the Massachusetts program and we have not had any additional calls for seven as opposed to two. So, short term, the problem certainly is not a problem.

Mr. **Mineta**. That availability has been pretty well publicized?

Mr. **Picknelly**. Yes, it has. The commonwealth printed a brochure. There have been a lot of newspaper articles and public interest type news releases on the availability of those buses throughout the state, not only on our fleet but other bus companies serving Massachusetts.

Mr. **Mineta**. Has the state done much to publicize their program that has been extended to the private bus companies in this manner?

Mr. **Picknelly**. Yes, they have, sir.

Mr. **Mineta**. The private company industry has consistently opposed charter activities by public transit operators. Under the ADA, let me ask, why should you be permitted to lease a lift-equipped bus from a transit operator to provide service to the disabled community rather than allow that transit operator to provide the service or purchase lift-equipped buses yourselves?

Mr. **Picknelly**. Again, because of the cost required to purchase a lift-equipped bus. This is a cost we feel that our industry simply cannot afford.

Mr. **Mineta**. Mr. Currey, how is it that Greyhound has been able to determine that to fully implement the provisions of the Senate-passed ADA, that it would cost approximately, as you say in your testimony, about $40 million a year. How did you arrive at that?

Mr. **Currey**. Mr. Chairman, I would like to submit for the record the document entitled, "Annual Costs for Greyhound" that details the information I am about to speak to if I could.

Mr. **Mineta**. Without objection.

[The information on Greyhound follows:]

ATTACHMENT A

H.R. 2273 ANNUAL COST FOR GREYHOUND

The following is an analysis of the annual, per bus operating costs to Greyhound of the requirements of H.R. 2273, using the lowest and highest realistic cost estimates. The calculations assume a 4,000 bus fleet with 400 buses being purchased each year and used in the fleet for 10 years. Thus, capital costs, such as purchases and installation of the lift are amortized over a 10 year life. The total annual cost figures appearing at the bottom of the page represent the per bus costs multiplied by 4,000 buses.

	Low Estimate	High Estimate	Explanatory Notes
Lift Purchase and Installation	$ 1,000.00	$ 3,500.00	Lowest and highest estimated costs of lift and installation ($10,000.00-$35,000.00) amortized equally over 10 years.
Restroom Installation	$ 100.00	$ 100.00	$1,000.00 installation cost amortized over 10 years.
Cost of Loss of Seats Due to Lift	$ 2,400.00 (2 seats)	$ 4,800.00 (4 seats)	Annual cost of running extra busses due to two seat (and four seat) reduced capacity.
Cost of Loss of Seats Due to Restroom Accessibility	$ 4,800.00 (4 seats)	$12,000.00 (10 seats)	Annual cost of extra buses due to four seat-ten seat lost capacity. Four seat lost capacity assumes restroom and lift are adjacent.
Loss of Package Express Capacity	$ 0.00	$ 9,000.00	High estimate is due to loss of 30% of package express capacity.
Maintenance Costs	$ 1,000.00	$ 3,000.00	Actual best estimates of those that have used the lifts in question.
Training Costs	$ 800.00	$ 1,600.00	Annual training costs based on DOT airline requirement of one day training and retraining for all operational personnel. Differential is due to different levels of travel and lodging costs.
Per Bus Annual Operating Cost	$10,100.00	$33,300.00	Low and high estimate of total annual *per bus* cost of wheelchair lift and accessible restroom.

TOTAL ANNUAL COST OF H.R. 2273 TO GREYHOUND

Low Estimate	High Estimate	Explanatory Notes
$40,400,000.00	$133,200,000.00	Total annual cost of wheelchair lift and accessible restroom for 4,000 bus Greyhound fleet when H.R. 2273 is fully implemented.

NOTE: These numbers, if anything, are too low. They do not include estimated increased interest and insurance costs. We have not been able to finalize those cost estimates, but typically capital equipment is financed and there is consensus that insurance costs would increase. In addition, the latest figures from the agency supplying the "low estimate" lift purchase figure indicate that this estimate needs to be increased by at least 50 percent.

Mr. **Currey**. Greyhound first utilized, in arriving at its numbers, the low cost of the Hubmatic lift provided to us initially by the people in Denver; that is $10,000. We have continued on our low cost estimates to use that $10,000, or a 5 percent of a $200,000 bus number.

I would emphasize that that number is not borne out by the estimates given to us by Hubmatic distributors, in that their estimate to us for very large numbers is $15,000, not $10,000 and further, the distributor says that the distributor by no means will guarantee that package express or luggage space is not utilized in that process.

In any event, how we arrived at the numbers; we began at the $10,000, 50 percent too low number from Hubmatic. Our estimates were done on the basis of amortizing that over 10 years. Restroom installation amortized over 10 years, cost of loss of seats due to the lift of $2,400.

A cost of loss of seats due to the restroom of $4,800. We did not provide for any lost revenue figure whatsoever from package express, which is fallacious, frankly, but we could not do so accurately enough to sustain credibility. We provided maintenance costs of $1,000 a year. That is one penny and a half a year on a vehicle that operates 66,000 miles a year.

That is a low, low cost. Keep in mind I have been in the wheelchair lift business with the Dallas Transit System myself, so I know something about the cost of maintaining and operating lifts.

Finally, we provided numbers for training costs, so that we used arithmetic that fully implemented, ADA on the minimum side would cost our company using 10-year amortization schedules, $30 to $40 million. Frankly, I know as a businessman that is a low number but I felt no need to argue with anyone from RTD in Denver or anyplace else, because that number, although low, is so punitive that there is not much need to argue that it is any higher.

Mr. **Mineta**. If there was an exemption for restroom accessibility, as I said earlier, and that chart you indicated represents $4,800 of that $10,100, does that make a difference?

Mr. **Currey**. Well, if that amount were exempted we would have to ask you to take more into account what we believe to be the real cost of the lift, or $35,000. Let me for a moment speak to the restroom accessibility issue.

If you will please visualize the route I was on a few weeks ago going from Santa Barbara to Oxnard, Ventura, Santa Monica to L.A. I rode that route and spoke with every passenger on that route. If a person was on that route and we had utilized a wheelchair lift promising full accessibility as defined by a wheelchair lift and we did not provide accessibility to the restroom, we would be holding out an inappropriate hope for that passenger.

I don't think that is consistent with what any of us wish to do in that if that passenger needed physical relief to use the toilet during such a trip, it simply would not be available. But there is a further problem with that, in that even with a fully accessible restroom on that route, accessibility to the toilet except at stops, for a person in a wheelchair would be highly questionable because of the way the road weaves up and down.

I think it is important, we hope, for you to try to examine us, as you are doing quite ably with our numbers, because no matter how we cut these numbers the cost is so excessive that it will force a massive restructuring of our business.

The bill as enacted, that second portion which treats us like transit, simply does not represent reality because we are not like transit. That is a different system.

Mr. **Mineta**. How much of that cost of the $10,100 would recover on the sale of that bus?

Mr. **Currey**. That is an interesting question. We believe what we testified to earlier with respect to the numbers of people in wheelchairs; that is using the 1978 figure of 400,000 or the current figure of 760,000. We believe, based on the Peter Pan experience, that the proclivity of Americans in wheelchairs who travel on intercity buses is not substantially higher than the proclivity of Americans at large to travel by intercity bus.

We believe there is such a de minimis factor that the wheelchair lift equipped bus on sale would be a drag on the market, not an asset on the market, and we would be forced to reconvert for very private use, which is to say church or school, or as a school bus it would be exempt and many buses go into the use of church-related activities, it would not be required. We believe that the usage indicates that it would not be needed and rather than an asset on the sale, it would be a liability on the sale.

Mr. **Mineta**. In looking at their route structure prior to deregulation compared to since that time, what would you say is the cut back in terms of the number of stations or stops?

Mr. **Currey**. From 1976 to 1987 when we bought this asset the cut back was 50 percent. This is documented by a DOT study. It went from 20,000 places served to approximately 9,500 places served. We have been able through our rural connection program and through our outright refusal to reduce any rural service except in the most disastrous circumstances—I mean we reduced some in Kansas that were generating 10 cents a mile, but we had net added service and we have added a large increment of service through connecting with the rural systems.

We believe we have now stabilized that. It is right off of our books in Des Moines, which are open to audit by this committee, that we arrive at the 32 percent of our restructure that is cost subsidized by solid routes. So you go from 20 to 10. That is very well documented. We believe with the ADA cost we will have to go from 10 to five.

We believe that is what this structuring would do. If we have the costs out here facing us, we have to get on with this restructuring. It might in the short term enhance profits until such time as ADA came on, but we have to get on with this structure with anticipation of those costs.

Mr. **Mineta**. You are saying about 50 intercity locations would lose bus service upon enactment of ADA?

Mr. **Currey**. Yes, sir. Look at this map from Texas. I just say, Mr. Noonan here from North Carolina.

Mr. **Mineta**. Do you have all the states of our Members of the committee up there?

Mr. CURREY. I don't have California. No, sir, I wouldn't do that. I hope I am more astute than that. Here is North Carolina. The yellow lines are the connecting carriers. The pink are our routes that would go negative under the ADA cost structure.

The blue are the routes that would remain. What happens is that the whole infrastructure gets collapsed down just like the 20,000 to 10,000 that occurred from 1978 to 1987. That is what we want to avoid. We think that is not necessary if we can get the same definition of accessibility with the same penalties I might add, that school bus operators have, airlines have, et cetera. We don't want anything any different.

We don't want not to be under the gun. You can put us under the gun.

Mr. MINETA. How many of those communities would lose service in any event without passage of ADA?

Mr. CURREY. Since 1987 we have increased the number of communities served, we resolved to do that. I wish a Member was here from Ohio, there is one, Mr. McEwen. I can show how our commission agents in Ohio, Lee and Jane Woods, improved service. There is a positive example of the private industry restoring service with no subsidy.

Here is Sandusky, Ohio, you will notice the yellow line from Sandusky to Freemont, Norwalk and back to Sandusky. That is run twice a day by a van service, utilizing our franchise name on the side of the van, by Lee and Jane Woods, our commission agents in Sandusky. What happened there was that this local road had service collapsed, as did a cross road that does not show on this map. What we have here is two private entrepreneurs who have established a pick up and delivery service.

They are serving senior citizens' homes. I rode this van on its inauguration. The mayor of Port Clinton said, "I never thought I would welcome anybody from Greyhound to this town, because when you abandoned us I really hated you." So we have gone back. We are asking you not to put us back into the shape we were in in 1978 yet for a different reason.

We are not pleading not to provide accessibility. We are willing to provide accessibility consistent with the definitions of airlines, school buses and all other public carriers, but not the ones, the definitions for federally funded transit systems.

Mr. MINETA. If Congress were to enact that ADA that requires to provide accessible service, not just accessible vehicles, how will Greyhound determine how many vehicles will be needed to provide access for vehicles with disabilities?

Mr. CURREY. I think there are two ways to address that. The present legislation provides for a study. We do have the Peter Pan example.

Mr. MINETA. You said the present study requirements. I thought that was pretty descriptive.

Mr. CURREY. We believe the study should determine the need. We believe we have a profile of what the need is. We believe that a specially designed chair can permit the use of a intercity bus for charter, tour and regular route by persons in wheelchairs with improved grace and dignity.

We think it is important to develop that chair and provide it. We think that is important. Further, we would support strongly a system where the Department of Transportation and industry at large, like the Massachusetts example, but the Department of Transportation since we are dealing with interstate commerce, would have a fleet available for call up at all major centers across the country, call up for charter, call up for tour, call up for regular route to the inter-city.

Indeed, it is that interchangeability of equipment that we think is important to approach this problem in a capital-responsive fashion.

Mr. MINETA. If we are going to come up with legislation that is a cookie cutter template to apply across the country, that may fit Greyhound, but how does it fit Mr. Dipert, or a two or three bus operation in Missouri or wherever?

Mr. CURREY. They, of course, are ready, willing, and able to speak for themselves but all of us are a network. We terminal with Frank Henry at Wilkes-Barre, Pennsylvania. His company is our commissioned agent in Wilkes-Barre. We feed one another traffic. You are looking at us, those of us who operate inter-city service, you are looking at us as separate individuals but we are part of the same network.

We feed one another in this network. We are all, in this intercity transportation network, all in the charter and tour business. We don't operate tours directly. We try to induce Dan Dipert and his colleagues in the charter tour business to utilize our bus.

In that case we are competitive with Curvelle, Valley Transit, and all the other providers on the map of Texas. We are colleagues with respect to the exchange of inter-city passengers and competitors in the charter and tour business. That is a generalism. My colleagues may not go along with it.

Mr. DIPERT. Mr. Chairman, my company is a large user of Greyhound equipment. If there were a pool of buses that were available to handicapped, we would use that pool just as when my 14 over-the-road buses are busy with my own programs, I call Greyhound up and lease their coach. I would call up the pool and lease that coach for the need.

Excuse me, Mr. Currey.

Mr. CURREY. I would just like to amplify on one point. Our five point program is designed to give 85 percent accessibility in two years without notice.

Mr. MINETA. But at a reduced number of cities or locations?

Mr. CURREY. Eighty-five percent comes from the fact that there would be 200 locations at which the special chair would be available. Those 200 locations represent 85 percent of our total boardings. The other 15 percent we could provide with either a 24 or 48 hour notice.

Mr. MINETA. So you are saying the community would be covered? The community with disabilities would be covered by communities, in the sense of towns and locations would be reduced?

Mr. CURREY. All communities would be covered. The difference would be notice. The larger communities would be covered when the person in a wheelchair presented themselves to the terminal.

Persons in the smaller community would have to give us 24 to 48 hours notice.

Mr. **Mineta**. Going back to that other chart, the pink and blue and yellow chart, you are talking about curtailment of service to communities because of unprofitable service. So there would be in that sense a reduction in the number of locations that would be served.

Mr. **Currey**. No, sir.

Mr. **Mineta**. You said with 24 or 48 hour service you would still be able to provide it?

Mr. **Currey**. Sustain service to those communities. What we are talking about here is whether there is a capital intensive non-revenue producing solution to this problem on the one hand, and what the Senate bill is. Or on the other hand, a non-capital intensive revenue producing answer to this problem, and that is what our five point program is.

Mr. **Mineta**. If I were a two-bus operator as a member of Dan Dipert's association what would I do?

Mr. **Currey**. If you were a two-bus operator, a member of Dan's association, or a member of the ABA?

Mr. **Mineta**. I can't afford the ABA. But I could afford to be a member of Dan's organization.

Mr. **Currey**. Mr. Henry reported total industrial profits of $40 million. We had a loss of $17 last year. I believe you top draw your own conclusions about my smaller friends and their profitability. They are very good business people and they would not be in this business if they were not very good business people.

It is a very cost intensive system. What Dan would do or any other charter carrier would do, should there be a pool of buses in the Dallas/Fort Worth regions, then utilizing the 24 to 48 hours notice that bus could be pulled on stream to be utilized with a lift if a lift-equipped trip were desired.

If the customer desired to go immediately on impulse, as it were, then the customer would utilize one of the special boarding chairs that we would expect to have.

Mr. **Mineta**. You refer to the public transit operator that would have the 100 percent fleet.

Mr. **Currey**. In conjunction with the Department of Transportation. That makes the most economic sense from a public and private sector point of view. Should we have those pools of the type that Peter has in Springfield and Boston then we would observe usage.

We would all observe usage for a period of time. We would do what we have always done in the bus business which is be very demand responsive. When we see a demand, we respond.

Mr. **Mineta**. If I could play devil's advocate here. You know I don't like to be sitting in a nice 47 passenger parlor car upholstered, swivel seats, maybe reclining back on a tour, but now I am all of a sudden sitting in a 47 passenger Dart which has been pulled out for service on this package tour.

Mr. **Currey**. As a former member of the Dart Board I protest, sir. I would propose that it be a non-upholstered, straight back seat, Dart bus. I would propose that the bus companies through a cooperative program with UMTA create a pool of city buses as luxurious as Peter's or Chuck's or ours, which would be available for any inter-city trip within the community at large. That is what I will propose so that you take the Massachusetts example, if you will, and re-replicate it but with a pooled equipment concept as opposed to a specific owned equipment concept.

Mr. Mineta. On the scheduling, you will have to do this, positioning your equipment to where you need it.

Mr. Currey. Of course, we do, all the time.

Mr. Mineta. What does that do to our operation?

Mr. Currey. Well, it would be a problem to manage but we all have communications systems. We all have a flow of traffic today. Frankly, out in your country often there is a disproportionate flow of traffic from L.A. to San Francisco and sometimes in the other direction, so you are always having to balance the equipment and put it back into place.

We run a lot of deadhead miles to get equipment at the point of demand just like the railroads. That is within our cost structure. It would be a problem to manage, but as a problem, addressing the problem in a non-capital intensive fashion is in everyone's interest. It is certainly in the disabled Americans' interest, because certainly they wish service to be continued to all the rural towns in America they like to go to also.

Mr. Mineta. Would you think the replication of the Massachusetts kind of program modified to deal with it nationally would be, from your experience, a pretty good way to address the issue?

Mr. Picknelly. Yes, sir, I believe it would.

Mr. Mineta. Thank you.

Mr. Shuster, my very fine colleague.

Mr. Shuster. Thank you, Mr. Chairman.

First, I would like to ask unanimous consent that we keep the record open in expectation of receiving statements from the American Association of Retired Persons, the American Car Rental Association, and Claude Robinson, the transportation consultant.

I would also like to ask unanimous consent that a statement by Mr. Lightfoot be entered in the record.

Mr. Mineta. Without objection.

[The statement of Hon. Jim Lightfoot follows:]

STATEMENT OF HON. JIM LIGHTFOOT, A REPRESENTATIVE IN CONGRESS FROM IOWA

Mr. Chairman, I am pleased the Subcommittee on Surface Transportation will continue their hearings examining the transportation provisions included in the Americans With Disabilities Act. As a former member of the subcommittee, I look forward to hearing from our panelists.

I recognize and support efforts to protect individuals with disabilities from discrimination. This measure addresses a wide variety of concerns. I am particularly interested in how we can meet the mobility needs of disabled individuals in the most efficient and reliable manner.

As the Senate bill stands, private bus carriers are required to equip all vehicles purchased after a six or seven year period with wheelchair lifts. I have some concerns how this mandate would affect access to services for those individuals who traditionally use private carriers as a mode of transportation: the low-income, elderly, rural and small town residents. Private carriers represent a more cost-efficient means of transportation for these individuals, therefore, any increase in fare would limit access.

It has been my experience most private entities have established policies attempting to meet the needs of its physically challenged community.

Mr. Chairman, I would like permission to submit questions into the hearing record so that our witnesses might provide me with their insight.

Thank you, Mr. Chairman, for allowing me to participate at today's hearing.

Mr. SHUSTER. Gentlemen, I want to thank you for your testimony today. I think it has been both rational and well reasoned. I have seldom seen a piece of legislation which under the banner of doing good, does so much harm to low-cost transportation availability, particularly for the poor and senior citizens.

I hope we can fix it because I certainly hope we can have legislation to take to the floor and get to the Congress so we can provide reasonable improvements for the disabled of America.

Mr. Currey, you talked about reducing the number of communities served from about 10,000 to 5,000 communities. Of the 5,000 communities that would no longer get your service, how many would no longer have other public transportation available to them? In other words, where you are now the sole provider?

Mr. CURREY. In the vast majority of those communities, we are the only provider.

Mr. SHUSTER. We are talking about close to 5,000 communities having no public transportation service if the bill as passed by the Senate becomes law.

Mr. CURREY. And in many of those communities, in addition to the passenger business, we are the life blood through the package express distribution system, literally transmitting blood as a very major category to small town hospitals.

Mr. SHUSTER. Let me come back to a subject which the chairman ended on, which is trying to understand how a small charter company will provide service. Let's say a rural charter bus company has somebody in a wheelchair who wants to go on a charter tour, and we have given them some form of exemption, and they do not have the requirement that they have to have lifts on all their buses. They have no lifts on any buses. You are saying that they would pick up the phone and call a city, a public transit facility, and say, "We want to charter a deluxe transit bus with a lift for a 10-day period," if it is a 10-day charter. What is the requirement, and what is the probability that that public transit system is going to have a bus available and be willing to provide it?

I can see some of my friends in Pittsburgh and Philadelphia not being particularly responsive unless there is some stick that requires them to be. I can see them saying, "Wait a minute, we have that bus out, we are using that bus, we don't have that $200,000 bus sitting there just waiting for a little rural charter company to telephone us once every four months and ask for the bus." How reasonable is it that such a bus would be available?

Mr. CURREY. Well, we think it is quite reasonable should the Department of Transportation establish regulations with respect to the use of such a bus. It is like having a standby vehicle, but a standby vehicle available for use in the community at large as opposed to the capital cost of equipping all the vehicles in the community. So it is not as if that bus would get maximum total usage unless we are all wrong about the demand, in which event we would need more buses.

Mr. **Shuster**. So we could just as easily, instead of giving it to a public transit operator in a city, we could establish a pool of 10 private bus companies and subsidize their having one such bus.

Mr. **Currey**. We could. We could.

Mr. **Shuster**. So you are saying—I understand where you are coming from. I have difficulty seeing how this is going to work smoothly, but I appreciate your response.

Let me turn to the Denver lift and your assessment of it. We have had testimony here ranging from its low cost, it works fine, and it is the wave of the future to testimony that it is only a couple of prototypes and we don't know really what it is going to cost, we don't even know if it is going to work.

What is your assessment of the Denver lift?

Mr. **Currey**. My assessment of the Denver lift is that, point one, we utilized the suggested cost of the Hubmatic lift provided by Denver RTD in our low-cost estimate, as I have previously testified. However, we went to Stewart & Stevenson Headquarters in Houston, a very, very major distributor of Hubmatic in the United States. Stewart & Stevenson's installed cost ranges from $15,000 to $17,000.

Further, Stewart & Stevenson states that it will require very substantive restructuring of the flooring and package express space, diminishing the place available for luggage or package express by as much as one-half. One-third to one-half are the estimates.

Finally, Stewart & Stevenson has yet to provide us with any estimates about what the maintenance cost is.

Now, I would like, if I could just for one moment, to differentiate that use in inter-city service from use in transit service. Transit service is a hub-spoke service. I worked deeply and for long years in the transit business in a pro bono job. Transit service is a hub-spoke service so that equipment sits idle every night between 11:00 to 12:00 p.m. and 6:00 a.m., when the big roll-out is the next morning. Our bus leaves New York City, and it is on the road for four days before it gets to San Francisco or LA, or three days before it gets to Miami, et cetera, et cetera, et cetera. So the ability to sustain and make quality maintenance for the safety of the patrons using the bus is an entirely different proposition.

Further, the pattern of usage of transit buses equipped with wheelchair lifts and those equipped for inter-city purposes is entirely different, as is borne out by the Peter Pan experience, in that transit passengers establish a pattern. So if there is a lift-equipped bus by the spot every 10 minutes during the period of time of going to and from work, people get into a transit pattern to and from work.

That is not the way inter-city travel is accomplished. It is an entirely different decision pattern of deciding to make a trip by inter-city bus. It has to do with the fact that we only handle travel for one percent of all Americans, so to conjure up an example that extrapolates the Denver experience into the inter-city experience is nonsense, sir. It is absolute nonsense, and the cost estimate is nonsense, too, even though we have continued to use it.

Mr. **Shuster**. I don't want to put words in your mouth, but what is your assessment, then, of the reliability of the Denver lift as applied to inter-city bus travel?

Mr. **Currey**. My assessment is that both on the cost of maintenance and on the original cost of the lift, we have far under-estimated it in our low-cost estimate. We are much closer to our high-cost estimate, but no need to argue the higher cost estimate, frankly, because the lower cost estimate is a bullet to the heart to us.

Mr. **Shuster**. Does that mean with adequate maintenance, with substantial maintenance, it has worked reliably for sustained periods of time?

Mr. **Currey**. We don't know that it is, but I wouldn't say it is not. I am a believer in technology, either the MCI lift or the Hubmatic lift. The lift, there is no mystery about it. It can be made to work, it is only a matter of money and labor dollars to maintain it. I wouldn't argue for a second a lift couldn't be made to work, sir. It is all a matter of price.

Mr. **Shuster**. Let me turn to some of the smaller bus operators. Is it not reasonable for a small bus operator to look at the ADA Senate version, if it passes, and say to himself, "I am going to make a prudent business decision here which is, fundamentally, I am going to disinvest because the bill doesn't take effect for—what is it—seven or eight years, six years." The smaller operators, because you have some years, why wouldn't the prudent businessman say, "I will simply run my fleet into the ground, in fact increase my profitability or increase my cash flow in the short run over a period of five, six, seven years and get out of the business or sell off what I have left to whoever wants to stay in the business," maybe to Greyhound or to somebody else, why wouldn't that be almost a classic kind of a prudent business decisions that a small businessman would make?

Mr. **Busskohl**. I would think that some people would do that, you bet, and one of the things that would maybe force you to that is your banker that says you will pay the rent. If you are going to stay in the business, there isn't a prudent banker in the world that is going to give you a loan, which we always have to have on a $225,000 piece of equipment, that would in his right mind give you a loan on that thing.

Mr. **Shuster**. Is it reasonable, or am I going too far when I say, that in addition to the problems that Greyhound has outlined and your profitability problems of a small bus owner—is it reasonable to assume that there will be an acceleration of disinvestment and getting out of the business by the smaller owners as a result of the ADA bill if it becomes law?

Mr. **Henry**. Congressman, I think that there is a very definite issue there. A family corporation like we have, we are now in the fourth generation; my son, this same thing came up, he said, "How do you see the future of this industry?" He doesn't care whether it is buses or planes or boats, he has to make a living for his family. I said we would sit down and see what our ROI was in this industry.

Quite frankly, with what we are talking about today, he wouldn't be in this industry. That is a business decision.

Mr. **Shuster**. That is in addition to the ones we have been talking about here today, isn't it? All right. Thank you.

One final point, Mr. Currey. When you talk about serving 10,000 towns down to 5,000 towns, I presume you have calculated—if you have 10,000 towns and if 32 percent of your miles are at a loss today, and if that is going to go up to 51 percent, that means that you have a base that you are serving today which includes 32 percent.

If ADA passes, the base is reduced.

Mr. CURREY. Right.

Mr. SHUSTER. And so you don't have the same percentage of profitability to spread over even a smaller 32 percent base?

Mr. CURREY. That is exactly correct.

Mr. SHUSTER. So the implication is an accelerated leverage to reduce the communities you serve, and I presume that kind of calculation is built into your reduction from 10,000 to 5,000?

Mr. CURREY. Exactly, and that is why we would have to begin almost immediately to rationalize these routes—that is the euphemism for eliminating small towns—to rationalize these routes into a different kind of route structure, because we couldn't do it overnight because we would stand the risk of collapsing the whole system.

Mr. SHUSTER. Let me ask you one final question. As a businessman running a company to make a profit, why do you serve 32 percent of your mileage today when it is operating at a loss? What does your Board of Directors say? Don't they ask you that kind of a question?

Mr. CURREY. Often.

Mr. SHUSTER. I would think so.

Mr. CURREY. It is a balance between the feed that you get from the lost routes and the miles on the profitable routes that that feed runs. It is that balance. Those of you that dealt with matters of air transport during the days of regulation will remember that balance.

Well, that balance is obviously quite precarious for us because last year we lost $17 million on that balance, and don't think that I didn't get interrogated by the Board of Directors about it, because I sure as heck did for a long time. But I have been convinced that that field would be our life blood for the future if we could sustain that, and this year that is proving to be correct.

If I sound desperate about not wanting to reinstitute the divestment program, then that is a true representation of my understanding of the matters. I think it would be a desperately bad thing in the public interest, in our customers' interest, in my own shareholders' interest, and I know in our employees' interest, because we are going to have to get them out of there by large groups.

Mr. SHUSTER. Does part of your thinking in terms of your long-term strategic thinking include the thought with further concentration in the airline industry prices will be going up in the airline industry, and, therefore, you stand to benefit from that in the long run?

Mr. CURREY. Yes, sir.

But I would urge consideration of our actual results. For instance, in the month of August this year we handled 837 million passenger miles versus 785 million passenger miles last year, an increase about which we are quite proud. But I would like to note that we handled that as a result of a decrease in yield, that is revenue per passenger mile, from 917 to 907.

Mr. **Shuster**. Is that fixed route only you are describing?

Mr. **Currey**. Yes, that is fixed route only I was describing. So it is further proof of the fact that demand for inter-city bus travel is closely tied to price, and I would also like to point out that an interesting phenomenon, extremely interesting phenomenon in our business, this route that originates in New York and goes across country through Cleveland and Toledo and Chicago becomes unprofitable west of Chicago going to San Francisco, so you might say that doesn't make any sense.

Well, it isn't because the loads are not on that route. Our average loads on that route are high, 23, 24 passengers. It is because the yield on these miles out here has to be very, very low to get any traffic at all, and we are operating that route, second, because we are cost subsidizing it with the setting between New York and Chicago where population is more dense, the miles are much shorter, so people will ride the bus at a higher rate per mile. But out here we are hauling people from Chicago to San Francisco at five and six cents a mile.

Now, what that means in conjunction with your airline comment is that we are not—I mean, the airlines can triple their price from San Francisco to Chicago, but there is an absolute maximum that a bus passenger can pay that isn't related to air fares, and so we bump up against that price, and that is what we call the stay-at-home phenomenon. We say to our people all the time, "Look, we have got three competitors, the airlines, the automobile when it is used against the incremental price of a tank of gas, and "stay at home", and our biggest competitor is "stay at home". We compete against "stay at home" when our service is lousy or our price is too high, and so we have got to keep our service up and our prices down if we expect to survive.

Mr. **Shuster**. Thank you very much. Thank you, Mr. Chairman.

Mr. **Mineta**. Mr. McEwen.

Mr. **McEwen**. Thank you, Mr. Chairman.

I have appreciated the testimony very much. Just a couple of questions from the testimony we will receive shortly after you leave, and if you could respond to them, I would be appreciative. We have a general support for a regional transportation district which, as you know, operates with certain flexibilities that those in the private sector do not enjoy, but he is able to make observations such as this, that he provides the accessible wheelchair service without an increase in schedules, safely, reliably and cheaper.

He further points out that—would any of you have any comment on that as to how one can do that?

Mr. **Currey**. Does he want to buy a bus company?

Mr. **McEwen**. I am asking for some figures as to how much those in the rest of the country get to contribute to his ability to operate more cheaply, but we don't have those numbers as yet.

The same testimony goes on to point out that Denver has lost some four seats in the application of their lift, and then we have further testimony coming right afterwards, that the same manufacturer that Denver uses, when applied to a bus occupies zero baggage space, will remove only one seat, adds $11,000 to the cost, and this price can be expected to fall.

Your testimony is such that it takes more than one seat. In fact, Denver says their experience has been they have taken four. Can you reconcile this for us?

Mr. PICKNELLY. In the bus that we have in our fleet, for one wheelchair position, it would replace four conventional seats. I am not familiar with the Denver lift. The buses that we have and I see every day is a replacement of four conventional seats for one wheelchair.

Mr. MCEWEN. Like I say, when we receive testimony, we build a record that says certain things. If they are left unchallenged, then the presumption is that somehow or other they are valid. Every experience we have testimony on has been four seats have been removed; yet we are about to receive testimony saying that is not the case, notwithstanding your experience, that a lift would not do that. Your experience is a lift that you deal with would have to remove a minimum of four seats in order to have them installed in your vehicles?

Mr. PICKNELLY. Yes, that is right.

Mr. MCEWEN. All right. I thank you.

The way I got involved in this, is that 51 disabled Americans living in Chillicothe, Ohio, came to me in the spring of 1981, pointing out that the bus service in Chillicothe was about to receive the new buses under the new Transit Act, and the regulation they had previously was about to go into effect that would require all these vehicles to have lifts.

They suggested that they would prefer to have personal door-to-door service which was currently provided by a series of charitable organizations rather than having that happen.

Of course, when we checked the regulations we found out that was universal. We went to the Secretary of Transportation, explained the dilemma to him and asked that if somehow or other we could provide superior service, could we receive an exemption from the four buses that were currently in the process of being built in North Carolina to be delivered to Chillicothe, Ohio?

The Secretary or Transportation agreed. The regulation was implemented, and I remember the day that it took effect. As it came across on the news broadcast I was out in Ohio, and the first person they interviewed was the Mayor of New York, in which he said he was going to save a billion dollars because of this common sense application of not requiring across-the-board institution, but allowing local policy-makers to decide how they can serve people the best.

I see we are back to square one, and as the questions from our colleague from Pennsylvania reflect, sometimes it appears to the point that government does not know how to create jobs or provide service. They are not in the business of purchasing vehicles cost effectively and providing small towns with service, but an entrepreneur provides the risk and muscle and the blood and sweat to provide that service, then the government comes sashaying up alongside and says, "Now that you are doing this, here is how you will do it," to which the proper response might sometimes be, "If you knew how to do this, why didn't you do it yourself?"

And that is kind of where we are in our desire to do what is right and what is good without recognizing that there is a tremendous service that is being provided to those of us in the rural area that needs to be preserved in a manner that is not only compassionate but cost effective.

I think they can be reconciled much better on a limited application basis as opposed to a universal one-swat hammer Federal law.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much, Mr. McEwen. Let me thank all of you for taking time from your own busy schedules to be here and giving us the benefit of your experience and background. This is a very important piece of legislation. It passed the Senate, as all of you know, with eight no votes. It has got the strong endorsement of the President, and this legislation is going to be law.

The question is how is it going to be law? Your input into this legislative process today has been very, very helpful in our deliberations as we come to the head of putting something together. So I really appreciate your taking the time from your own schedules to come here and enlighten us as to what the ramifications are of this bill. I would like to thank you very, very much.

The subcommittee stands in recess until 2:30.

[Whereupon, at 1:25 p.m., the subcommittee was recessed until 2:30 p.m. the same day.]

[The statements of Frank M. Henry, C.D. Busskohl, Dan Dipert, and Fred G. Currey follow:]

STATEMENT OF

FRANK M. HENRY
CHAIRMAN OF THE BOARD
AMERICAN BUS ASSOCIATION

BEFORE THE
SUBCOMMITTEE ON SURFACE TRANSPORTATION
OF THE
COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION
U.S. HOUSE OF REPRESENTATIVES
HONORABLE NORMAN Y. MINETA, CHAIRMAN

TUESDAY, SEPTEMBER 26, 1989
2167 RAYBURN HOUSE OFFICE BUILDING
WASHINGTON, D.C.

American Bus Association
1015 15th Street, N.W.
Washington, D.C. 20005
(202) 842-1645

Mr. Chairman and Members of the Subcommittee:

My name is Frank M. Henry. I am the president of Frank Martz Coach Company of Wilkes-Barre, Pennsylvania, and chairman of the board of the American Bus Association (ABA). I appreciate this opportunity to present the views of the Association on the proposed Americans With Disabilities Act of 1989.

ABA is the national trade association for the intercity bus industry. The Association's 700 bus operator members range in size from operators of two or three buses to Greyhound Lines, Inc., which has a fleet of some 4,000 buses. A few members of ABA provide only scheduled, regular-route service; several hundred members, like three of my own companies, provide both regular-route service and tour services; and the remaining 500 or so members are engaged exclusively in charter and tour operations.

My companies, Frank Martz Coach Company, Gray Line of Washington, D.C. and Gulf Coast/Gray Line in St. Petersburg, Florida rely heavily on scheduled service and tour operations. Any service that depends on individual fares, such as regular route and special operations tours, price their trips so that they are divided among the number of seats available on the bus. The reduction of seats and added operating costs, which are proposed in the Americans With Disabilities Act of 1989, would make regular route lines unprofitable in most areas and would thus cause the service to be curtailed. Tour prices would be increased to a point where many of the now offered tours would be too expensive for those on retirement or restricted incomes. In order to continue these services the industry would require heavy subsidies from the federal government to stay in business.

We believe all Americans should be able to use all of the transportation services offered by the intercity bus industry. With but one exception, that right is honored by the industry today. Disabled Americans who are confined to wheelchairs should have access to intercity buses. That objective should be achieved in a way that does not destroy a substantial part of the intercity bus system.

Disabled Americans in wheelchairs should be able to utilize all types of intercity bus service. That right can be accorded without installing lifts on all of the intercity coaches of all intercity bus operators.

Section 304 of the Senate-passed bill would require wheelchair lifts to be installed within six or seven years on new vehicles operated by intercity bus companies who provide regular-route and charter services. Such service is provided today in approximately 20,000 intercity coaches.

Intercity bus operators attempt to replace 10 percent of their fleets each year. The estimated cost of lift installation ranges from approximately $10,000 per bus, the cost of lifts on coaches used in suburban commuter service by the Denver RTD, to $35,000, the present cost of lifts installed on intercity buses by Motor Coach Industries, Inc. Thus, the industry's total annual cost for installing lifts on 20,000 buses would range from a low of $20 million to a high of $70 million. Average annual revenue after expenses but before income taxes (net operating income) for the entire industry in the five-year period, 1982-86, was only $41.5 million.[1]

Lift installation is not the only cost involved. The report of the Senate Committee on Labor and Human Resources indicates that space must be reserved in the bus for at least two wheelchairs. This would result in the permanent loss of two to four revenue seats.

---

[1] Federal Subsidies for Passenger Transportation, 1960-1988: Winners, Losers and Implications for the Future, Robert R. Nathan Associates, Inc., May 1989, Appendix C.

At page 73 of its report, the Senate committee stated that it expects the Department of Transportation to --

> develop regulations which require that accessible restrooms be installed on intercity coaches when technologically feasible.

Wheelchair access to restrooms on buses may be technologically feasible. The restroom would have to be enlarged to accommodate wheelchairs, thus reducing seating capacity. And, if access were required from anywhere in the bus, an entire row of seats would have to be removed to make the aisle wide enough. Thus, restroom accessibility does not appear to be economically feasible.

In sum, the mandatory lift requirement with its attendant costs including installation, seat loss, and possible package express loss would spell the end of intercity bus service in the United States. Rural communities, now served only by intercity bus, would have no public transportation available. Customers now served, many of whom are young, old, and poor and who have no other means of transportation, would be stranded.

There is no justification for the sledgehammer approach taken in section 304 of the Senate bill. ABA is willing to accept legislation along the lines set forth in the Air Carrier Access Act of 1986. Under that Act, the Secretary of Transportation is authorized, but not required, to mandate the installation of wheelchair lifts on commercial aircraft to implement the following prohibition:

> No air carrier may discriminate against any otherwise qualified handicapped individual, by reason of such handicap, in the provision of air transportation.

The Senate imposed this standard on us in section 304 (a) of its bill, but then imposed a second standard on us in section 304 (b)(4) that requires lifts on all vehicles. The first standard, which tells us what to do seems appropriate for us (as it is for private, unsubsidized air carriers). But the second standard, which tells us how to do it is the same as that applied to the publicly financed transit agencies and is not appropriate for the private sector.

There are possible solutions other than full accessibility on every one of our coaches. Charter trips are planned in advance. Fully-accessible buses could be leased from transit authorities and from other bus operators. A charter bus operator with 50 buses in its fleet could guarantee the availability of a wheelchair-accessible bus with only one or two of its own buses so equipped. To require the remaining 48 buses in such a fleet to be equipped with lifts involves a monumental waste which contributes absolutely nothing to the transportation of the disabled.

Regular route operators could do very much the same. When prospective travelers call to make their travel arrangements (check schedule and fare information), they also can ask for an accessible bus and, with a reasonable notice period, the bus will be provided. It will not be a paratransit vehicle but, rather, the regular bus for all the passengers on that particular run. This would be the same as the charter operator who would secure an accessible vehicle for the group. Furthermore, regular route operators can, through the use of specially designed loading chairs, provide accessible transportation without prior notice in the vast majority of cases. We would note that this offer on our part goes beyond the standards currently being promulgated by DOT to be imposed on the airlines.

The American Bus Association is prepared to cooperate fully with the Congress, the Secretary of Transportation, and groups representing disabled persons in finding ways to improve access to intercity bus services. It is not clear to what extent, or under what circumstances, the installation of lifts on intercity buses is economically and technologically feasible. We do not think it is unreasonable to ask that an impartial study precede the enactment of any law or the promulgation of any regulation on the subject. The Senate bill includes such a study, and we applaud that amendment. We do believe, however, that its outcome is forecast by the inclusion in the legislation of a mandated lift requirement.

ABA is pleased to have had the opportunity to present its views on this important matter.

TESTIMONY

U.S. HOUSE OF REPRESENTATIVES

Committee on Public Works and Transportation
Subcommittee on Surface Transportation

C.D. "Chuck" Busskohl, President

Arrow Stage Lines, Inc., Sioux City, Iowa
Director, United Bus Owners of America
September 26, 1989
Re: H.R. 2273, Americans with Disabilities Act of 1989

Mr. Chairman, members of the Committee, as President of my own company, operating both intercity and charter motorcoach businesses, and as a member of the Board of Directors of the United Bus Owners of America (UBOA), representing more than 1,000 members, I urge that significant changes be made in H.R. 2273, the Americans with Disabilities Act, before this Committee approves the legislation for full House consideration.

My own business, Arrow Stage Lines, Inc., of Sioux City, serves Iowa, Nebraska and much of the West with intercity, charter and tour service.

The United Bus Owners of America is an association of private bus owners and operators ranging in size from Greyhound's 4,000-bus fleet to single-vehicle charter operators. We also represent, as associate members, the commercial businesses which serve the needs of this industry. Our associates include coachbuilders, equipment and accessory makers, and representatives of a wide variety of service industries.

In unison, we applaud the goal and concept of this legislation: the elimination of discrimination against our American neighbors with mental or physical handicaps. And, in unison, we speak out against the single-minded legislative approach to accessibility which drives this bill to demand -- in the case of private intercity transportation -- that the forest be clear-cut so we may have a better view of the trees.

In the legislative authors' enthusiasm to "do right," we believe that H.R. 2273 was introduced with serious flaws. These desperately need to be corrected prior to its becoming law. They threaten the very existence of the American private bus industry and, if they are not addressed, the passage of a bill designed to assist the handicapped will instead result in the near-total loss of intercity bus service to the handicapped and to every American.

This Congress must understand that is may well jeopardize the most widespread, most affordable means of transportation now available to the American citizen to establish a worthy but limited goal of "full accessibility" for a small segment of this Nation's population.

Specifically at issue is the requirement in H.R. 2273 that all new buses sold in the United States be made "***readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.***"[1]

---

[1] H.R. 2273, Title III, §303(b); Title IV, §402(b)(7)(B)

Mr. Chairman, members of the Committee, our operators today offer the most accessible, most available, most affordable means of public transportation in America. And, unlike our competitors, we do so virtually without assistance from this or any government. We survive because our members are good businessmen and women who are willing to accept a very narrow margin of profit to continue in business as independent, tax-paying enterprises.

Despite the narrow margin of profit and the near-total lack of governmental funding, the estimated 46-million handicapped persons addressed in the preamble of this legislation already find that our owners and operators are among the most accommodating businesses in the Nation. With very few exceptions, private bus owners are prepared to transport handicapped persons in the same manner and level of service afforded fully-capable passengers. In many cases, handicapped persons are offered discount or totally free passage; in others, attendants travel at reduced fares or completely cost-free. Guide dogs have long been welcomed aboard our vehicles. Wheelchair-using passengers who are brought aboard by attendants are easily accommodated.

It is only the occasional wheelchair-bound passenger, who may even remotely perceive that he or she is denied "ready accessibility" to the services offered by UBOA members. It is also this final category of potential rider whom, we believe, is being excessively accommodated by this bill's most serious degree of "legislative overkill," the apparent requirement that every new or re-manufactured bus sold in this country be equipped as "fully wheelchair accessible."

Allow me to address four important aspects of the bill's intended requirements: **cost, safety, practicality** and finally, **alternatives.**

First, however, it's critical that the goal of this Committee be carefully defined. Legislative language and perceived intent have a great deal to do with the way any legislation is enforced. If the transcript of these hearings is to be used as a guide for future enforcement, our perception of the intent is that all persons must have equal opportunity to board, move about within and use the available facilities of every passenger vehicle on the road.

If that is the case, every motor coach used by UBOA members must, at a minimum, be wheelchair lift equipped; it must have aisles and restrooms which are wide enough to accept wheelchairs; it must allow enough seating space to secure a wheelchair.

I'd like first to address the question of the cost of these changes to the private bus industry in America. For the moment, I'll limit my comments to equipment purchase costs.

The average private line motor coach sold in the United States today is $200,000. It carries 47 passengers; it is 40-feet long and 102" wide. It's aisles are 14" wide and the floor of the passenger deck is approximately four to five feet off the ground, riding atop a luggage and storage compartment with a capacity of some 330 cubic feet. It's useable life, depending on the service requirements, is 8 to 12 years.

The addition of a wheelchair lift and coach design changes to aisle, restroom and seating, will cost each new coach buyer an estimated $15-$35,000 -- depending on a variety of elements -- at the outset of this bill's life. I admit that the exact cost is in dispute, as are the durability of technologies involved. But because of vague language, frankly today's operator cannot be certain of the extent of changes which this bill mandates.

Lifts on intercity buses will need to reach the lofty second deck safely and to be fitted into a coach which is far more complex in its engineering than the everyday transit bus. While cost would be expected to drop over a period of time, reflecting the economies of volume as the luxury coach business adopts these standards, the lift will never be as inexpensive as its transit bus counterpart. By the same token, the mechanical reliability of lifts will, hopefully, improve dramatically in the future, reflecting technological advances which naturally follow a high-demand product.

I'll come back to cost, but for now let's assume that every bus buyer in the Nation is prepared to pay the additional 10 to 15-percent front-end cost for the equipment.

Let's move on to the question of safety.

Lifting a passenger 18-inches from ground to the deck of a transit bus or a step-van is a comparatively risk-free activity. Equipment need not be intricately designed, nor employees highly-trained to affect the loading of a passenger. Such is not the case with a four to five foot lift onto the second deck of a luxury coach. No doubt, insurance liability costs will mirror the increased risk from injury in falls caused by potential equipment failure or poorly-trained staff. But if we were to assume the optimum -- 100-percent equipment reliability and 100-percent reliable employees -- what's to be said about safety on once the passenger is on board.

Today, the U.S. Department of Transportation hazardous cargo regulations prohibit the stowing of battery-equipped wheelchairs in bus luggage compartments. Will the DOT look more favorably to the transport of these explosive-potential batteries in the passenger compartment? Or should DOT simply drop it's prohibition? Technology is, at the moment, targeted on creation of a safe battery which may be stowed and transported, but if this legislation is approved quickly, will only non-electric wheelchairs be permitted? Will the wheelchair occupant be required to bring along his or her own seat belt? Will there be a standard implemented to see that all chairs are secured properly during transport?

UBOA interprets this legislation as prohibiting any rules for wheelchair bound passengers which it would not apply to fully-mobile passengers. As such, wheelchairs must be allowed to traverse aisles during a journey, certainly at least to the restroom. We suggest, however, that an unsecured wheelchair -- not to mention its occupant -- would become a lethal missile in an emergency situation. Even if it remained on the deck, it represents a barricade to paths of escape, a violation of federal safety regulations.

I remind the Committee that the tragic crash of an out-of-service school bus being operated by a church cost 27 lives in Carrollton, Kentucky, just last year. In large part, those who died were not victims of the trauma of the crash, they died because they could not escape the burning bus. Federal investigators found that items as insignificant as picnic baskets and coolers in the aisle cost the lives of some of those who might otherwise have escaped. A picnic basket is far less impeding than a wheelchair.

If we assume that there is a way to ensure that the wheelchair passenger is properly secured at the time of a vehicular accident, we cannot assume that the paralyzed occupant is capable of negotiating his or her way to a proper exit. Elevators in buildings -- where all other elements are stable -- all carry warnings that they are not to be used in times of emergency conditions. Will we expect a higher standard of mobile elevators? Or will each bus be designed with some form of ejection device for the occupant of a pre-designated seat or wheelchair pad? If so, how many devices or directions need be considered?

From a safety and emergency escape standpoint, the on-board wheelchair can be a nightmare within a nightmare. This Committee must share the responsibility, with buyers and with manufacturers, of deciding on a reasonable and acceptable method and level of safety for the wheelchair-bound passenger.

From a third perspective, I urge this Committee to look at the practicality of its demand that 100-percent of the American fleets of intercity and privately-owned buses be equipped to accommodate three-tenths of one percent of the population.[2] In a survey of UBOA members, annual requests for lift-equipped buses -- in those cases where any request was made at all -- averaged two. One member in the busy San Francisco area noted that, over 11 years of business, he had yet to receive one request. In virtually every instance, operators noted that alternative sources of transportation for the wheelchair-bound passenger are abundantly available through existing community services. Virtually all responses indicated that this legislation -- if approved as is -- would force them to close the door to their business.

Which brings me back to a point which I already understand this Committee does not want to discuss: the cost of this measure, in realistic, boilerplate terms. Or, maybe I should say it brings me back to a discussion of "value: cost versus returns."

Compassion is a wonderful thing. Without compassion for one's fellow human beings, without altruistic motivation, America could not ever have become the power it is today. Without charity and a belief in the "rightness" of what we are doing, little would ever be done. And, while I applaud the "rightness" of the goal of the ADA, I suggest that the brilliance of compassion has handicapped this legislation.

What this Committee decides to do with federal money is, technically, its business, though it is our members who pay the taxes which pay for your decisions. If it is the desire of this Committee to require its federally-support transit fleets to be fully lift-equipped, and if you're ready to pay the cost of that, we urge that you follow your conscience. You and your constituents will, ultimately, decide whether or not your vote to disburse billions of tax dollars was a sound decision. I suggest that the soundness of federal policy might be questionable when -- in the same year -- federal sources would require spending $20-50,000 to accommodate one **potential passenger** in 300.

But what you do with our money and our business is another matter. Earlier, I skipped past initial vehicle modifications so that we could look at the many other aspects of this bill's requirements. Now I want to return to it.

---

[2] U.S. Department of Commerce, Bureau of the Census, U.S. population in 1980: 226,000,000+; wheelchair-using population, approximately 720,000 persons.

If we still assume that the UBOA member who buys a new bus can, indeed, afford to spend an extra money to purchase the vehicle, it's highly doubtful that he or she will ever be able to afford o keep that bus on the road.

From the current 47-passenger configuration, lift installation and creation of a tie-down area for the chair will cost at least four seats. Now we're down to 43. Expanding the size and access of the restroom, will cost another two seats at a minimum. Now we're down to 41. Aisle widening will force reconfiguration of the current four-across seating to three across; mark out another 9 to 11 seats. Now we're down to 32 passengers, at best, in a business where 47-seats have served as the norm.

Depending on the technology used, the same is true of the capacity in the luggage compartment where valuable package express services help underwrite the cost to passengers.

Remember that we're prohibited from expanding the size of the bus; state and federal size restrictions determine the maximum exterior dimensions of that vehicle. Unless the Federal government widens roads or mandates smaller people, we're pretty well stuck with what we've got.

This bill, then, costs a minimum of a 30-percent loss of passenger and package carrying capacity, **on top of the increased cost of the vehicle.** No carrier -- from UBOA's largest member to its smallest will be able to absorb that cost without passing it directly on to the customer.

And who is the passenger who'll be expected to pay this cost?

In large part, the bus passenger today is: a) someone who cannot or chooses not to afford a personal automobile; b) senior citizens on fixed incomes; c) low-income families; d) students; e) virtually anyone who wishes to take public transportation to or from an American community which is not served by an airline or rail terminus. There are, by the way, plenty of those latter communities. Regularly scheduled air carriers reach fewer than 500 communities; AMTRAK about the same. Regularly scheduled bus service today touches about 10,000 communities.

These are not customers with a choice of transportation modes. These are not customers with deep pockets who travel by bus so they can spend more at the Atlantic City gaming tables. These are people with only one avenue to the foundational American promise of affordable and available travel.

Today's bus operator lives on a very narrow ledge, whittled back even farther by the grossly unbalanced federal transportation subsidy policies of the last generation. Since 1965, the pre-tax net income of the intercity bus industry has fallen to one-eighth of its level at that time.[3] That drop seems to correspond near identically with the spending of some $90.5 billion[4] in federal assistance since 1960. During that time, while Congress subsidized each AMTRAK passenger with $33.45 per ticket, intercity bus passengers received eight-cents each.[5]

The intercity bus is a low-margin, peak-period business. The charter bus business is little different. Customers turn to the bus to save money; it's a fact of life. When that single and slim marketing edge is lost, so too is any reason to stay in that business.

Leaving us at the bottom line: most of our members will be forced out of this business.

The added cost of vehicles will force many out right away. The added cost of operating will force out many more. Those who are left, if any, will be left to charge airline prices for intercity travel -- prices which thousands of Americans already find intolerable.

The decreasing passenger levels will, of course, contribute to a downward spiral of service and an upward and corresponding spiral in prices.

Should this legislation pass as it is now written, UBOA predicts that a decade from today the private bus operator will be as scarce as the private rail passenger line in this Nation.

Congress will, indeed, have torn down the discriminatory barriers between the handicapped and able-bodied traveler in America: neither will be able to afford or to find intercity bus service. Able-bodied and handicapped will, together with elderly, low-income and every rural resident without private transportation, become a Nation of shut-ins.

To the age-old question, "How ya' gonna' keep 'em down on the farm?" this bill seems to have found the answer.

---

[3] "Federal Subsidies for Passenger Transportation, 1960-1988: Winners, Losers, and Implications for the Future," Robert R. Nathan Associates, Inc., May 1989.

[4] ibid.

[5] ibid

A decade from today or before, Congress will be faced with a single alternative: the creation of "AMBUS," a nationalized, fully-subsidized intercity bus line operating with all of the efficiencies and innovation of the Nation's existing transit systems. The same basic subsidies will be applied to create an intercity clone to the transit system which, in his final budget to this Congress, President Reagan said, "finance high wages and low labor productivity. The subsidies encourage waste, distort local decision making and perpetuate public monopolies that discourage competition. Very little of the subsidy benefits the transit rider."[6]

What are the alternatives?

UBOA agrees that more can be done in our industry to accommodate the handicapped passenger. Uniform standards and policies toward the handicapped rider might become voluntary criteria so that the handicapped know what to expect when they are in need of intercity transportation. More systems might be encouraged to invest -- with public assistance -- in lift-equipped vehicles. More cooperative efforts can be encouraged between public and private operators; after all, virtually all lift-devices today are publicly-underwritten or -owned. Direct federal assistance -- both capital and operating assistance -- can be offered to private operators to encourage lift installations. Even requirements for proportional fleet purchases would make more sense than this shotgun approach.

In the long run, however, UBOA believes that the ADA demands far, far too much from bus owners and operators in response to the statistical and demonstrated need for handicapped intercity transportation. Equipping every vehicle to prepare for the call which may never come is squandering precious resources which could certainly be better spent. And it doesn't matter whether those are private or public resources -- neither of us can afford it.

UBOA encourages the passage of those sections of the ADA which offer the handicapped a legal recourse to willful, obviously intentional and continuing discriminatory practices by American business, though we believe that far more opportunity for negotiated settlement should be added to this bill.

And to the extent that productive changes were made by the United States Senate in its deliberation on this bill, UBOA endorses the three-year study into needs and means of achieving full accessibility which are contained in the Senate bill, S. 933.

---

[6] Fiscal Year 1990 Budget of the United States, Major Policy Initiatives. President Ronald W. Reagan, 1989.

But the mandate that every bus be fully accessible remains even in the Senate's bill. It must be removed. Our operators are full prepared to live with the results of the mandated study. We're certain, however, that there are far more efficient, more affordable, more satisfactory ways to achieve full accessibility than the single approach offered by this bill.

To summarize, Mr. Chairman, this bill's sections calling for modifications in all new buses sold in America will, at best, blanket this Nation with equipment which will never be used, for which too many people will pay too much. At worst, the private intercity and charter bus operator will disappear entirely, leaving the American traveler entirely in the hands of air and rail carriers which are too costly and reach too few communities. Or, it will force the nationalization of an entire industry or the abandonment of the American principle of a fully mobile population.

UBOA urges a more realistic and practical assessment of the problem be made, and a more solution be sought reasonable and pragmatic solution sought. If significant changes are not made, UBOA urges that this bill be defeated.

Thank you for this opportunity to address our concerns.

-0-

MR. CHAIRMAN, AND DISTINGUISHED MEMBERS OF THE COMMITTEE,
MY NAME IS DAN DIPERT.

I AM PRESIDENT AND OWNER OF DAN DIPERT TOURS, THE LARGEST INDEPENDENT OPERATOR OF MOTORCOACH TOURS IN TEXAS. IN ADDITION, I AM A BUS OWNER. THIS YEAR I AM SERVING AS PRESIDENT OF THE NATIONAL TOUR ASSOCIATION (NTA). THIS ASSOCIATION REPRESENTS THE GROUP TOUR INDUSTRY IN AMERICA, WITH MORE THAN 3,500 MEMBERS.

EQUAL ACCESS FOR ALL DISABLED AMERICANS IS A GOAL THAT HAS BEEN EMBRACED AND PRACTICED BY NTA MEMBERS FOR MANY YEARS. TODAY I REAFFIRM NTA'S COMMITMENT TO THIS GOAL AS EMBODIED IN H.R. 2273. FURTHER, I WILL SHARE SOME BASIC QUESTIONS AND CONCERNS WITH THE MANDATES CONTAINED IN S. 933, AS PASSED BY THE U.S. SENATE.

BEFORE I DO, HOWEVER, LET ME PROVIDE YOU WITH AN OUTLINE INSIGHT INTO OUR ASSOCIATION. NTA'S BACKBONE IS 550 TOUR OPERATORS WHO DEVELOP, PACKAGE AND SELL GROUP TOURS TO DESTINATIONS IN THE UNITED STATES, CANADA, AND OTHER LOCATIONS THROUGHOUT THE WORLD. WE ALSO REPRESENT 2,500 TOUR SUPPLIERS: HOTELS, RESTAURANTS, MOTORCOACH COMPANIES AND AIRLINES. WE ALSO REPRESENT DESTINATION MARKETING ORGANIZATIONS, WHOSE MEMBERS REPRESENT LOCAL, REGIONAL, STATE AND PROVINCIAL TRAVEL PROMOTION OFFICES. BECAUSE OUR UNIQUE STRUCTURE COVERS EVERY FACET OF GROUP TRAVEL. NTA IS CERTAINLY IN PART, A SPOKESMAN FOR THE ENTIRE TOUR AND TRAVEL INDUSTRY.

THIS SUMMER THE NTA BOARD OF DIRECTORS REAFFIRMED OUR TRADITIONAL SUPPORT FOR THE RIGHT OF EVERY AMERICAN TO EQUAL ACCESS TO ALL FORMS OF PUBLIC TRANSPORTATION. H.R. 2273 IMPLEMENTS THE LAUDABLE ASPIRA-

TIONS OF INTEGRATING AMERICA'S DISABLED INTO THE MAINSTREAM OF AMERICAN LIFE AND SOCIETY. HOWEVER, OUR ASSOCIATION WOULD BE REMISS IF I DID NOT HAVE SOME BASIC QUESTIONS AND CONCERNS ABOUT SOME TRANSPORTATION PROVISIONS OF THE LEGISLATION THAT COULD PRODUCE EXTREME FINANCIAL HARDSHIP AND POSSIBLY LEAD TO THE TERMINATION OF SERVICE TO THOUSANDS OF RURAL TRAVELERS AND HUNDREDS OF RURAL COMMUNITIES.

TOUR OPERATORS AND COACH OPERATORS HAVE MADE SUBSTANTIAL EFFORTS TO ACCOMMODATE THE NEEDS OF THE DISABLED WHEN ASKED TO TRAVEL BY MOTORCOACH -- OFTEN FAR AND ABOVE THE DEMONSTRATED NEED. WE, HOWEVER, KNOW FROM OUR EXPERIENCE THAT, FOR OUR ORGANIZATIONS TO SURVIVE IN THE MARKETPLACE, WE MUST BE VERY EFFICIENT MANAGERS OF THE AVAILABLE RESOURCES. THIS LEGISLATION, IF IMPLEMENTED, WILL PLACE AN UNFAIR BURDEN OF ECONOMIC COMPLIANCE UPON THE OBVIOUSLY LIMITED CAPITAL OF THE NATION'S PRIVATE BUS OWNERS THAT SUPPLY THE MOTORCOACHES FOR OUR ASSOCIATION'S OPERATORS. ONLY ONE-THIRD OF OUR OPERATORS OWN THEIR OWN EQUIPMENT.

YOU HAVE BEEN TOLD THAT "THERE SHOULD NOT BE A PRICE-TAG CONSIDERATION WHEN INSTITUTING A BASIC CIVIL RIGHT." IN PRINCIPLE, THIS IS DESIRABLE; IN FACT, THERE IS NO FREE LUNCH. IS THE PRICE OF COMPLIANCE REASONABLE? INDUSTRY ESTIMATES SHOW THAT IT WILL TAKE BETWEEN $30,000 AND $50,000 TO INSTALL A LIFT AND RESTRUCTURE THE SEATS AND RESTROOMS ON BOARD A MOTORCOACH. THESE FIGURES ARE HIGHER THAN THOSE REPORTED BY DENVER OFFICIALS, WHO SAY THE AMOUNT IS CLOSER TO $8,000. DON'T COMPARE APPLES WITH ORANGES -- WHILE CITY BUSSES HAVE NO RESTROOMS AND NO BAGGAGE SPACES TO ALTER, WITH SEATS FACING THE CENTER AISLE, MOTORCOACHES HAVE HUGE LUGGAGE BINS, FULLY EQUIPPED RESTROOMS AND FORWARD-FACING SEATS. THE LIFT IN A CITY BUS MAY RAISE A PASSENGER 18 INCHES FROM STREET LEVEL; IN A MOTORCOACH, A PASSENGER MUST BE RAISED AS MUCH AS FIVE FEET TO CLEAR THE LEVEL OF THE BAGGAGE

COMPARTMENTS AND REACH OUR SEATS.

ALL THIS RESTRUCTURING COSTS US SEATING CAPACITY; WE WILL LOSE 15 TO 17 SEATS PER MOTORCOACH, LOWERING OUR REVENUES BY ONE-THIRD AND RAISING COSTS BY AT LEAST THAT MUCH.

THIS SPRING A STUDY WAS RELEASED BY THE LONG-TIME WASHINGTON, D.C., BASED FIRM, ROBERT NATHAN AND ASSOCIATES. THEY FOUND, FOR EXAMPLE, THAT MOTORCOACH AND INTERCITY BUSSES ARE THE LEAST SUPPORTED MODE OF TRANSPORTATION BY THE FEDERAL GOVERNMENT. FEDERAL SUBSIDIES TO THE AIRLINES TO SUPPORT AIR TRAVEL AVERAGE 70 CENTS PER PASSENGER TRIP; AMTRAK RECEIVED A STAGGERING $33.45 PER PASSENGER TRIP! MEANWHILE, THE INTERCITY BUS SYSTEM RECEIVED A PALTRY 8 CENTS IN FEDERAL GOVERNMENT SUBSIDIES PER PASSENGER TRIP.

THE TOUR INDUSTRY (IN THE FORM OF TOURS OFFERED TO THE PUBLIC) IS A LOW-MARGIN, PEAK-PERIOD BUSINESS THAT DOES NOT OPERATE ON FIXED-SYSTEM ROUTES. THE INDUSTRY AVERAGE RETURN ON INVESTMENT IS 9 PERCENT. THE SLIM MARGIN OF PROFIT WOULD BE FURTHER REDUCED WHEN BUS OWNERS PASS ON COSTS OF MANDATED LIFTS TO THE LEASING TOUR OPERATOR. THIS FACT, COUPLED WITH THE COMPETITION THAT OUR OPERATORS FACE FROM THE NON-PROFIT COMMUNITY WHICH OFFERS DISCOUNTED TOUR AND TRAVEL OPPORTUNITIES, MEANS THAT EACH MONTH SOME OPERATORS IN CERTAIN MARKETS ARE FORCED OUT OF BUSINESS.

THE TOUR INDUSTRY HAS ALWAYS TRIED TO BE RESPONSIVE TO THE NEEDS OF THE DISABLED TRAVELER. WE WILL CONTINUE THAT EFFORT. I AM ABSOLUTELY CONFIDENT THAT ALL NTA OPERATORS ARE CAPABLE OF PROVIDING THE SAME DEMAND-RESPONSE TOUR FOR DISABLED PERSONS THAT WE PROVIDE FOR THE ABLE-BODIED.

IN MOST CASES IT TAKES FROM SIX MONTHS TO A YEAR TO PLAN, ORGANIZE AND CONDUCT A TOUR. THAT TIMEFRAME WILL GIVE PRACTICALLY EVERY OPERATOR THE

ABILITY TO LEASE LIFT-EQUIPPED COACHES TO ACCOMMODATE REQUESTS FROM THE DISABLED TRAVELER.

OUR OPERATORS ARE WILLING AND ABLE TO MEET THE EQUAL ACCESS MANDATE OF H.R. 2273 AND S. 933.

IN MY 17 YEARS IN THE MOTORCOACH INDUSTRY, I HAVE PACKAGED AND PROMOTED THOUSANDS OF TOURS ALL OVER NORTH AMERICA AND BEYOND, AND IN ALL OF THOSE YEARS, I HAVE HAD ONLY 15 REQUESTS FOR SERVICE TO DISABLED CUSTOMERS. IF I HAD BEEN REQUIRED TO COMPLETELY RE-EQUIP MY MOTORCOACHES WITH EXPENSIVE AND UNUSED LIFTS AND OTHER REQUIREMENTS THAT MAY YET BE DETERMINED BY THIS BILL, RESULTING IN FEWER SEATS TO SELL TO MY CUSTOMERS, THEN I MIGHT NOT HAVE BEEN ABLE TO REMAIN IN BUSINESS LONG ENOUGH TO TESTIFY TO YOU TODAY.

I WOULD LIKE TO THANK YOU FOR THE OPPORTUNITY TO BE WITH YOU TODAY TO EXPRESS THE CONCERNS OF OUR INDUSTRY.

THANK YOU!

STATEMENT OF

PETER L. PICKNELLY, SR.
CHAIRMAN OF THE BOARD, PETER PAN BUS LINE
SPRINGFIELD, MASSACHUSETTS

BEFORE THE
SUBCOMMITTEE ON SURFACE TRANSPORTATION
OF THE
COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION
U.S. HOUSE OF REPRESENTATIVES
HONORABLE NORMAN Y. MINETA, CHAIRMAN

TUESDAY, SEPTEMBER 26, 1989
2167 RAYBURN HOUSE OFFICE BUILDING
WASHINGTON, D.C.

American Bus Association
1015 15th Street, N.W.
Washington, D.C. 20005
(202) 842-1645

Mr. Chairman and Members of the Subcommittee:

I appreciate this opportunity to present the views of Peter Pan Bus Lines, on the proposed Americans With Disabilities Act of 1989.

Peter Pan is a Class I motor carrier of passengers headquartered at 1776 Main Street, Springfield, Massachusetts. Peter Pan provides regularly scheduled intercity bus service over routes in Massachusetts, New York, New Hampshire, and Connecticut, charter service from New England origins to various destinations throughout the United States, and both one-day and multi-day tours sold on an individual fare basis. That service is provided in 146 MCI motorcoaches seating from 47 to 49 passengers.

Peter Pan is one of the few privately owned bus operators with experience in the operation of lift-equipped buses in intercity passenger service. In 1982, Peter Pan designed a wheelchair lift and installed the lift on one of its motor coaches used in charter service. The availability of a wheelchair-accessible bus was widely advertised and Peter Pan received much favorable publicity for its innovation.

Unfortunately, there was no demand for the fully accessible charter bus. In 1985, the lift was removed and the bus reconverted to a conventional coach.

In 1985, the Commonwealth of Massachusetts initiated a program for the purchase of 25 buses to be leased to private carriers for the purpose of upgrading regular-route service within Massachusetts. Six of the original 25 buses had wheelchair lifts, two of which were leased to Peter Pan. Massachusetts expanded its bus lease program in 1989 to include 20 to 28 additional buses all of which will have wheelchair lifts.

At the present time, Peter Pan is operating 7 buses equipped with wheelchair lifts and leased from the Commonwealth. The lifts were developed by Motor Coach Industries and installed at the MCI factory at a cost of approximately $35,000 per bus. About one-half of the cargo space is sacrificed to the installation of the lift. In addition, transportation of one (1) passenger in a wheelchair results in the loss of four (4) revenue seats depending upon the interior configuration of the bus. On the buses leased to Peter Pan, the wheelchair passenger has no access to the restroom.

Ridership on the accessible buses has been negligible. During the three (3) years from 1986 to 1989, during which time Peter Pan had two (2) wheelchair-accessible buses in its fleet, each bus was used less than once every two (2) months as a wheelchair-accessible vehicle.

But for the costs borne by Massachusetts, Peter Pan could not afford to own and operate the fully accessible buses in its fleet. Peter Pan pays the Commonwealth of Massachusetts approximately $675 per bus per month, which enables the Commonwealth to recover the purchase price of the leased equipment less the cost of the wheelchair lift.

Under the Massachusetts bus lease program, a disabled person must give 24 hours' notice of this or her intent to travel. The purpose of that restriction is to enable bus operators to position a limited number of accessible buses and to enable paratransit service to be arranged at the trip origin and destination points. No such restrictions would be permissible under the language of the Senate bill.

Peter Pan derives approximately 50 percent of its operating revenue from charter and tour services. Even if the arguments advanced for installing lifts on all buses used in providing regular-route service were sound, they would not apply to buses used exclusively in charter and special operations. This is because charter and tours are planned far enough in advance to enable accessible buses to be provided if there is a demand for them.

Peter Pan is prepared to guarantee that an accessible bus will be provided to every charter group that requests one. That guarantee can be met by purchasing one or two lift-equipped buses and by leasing buses from public operators. To require Peter Pan to install lifts on its entire charter bus fleet would not benefit any disabled person but would cripple Peter Pan.

Statement by Fred G. Currey, Chairman and Chief Executive Officer, Greyhound Lines, Inc., 901 Main Street, Dallas, Texas 75202.

Before the Subcommittee on Surface Transportation, Committee on Public Works and Transportation, U.S. House of Representatives, September 26, 1989, regarding the Americans with Disabilities Act, H.R. 2273.

INTRODUCTION

This historic legislation will remove barriers for millions of Americans. Greyhound Lines supports the bill's objective of improving mobility for disabled Americans. Indeed, our company was founded 75 years ago to improve mobility for all Americans.

We support, however, an amendment that would require the intercity bus system, as a total system, to be accessible without requiring each and every bus to be accessible.

We respectfully petition the Subcommittee to amend the bill for the following three reasons:

1. The double standard. It is ironic that a bill designed to reduce discrimination in itself discriminates against the intercity bus industry. It does so twice:

. The intercity bus industry is treated differently than all other forms of transportation.

. The intercity bus industry is treated differently than all other private entities.

2. Loss of rural service. If the bill stands as passed by the Senate (S.933), the fully implemented cost to Greyhound Lines will be about $40 million dollars a year. We will have no alternative but to curtail service to thousands of small towns and rural communities. The result: reduced mobility for the disabled as well as all other Americans.

3. There is an alternative. There is a better way to achieve the goals of ADA without destroying intercity bus service to small-town America. As the House holds its hearings, Canada is launching a joint public sector-private sector pilot program to provide accessible bus transport on a major passenger corridor. We should do the same.

DISCRIMINATORY TREATMENT OF THE INTERCITY BUS INDUSTRY

Rhetoric about ADA implies that it sets new standards for the field of "transportation." Nothing could be more misleading. For one thing, airlines and taxicabs are exempt. For some other modes of transportation, such as school buses and hotel shuttle buses, only some vehicles in each fleet must be accessible. Even in the public sector, Amtrak must make only one car per train accessible. In the private transportation sector, only the intercity bus industry is singled out for accessibility on each and every vehicle. It is the difference between having, on the one hand, an accessible system, and, on the other hand, 100 percent accessible vehicles.

It is not enough to defend this double standard by saying it exists because airlines are not in the bill, that they are covered by the Air Carrier Access Act of 1986 (ACAA). The different treatment of air carriers and bus companies, plus the difference in the financial strength of the two industries, reveals the greatest inequity in ADA. According to the most recent figures available, for the 12 months ended September 30, 1988, the nation's airlines reported net profits of $611,420,000. By contrast, Greyhound Lines lost $17,000,000 last year, and forecasts a profit for this year of less than half that amount. Yet, the U.S. Department of Transportation estimates that compliance with ACAA will cost only between $5.4 and $18.7 million annually for the entire airline industry. Greyhound Lines alone, however, will spend more than twice that much, at least $40 million annually, to comply with ADA.

The American system is based on fairness. That, of course, is the reason for ADA's broad support. Fairness requires all modes of private transportation to be treated equally, even if they are covered by two separate pieces of legislation. Greyhound Lines and the airlines should receive the same treatment.

ADA also discriminates by setting two separate and distinct standards for the private sector intercity bus industry.

. The first standard requires "full and equal enjoyment of public transportation services. This is fair. It is essentially the same standard imposed on airlines in ACAA and on other forms of bus service in ADA.

. The second standard is inappropriate for the private sector, unsubsidized intercity bus industry. It requires every new vehicle be "readily accessible to and useable by individuals with disabilities, including individuals who use wheelchairs." This standard for the private intercity bus industry was lifted verbatim from the section of the bill covering federally subsidized public transit services.

While the second standard may be appropriate in cases where it will be financed by U.S. taxpayers, it will devastate the private sector bus industry. It is a question of who pays. Greyhound's compliance with ADA will not be paid by American taxpayers. it will be paid by our customers, who are the least able to afford higher fares. It is nothing less than a regressive tax.

There is a second double standard, in which intercity bus companies are treated differently than other private entities. Throughtout the Senate bill, all other private entities are governed by standards of reasonableness that will prevent undue hardship. The bill takes into account "undue hardship" and significant difficulty or expense." It speaks of "demonstrated good faith" and "to the maximum extent feasible." Even for public paratransit systems, there are exceptions where the bill "would impose an undue financial burden." A full list of exculpatory provisions is attached to this statement. Only intercity bus companies are denied access to standards of reasonableness.

COLLAPSE OF RURAL SERVICE

Although the ADA is clearly discriminatory, and should be amended, it was passed by an overwhelming majority in the Senate and has the unqualified support of the Administration. As prudent business operators, therefore, managers of Greyhound Lines have no choice but to begin planning for operation under the legislation.

There can be no doubt about what is ahead for us. We face an enormous new cost burden, and a price-sensitive customer base that will not allow us to raise prices. The only alternative is to curtail or eliminate unprofitable service.

Before getting to the specifics, let me take a moment to set aside several myths that sometimes get in the way of a rational business discussion.

. First, we hear the comment, "You are a big company and you can afford it," as if those two characteristics were inseparable. We are about the size of the nation's eighth largest airline, Southwest Airlines, which earned a profit of 10 cents on the dollar last year, and is having another great year in 1989. After two losing years in a row, we have high hopes of making 2 cents on the dollar this year.

. Second, we have been lectured repeatedly that costs don't count, and can't be considered in matters of this type. That is easy to say for someone who is spending other people's money. Those of us who must contend with employees who want job security and more pay, customers who resist higher prices, and bankers and stockholders who want a fair return on their investments can never say that costs don't count. And that does not apply to the private sector alone. It seems to me that the focus of our government for the last decade has been on dealing with problems created by the "costs don't count" attitude.

. Third, I'm giving you cost estimates of complying with ADA, knowing full well that many people automatically dismiss any cost estimate from a company faced with new legislation or regulation. Even The Wall Street Journal, in its editorial denouncing ADA, could not resist the temptation to discredit our numbers. I believe you can decide this matter for yourselves. Our financial reports are a matter of public record. I have copies with me today of our reports to the Securities and Exchange Commission for 1988 and the for first six months of 1989, available to anyone who is interested.

. Fourth, when all else fails, people tell me we have six years to get ready, so why worry about it today. Let me tell you why. My associates and I acquired an operation in March, 1987, that had been allowed to deteriorate for a decade or more. We launched a massive investment program to rebuild the company, including new buses, new computers, new terminals, training programs for employees, and much more. We are building for the long term, and from that point of view six years is not far away. A new bus at $200,000 should last 10 or 12 years. In June, we opened a new terminal in Kansas City, for $6 million. Another new terminal, at a cost of $15 million, is under construction in Chicago. We expect these and other new facilities to serve our needs for several decades, and we have arranged financing accordingly. Now, our entire rebuilding program is called into question. These financial issues are much on my mind, because when this hearing is completed I will be going to New York for a meeting with our bondholders. They do not believe six years is such a long time, and they want to know about our plans.

. Fifth, and finally, we are up against the myth of the Freedom Riders. The civil rights movement of a quarter-century ago ended racial discrimination in transportation. The beneficiaries were the poor, minorities, and people in isolated rural communities. Those same people will be victims this time, through increased fares and loss of intercity bus service to most rural areas. While the earlier civil rights movement expanded mobility, this bill will curtail mobility, not for airline travelers but for our core customer base of rural people and those who can't afford to fly. We have seen the freedom ride, now we may see the last ride for much of our system.

With that said, let me turn to our business plans. The starting point is the concept of cross-subsidization, which was common in the airline industry during regulation. Airlines were given lucrative, high-density, high-profit routes in combination with low-traffic, unprofitable routes. They had to take the bad to get the good. Profits from some routes covered losses on others. As soon as deregulation came, of course, airlines pulled out of the losers, turning them over to commuter airlines. For routes that are not economically viable, Congress provides a subsidy through the Essential Air Service Act.

At Greyhound Lines, after deregulation, we are still operating under the cross-subsidation system, as a way of maintaining service on unprofitable rural routes.

The following table shows the number of miles operated for the month of July, 1989, and for the 12 months ended July 31, 1989, and the shift that would take place under ADA.

	CURRENT		AFTER ADA		CHANGE	
	MILES (000)	%	MILES (000)	%	MILES (000)	%
July 1989 (000)						
Profitable miles	21,902	68%	15,811	49%	(6,092)	(19%)
Unprofitable miles	10,079	32%	16,170	51%	6,092	19%
Total miles	31,981	100%	31,981	100%	0	0
Last 12 months						
Profitable miles	219,531	68%	158,191	49%	(61,340)	(19%)
Unprofitable miles	103,308	32%	164,648	51%	61,340	19%
Total miles	322,839	100%	322,839	100%	0	0

The key numbers are on the second line. We are operating 32 percent of our bus miles today at a loss. Under ADA, if we were to keep the same route structure, we would be operating 51 percent of our bus miles at a loss. I know of no enterprise that could survive with more than half its operations losing money.

Most of the 32 percent of the bus miles we are operating at a loss today are in rural areas. Under ADA, those loses will increase. Here is a list of the people who are now subsidizing our rural routes:

. Our urban passengers, who are the least able to do so. They include people on tight fixed incomes, such as students, enlisted military personnel, and senior citizens. They also include lower income groups, the disabled, and people who can not afford rising airline fares.

. Individuals and small businesses who ship packages.

. Our employees, whose wages and benefits are set by competitive market rates and by our financial performance.

. Our investors and shareholders, who will receive depressed returns if we continue to operate at a loss.

In short, our policy of cross-subsidation will fail under ADA. There will not be enough profitable routes left to support the unprofitable ones. Furthermore, monumental losses of this kind can not be fixed through tinkering with schedules. It will require a new business strategy that reduces fixed costs for terminals, garages, and payroll.

I have some maps that show the work we have done to date on our restructuring.

The first map shows routes where all schedules, even under ADA, will be profitable. These are the high-density routes connecting major urban areas, and are only a small part of today's national network.

On each route we usually operate several schedules a day. The second map shows routes where at least one schedule a day, usually more than one, will be operating at a loss under ADA.

The third map shows the routes that will be operating at a loss. That is, the total of all the schedules is in the red.

The fourth map shows the outline of the new Greyhound Lines system that will emerge from our restructuring. It has three zones:

. The blue zone shows our strength. In this area we will be able to maintain a network of routes to serve major locations. However, as I will show in a moment, there will be substantial cutbacks within most of these states.

. The yellow shows the area of major restructuring. This is where most routes now lose money, even before ADA. We will discontinue service to most locations off the main roads, and the buses on the main roads will make fewer stops.

. In the pink area, we will maintain only the one bridge route on the interstate highway connecting east and west.

Now let's turn to some individual states.

Here is our home state of Texas, where we have unprofitable service to dozens of small towns. In addition, here is what we see ahead in Ohio, North Carolina, and Missouri.

In summary, we now serve about 10,000 locations. Since all the airlines, including commuters, serve less than 500, and Amtrak serves basically the same places, we provide the only public transportation to 9,500 towns and rural communities. Under ADA, Greyhound will cut in half the number of locations it serves. The new structure will provide service to about 5,000 locations, putting an end to intercity bus service to the other 5,000 locations now on our map.

The radical restructuring will have a devastating effect on our people. Greyhound now employs 12,500 people, with another 8,000 people working for contractors who operate our terminals. In the transition to the new route network, we will eliminate 10,000 jobs.

THE ALTERNATIVE

Fortunately, there is an alternative.

The reason for today's hearing, and the controversy about provisions of ADA dealing with the intercity bus industry, is, to use a cliche from another form of transportation, we have the cart in front of the horse.

ADA proposes a comprehensive study of technology, costs, market demand, and alternate solutions. Normally, that information would be available before, not after, enactment of a legislative mandate. In business school slang, the Senate bill is a case of "Ready! Fire! Aim!" Again, it is not enough to say that adjustments will be made as indicated by the study, which will be available in three years. Adjustments will not be automatic, but can be made later only through new legislation.

Three years from now happens to be 1992, which happens to be an election year. Who wants to predict what the Senate, the House and the Administration will do with a hot potato like this in a campaign year. It is not a comforting prospect.

Let me propose a five-point program to increase mobility for the disabled.

1. Our new Transportation Assistance Program. For the last 14 years, under our Helping Hand program, we have provided free transportation to companions traveling with disabled passengers. At the request of the disabled community, we have revised the program to permit the disabled to travel alone, with advance notice of 24 to 48 hours. We will provide boarding assistance, and will carry most types of battery-operated wheelchairs.

2. A nationwide 800 number for the disabled. This number will go into effect with the new Transportation Assistance Program. Operated 24 hours a day, it will provide information and make reservations for wheelchair passengers.

3. A new boarding chair for the disabled. We are designing a chair to permit loading of disabled passengers through the front door. It has a sliding seat mechanism which, in combination with the movable armrest of the Greyhound seat, will enable a pasenger to be moved into the bus seat without any lifting. It is better than procedures used by airlines. In two years, we will have these chairs in our 200 largest terminals, which handle more than 80 percent of our passengers. For other locations, we can transport a chair from one of the larger terminals on 24 hours notice.

4. We will support the Technical Assistance Program as advocated in draft form by the National Council on Disability. It is a federal assistance program to help private sector entities fulfill their responsibilities under the new legislation. We will contribute $100,000 on a matching basis for a marketing campaign in behalf of our new transportation services for the disabled.

5. As part of the study required by the Senate bill, we will participate in a pilot program with a public agency to operate lifts in regular route service. As we struggle with these issues here today, the Canadians are setting an example for us.

They are beginning a three-year pilot program that will answer from real life all the questions the ADA study will try to answer through computer models based on someone's assumptions.

The Canadian federal government and a private carrier are funding a program, roughly 50 percent each. The carrier operates six buses with wheelchair lifts on a passenger corridor across southern Ontario, connecting to our system in Buffalo. The buses are equipped with prototypes of two types of lifts, manufactured by different companies.

The program includes advertising and other marketing programs designed to encourage the disabled to travel. Careful records will be kept of such obvious areas of interest as actual travel by people in wheelchairs, operating efficiency of the two types of lifts, and maintenance costs.

There is no reason I can think of for not duplicating the Canadian initiative in this country, before we mandate expenditure of huge sums of money and the unnecessary loss of bus service to thousands of rural communities.

Greyhound Lines is ready to join with the U.S. Department of Transportation or any state agency in funding and conducting a pilot program. Two obvious locations would be the northeastern corridor from Washington, D.C., through New York up to Buffalo, to connect with the Canadian carrier, or the Interstate 5 corridor in the west, from Los Angeles to Seattle. Undoubtedly, there are many other suitable locations for a pilot program.

CONCLUSION

In outlining our contingency plan to curtail service to rural America, I said that as prudent business people we have no choice but to get ready. Clearly, we don't want to do that. We would much rather run our business so that it grows, and extends its service to more and more locations.

In the same way, we face another unpleasant choice. If the Senate bill is enacted, it will be disastrous for our company. Half the communities we serve today will lose public transportation, and several thousand employees will lose their jobs. We will be fighting for survival the next six years, and that means whatever it takes, year after year, in behalf of legislative relief.

Again, that is not our choice. We believe it would be in our interest, and in the public interest, to use our time and resources in a constructive search for ways to increase mobility for the disabled, and all other Americans. We believe the five-point program I have outlined here today will serve that objective.

Accordingly, we commit to the full implementation of this program if Congress enacts a final ADA provision that requires us to provide accessible service nationwide, but gives us the flexibility to provide that service in a reasonable and cost-effective manner. Such legislation would require that our service be fully accessible, but would not hold us to a higher standard than the airlines and would not require that every vehicle be equipped with a wheelchair lift. Greyhound respectfully urges the Subcommittee to adopt such a provision for private sector bus companies so that we can start together on a public-private partnership that will truly improve and insure mobility and intercity bus service accessibility for the disabled.

ATTACHMENT

Exculpatory provisions in the Bill based upon standards of Reasonable Accommodation/Undue Hardship.

Title I - Employment

Section 102(b)(1)(E) [the term, "discrimination" includes] "not making reasonable accommodations to the known physical or mental limitations of a qualified individual who is an applicant or employee,

> **unless such covered entity can demonstrate that the accommodation would impose an undue hardship (emphasis added) on the operation of the business of such covered entity."**

Section 101(9): "(A) In general - The term 'undue hardship' means an action requiring significant difficulty or expense."

Section 103. Defenses:

> "(a) In General - It may be a defense to a charge of discrimination under this Act that an alleged application of qualification standards, tests, or selection criteria that screen out or tend to screen out or otherwise deny a job or benefit to an individual with a disability has been shown to be job-related and consistent with business necessity, and such performance cannot be accomplished by reasonable accommodation" (emphasis added)

Title II - Public Services

Section 203(b)(2) "USED VEHICLES. . .shall make demonstrated good faith efforts. . ."

Section 203(b)(3) "REMANUFACTURED VEHICLES. . .to the maximum extent feasible. . ."

Section 203(c)(1) "PARATRANSIT AS A SUPPLEMENT TO FIXED ROUTE PUBLIC TRANSPORTATION SYSTEM. . .unless the public transit entity can demonstrate that the provision of paratransit or other special transportation services would impose an undue financial burden on the public transit entity."

Section 203(c)(2) UNDUE FINANCIAL BURDEN

> "If provision of comparable paratransit and other special transportation services would impose an undue financial burden on the public transit entity, such entity must provide paratransit and other special transportation services to the extent that providing such services would not impose an undue financial burden on such entity." (emphasis added)

Section 203(d) "COMMUNITY OPERATING DEMAND RESPONSIVE SYSTEMS FOR THE GENERAL PUBLIC. . . it shall be considered discrimination. . .to purchase or lease a new vehicle. . .that is not readily accessible unless the entity can demonstrate that such system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to that provided to the general public."

Section 203(e) "TEMPORARY RELIEF WHERE LIFTS ARE UNAVAILABLE - With respect to the purchase of new buses, a public entity may apply for, and the Secretary of Transportation may temporarily relieve such public entity from the obligation to purchase new buses of any size that are readily accessible to and usable by individuals with disabilities if such public entity demonstrates--

1. that the initial solicitation for new buses made by the public entity specified that all new buses were to be lift-equipped and were to be otherwise accessible to and usable by individuals with disabilities;

2. the unavailability from any qualified manufacturer of hydraulic, electro-mechanical, or other lifts for such new buses;

3. that the public entity seeking temporary relief had made good faith efforts to locate a qualified manufacturer to supply the lifts to the manufacturer of such buses in sufficient time to comply with such solicitation; and

4. that any further delay in purchasing new buses necessary to obtain such lifts would significantly impair transportation services in the community served by the public entity."

Section 203(h) "ALTERATIONS OF EXISTING FACILITIES. . . it shall be discrimination. . .to fail to make the alterations in such a manner that, to the maximum extent feasible (emphasis added), the altered portions of the facility are readily accessible. . .

Section 203(i)(3)(c) "INTERCITY RAIL SYSTEMS

All stations in intercity rail systems shall be made readily accessible to and usable by individuals with disabilities, including individuals who use wheelchair, as soon as practicable, but in no event later than 20 years (emphasis added) after the date of enactment."

Section 203(i)(3)(B) "RAPID RAIL, COMMUTER RAIL, AND LIGHT RAIL SYSTEMS

Key stations in rapid rail, commuter rail, and light rail systems shall be made readily accessible. . . as soon as practicable but in no event later than 3 years after the date of enactment of this Act, except that the time limit may be extended by the Secretary of Transportation up to 20 years for extraordinarily expensive structural changes to, or replacement of, existing facilities necessary to achieve accessibility (emphasis added)."

Title III - Public Accommodations and Services Operated by Private Entities

Private entities covered by this legislation include:

a. an inn, hotel, motel, or other similar place of lodging, except for an establishment located within a building that contains not more than five rooms for rent or hire and that is actually occupied by the proprietor of such establishment as the residence of such proprietor;

b. a restaurant, bar, or other establishment serving food or drink;

c. a motion picture house, theater, concert hall, stadium, or other place of exhibition or entertainment;

d. an auditorium, convention center, or lecture hall;

e. a bakery, grocery store, clothing store, hardware store, shopping center, or other similar retail sales establishment;

f. a laundromat, dry-cleaners, bank, barber shop, beauty shop, travel service, shoe repair service, funeral parlor, gas station, office of an accountant or lawyer, pharmacist, insurance office, professional office of a health care provider, hospital, or other similar service establishment;

g. a terminal used for public transportation;

h. a museum, library, gallery, and other similar place of public display or collection;

i. a park or zoo;

j. a nursery, elementary, secondary, undergraduate, or postgraduate private school;

k. a day care center, senior citizen center, homeless shelter, food bank, adoption program, or other similar social service center; and

l. a gymnasium, health spa, bowling alley, golf course, or other similar place of exercise or recreation.

Section 302(b)(2) SPECIFIC PROHIBITIONS

(A) DISCRIMINATION - "As used in subsection (a) the term 'discrimination' shall include---. . .

> (ii) a failure to make reasonable (emphasis added) modifications in policies, procedures, when such modifications are necessary to afford such privileges, advantages, and accommodations to individuals with disabilities. . ."

Section 302(b)(2)(A)(iii) "a failure to make reasonable (emphasis added) modifications in policies, practices, procedures when such modifications are necessary to afford such privileges, advantages, and accommodations to individuals with disabilities. . .unless the entity can demonstrate that taking such steps. . .would result in undue burden (emphasis added)."

Section 302(b)(2)(A)(iv) "a failure to remove architectural carriers and communication carriers that are structural in nature in existing facilities. . .where such removal is readily achievable (emphasis added)."

Section 302(b)(2)(A)(v) "where an entity can demonstrate that the removal of a barrier under clause (iv) is not readily achievable, a failure to make. . .available through alternative methods if such methods are readily achievable (emphasis added)."

"Readily Achievable" - defined in section 301(5)(B): factors considered in determination include:

(i) the overall size of the covered entity
(ii) the type of operation
(iii) the nature and cost of the action needed

Section 302(b)(2)(A)(vi) does not "require the installation of an elevator for facilities that are less than three stories or that have less than 3000 square feet per story. . ."

Section 302(b)(2)(B) "FIXED ROUTE SYSTEM

> (ii) Equivalent Service - If such entity purchases or leases a vehicle carrying 16 or less passengers after the effective date of this title that is not readily accessible. . it shall be discriminatory for such entity to fail to operate a system that, when viewed in its entirety, ensures a level of service to individuals with disabilities. . .equivalent (emphasis added) to the level of service provided to the general public."

Section 302(b)(2)(C) "DEMAND RESPONSIVE SYSTEM. . .an incident in which (iii) such entity purchases or leases a bus or vehicle. . .that is not readily accessible. . .unless such entity can demonstrate that such system, when viewed in its entirety, already provides a level of service to individuals with disabilities equivalent to that provided to the general public except over the road buses (emphasis added). . .

Section 303 "NEW CONSTRUCTION IN PUBLIC ACCOMMODATIONS AND POTENTIAL PLACES OF EMPLOYMENT

(a) . . .failure to design and construct facilities. . .that are readily accessible. . .except where an entity can demonstrate that it is structurally impracticable to meet the requirements of such subsection. . ."

(b) Elevator exception - same in section 302.

Section 303(b)(3) "the purchase or lease of a new vehicle (other than an automobile or an over-the-road bus) that is to be used to provide public transportation services. . .except in the case of a vehicle used in a demand response system, in which case the new vehicle need not be readily accessible. . .if the entity can demonstrate that such system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to the level of service provided to the general public."

Section 307. EXEMPTIONS FOR PRIVATE CLUBS AND RELIGIOUS ORGANIZATIONS

Title IV - Telecommunication Relay Services

Section 401(a) "(b) AVAILABILITY OF TELECOMMUNICATION RELAY SERVICES

(1). . .shall ensure that interstate and intrastate telecommunications relay services are available, to the extent possible (emphasis added). . .

(d) REGULATIONS.---(3) JURISDICTIONAL SEPARATION OF COSTS(B). . cost caused by interstate telecommunications relay service shall be recovered from the interstate jurisdiction and costs caused by intrastate telecommunications relay services shall be recovered from the intrastate jurisdiction. . .

(5) UNDUE BURDEN. . .the Commission may extend the date for full compliance by such carrier for a period not to exceed one additional year."

Mr. MINETA. The subcommittee will please reconvene. At this time I would like to call forward a panel made up of Marilyn Golden, Policy Analyst, Disability Rights Education and Defense Fund; George Herman, General Superintendent of Maintenance, RTD Denver; Tim Cook, Director, National Disability Action Center, Washington, D.C.; John Winske, Assistant Director, Massachusetts Coalition of Citizens With Disabilities; and Ralph Markward, Executive Director of the Zia PVA, Albuquerque, New Mexico.

Ms. Golden, we all have copies of your statement, and in fact, all the statements of the members of the panel will be made a part of the record. Please proceed.

TESTIMONY OF GEORGE HERMAN, GENERAL SUPERINTENDENT OF MAINTENANCE, RTD DENVER; MARILYN GOLDEN, POLICY ANALYST, DISABILITY RIGHTS EDUCATION AND DEFENSE FUND; JOHN WINSKE, ASSISTANT DIRECTOR, MASSACHUSETTS COALITION OF CITIZENS WITH DISABILITIES; RALPH MARKWARD, EXECUTIVE DIRECTOR, ZIA PVA; AND TIM COOK, DIRECTOR, NATIONAL DISABILITY ACTION CENTER

Ms. GOLDEN. Thank you, Chairman Mineta, members of the committee and staff. My name is Marilyn Golden. I am a Policy Analyst for the Disability Rights Education and Defense Fund. I will summarize my testimony, but first I would like to proceed immediately to answering some of the issues that were raised this morning.

Quite a few things were raised by quite a few people, so please bear with me. First I want to respond to Mr. Currey, and I want to say that I very much appreciate his concern to come up with a feasible way of providing access to inter-city transit. This definitely shows his eagerness to cooperate with the disability community, and we are very pleased to see his keen interest in coming up with methods that will work.

We in the disability community are not eager to rush into an infeasible solution that will bankrupt Mr. Currey's company because we, too, want access to every city that he currently serves, and ideally, more. That is why, when it came time to compromise, when the Senate was considering the bill, the Senate compromise included not a mandate for lifts, as some of the speakers would have led you to believe this morning; the Senate compromise and the House bill do not require lifts. They require access.

I think that the current bill, certainly the Senate bill, includes both what we want and what Mr. Currey presented. Which is that all the solutions he presented and other solutions that have been advocated can be considered by the Office of Technology Assessment study. But access will be required, as Mr. Currey, as well as the rest of us, imminently seem to feel is reasonable at least some way and, therefore, would be reasonable to require, so at least in that point we are in agreement.

Again, I want to just reiterate that the current bill, the Senate compromise bill, requires access, not lifts. The study can look at every method that has been suggested. We can proceed, I think, with the Senate compromise completely encompassing and including everything that Mr. Currey recommended this morning without changing the bill.

I also would want to warn Mr. Currey of the comparison to airlines. The 504 regulations of the 1973 Rehabilitation Act require all airports that receive Federal funding, which is the overwhelming majority of them, to require a lift or a ramp level boarding device so that people in wheelchairs do not have to be carried upstairs onto a plane. If the bus transit industry is to be compared to that, those devices would be required of them, too, and the compromise that Mr. Currey suggested in terms of carrying up wheelchair users in separate chairs would not be permitted. So he may want to beware of that comparison to airlines. We would love him to be considered just like airlines and lifts or ramps would then be required.

I want to go on to some other points that were raised, particularly to tour and charter services, and some of the objections that Mr. Skaggs raised. The distinction is already in the bill, that is the Senate compromise bill, between a common carrier and a tour charter. We don't have to put that distinction in, it is there. Demand response providers, tours and charters are considered differently than fixed-route providers, common carriers.

Fixed-route providers have to provide vehicle access whereas demand response providers only have to provide access when their system is viewed in its entirety. If they cannot accommodate the disabled customers that they have now, then new vehicles would have to have lifts. If they can accommodate them, new vehicles would not have to have lifts. I think that simple feature, which is already in the Senate compromise bill, would take care of their concerns.

I want to address the issue of seat loss. Figures have been thrown back and forth. It is true that, as Mr. Herman will testify in a little while, the Denver seat loss on their current generation that is in service, was four. But as Mr. Herman will testify, he expects to go back and retrofit those buses in a reasonable way; he is not required, he just wants to. That will minimize that seat loss back to zero or one, and his next generation, which is almost ready to go on line, will have a seat loss of zero or one. That should explain the discrepancy. Any future Hubmatic installations will only have a seat loss of zero or one.

To the concern Mr. Packard raised about retrofit, I want to again remind the committee that no retrofit is required in any situation by the bill.

I want to go to the issue of rest rooms. A significant amount of the cost that has been figured in by Greyhound is for rest room access. Rest room access is something to be required as technology becomes available, and this is also in the Senate compromise. It is a distortion to assume that rest room access is required by the Americans With Disabilities Act. It simply isn't, and in fact the Senate report very directly addresses that it could be considered a future requirement as technology becomes available, and the OTA study could, in fact, look at using boarding chairs or other devices.

The other thing to realize is that people with physical disabilities have dealt with the "no rest room" issue for a long time. Those of us who have struggled our way onto buses, those of us who have taken long flights, international flights, some of us use various medical devices; others use means that I will not describe, but, you know, it is not a new problem to us. And again, while we really appreciate Mr. Currey's insistence that access means rest rooms, which sort of helps out his cost figures, it makes them bigger, access to us doesn't mean rest rooms in this case, at least right away, and we reject any cost estimates that count them in. It is a distortion of the requirements.

I would like to rebut this morning's testimony of both common carriers, some of the smaller carriers, as well as Greyhound and the charter services, who say they have served people with disabilities. We have numerous reports, and I will not take up your time, but I could document them easily, of massive amounts of discrimination. Just the other night we had a story of a charter company where a young disabled adult was blanketly refused to be carried, even if they could get themselves on, even if they could get their friends to carry them on. The charter company said, "No, we will not carry you, I am sorry, it is against our insurance regulations."

Now perhaps that charter company is not in the charter company association that was represented this morning, but I don't think it is fair for the association to deny the fact that discrimination exists. We can give you all the documentation and anecdotal evidence that you want, that it does exist.

I want to clear up something about the Hubmatics in Denver. The Hubmatics' cost isn't necessarily $17,000. The future generation of Hubmatics, as Mr. Herman will testify, could be easily $7,000 to $9,000. It is another issue where cost estimates really have to be taken with a grain of salt. We do think there is a certain amount of hysteria, despite the documentation that was given this morning. We have experienced this before.

Section 503 of the Rehabilitation Act, before it was passed, was accompanied by humongous cost estimates by medical providers and universities that never panned out to be true. You all know that the New York subways are having key stations rehabilitated now for access. The actual cost estimates are known because of the working drawings which are being done. Before the New York rehabbing, there was never an example of actual rail rehab for access. Now we have an example of when it has actually been done, and lo and behold, the wild, early scare-tactic cost projections for the New York system were fully ten times what the actual costs are going to prove to be, and I wouldn't be surprised if the cost estimates we heard this morning would turn out to be similarly inflated, not in a deliberate sense.

I am sure they are not being deliberately inflated, but I think that when a mandate is passed, when the reasonableness of it is realized, the industry finds a way to do it that can be accommodated because at that point it is in their interest to do so. I am sure Greyhound will be able to do that.

Advance notice was raised this morning as a possible way to accommodate people with disabilities. As was testified last week in relation to public transit systems, publicly funded transit systems, advance notice has never worked. It completely rules out spontaneous travel, family emergencies, business travel. We have to remember that there is still, without regulation, quite a bit of discrimination on the airlines, and people with disabilities may look to buses for their business travel. It is a very seriously second-class alternative at best.

We also reject the idea very much of having a study without a mandate, and also the metaphor that it is—I think it was termed—ready-fire-aim. I can see how it would be termed that, but I don't think that is a fair analysis. We face a situation in which a study without a mandate would produce probably quite a bit of basically foot dragging.

We think it would seriously weaken the bill. If the mandate were removed, the interim years would expectably be used by over-the-road bus providers to contest the feasibility of accessible service or to pretend that a second-class way of providing it is really a decent way rather than really getting ready to deliver accessible service.

I want to remind everyone involved that the aim of the legislation is to facilitate accessibility, not to create incentives for resisting it.

I also want to address the issue of ridership figures, and some of the members of the committee addressed them as well. It is really silly to count requests on systems that have no access. It is a little bit like the futile gesture concept, in affirmative action employment. The courts have ruled in those situations that discrimination has been committed even in situations where, say, people of ethnic minorities don't even apply for jobs in situations where it has been so clear that discrimination is rampant that it would be a futile gesture to apply.

Similarly, it is a futile gesture for disabled people to complain to Greyhound. They are a private company, they are not accountable. To count the complaints is not an accurate measure of demand. Our figures in California have indicated a much different number of wheelchair users across the State than Mr. Currey estimated. I would estimate more like 1,700,000, and I think that they will ride at least as often as the rest of the public. Some of them have the specialized vehicles Mr. Currey mentioned, but many, many more cannot drive and are very much dependent on public transit, or cannot afford vehicles. I think the demand will be very great.

The other thing to remember about ridership is that you can't ride a half-accessible system, as other disabled testifiers will testify today. As happened in the case of Peter Pan, you can't really expect a high ridership when you can go somewhere and then when you get there, there is no way to get past the bus station or into town. Ridership has been shown to go up in Denver, in Seattle, in New York City in terms of buses, in cities where total access is provided so that you can connect to other places, and where the systems function well enough so that disabled people's confidence in the system goes up.

You know, I don't think members of the committee themselves would have a lot of confidence in some of the half accessible or poorly maintained systems that exist today. We do have cities where ridership has gone up very strongly, and Mr. Herman will testify to his high figures. We reject the analogy that our demand is not great because there is only two or a handful of organizations that provide disabled groups with tours.

We reject the notion that we travel in groups or packs. Disabled people are individuals first, and disabled second. We want to travel with our families, with our friends who could be amongst anyone, we want to travel alone. We don't necessarily want to be in a herd with other disabled people, and, you know, some disabled people use those group tours because they want to go somewhere and they can't get there any other way, and I empathize with them and may do it some day myself, though my own brand of travel has been to strike out in unfamiliar territory on my own and somehow make it.

But people have different levels of bravery on that situation, and the demand really cannot be measured by the number of disability tour companies.

I think it is interesting that Mr. Currey termed the inter-city transit industry as the one that is being discriminated against by how the ADA is set up. In a sense they are a discriminated group against the Americans With Disabilities Act, which was his first statement, because actually the ADA, in my opinion, is the most generous with the inter-city transit industry. No other feature of the bill takes six or, in the case of small providers, seven years to click into effect other than extraordinarily expensive structural modifications to rail systems, which is 20 years. But with the exception of that feature, every single other aspect of the ADA clicks into effect either after 30 days or 18 months, two years, three years, or five years. I think that actually the ADA treats the inter-city transit industry very, very generously.

A few other responses. Mr. Packard had a concern about a number of kinds of specialized vehicles, including San Francisco's trolleys and cable cars and other recreational vehicles and double-decker buses. A lot of these specialized vehicles really wouldn't necessarily be covered by the bill. The ones that were covered, because they are light rail vehicles, I think the disabled community would quickly agree could be dealt with as special circumstances under regulation.

It is certainly not a high concern in our mind that those particular situations have the immediate accommodation that we do see as much more urgent for the forms of transit that we must rely on just for our basic transit needs, buses and rail.

It was mentioned that possibly the White House did not—it seemed a little strange to me—but it was contested the White House may not fully understand what was required and may be willing to renege on the requirements for, say, small charter companies and small common carrier providers in terms of an exemption or a further weakening of the requirements.

I am not sure that that is true. I think really intense negotiations went on during the Senate compromise. We were very, very pleased that the Bush Administration very well understood and supported the compromise that emerged which includes, again, access and charter companies and other demand response systems only when viewed in their entirety and of small common carriers on a vehicle by vehicle basis when vehicles are new.

I was also pleased that Congressman Shuster pointed out how some of Greyhound's proposals to share vehicles would probably be unworkable. He took the lead on pointing out an objection that was strong in my mind when Greyhound was detailing this morning, for the first time I knew about, that it would be very difficult and unworkable to have a pool where there would be a great lack of availability when the need arose.

That was a concern of mine too. Though of course it would be fine for the OTA assessment to look at it. That concludes the points I wanted to address from this morning.

In summarizing my prepared testimony, in disability advocacy I have been pleased to work with transit providers, and many were like Mr. Herman of Denver Rapid Transit who calls himself a convert, a transit operator who thought fully accessible transit was a physical impossibility but when he tried it, he came an ardent booster.

I think once these others see the feasibility, they will likewise become boosters. I will leave to Mr. Herman the defense of the Denver lift. It is not necessary to take up seats and occupy baggage space, plus the factor that six years of delay in the lift industry basically represents three generations of lift technology, three generations of lift technology in the public transit arena has meant enormous improvements in how well lifts function.

Lifts are like any other piece of basic technology. When there is a high demand, they will get cheaper and more available. Anyone who doubts this is ignoring America's historic ingenuity. You know the lift companies outside of Denver are not real eager to make Stevenson make all the money. Lift companies may benefit from the ADA but they don't need the ADA to benefit, because lifts are the trend, both inter and intra city. They are tripping all over themselves to develop better lifts of every kind.

A six-year extension before the inner-city transit industry has to comply with the act is very, very generous.

I want to mention a couple of other requirements of the ADA that I think will be mentioned by the next panel. You may hear it is infeasible for airport shuttles to provide access, but there are examples where they do, in the San Francisco Bay area where I live, and in L.A., a company called Super Shuttle has been providing demand response service for years.

In a couple of cases they contract for the accessible vehicles rather than owning them, and this too is permitted by the ADA. The same is true for charter companies and all the demand response providers.

One other concept on lifts: though they are not always required, I want to put the cost issue into perspective when they are, for public and private transit.

Lifts in general add about 5 percent to a new bus' cost. This means when 21 buses would have been purchased, now only 20 could be. It means when $200,000 of financing would have been necessary to add one vehicle to the fleet of a small provider, now a whopping $210,000 of financing will be necessary.

Yes, it is a little more. This cost must be weighed against the desperate need for integration into society by millions of potentially productive Americans. The weighing of these factors is in your hands, reasonable cost versus the integration or lack thereof of millions of potentially productive Americans. Your assistance is urgently needed to pass the Americans with Disabilities Act of 1989.

Thank you.

Mr. MINETA. Thank you.

Mr. Herman.

Mr. HERMAN. My name is George A. Herman, general superintendent of maintenance, Denver, Colorado. Originally I was from Pennsylvania, born and raised there and in the transit business. Then I spent four years in Texas in the transportation business and now four and one-half years in Denver.

So I am not sure if I have you surrounded or you have me surrounded at this point. We have been providing since January 20, 1989 accessible inner-city type transit service. I agree with Marilyn that I am a convert. I recall 14 or 15 years ago when 504 regulations went through, I thought lifts on buses were the craziest thing I ever heard about.

Having been in Denver now for some time I can see where an accessible system that has lifts that work, works. In 1977 the RTD Board of Directors instructed the staff that the RTD system operating throughout the Denver area would be made accessible to the handicapped on fixed-line route service. Included along with this decision, was to equip the 1986 inter-city buses being ordered from Neoplan USA with the capability of providing wheelchair accessibility. The mechanical staff at RTD in Denver was given this task to complete. It was not an easy task. We do use our baggage compartments a lot. We run airport service through Boulder, Colorado through the same terminals that the inter-city carriers operate and our luggage carriers are too small.

We started with a lift that actually took about one-third of the luggage compartment and ended up with a story I will not go into on how we discovered the lift out of Germany. Was the price restrictive? The answer is that the lift is compact and as a result, very low in price. We are estimating the cost of the lift on normal application to be somewhere between $7,000 and $9,000 total. That is installation on a new coach not a retrofit. There is a big difference. We recently installed a lift in an MCI coach, used in inter-city bus service. The total cost of the engineering, modification to the lift, door and all auxiliary parts was $15,000. That includes engineering costs.

The next question we had to ask was, is the lift reliable. I have all the costs on all 608 buses which are lift equipped with every device known to man and you can compare that along with the testimony that I presented.

We have had no failures with the lift. In fact, I believe our total cost for the first seven or eight months of service was something around $85 which includes the maintenance program.

The lift is now manufactured in this country through Stewart & Stevenson, rather than order it from Germany, we had to pay the costs to get it in. The ink is not quite dry on their brochure. I am not their representative but they were the company that did, through my request, incorporate and build the lift in this country so it would be more available.

How many seats are lost? That is always a big question. I can understand charter and tour companies, having been in that business for 16 years, realizing what they would lose. Due to RTD Denver's commitment to the handicapped community, and due to the length of time it has taken to provide a lift that was satisfactory for this type of service, you have to remember we were sued back in 1979 to put in accessible service. The result was to provide the accessible service. RTD Denver has lost some four seats in the application of this lift. RTD Denver mechanical staff is presently in the engineering mode of utilizing a collapsible recliner seat to reach the point that no seats are lost. I believe that is mechanically feasible and the technology is around the corner.

Is it easy to gear up for production? How quickly can these buses be reproduced in mass? Answer: This lift is available today. What is our ridership? Perhaps Denver is sort of unique as far as ridership, but we average 42,000 wheelchair patrons a year. I believe that we don't really record all those wheel chair passengers. I believe our drivers are at a stage now where it is another passenger and all they care about is that they collect the fare.

That is my personal opinion in observing the operation.

Will the lift function in harsh weather? Certainly, it has; we had snow last week and we have it all winter. All RTD lifts function well, including snow conditions. The RTD Board of Directors and staff are committed to accessible transportation.

It has been alleged that Denver over-the-road coach service is not genuine over-the-road service. This is simply untrue. Our coaches make constant runs from 50 to 100 miles for 18 hours daily. We operate these coaches with their lifts continuously through great changes and altitudes and snow and ice conditions.

In reality, the provision for providing handicapped transportation through fixed-line bus service and inter-city type bus service saves you dollars. The key to this is the fact that mobility is certainly the answer for almost all individuals, handicapped included. Since RTD Denver has taken the course to provide accessible, main-line transportation for the handicapped, we have seen a noticeable change in the handicapped community itself. The fact that they now have the mobility throughout the Denver area has made them self-sufficient and removed the need for them to be kept in nursing homes, for example, which are very expensive. If we would certainly add up the costs of confinement of the handicapped individuals who are locked into wheelchairs and the daily care that they would need provided to them, I would certainly believe that anyone would come to the conclusion that mobility and access to transportation saves you money when applied to the handicapped community itself.

In the 14 years I have been involved with the handicapped community, I have noticed a tremendous change in the attitude and appearance of the handicapped individuals. They are more in tune to the general day-to-day life that each of us not confined to a wheelchair enjoys. They can go where they want, when they want, in complete safety.

Only the technology was holding back the transit systems from providing this service. This technology is now readily available and very reasonable in cost.

I know there is reluctance of many private companies and individuals to provide this type of transportation. I was a little amused with Mr. Currey's testimony about losing money when he crossed the Mississippi. Perhaps if he provided handicapped transportation he would not be in such bad shape. It is simply a matter of not understanding what the long-range effects of providing this transportation really means. An interesting story that could well be applied to this situation would surround my assistant. My assistant and his wife were talking about getting a dog. The conversation surrounding the situation became, "Yeah, but we don't really need a dog. Yeah, but it would be nice to have a dog." The conversation continued on until they actually got a dog. They named the dog Yeahbut. Yeah, but perhaps should be applied to this situation. Why don't we just get on with providing the necessary transportation. In the long run we will save dollars.

I disagree with one of the statements Mr. Currey made on eliminating luggage department space. Actually, the pump and motor is about the size of a shoe box mounted below the floor on this particular lift. I believe that ends my testimony.

Thank you very much.

Mr. MINETA. Thank you very much, Mr. Herman.

Mr. Tim Cook.

Mr. COOK. Thank you, Mr. Chairman.

As Director of the National Disability Action Center, I have had the opportunity to see first hand the importance of accessible transportation to people with disabilities. Indeed, it was because of the enactment by the Congress of the Education of the Handicapped Act 14 years ago in 1975 that it has become more important today.

As a result of that Act, you now have adults with disabilities who have been educated, who want jobs, who want training, who want to be able to use recreation and social services in the community, but they cannot do so because of the lack of accessible public transportation. Transportation is probably the most important and fundamental aspect of the ADA because without accessible transportation, all the other things the Act provides us just don't matter—because we cannot get there.

It is a civil rights issue for us as much as it was for Rosa Parks 30 years ago in Montgomery, Alabama. She had to go to the back of the bus. We can't even get on the bus. The witnesses from the transit system this morning are still trying to argue over the issue of whether or not we can get on that bus. That should not be the debate anymore.

The transit systems' testimony asks these Members of Congress to continue to give them the ability to exclude us from buses. That should not be the debate anymore. The only debate at this point should be how to get us on the bus.

Contrary to the transit system witnesses this morning, the Americans with Disabilities Act as enacted by the Senate constitutes a number of very severe compromises on the part of disabled Americans in this country.

One, we are not asking any transit system to retrofit a single bus. Greyhound has 40,000 buses now that are totally inaccessible. ADA allows those to continue to be inaccessible. The thrust of the Act is future oriented; if you purchase a new bus, it must be an accessible bus. Although public transit systems must comply with this requirement 30 days after the enactment of the Act, private transit operators are given six to seven years to comply with the Act.

Under the Senate provision, that is actually extendable by the President to seven or eight years, a very long period of time. Remember, disabled people have been excluded completely from buses, ever since they started manufacturing buses in this country several decades ago.

But we are still willing to wait patiently all this time until we are able to use the transit system. Look what we are talking about here: if the ADA passes this session of Congress, we are talking about waiting until 1998 before that first accessible bus must be purchased.

Then we are talking an additional 12 years after that before an accessible bus system is phased in. So we are talking about the year 2010 before we have a fully accessible system in this country, 2010. That is a severe compromise. The transit system witnesses say, we want to be able to exclude you not only until the year 2010, but forever. That is the compromise we are not going to make.

The other compromise that is embodied in the ADA is that it does not dictate any particular methodology for making the systems accessible to people with disabilities. The Act does not say buses must have lifts. All the Act says is that they must be readily accessible. There is enormous flexibility in the way that transit systems can go about making their systems accessible under the Act.

Yes, they can purchase lifts. They can redesign the bus making a low-floored bus. We are talking eight years down the road. That is plenty of time if that is what the transit system chooses to do to redesign the bus and have a ramped bus. You could have a boarding lift come out to the bus if that is the way they want to do it. The point is that there is enormous flexibility in the way the Americans with Disabilities Act allows you to comply with the requirement.

Now, in terms of the mandate in the Act, and the study coming before the mandate, it is very clear—if I am an inventor and I have a choice of inventing a better lift for a bus or inventing a better widget, what am I going to choose to do with my time over the next eight years? If I see the ADA will make it a higher likelihood that my product will be purchased, I will put my resources into building a better lift. That is part of the economic system in this country.

If we don't put the mandate in, there is absolutely no incentive for any inventor or any industry in this country to work on building a better lift. If we mandate it now and have it take effect eight years from now, there is an incentive. This is not unusual.

This is something Congress does all the time. For instance in the area of auto safety Congress required greater auto safety including things like disc brakes and air bags to be required in the future before the technology existed for those things.

The purpose was to give incentive to develop the technology. Pollution controls is another example. There are many statutes for certain pollutants like benzyne and carbon dioxide that are required to be decreased by industry before the technology exists for doing so.

These are what in the field are termed "technology-forcing" statutes. That is what the ADA does, it gives incentives and puts the requirement in there in order to give the industries the incentive to develop the technology. That is the whole point, to force the technology through the means of legislation.

In terms of the costs, what we are talking about is a question of values here. The bus companies are willing to spend enormous amounts for extras such as air conditioning and luxury items for buses, but they are unwilling to spend that amount on lifts. What Congress will do by passing the ADA is to say to the transit systems, we are making a judgment that access is a civil right and that it is as important as our extras such as air conditioning, which are just as if not more expensive.

It is interesting what the industry has done with the costs. The first time we met with them several months ago they insisted that the cheapest way of providing access was by a $35,000 lift. In fact, in testimony before the Senate Subcommittee on the Handicapped in June, 1989, we had testimony by Mr. Charles Webb, a representative of the American Bus Association, which also testified before this body this morning. I am reading from page 172 of the hearings before the Senate Subcommittee on the Handicapped on the ADA: "Mr. Webb, if you could get a lift for under $8,000 with no loss of space for baggage and only one seat, do you think that would be reasonable?" Mr. Webb answered, "Absolutely."

So now that we have the Hubmatic lift with no loss of cargo space, no seat loss and with minimal operating costs, according to the American Bus Association's own testimony, in June, it is feasible. Now they are trying to backtrack furiously and now say they apparently didn't mean to say what they said in June. What they are doing before this Congress is attempting what many business people commonly do, paint the worst case scenario.

The costs in terms of accessibility are minimal compared to the enormous economic benefits not only to the people with disabilities in the country but also the economy as a whole. We are talking about a 70 percent unemployment rate among persons with disabilities, people who largely rely on public assistance, people who want to work, want to be able to transport themselves and become taxpaying citizens. The cost to people with disabilities of "special services" is enormous not only because of the loss of income but also because it completely eliminates the ability to travel spontaneously.

This 48-hour notice business Mr. Currey talked about this morning is the minimum amount of notice that will be required if his proposals were adopted. Remember, once you make that reservation 48 hours ahead of time, it is impossible to change it. It totally eliminates the ability to travel spontaneously. How many Members of this Congress would be able to get anything done if they had to make their travel arrangements 48 hours in advance without a possibility of a change? What do you do if you have an emergency? What do you do if someone calls and says, let's take a bus trip this afternoon?

If you are in a wheelchair, you cannot do it. Buses as they are constructed accommodate an enormously large spectrum of peoples' gaits and girths and they provide an enormous amount of luxury such as air conditioners. Disabled people are saying, we do not want something "special." All we want is a service that is "as special" as that provided to everyone else in this country.

We need to keep our eyes on the prize here, that is, equality, civil rights. In the area of transportation, that is a fundamental right, and that is what the Americans With Disabilities Act gives us.

Thank you very much.

Mr. **Mineta**. Thank you, very much.

Mr. John Winske, Assistant Director of Massachusetts Coalition of Citizens with Disabilities.

Mr. **Winske**. Thank you, Mr. Chairman. My name is John Winske. I live in Boston, Massachusetts. I guess today I am the Massachusetts point man to redirect some of the things Mr. Picknelly said this morning about the Massachusetts experience with lift equipped buses.

I am the executive director of the Massachusetts Coalition of Citizens with Disabilities and also the chairperson of the Access Advisory Committee to the Massachusetts Bay Transit Authority, one of the largest transit authorities in the United States.

In 1986, the Commonwealth of Massachusetts purchased six wheelchair accessible intercity coaches. This was the first time any state or any company in the United States purchased accessible intercity coaches. Early that same summer I met with a young lady named Joy who lived in Fitchburg, Massachusetts, a small city some 50 miles north of Boston. Joy, like myself, uses an electric wheelchair for mobility.

One of the companies which leased an accessible intercity bus was Englander Coach Lines, based in western Massachusetts. The bus route for Englander passed through Fitchburg and ended in Boston. For the better part of 15 months, Joy and I used that bus to visit each other on weekends and holidays. On a typical weekend, Joy would catch the bus at 8:00 p.m. on Friday after finishing her classes at Worcester State College. When Joy arrived in Boston at 9:30 p.m., she would wheel herself for the one mile trip to my apartment. She was not able to use the paratransit program in Boston because of residency requirements.

From June 1986 until October 1987, Joy and I took 50 round trips on the bus. In addition to visiting Joy, I used the buses for business purposes around the state. In October of 1987, Joy moved to Boston where she had gotten a job. After October, we both used the bus approximately once a month to visit Joy's family and to make our wedding arrangements. We were married in June of 1988.

It should be pointed out that if Joy and I had had to rely on paratransit (van) service to and from Fitchburg, it would have cost us at least $150 round trip. The cost of the bus was $9.00 round trip. At that time she was living on social security and I was making $7.00 an hour. It would have been highly unlikely that we could have carried on a relationship or romance at that price.

The fact that I am here today telling you this story actually speaks volumes about the need for an Americans with Disabilities Act. Two young people using buses to carry on their romance shouldn't be noteworthy, but for the disabled in America our story is quite unique.

Despite my story, you will hear today from opponents of this bill that the buses are not utilized very often. I would like to tell you some of the reasons for this apparent low ridership statistic.

Before 1988, there was no cooperative agreement between the 15 transit authorities in Massachusetts. That is to say that even if a person was eligible to use the paratransit (van) service in their own community, they could not use that service to travel to another part of the state because each individual transit authority had its own residency requirements. This is why Joy had to wheel the one mile to my apartment in the middle of winter or summer at 9:30 at night.

Because of the length of some of the routes, buses only made one round trip per day. A disabled person had to have accessible lodging for the night.

The new accessible bus program was not well publicized. This was deliberate since the lifts were of an experimental nature. There was concern that consumers might be stranded.

The lifts for the first year had several mechanical problems, and were out of service frequently. They were eventually rewired by one of the bus companies in Massachusetts and those ideas were incorporated into the new lift design.

Lastly, it must be mentioned that one of the reasons for the ridership figures not being high is the timidity of persons with disabilities. Persons with disabilities have been conditioned that they cannot ride buses. Society has told them no. It will take time for them to believe the word, yes. What is known is that as transportation systems become more accessible, the ridership by disabled consumers increases dramatically.

The MBTA has seen the demand for accessible buses increase six-fold since 1986. You have also seen the ridership on the Metro system here in Washington, D.C. increase. I understand that when that system was being built, there was concern that the disabled would not ride it. You know that this is not true. You have seen that, as confidence in the system grows, the number of disabled people using the system grows. We know as systems become more accessible and as the confidence of disabled people grows in the system, they ride the system. It can also be noted that Massachusetts this year purchased 22 more intercity coaches.

These were fully designed coaches. I want to point out that despite what Mr. Picknelly said this morning, with these new coaches there was no loss of seats. If no person with a disability is on the bus, then the seats snap right back into place. If there is a person in a wheelchair then you lose two seats. All the driver has to do is snap the seats into a forward position and there is room for the wheelchair.

Yes, the cost of the lift in Massachusetts is $35,000. Let me point out that this is because the buses are pulled off the assembly line to have the special lift put in place. If Congress sends the word that accessibility is a must, there is going to be a rush to build accessible buses. It will become a regular feature of buses and the cost will drop dramatically because it will be part of the tooling of the factory and will not be something that needs to be pulled off the line to be put in place.

We must strive to make all forms of transportation; public and private, accessible to the disabled. It would make no sense to have the buses in city A and the buses in city B both accessible but the bus which connects them inaccessible. It is only until the whole system in the United States is 100 percent accessible that we will see a dramatic upswing in the ridership by disabled people.

Let me give you a quick example of the need for accessibility on all forms of transportation. Marilyn called me Sunday to ask if I could be here. If I needed 48 hours to call ahead, I would have been in big trouble. Instead, I left my apartment at 9:00 p.m. and took the rail line to the Amtrak station. There I wheeled from a high level platform onto one of Amtrak's new sleeper cars. When I got into Washington, D.C. at 8:00 o'clock this morning I simply wheeled the 200 yards over to the Metro system, hopped on the Metro system and came back above ground some 500 yards from this building.

That is what accessible transportation means. Last year Joy and I paid almost $5,000 in federal taxes. That is pretty damn good for two people who were living on social security three years ago. All we want out of our country is to be able to work, to live in the community, ride the buses and enjoy all the opportunities.

Thank you.

Mr. MINETA. Thank you very much, Mr. Winske. That was very moving.

I would like to call on Mr. Ralph Markward, Executive Director, Zia PVA.

Mr. MARKWARD. Chairman Mineta and Members of the subcommittee, my name is Ralph Markward. I am the Executive Director of the Zia Chapter of the Paralyzed Veterans of America in Albuquerque, New Mexico. I speak in favor of the private transportation requirements of the Americans with Disabilities Act from personal experience.

I am a veteran of World War II. I was a tailgunner and flew 30 missions over Germany. I am proud of my service to my country, but my country doesn't seem very proud of me. I and my fellow disabled veterans experience discrimination every day.

When I was in the U.S. Army Air Corps, I was stationed in places like Pyote, Texas, St. Louis, Missouri, and Las Vegas, Nevada. In every station I took intercity Greyhound and Trailways buses from the base to town, and sometimes, home to visit my family. With my duffel bag over my back, I and soldiers like me were a familiar sight.

Now the same ex-soldiers, like me, who are disabled, cannot take these buses. My wife and I would like to travel aboard Greyhound with senior citizen groups, because my wife is unable to drive a vehicle on highways. But we can't. When we reach a new city, we would like to take tour buses like thousands of other tourists. Our money, as the saying goes, is as green as theirs. But my business is not welcome. The buses cannot accommodate me. And sometimes, they refuse to accommodate me, even if, with help, I could get myself on the bus.

My fellow disabled Americans who, like me, need access to private transportation, are likely to be poor, because disabled Americans are much poorer, as a group, than non-disabled Americans. In

1984, according to a Lou Harris poll, half of us had household incomes under $15,000, while only 25 percent of all Americans were that poor. For the older disabled, the poverty rate is greater—fully one in three older disabled Americans has an income below $7,500; twice as high as for the non-disabled. The more severe the disability, the statistically lower the income.

I don't have to tell you that private transit is the only choice available to poor Americans. What this means is that access to private transit is even more crucial for disabled persons than for the rest of the population. Yet we have none.

Let's look at my state, New Mexico. It is 46th or 47th in per capita income of all the states. Tourism is a big business in my state. Albuquerque is the only city in New Mexico served by major airlines; therefore, Greyhound bus travel is absolutely essential. But it is not available to us.

Accessible airport transportation, also essential, is absolutely unavailable. All paratransit is available only to certified handicapped persons, not tourists or business travelers, since certification requires a month. The "Shuttle Jack" bus service between Albuquerque and Santa Fe is also not lift equipped.

The enforced isolation of older disabled Americans is truly un-American. You may think that my age peers and I—and I am 64 years young—are taken care of by paratransit. But we are not. Paratransit is unsatisfactory as it is, around town. It would never work over long distances. Older disabled Americans need access to mainline transit as well as private transit. We may be older, but don't let us be forgotten. Please help restore our pride and our ability to be a part of our society, with your support of the Americans with Disabilities Act.

Mr. Chairman, I would like to make one other comment. I have been an activist for 25 years of my 37 year disability. It has been my pleasure and success to have been rather successful in my state in advocating for accessibility mostly as it pertains to buildings. We always hear that it costs too much. To this date I have yet to be sued the first time for having put a small business company out of business.

It just simply doesn't happen. If you don't pass a law, private business and even governmental units such as cities, countries and the states, will absolutely do nothing. A law must be passed mandating that this will be done.

When that happens, it does not cost the money that they always preach that it would.

Thank you, Mr. Chairman.

Mr. Mineta. Thank you very much, Mr. Markward.

Mrs. Golden, as you indicated the legislation only talks about access. I guess the problem is that the perception is that access means lift and I think a lot of people are sort of focusing on that perception and "fear" about requirement of access.

Ms. Golden. That is right. That is true.

Mr. Mineta. However, I think when you look at the Senate report, I think that is true. The problem is that people keep saying to me, well, if you look at the language of the bill, not the report but the bill itself, really the only thing they are talking about, even though they don't say lift, it means lift. I am wondering if there is some way out. I know the architectural board has the responsibility of making that determination as I understand it as to what accessibility means.

Ms. **Golden**. Do you mean in private or public or both?

Mr. **Mineta**. I believe it says both.

Ms. **Golden**. That is for public. I am not sure what you mean exactly, sir. I feel that you are right on the money in terms of the fear and the way the bill has been both portrayed and I would say distorted.

I think both the House and the Senate bills only require access. The Senate bill made that more clear and the report make it more clear. I would hope the successive refinements of the law would allay the fears of the industry, but they insist lifts are meant when lifts are not specifically required although they are certainly allowed.

I don't agree. I guess that I think it is really saying lifts. Perhaps I am missing something but I don't see why that conclusion would be drawn. I agree very much with Mr. Cook who spoke eloquently to the flexibility provided by the bill.

Again, I just want to say that, in negotiating the Senate compromise between the White House, key Senate leaders and the disabled community, as well as people who the White House was consulting with from the American Bus Association and groups of that nature, decided that the key concept was that they require access, give a longer time to comply with it and have the beginning of that longer period be a study to determine the most feasible way.

That also included the needs of the private transportation industry. We have so many cities that have successful lift service and have demonstrated that purchasing lifts on new buses is not financially burdensome, that I think it is only intra-city service where it may be a foregone conclusion about lifts. Since they have to start in 30 days, they are more restricted to what is on the market.

Other than that I don't think lifts can be read into the language.

Mr. **Mineta**. The other subject that does come up is the issue of electric wheelchair batteries, that I am told are not allowed on certain intercity buses. Is there a hazard with regard to batteries?

Ms. **Golden**. I am glad you raised that point. I want to use it as an opportunity to address what Greyhound is doing currently. I am glad that they are not saying it is enough. Greyhound will allow an attendant to carry on a person in a manual wheelchair, but they are not allowed to travel alone. They will not carry anyone's motorized wheelchair. Yet it has been thoroughly demonstrated in the air carrier industry by airlines that do it, that motorized wheelchairs with wet cell batteries can be safely carried.

I believe that in private meetings earlier compromise positions that fell short even of the positions offered by Greyhound this morning, indicated that they foresaw what they would be forced to do by ADA and that they would be willing to carry them.

To answer your question directly, no, there is not a danger. I think that, yes, if they were tossed willy nilly into a baggage department, yes maybe, but if carried in a reasonable way they do not propose a danger.

Mr. **Winske**. My wife and I both use motorized wheelchairs on intercity buses. The only way you would have a problem is if you had a wet cell battery and tipped it upside down which would be a silly thing to do in the first place.

So no, there should not be any problems.

Mr. MINETA. We have heard considerable evidence that installing wheelchair lifts on over-the-road buses would be less expensive than many have stated. Is it true that lifts would be the only means of assuring accessibility for disabled passengers at flagstops and other rural boarding locations?

Ms. GOLDEN. I think what you are implying is that the rural stations and flagstops would not have station lifts. If station lifts were in some way designated as a preferred alternative, it is true that they would be after the big cities certainly of being equipped but I don't think that is the only other alternative.

Mr. Currey had thoughts this morning that the OTA study could look at. There is also the lift forward kneeling process used in Europe.

Mr. MINETA. Are those inner city or intra-city type buses on the kneeling?

Ms. GOLDEN. I think they are intra-city and they are low. You can have the baggage on top or the back. Again, a creative design could be come up with.

Mr. MINETA. We got away from the buses with the luggage on top. Just to get away from inter-city right now and ask about something like intra-city, we have heard examples of Buffalo being 100 percent accessible. On the other hand, Milwaukee is a responsible, demand response system. I had a colleague a little while ago while we were on this last vote, say to me, what is the matter with the Milwaukee experience?

I mean, why can't we leave it up to the local agency to make that determination, because in Milwaukee it was the community with disabilities that said, "Hey, you know, this is what we want or what we like, what we prefer," and so this colleague was saying, why not let that happen rather than make it 100 percent accessible.

Ms. GOLDEN. I am glad you asked that question.

Mr. MINETA. If I could make one more point, he also said something about the winters being more severe. As an example, in Milwaukee they have minus 50 with wind chill factors, and it is better for the person to be inside waiting than to be out on the corner waiting for the bus for half an hour out in that cold.

Ms. GOLDEN. I think—I understand—I know that a great deal of the thinking by people that aren't as familiar with disability access that has been done on this question has been along the lines you described, and I am really glad you asked it that way because I want to present what I think is a better context for the question.

People in this country who are, shall we say, transportation-disabled, the groups we are talking about, in a sense, form two overlapping constituencies. One is a constituency that needs and wishes for para-transit. The other one is a group that needs and wishes for fixed route access.

They overlap to some extent. Some of those people could and will use whatever one is available. It is hard to determine how much they overlap, but it can be conceived of in that way. The local option idea pretends that a particular city has only one constituency, but that is not true. There are really all kinds of disabled people everywhere.

Milwaukee is not limited to people with a certain kind of disability, and Buffalo has another disability and in Miami there is a third kind of disability. People with all kinds of disabilities live in every single town in the country. The need is everywhere for a multi-modal system, which is what the ADA requires. What happened in cities like Milwaukee where they, in a sense, got burned, I think by lifts, you could say, is that early general lifts were bought, they weren't easy to maintain, a lack of commitment was shown by the transit district, sometimes they weren't well-publicized.

We heard in Milwaukee lift routes weren't well planned. We heard that training wasn't done, drivers didn't know how to operate the lifts, confidence was lost, disabled people lost confidence, decided that para-transit was better. That has happened also in a couple of cities in California that we could both name.

Whereas there is lots of documentation, more cities that I have heard of in this case, bought lifts when they were working, had commitment, and have systems that are working well. I think the point is that a multi-modal system can work. It is not fair to say—in a sense I think that that argument is the para-transit constituency saying to the fixed route constituency, we only want para-transit, and you can't have what you want.

I would like to point out that the fixed route constituency is never saying to the para-transit constituency, you can't have what you want. The people who want fixed route aren't trying to deny the people who want para-transit their preferred mode. We are trying to have both.

Both are needed in every city. The question is, can both work and be cost-effective, and I think that the experience of the cities, the Seattles, the Denvers, the Buffaloes, the Syracuses, the New York Cities, the Johnstowns, Pennsylvanias, the Champaign-Urbana, Illinois, show not only that multi-modal can work, but that it can work in the snow. And in addition to the systems I have named which work in the snow, there are a lot of days even in those cities and in Milwaukee and in every snow city, there are a lot of days in the year, certainly over half, where there isn't snow. We also heard testimony the other day of creative ideas for dealing with the snow, like Detroit where they show the orange mitt, and if they can just get to the bus route they are a bus stop.

The bottom line is that a multi-modal system will best meet the need and that it can work.

Mr. Winske. Boston has found the same thing. Boston has gone to a muiti-modal system and has found it to be the best thing and, in fact, when you consider that one way para-transit trips now run 25 to 40 dollars per trip, it is certainly more cost-effective in the long-run when those who can use fixed route, when the weather allows and when their ability allows, use fixed route, it is a cost savings.

Mr. Mineta. Fine. Thank you. Mr. Hastert.

Mr. Hastert. Thank you, Mr. Chairman. I just want to clarify some testimony by Mr. Herman. Mr. Herman, in your statement you estimate the cost of a Hubmatic lift at somewhere between 7,000 and 9,000 dollars. We have a letter here which you wrote to

Senator Harkin on May 15th of this year which contained three different estimates ranking from 5,000 to 13,000.

I also have another letter here from one of your colleagues at the Denver RTD, Mr. Larry Joe, who was a warranty administrator, addressed to an Illinois bus company in my district dated June 1, 1989. In this letter you estimate the cost of the lift to be 17,000. There are some discrepancies here. Certainly not 17,000.

Is it different costs for different buses or do the lift manufacturers know that lifts can be applied to a typical over-the-road coach, or how do you see this? What are the discrepancies?

Mr. Herman. R&D Denver paid all the engineering costs for this lift, including the transport back and forth to Germany on various versions. Along with the original cost for the lift was a lift that was purchased for the inter-city coaches from EEC Corporation through Neoplan, a lift that did not work. Because we had a contractual relationship with Neoplan, we had to fulfill that obligation.

It just kept driving the cost of the lift up. The latest version on the MCI coach was a total of 15,000 with engineering, If you deduct the engineering, if you went in and bought a lift for an application, we are looking at 7,000 to 9,000.

I don't think there has been an exact price on it. It may even be less than the 7 at this point in time. I realize it is very confusing, but again it was a confusing project.

Mr. Hastert. I understand. Thank you very much.

I have no further questions.

Mr. Mineta. Mr. Laughlin?

Mr. Laughlin. Thank you, Mr. Chairman.

Mr. Cook, I want to be sure I understood your testimony, and then I have another question. As I understood your testimony, and perhaps Ms. Golden also, it is not your position that this act requires all inter-city buses to be equipped with lifts. Did I understand your explanation correctly?

Mr. Cook. That's correct, not a single intercity bus presently out there ever has to be made accessible under the Americans With Disabilities Act, and not a single bus that is purchased over the next seven years has to be made accessible. It is only in 1998 at the earliest that accessible buses must be purchased, and then only if new vehicles are purchased.

Mr. Laughlin. What I want to be sure about, though, is you are not saying that buses in the future, and I don't want to put double negatives in and confuse the question—are you saying that buses in the future after 1998, all of those buses must be equipped with lifts?

Mr. Cook. That's correct, if a new bus is purchased, it must be an accessible bus, but not necessarily with lifts. It could be a low-floored bus with a ramp. You could use a lift at the station. There is, again, a wide variety of ways that you could provide accessible services.

Mr. Laughlin. The reason I asked that question is I did understand you to say that what you are really asking and what you expect is that all buses be accessible.

Mr. Cook. Eventually over time, by the year 2010 I am talking about.

Mr. Laughlin. Buses purchased in the future.

Mr. Cook. That's correct.

Mr. Laughlin. Be accessible. By being accessible, you are not saying that they must have lifts on them?

Mr. Cook. That's correct.

Mr. Laughlin. But in some manner enable persons with disability to be able to get on them?

Mr. Cook. The Congressman is correct.

Mr. Laughlin. All right. I wanted to be sure I understood that, and that is how I understood. Now, the other thing I want to ask you is, I understood Mr. Currey's testimony this morning was that under the Greyhound plan, in two years, 85 percent of their—I am going to call them bus stations because that is what I called them growing up—85 percent of the Greyhound bus stations would be equipped to assist a person with a disability to gain access to the bus without any notice, without a phone call, without a telegram or anything.

Did you understand that that way?

Mr. Cook. I wasn't quite sure what Mr. Currey was talking about when he talked about his specially equipped chair. Now, if that is a lift-type of device where the wheelchair user does not have to be carried, then it may well be a feasible means of complying with the Act, and this is something which I think the OTA and Architectural and Transportation Barriers Compliance Board study should look at, as one of the possible ways of providing access.

Mr. Laughlin. Well, I asked him and he agreed, as I appreciated his testimony, that the disability community would be consulted with, and we would have their input on the chair that—because I don't know what it looks like, and for it to work, and I think it is going to have to be acceptable to the disabled community.

The point I wanted to get to is, assuming that at 85 percent of the bus stations in America that without notice a disabled person can——

Mr. Mineta. Could I correct something. As I recall, I think Mr. Currey said 85 percent of the passengers at those two hundred locations. I don't think it was 85 percent of the 200 locations. I think that is where his 85 percent—I had a question in my own mind about that at the time you said that, and so I asked him about it later, and as counsel reminds me, it was 85 percent of the passengers at those 200 locations.

Is that correct?

Mr. Cook. That is the way I understood the testimony, yes.

Mr. Laughlin. Then I misunderstood it, and I am glad the Chairman got it clarified.

Mr. Mineta. No, I thought I heard it the same way, that's why I asked him about it.

Mr. Laughlin. Then I can take up with the Chairman then what happens to the other 15 percent. But then Greyhound certainly has more than 200 bus stations around.

Mr. Mineta. He has got, as I recall, how many, 5,000 locations? Ten thousand locations, and those you would call in advance 24 or 48 hours, as I recall.

Mr. Laughlin. But that accounts for only 15 percent of the disabled riders, then?

Okay, well, then I have no further questions, Mr. Cook. You have helped me get clarifications in the areas where I needed. Thank you very much.

Mr. Cook. If I could interject just one very brief comment about carrying. The reasons for our concern about having people with disabilities carried are two-fold. One is, it is an enormous indignity to a person with a disability to have to be carried instead of being able to just stay in their chair, and the second thing is, it is a very large safety hazard, not only for the wheelchair user, but also for the person doing the carrying, unless they have received specific training on how to carry a person in a wheelchair.

And I think Mr. Currey may not have considered that as a cost of the possibility of having to carry passengers through the use of his suggested device.

Mr. Mineta. I think that is why, Ms. Golden, you could understand why the employee would say or the company would say, our workers compensation wouldn't allow us, or a liability problem involved.

Ms. Golden. That is right. And just to further clarify, Mr. Laughlin, the original statement in terms of just clarifying the Act's requirements, it is correct that every future bus has to be accessible, as Tim was responding, for fixed route system, including Greyhound normal inter-city coach service, but the Act doesn't require that of demand response systems, like charter and tour services, and that was one of the misunderstandings this morning.

The Senate compromise only requires every new bus to be accessible in those systems unless the system is not now accessible when viewed in its entirety, which means unless the system cannot handle its disabled customers that call in at the current time. If they need more accessible vehicles, they need to get them, so charter and tour services aren't under as strict requirements as fixed route.

Mr. Mineta. Mr. Duncan.

Mr. Duncan. I will be very brief because we have other witnesses who have been waiting a long time to testify. But, Mr. Markward, you said in your testimony how important the Greyhound transportation system was to people in New Mexico to get to the airport and so forth.

Do you simply not believe Mr. Currey, the Chairman of Greyhound, when he testified this morning that many of those routes in New Mexico would be—that they would eliminate many of those routes if this Act passes?

Mr. Markward. I believe my answer would be, yes, I do not believe his statement this morning. Past experience has told me that in other items, especially with construction contractors, that that simply was not the case.

Mr. Winske. If I could, Mr. Duncan, one of the things that concerned me this morning about Mr. Currey's testimony was I think he vastly underestimated, first of all, the number of new riders he would generate. I don't think he comprehends that 70 percent of the people in America live below the poverty line and therefore would be inclined to use buses.

He made a statement that most disabled people own their own vehicles. That is factually not true. Most disabled people cannot afford their own vehicle. A new lift-equipped van is anywhere from 20 to 35 thousand dollars plus the insurance. Not many disabled people can afford that.

So I think Mr. Currey overestimated the cost because he was going by the cost figures of lifts today of 35,000 when it is a new technology, and I think he underestimated the new ridership.

Mr. MARKWARD. Mr. Congressman, if I may, Mr. Currey, this morning, asked an additional two years to study this problem. Why wasn't Greyhound Bus Company studying the problem two years ago? This subject has not just come up within the past two years.

Mr. DUNCAN. Well, that brings up another point. You know, I really don't know whether I am for or against this bill, but it does concern me when I read the lead editorial in the New York Times, which is not a conservative publication or particularly pro business, an editorial that is very unfavorable to this Act.

The editorial they had, I think, on September 6th, said, "blank check for the disabled." And when I read the column that I referred to in the National Journal, which is probably one of the most objective publications that is in existence today, when I read that they say that this Act is very ambiguous and that no one really understands what it means and that it is being rushed through, you know, out of sympathy for the disabled, which all of us have sympathy for the disabled—and does it concern any of you that perhaps we are—you know, that this is something that we need to do but that we are rushing into this and that we are going to end up with some pretty important legislation because we are putting this on too fast a track?

I know the easy answer to something like that is to say, well, this should have been done many years ago, but all this as far as this legislation is concerned, all of this legislation has come up just fairly recently that it has been given any real attention here in the Congress.

Who wants to——

Mr. COOK. If I may address that briefly, Mr. Duncan, this was a bill that originally was developed by the National Council on the Handicapped, an Executive Branch agency, which took over two years to draft the first version of the Americans with Disabilities Act. This was not just something that was done haphazardly or very recently rushed through.

It was a very painstaking process through an executive branch agency that had input from all over the country. A body of the House of Representatives, the Select Committee on Education established a body which held hearings in all 50 states on the Americans with Disabilities Act to receive input from not only people with disabilities, but from the people who would be affected by the Act all over the country. And that was the Committee on Empowerment of People with Disabilities chaired by Justine Dart.

In the Senate, there is a thousand-page volume of hearings that were held over three days with several dozen witnesses, including the Attorney General of the United States, testifying in favor of this bill.

I think there have been at least five hearings so far held in the House of Representatives on this bill, and so I think it is a little bit unfair of the New York Times—I think we counted, by the way, Mr. Duncan, 13 separate factual errors in that one short editorial in the New York Times. They simply have not talked to anyone in the disability community, anyone on the staff of the Senate Subcommittee on the Handicapped, before writing that editorial, and I think if they do get their facts straight they will find that this has been an enormously studied issue.

It is something that is way past being due for people with disabilities, and it is time that it is passed.

Mr. DUNCAN. Well, if it has been so painstakingly prepared, why does the National Journal and I believe even the Washington Post express some concern about it being too ambiguous and uncertain? Do you know why there is still that concern?

Mr. COOK. I would suggest that they read the testimony and read the Senate report, which is lengthy, on the bill, and I think many of the questions will be answered. I think some people have put the idea in their minds that this is something that is being haphazardly and too quickly done, but I think if they ever sat down and looked at what the process has been, they would see that it is not something that is haphazard, the issues have been addressed, and you know if they would talk to people with disabilities or talk to the people who actually developed the bill on the National Council of the Handicapped, they would get some different answers, I think.

Mr. DUNCAN. Well, I am told that these hearings that we are holding now, that we held one day of hearings last week and then this today, that this is the first time that these transportation issues have been really discussed here before the Congress or before the House. Is that correct?

Mr. COOK. That may be true in terms of the House. There is another hearing on Thursday to further discuss transportation issues. That will have been at least three separate committees having hearings on the issue of transportation alone, and I believe the issue of transportation has come up in other hearings, although it may not have been the central purpose of those other hearings.

Mr. DUNCAN. Mr. Herman, I was impressed by something that you said. We had heard earlier that in Seattle that even though the buses were lift-equipped that they were used on the average of once every three days, and in Johnstown, Pennsylvania, once every two days or maybe I have reversed that, I am not sure, but you said you had 42,000 handicapped riders.

Now, does that mean more than just people in wheelchairs, is that right?

Mr. HERMAN. That is strictly wheelchairs.

Mr. DUNCAN. That is strictly wheelchairs. Out of home riders is that? What percentage is that?

Mr. HERMAN. We transport about 180,000 people a day, and——

Mr. DUNCAN. 180,000 a day.

Mr. HERMAN. Including our mall operation.

Mr. DUNCAN. So you are talking—you said 42,000 a year?

Mr. HERMAN. Forty-two thousand a year, yes. I think the direct comparison——

Mr. DUNCAN. I can't do math that quickly. Do you know what percentage that is?

Mr. HERMAN. It is probably one or two percent of our total service. Budget-wise it is probably two-tenths of one percent the total cost of the lift service. I think the most dramatic comparison would be between our para-transit system. We do operate five para-transit vehicles in a population of around two million because we cover six counties.

Mr. DUNCAN. Something I haven't heard before and some of you may know this, and I would be curious. There are 43 million disabled or handicapped people, according to the estimates I have seen. How many are in wheelchairs all together in this country? Does anyone know?

Ms. GOLDEN. In California, to deal with some similar legislative issues, we did some calculations that came up with about 4 percent, and that totals something like about 1.7 billion nationally.

Mr. DUNCAN. 1.7 billion nationally in wheelchairs?

Ms. GOLDEN. I haven't checked out those figures on a national basis. I am using a statistical projection we developed in California. I would like to add on ridership. It depends on how you say it. I know Mr. Herman's figure of 42,000 a year is impressive. If you give Seattle a yearly figure instead of a per bus figure, they have a lot of buses. They would have 140,000 yearly.

When you look at it—and that multiplies out no different than what you heard the other day. Those aren't figures with discrepancies, but it sounds smaller. The average figure I don't think is misleading. It does show that a lot of people are getting a lot of places in Seattle, as well as Denver, as well as the other cities that have good service.

Mr. DUNCAN. You mean they have 140,000 wheelchair riders each year?

Ms. GOLDEN. Again, wheelchair rides. I mean, a lot of people are using it again and again, but, yes as Mr. Herman had 42,000 wheelchair rides.

Mr. DUNCAN. Certainly that would come out to more than one every two days.

Ms. GOLDEN. It is one rider per bus every two days. They have a lot of buses, they have three, four, five, six, seven hundred buses, so they have maybe 500 rides a day, but perhaps it is one per bus, something like that. So the figures, you know, can get sliced in ways that make them sound very different.

Mr. DUNCAN. All right, just one other question. Mr. Cook, you were saying in your testimony that this act allowed great flexibility and that it would even permit—what was it you said—the use of mobile lifts at bus stations rather than lifts on the buses?

Mr. COOK. That's correct.

Mr. DUNCAN. But I understood that the handicapped community, first of all, would not be satisfied nor happy with that, and secondly, the thought occurred to me that the private small tour bus companies could not use that because when they are taking groups around on these tours, they are going and stopping many different places where mobile lifts wouldn't be available. So they wouldn't have that flexibility; is that correct?

Mr. COOK. Well, the tour bus companies wouldn't need that flexibility because there is a separate provision of the Senate-passed bill which allows them to bring an accessible bus in, as needed. The entire fleet of a tour group would not have to be accessible, and so they just simply wouldn't need the same flexibility that the other over-the-road companies would have, under the bill.

In terms of the handicapped community's acceptance, that is the first I have ever heard that they wouldn't accept that option, and that is something which the OTA study is going to look at, and they will consult with people with disabilities over the next two, three years when they do their study, and give us the answers to those sorts of questions as to what the needs are of the disability community, and the most feasible way of meeting those needs.

Mr. DUNCAN. So what you are saying is that the act, as passed by the Senate, would allow exceptions even after this six or seven-year grace period so that companies, tour companies could come in, because apparently there are a lot of these little tour bus companies out here, a lot of them around the country.

Mr. COOK. It is not an exception. It just says that the standard is, again, that they must provide access. They can do that by getting an accessible bus as it is needed.

Mr. DUNCAN. So 100 percent of their fleet wouldn't have to be accessible?

Mr. COOK. Not only would 100 percent not have to be accessible, but a very small percentage or maybe zero if they have the capability of renting a bus as it is needed.

Mr. DUNCAN. Even after a six or seven-year grace period?

Mr. COOK. That's correct.

Mr. DUNCAN. But there is a provision that says all buses produced after the six or seven-year period of have to be accessible, is that correct?

Mr. COOK. No, that is not the requirement. It doesn't say all buses produced. It says all buses purchased by fixed route transit must be accessible. There is a different standard for the demand responsive transit companies in the act.

Mr. DUNCAN. All right. Thank you.

Mr. MINETA. Let me ask about this, let me clarify this just a minute. In the report the phrase, "readily accessible to or usable by," refers to the over-the-road coaches, and it is my understanding that there is an exception for charter use but that there is no exemption as it relates to over-the-road coaches.

Ms. GOLDEN. There is two different standards because there are two different kinds of service.

Mr. MINETA. I don't know if it is standards or whether there is one that gets an exemption and the other does not.

Ms. GOLDEN. You could call it an exemption, but the way the bill reads, "a fixed route service," you don't know who is going to be there to be picked up. They present themselves at the moment at the bus stop or the Greyhound bus station, so you need a vehicle-by-vehicle access. You need every vehicle eventually accessible, but in a demand response service, any time where there is a call ahead, where a charter company is giving a trip and people call in advance to make a reservation, or a gray line tour or an airport shuttle; if I have to call in advance, I say I am in a wheelchair. They can call up and say, "Oh, we need a lift-equipped bus on this run."

So they don't have to have every vehicle lift-equipped. They can just have a couple or however many would accommodate the need, so they don't need vehicle-by-vehicle access. That's why for fixed route, eventually, every newly purchased vehicle should be accessible, but for demand response, charters, tours, para-transit of all kinds they only have to be accessible—the phrase is, "when viewed in their entirety." That wording was borrowed from the regulations to Section 504 of the 1973 Rehab Act where it was used with respect to college and university programs and programs like that where—remember the requirement that you didn't have to make every building at Harvard University accessible. You could have a classroom, so the system was accessible when viewed in its entirety. Well, as it is going to relate to transit, it means that for a tour company they don't have to have every vehicle accessible as long as somebody shows up needing an accessible vehicle, they can dispatch one out of five, then it is accessible when viewed in its entirety.

Mr. MINETA. All right. Mr. Payne.

Mr. PAYNE. No questions, Mr. Chairman. Thank you.

Mr. MINETA. Mr. Clinger.

Mr. DUNCAN. Mr. Chairman, excuse me, in this report from the Senate there is a paragraph on page 73 that says, "With respect to the purchase of new over-the-road buses, it is considered discrimination to purchase or lease a new over-the-road bus that is used to provide public transportation services and for which a solicitation is made later than six years after the date of the enactment of this act or small providers as defined by the Secretary of Transportation and five years for other providers."

Now, that is why I was asking a while ago, would that not mean that no company, even a small company could—they couldn't even purchase a bus that was not accessible?

Ms. GOLDEN. For a fixed route provider, that's correct.

Mr. DUNCAN. Well, even for a tour bus company.

Ms. GOLDEN. No. Are you reading from the Senate report?

Mr. DUNCAN. It says all over-the-road buses. That would include the buses operated by the tour companies, would it not?

Ms. GOLDEN. I support that that is under a section that addresses fixed route, and that there is another section that addresses demand response service, I believe.

Mr. COOK. Yes, that's correct.

Mr. MINETA. It is in reference to Section 304, and that is why there isn't that distinction.

Mr. COOK. Right. Do you have a copy of the Senate report?

Ms. GOLDEN. Yes.

Mr. COOK. The provision that we are speaking of with regard to the demand responsive systems comes under a different section. The section which you just read from the Senate report refers to Section 304 of the bill, which in turn talks about fixed route transportation. Section 302 of the bill, on the other hand, I believe is the correct number, refers to demand responsive vehicles.

Mr. DUNCAN. Well, I hope you all are right.

Mr. MINETA. Okay. Mr. Clinger.

Mr. CLINGER. Thank you very much, Mr. Chairman.

Have we resolved this——

Mr. MINETA. No, we haven't.

Mr. **Cook**. I found the section, which is Section 302(c)2, which refers to demand-responsive systems. Such entity—this is under the definition of discrimination such entity that purchases or leases a bus or vehicle that can carry in excess of 16 passengers for which solicitations are made later than 30 days after the effective date of this Act that is not readily accessible to or usable by individuals with disabilities, unless such entity can demonstrate that such system when viewed in its entirety already provides a level of service to individuals with disabilities equivalent to that provided to the general public, except that over-the-road buses shall be subjected to Section 304(b)4 and Section 305.

Mr. **Mineta**. So, Mr. Cook, doesn't that mean that they are covered under Section 304(b)?

Mr. **Cook**. If it is a fixed route system. This is a special provision for demand responsive systems, which is different from a fixed route system.

Mr. **Mineta**. But in that Section 302(c)2 that you were reading, it kicks it back to Section 304(b)4, which it seems to me that says you are under the umbrella, and you are covered. When you look at the Title of Section 304, it says prohibition of discrimination in public transportation services provided by private entities, which is charter.

Well, you know, let's—we will talk about this. Mr. Clinger?

Mr. **Clinger**. Let me just address a couple of questions to Mr. Herman. I understand that the route on which you operate the lift-equipped carrier is, I guess, a short run commuter service between Boulder and Denver?

Mr. **Herman**. Longmont, Boulder and Denver and to the airport.

Mr. **Clinger**. I am sorry?

Mr. **Herman**. Longmont, which is about 18 miles above Boulder.

Mr. **Clinger**. Okay. It is my understanding that the average over-the-road coach in inter-city service operates longer hauls for greater distances, and on different types of coaches than are operated in your service, so I guess the question is, are we comparing apples and oranges?

Can we really equate the service that you are providing on your run with typical inter-city service? Is there really a basis here for a fair comparison in your view?

Mr. **Herman**. Absolutely. We carry luggage in under floor compartments. We travel—I guess our longest run is 55 miles, but I think the problem would be boarding and deboarding, not so much the distance, if I am not mistaken. Same coach, absolutely the same coach.

Mr. **Clinger**. Ms. Golden, coming back to the somewhat confused figures we have had on some of the statistics and figures for purchase and installation and numbers of seats displaced and so forth, I think you stated that the Denver lift removed only one seat and costs $11,000 to purchase and install.

Mr. Herman, I think, testified that the lift costs between 5,000 and 8,000 and costs four seats to be displaced. Why do we have that? Can you explain the disparities between the two?

Mr. **Herman**. Again, we are going back to the production of lift in this country and the fact that we purchased ours out of Germany and that RTD covered all the engineering costs. On the tour bus, which I was an operator for many years, I agree with the fact that I don't think they should all be accessible, but I think all new buses can be manufactured to be accessible very easily by the simple installation of the two metal bars that support that lift, and then the lift could be exchanged from one bus to another.

I am throwing that out because I am sitting here listening to this. It is not necessary that the bus itself has a lift in it, as long as it can be made accessible very easily. The lift that RTD Denver ended up with is very easy to pull out of the bus and very easy to put in another coach.

Mr. **Clinger**. How many seats does it displace?

Mr. **Herman**. On our coach, on the original application we lost four seats. Again, going back to the fact we had a short time frame. Our intent is to go back in and try to not lose any seats. We are in that engineering mode right now with collapsible recliners.

On our retrofit on the MCI coach we lost two seats when we put that application in, which was just finished about a week ago, and again we are going to look at that one to look at seat technology and attempt not to lose any seats. I think it is possible.

Mr. **Clinger**. Staff informs me that the lift manufacturers have not been willing to guarantee any number of loss of seats. In other words, they are not willing to make any commitments in terms of how many seats would be lost with the installation of that lift.

Are you aware of that?

Mr. **Herman**. I think this is new technology. Of course we have had it in service since January. I think as a transit system who is knowledgeable in how to install seats, we need to work with that manufacturer.

Actually that lift would never have been installed on that bus a year ago if it wouldn't have been for the engineering that occurred at RTD in Denver, so I am saying that we need to work. My main goal as maintenance superintendent is to provide as many seats as possible, and we are going to meet that commitment.

Mr. **Winske**. Mr. Clinger, also if you would look at the MCI model bus used in Massachusetts, indeed now there is no loss of seats if no one with a disability is on the bus because the seats sit on a lift on a runner, and you can snap the seat back into the runner. If they pick up a person in a wheelchair, then you push the two seats forward so there is a loss of two seats for one disabled person, but otherwise there is no loss of seating.

Mr. **Clinger**. Okay. Thank you very much.

Mr. **Mineta**. Mr. Winske, let me ask, what is the current status of accessibility on the Massachusetts Bay Transit Authority's rail and bus fleet?

Mr. **Winske**. On the bus fleet 40 percent of the buses are lift-equipped. The current 504 plan that was submitted to UMTA calls for by 1993, 78 percent accessibility. On the rail system, I believe it is currently at about 50 percent, and there is current bond money available for another 15 stations, so it will be up around 65 percent or 70 percent in two years.

The biggest problem now is the green line in Boston, which is a light rail line that first opened in 1895, and they are currently conducting a $400,000 study of the green line system. That study is due to be released in December of this year, but already the company doing the study has indicated they believe access is achievable. They are now looking at how to provide that access.

Mr. **Mineta**. Do you believe that the inter-city bus capital assistance program in Massachusetts is an appropriate model for the nation in acquiring lift-equipped buses?

Mr. **Winske**. Thank you. I was kicking myself for the last 15 minutes for forgetting to put that into my testimony. I think it is. If you look at Massachusetts right now, I believe that the companies are lending their buses for between $750 and $850 for a bus per month, which is far below what it will cost them to go out and buy a bus on their own.

Now, granted at that rate they are not paying back the interest, they are merely paying back the capital over a seven-year period, so I think, you know, obviously Congress, given its dire financial state nationally, may need to look at recouping the interest at a lower rate over the seven or eight years of the bus. But I think that it is a model you should look at because, again, you can buy thousands of buses at a time, and certainly if you had a model such as Ibcap nationally, and you went out looking for 15,000 or 10,000 buses at a time, or maybe 5,000, I can't believe a manufacturer wouldn't find a way to retool his factory in a hurry, so I think it is a good model that you should look at.

Mr. **Mineta**. Mr. Markward, you mentioned in your testimony that you have been denied transportation on inter-city buses. I am wondering if you could elaborate on those experiences for the subcommittee.

Mr. **Markward**. Because New Mexico enjoys a large tourism trade, we have many tours coming to New Mexico. I have not been denied passage on a tour, because none of the tour buses have lifts on. There is no way that I can get on a tour bus, so why would I even attempt to get passage on a tour?

It is just simply impossible to ride on a tour bus in the State of New Mexico.

Mr. **Mineta**. What about an inter-city bus?

Mr. **Markward**. I haven't tried inter-state buses because the same thing exists. There is no inter-state bus travel available for a person in a wheelchair, and I haven't been able to find anybody that wants to carry me up the bus steps.

Mr. **Mineta**. All right. Let me thank this very, very fine panel for being with us and looking at these issues in a very real way. Again, I want to thank all of you for taking time from your own busy schedules to be before us. Thank you very, very much.

[The prepared statements of Ms. Golden, Mr. Herman, Mr. Winske and Mr. Markward follow:]

MARILYN GOLDEN
DISABILITY RIGHTS EDUCATION AND DEFENSE FUND

TESTIMONY, HOUSE OF REPRESENTATIVES PUBLIC WORKS
AND TRANSPORTATION COMMITTEE
SURFACE TRANSPORTATION SUBCOMMITTEE

ON THE AMERICANS WITH DISABILITIES ACT
SEPTEMBER 26, 1989

My name is Marilyn Golden. I am Policy Analyst with the Disability Rights Education and Defense Fund, or DREDF, our country's foremost guardian of disability civil rights for the last decade. Before DREDF, I directed an organization called Access California for nine years, and coordinated two other organizations, the September Alliance for Accessible Transit and the Disabled International Support Effort.

In ten years of disability advocacy, I've worked with many "converts" like George Herman of Denver Rapid Transit District, who testified before you this morning, transit operators who, at one point, thought fully accessible transit was a nice dream but a fiscal impossibility; operators who then provided access and became ardent boosters of accessibility mandates. In this testimony I will give a brief overview of the private transit issue and demonstrate why we believe the Americans with Disabilities Act presents very necessary and reasonable requirements.

The need for access to private transit is enormous. I could cite studies, documentation, and anecdotal evidence all day. Suffice to say, bus travel is the only travel available to poor Americans, and disabled Americans are three times more likely to fall below the federal poverty line than non-disabled Americans. Bus travel is also the only avenue available to rural Americans, and disabled Americans live in rural areas in higher concentrations than the non-disabled. Most transportation-disabled people can't afford cars or can't drive cars. Without private transit, hundreds of thousands are prisoners in their own homes.

The need doesn't stop there. Disabled businesspeople can't get an airport shuttle for business trips because they're not accessible. We learned the other night of a private charter company which patently refused access to a young disabled adult. Access is needed to all forms of private transit.

Let's look first at long-distance bus travel. The Act already allows private intercity transit providers a special exemption. Large providers have fully six years before new bus purchases have to be accessible, and small providers have seven years. Some providers, particularly Greyhound, have responded by raising the specter of financial ruination and service cutbacks, near to the point of hysteria. But these concerns do not hold up to the light of reason.

It is true that many of the accessible over the road coaches in use today cost an additional $35,000, using a lift that occupies a third of the available baggage space and eliminates some seats. But this particular design is far from the only available one. In fact, this design wasn't even originated for over the road use, yet it is being blamed with every complaint by the over-the-road industry. This coach was originally designed for Golden Gate Transit of Marin County, California, for intracity use.

Much more instructive is the experience of Denver, where seventeen accessible over the road coaches are in use currently, rain, shine, or snow, providing lift-boardings in excess of 42,000+ in a year. The Hubmatic lift used in Denver, originally of German manufacture, is now handled domestically, and is already available. The lift occupies ZERO baggage space, will remove only ONE seat, and added only $11,000 to the cost of each bus, comparable to the low 5% additional cost of regular city buses. This price, by the way, can only be expected to fall, with mass production and high market demand. It's been virtually maintenance-free despite climactic conditions. And contrary to what has been alleged, these coaches put in continuous rough snowy mountainous use, comparable to the roughest of over-the-road conditions.

Denver's experience demonstrates the bursting of a myth which we must look at very plainly here. The mechanics of lifts, what they cost, and when they work, has become very mysterious in these discussions. But bus lifts are very un-mysterious. They are simple devices, far simpler than an engine, for example, and cheaper, by the way, than the air conditioning. Lifts are like any other piece of basic technology. When there's a high demand, they'll work better, get cheaper, and become available quickly. Anyone who doubts this is ignoring the basic operation of our free market economy and America's historic ingenuity. And in the case of lifts, we don't have to wait for ingenuity. They're available now, and will be more so. Lift companies outside of Denver aren't so eager to let Stuart and Stevenson, who've got the patent on the Hubmatic, make all the money. And lift companies may benefit from the Americans with Disabilities Act, but they don't need it to benefit. The fact is, lifts are the trend, intracity and intercity alike. Lift companies are tripping all over each other developing better lifts of every kind, and quickly, while we sit here and deliberate. Given these conditions, a six-year extension before the intercity transit industry has to comply with this Act, is very generous indeed.

This is further evidenced by a 1988 Canadian study which showed that lifts on intercity buses provided the trips more cheaply than other methods by a factor of four.

During the first three years after enactment, a study is to take place which will help providers find the best method for providing access. The Act has been attacked by those who call for a study only, with no accompanying mandate for access. This would seriously weaken the bill. If the mandate were removed, these interim years would expectably be used by the over-the-road bus providers to contest the feasibility of accessible service, rather than getting ready to deliver it. The aim of the legislation is to facilitate accessibility, not to create incentives for resisting it.

Another myth which must be laid to rest, once and for all, is about restrooms. The Americans with Disabilities Act does not mandate wheelchair-accessible restrooms in over-the-road coaches, despite all the bally-hoo that's been made. The Senate report appropriately keeps open the possibility of regulations addressing this point as technology becomes available. But great loss of revenue due to great loss of seats due to restroom access is not a fair argument, since it's not required.

The Act's other requirements for private transportation can be just as easily accommodated. It's important to look where providers have had successes. You may hear today, for example, that airporters can't possibly provide accessible service. Yet in the San Francisco and Los Angeles areas, Super Shuttle has been providing accessible demand-response service for years: not with EVERY vehicle, but with only a couple of vehicles; their service is accessible WHEN VIEWED IN ITS ENTIRETY, as they Act would require. The same is true for charter companies and other private demand-response providers.

So keep in mind that lifts aren't always required. And when they are, let's put the requirements in perspective. Lifts, in general, add about 5% to the cost of a new bus. What does this mean? When twenty-one buses would have been purchased, only twenty can be. Where $200,000 in financing would have been necessary to add one vehicle to the fleet of a small provider, now $210,000 in financing will be needed. Yes, it is a little more. This cost must be weighed against the desparate need for integration into society by millions of potentially productive Americans.

I want to close with the story of John and Joy Winsky. Their story is the human element to the story of Peter Pan, a small provider in Massachusetts, who will be testifying today as well. Peter Pan has a few accessible intercity over-the-road coaches, and has complained of low ridership. Their low ridership stems from a complete lack of publicizing the program, and a few other factors, such as the fact that their cross-state run is so long, that a disabled rider has to stay overnight, even if they only travel twenty miles, because the accessible bus won't come back until the next day. Not to mention that a lack of inter-city cooperative agreements meant, until recently, that a disabled person couldn't use the paratransit in the city they're visiting, once they got there, to go anywhere from the bus station.

But despite these barriers, Peter Pan had some faithful riders for a couple of years. John Winsky, who lived in Boston, met his future wife, Joy, who lived forty-five miles away in Fitchburg. Both use wheelchairs, and thank god for Peter Pan, they could see each other. They commuted often for over a year, despite the fact that Joy had to walk a mile through the snow to John's house once she got to the bus station, due to the classic paratransit problem I described already. They took over sixty round trips on Peter Pan, and the paratransit costs to transport them would have been astronomical, paying for the lifts they used many times over. And their marriage points to the societal value of access that cannot be measured in dollars.

The weighing of these factors is in your hands. Reasonable costs, versus the integration, or lack thereof, of millions of potentially productive Americans. Your leadership is urgently needed, to pass the Americans with Disabilities Act of 1989.

WHEELCHAIR ACCESSIBILITY INTERCITY BUS REPORT

BY

GEORGE A. HERMAN
GENERAL SUPERINTENDENT OF MAINTENANCE
REGIONAL TRANSPORTATION DISTRICT

I am George Herman. I am the General Superintendent of Maintenance of the Regional Transportation District of Denver, Colorado. I am here to testify in favor of the Americans with Disabilities Act and report on our successful experience in Denver's providing wheelchair accessible, over-the-road service. RTD Denver currently has 17 such coaches in service. They have been in successful operation since January, 1989.

I, for one, am a convert. I had fought throughout the years the mere idea of providing fixed-line route bus service and intercity bus service for the handicapped. Since coming to RTD Denver in 1985, I have changed my mind completely. Not only can we provide the accessible wheelchair service without an increase in schedules, we can to it safely, reliably and cheaper.

In 1977 the RTD Board of Directors instructed the staff that the RTD system operating throughout the Denver area would be made accessible to the handicapped on fixed-line route service. Included along with this decision was to equip the 1986 intercity buses being ordered from Neoplan USA with the capability of providing wheelchair accessibility. The mechanical staff at RTD in Denver was given this task to complete.

The discovery of the Hubmatic lift manufactured in Germany which did not remove any luggage space and was totally within a neat package installed in the passenger compartment itself seemed to be the logical solution to this problem.

The following questions had to be answered during this engineering attempt:

1. Would luggage compartment space be eliminated?

   Answer: The lift was entirely within the passenger compartment in a small package. It required no loss of space in the luggage compartment. The only item in the luggage compartment is a small pump and motor that is entirely out of sight.

2. Is the price restrictive?

Answer: The lift is compact and as a result very low in price. We are estimating the cost of the lift on normal application to be somewhere between $7000 and $9000 total. This would include the door that is necessary on the right side of the bus in order for the lift to be deployed.

We recently installed a lift in an MCI coach, used in intercity bus service. The total cost of the engineering, modification to the lift, door and all auxiliary parts was $15,000. We expect the balance of the MCI fleet operated in Denver, Colorado could be accomplished for somewhere between $7000 and $9000 at this point in time.

3. Is the lift reliable?

After testing and nine months of service, we have had no lift failures and very minor maintenance required to the lift itself even though the lift is utilized some 100 plus times per week.

In the Denver area we have sometimes have snow even in the summer months, but the lifts have functioned successfully.

4. Is the lift available?

Stewart & Stevenson Power, Inc. of Denver, Colorado has applied for a patent on this lift design. This lift is now called the S&S Power Lift and is built and assembled in the United States and is available through that source.

5. How many seats are lost?

Answer: Due to RTD Denver's commitment to the handicapped community, and due to the length of time it has taken to provide a lift that was satisfactory for this type of service, RTD Denver has lost some four seats in the application of this lift. RTD Denver mechanical staff is presently in the engineering mode of utilizing a collapsible recliner seat to reach the point that no seats are lost. I believe that is mechanically feasible and the technology is around the corner.

6. Is it easy to gear up for production? How quickly these buses can be reproduced in mass?

   Answer: This lift is available today.

7. What is our ridership?

   Answer: RTD's annual boarding for wheelchair passengers averages some 42,000 plus per year.

8. Will this lift function in harsh weather?

   Answer: We had snow last week and we have it all winter. All RTD lifts function well, including snow conditions. The RTD Board of Directors and staff are commited to accessible transportation.

It has been alledged that Denver over-the-road coach service is not genuine over-the-road service. This is simply untrue. Our coaches make constant runs from 50-100 miles for 18 hours daily. We operate these coaches with their lifts continuously through great changes and altitudes and snow and ice conditions.

In reality, the provision for providing handicapped transportation through fixed-line bus service and intercity type bus service saves you dollars. The key to this is the fact that mobility is certainly the answer for almost all individuals, handicapped included. Since RTD Denver has taken the course to provide accessible, main-line transportation for the handicapped, we have seen a noticeable change in the handicapped community itself. The fact that they now have the mobility throughout the Denver area has made them self-sufficient and removed the need for them to be kept in nursing homes, for example, which are very expensive. If we would certainly add up the costs of confinement of the handicapped individuals who are locked into wheelchairs and the daily care that they would need provided to them, I would certainly believe that anyone would come to the conclusion that mobility and access to transportation saves you money when applied to the handicapped community itself.

In the 14 years I have been involved with the handicapped community, I have noticed a tremendous change in the attitude and appearance of the handicapped individuals. They are more in tune to the general day-to-day life that each of us not confined to a wheelchair enjoys. They can go where they want, when they want, in complete safety.

Only the technology was holding back the transit systems from providing this service. This technology is now readily available and very reasonable in cost.

I know there is reluctance of many companies and individuals to provide this type of transportation. It is simply a matter of not understanding what the long-range effects of providing this transportation really means.
An interesting story that could be well be applied to this situation would surround my assistant. My assistant and his wife were talking about getting a dog. The conversation surrounding the situation became, "Yea, but we don't really need a dog. Yea, but it would be nice to have a dog." The conversation continued on until they actually got a dog. They named the dog Yeabut. Yeabut perhaps should be applied to this situation. Why don't we just get on with providing the necessary transportation. In the long run we will save dollars.

Regional Transportation District

RTD

Memorandum

To: George A. Herman, General Superintendent of Maintenance

From: John Barberis, Division Maintenance Manager/Boulder

Date: September 22, 1989

Subject: Wheelchair Lifts on Intercity Buses

The Stewart & Stevenson Power Wheelchair Lift, formerly the Hubmatic wheelchair lift, has been in service in our fleet since January 20, 1989. These wheelchair lifts have been absolutely trouble free as they are the simplest and most basic design imaginable. We lubricate, clean and inspect these lifts on the regular 3000 mile inspection and have found very few minor problems such as the rubber hand grips have been removed by the passengers. This we solved by riveting the replacement grips on. Other than that, these lifts have been a dream come true.

In my 15 years in the transit industry, I have never seen such a simple and trouble-free wheelchair lift. I believe these lifts are the only practical solution to the handicapped accessibility problems we are presently faced with.

If you have any questions or concerns, please feel free to contact me.

RTD

Memorandum

To: George A. Herman

From: John W. Davis

Date: September 22, 1989

Subject: Wheelchair Lift Costs

Per your request of September 21, 1989, I have compiled a summary report regarding the costs to maintain the various types of wheelchair lifts in use at the RTD. This information is from January 1, 1989 through August 31, 1989.

As of August 31, 1989, the RTD had an active fleet size of 721 buses, of which 582 (80.6%) were wheelchair lift equipped. As of September 11, 1989, 57 buses, all wheelchair lift equipped, were leased to a private contractor to provide service on 17 privatized RTD routes.

The total parts and labor costs associated with wheelchair lift maintenance on this group of 584 buses YTD through August 31, 1989, is $299,593.06 or $37,449.13 per month. This translates to an estimated annualized cost of $449,389.56 or an average annual cost per bus per year of $769.50.

Please note that the 1987 Neoplan intercity buses have an estimated annualized cost of $949.05 for 17 buses or $55.83 per year per bus to maintain the wheelchair lift.

I also took the liberty of attaching a report listing service and road calls for lift equipped buses for the same time period.

September 12, 1989

Ms. Irene Leventhal
U. S. House of Representatives
Washington, D.C.

Dear Ms. Leventhal:

Pursuant to our telephone conversation this morning, I offer the following information regarding the accessible service provided by the Regional Transportation District. As we discussed, RTD is in a transitional stage because we are in the process of privatizing a large segment of our service. The fleet figures reflect the vehicles operated by both RTD and the private contractors. All vehicles in contracted service must be wheelchair-lift equipped.

(1) Fleet Make-Up*

	Total Vehicles	Lift Equipped	% Lift Equipped
RTD	667	527	79%
Laidlaw	57	57	100%
Mayflower	55	55	100%
TOTAL	779	639	82%

* Includes handyRide vehicles

(2) Fixed Route Wheelchair Boardings (1988) Annual 42,087
Average Daily 115.31
(Figures are not available for peak hour boardings.)
operates 365 days per year.

(3) HandyRide

- o This service is provided by 10 vehicles plus 3 spares for a total of 13 vehicles (included in total fleet above). Service is provided only on weekdays. RTD receives no subsidies which are specifically designated for HandyRide.

- o HandyRide passenger trips (1988)

Wheelchair	Ambulatory	Total	Average Daily
17,740	22,707	40,447	158.62

– operates 6:00AM-6:00PM Monday to Friday no holidays

- o Cost per passenger trip (based on projected fully allocated costs and 1988 passenger trips): $35.87

(4) Wheelchair Lift Maintenance Costs (1988)

Parts	$ 158,871
Labor	246,566
TOTAL	$ 405,437

$537.00 per lift per year.

Sincerely,

R H Garside

STATEMENT OF JOHN WINSKE

LADIES AND GENTLEMEN OF THE COMMITTEE:

MY NAME IS JOHN WINSKE AND I LIVE IN BOSTON, MASSACHUSETTS. I AM THE EXECUTIVE DIRECTOR OF THE MASSACHUSETTS COALITION OF CITIZENS WITH DISABILITIES AND THE CHAIRPERSON OF THE ACCESS ADVISORY COMMITTEE TO THE MASSACHUSETTS BAY TRANSIT AUTHORITY.

IN 1986, THE COMMONWEALTH OF MASSACHUSETTS PURCHASED 28 INTERCITY COACHES THROUGH A PROGRAM CALLED THE INTERCITY BUS CAPITAL ASSISTANCE PROGRAM (IBCAP). SIX OF THESE BUSES WERE WHEELCHAIR ACCESSIBLE. THE SIX WHEELCHAIR ACCESSIBLE BUSES WERE LEASED TO SIX DIFFERENT COMPANIES THROUGHOUT THE COMMONWEALTH

EARLY THAT SUMMER, I MET A YOUNG LADY NAMED JOY WHO LIVED IN FITCHBURG, MASSACHUSETTS. FITCHBURG IS A SMALL CITY SOME 50 MILES NORTHWEST OF BOSTON. JOY, LIKE MYSELF, USES AN ELECTRIC WHEELCHAIR FOR MOBILITY.

ONE OF THE COMPANIES WHICH LEASED AN ACCESSIBLE INTERCITY BUS WAS ENGLANDER COACH LINES, BASED IN WESTERN MASSACHUSETTS. THE BUS ROUTE FOR ENGLANDER PASSED THROUGH FITCHBURG AND ENDED IN BOSTON. FOR THE BETTER PART OF FIFTEEN MONTHS, JOY AND I USED THAT BUS TO VISIT EACH OTHER ON WEEKENDS AND HOLIDAYS. ON A TYPICAL WEEKEND, JOY WOULD CATCH THE BUS AT 8 P.M. ON FRIDAY AFTER FINISHING HER CLASSES AT WORCESTER STATE COLLEGE. WHEN JOY ARRIVED IN BOSTON AT 9:30 P.M., SHE WOULD WHEEL HERSELF FORO THE ONE MILE TRIP TO MY APARTMENT. SHE WAS NOT ABLE TO USE THE PARATRANSIT PROGRAM IN BOSTON BECAUSE OF RESIDENCY REQUIREMENTS.

FROM JUNE 1986 UNTIL OCTOBER 1987, JOY AND I TOOK 50 ROUND TRIPS ON THE BUS. IN ADDITION TO VISITING JOY, I USED THE BUSES FOR BUSINESS PURPOSES AROUND THE STATE. IN OCTOBER OF 1987, JOY MOVED TO BOSTON WHERE SHE HAD GOTTEN A JOB. AFTER OCTOBER, WE BOTH USED THE BUS APPROXIMATELY ONCE A MONTH TO VISIT JOY'S FAMILY AND TO MAKE OUR WEDDING ARRANGEMENTS. WE WERE MARRIED IN JUNE OF 1988.

IT SHOULD BE POINTED OUT THAT IF JOY AND I HAD HAD TO RELY ON PARATRANSIT (VAN) SERVICE TO AND FROM FITCHBURG, IT WOULD HAVE COST US AT LEAST $150 PER ROUND TRIP. THE COST OF THE BUS WAS $9.00 PER ROUND TRIP. I CAN HONESTLY SAY THAT NEITHER ONE OF US COULD HAVE AFFORDED TO HAVE A RELATIONSHIP AT $150 PER WEEKEND. THE FACT THAT I AM HERE TODAY SPEAKS VOLUMES ABOUT THE NEED FOR THE AMERICANS WITH DISABILITIES ACT. TWO YOUNG PEOPLE USING BUSES TO CARRY ON THEIR ROMANCE SHOULDN'T BE NOTEWORTHY, BUT FOR THE DISABLED IN AMERICA OUR STORY IS QUITE UNIQUE.

DESPITE MY STORY, YOU WILL HEAR TODAY FROM OPPONENTS OF THIS BILL THAT THE BUSES ARE NOT UTILIZED VERY OFTEN. I WOULD LIKE TO TELL YOU SOME OF THE REASONS FOR THIS APPARENT LOW RIDERSHIP STATISTIC.

BEFORE 1988, THERE WAS NO COOPERATIVE AGREEMENT BETWEEN THE FIFTEEN TRANSIT AUTHORITIES IN MASSACHUSETTS. THAT IS TO SAY THAT EVEN IF A PERSON WAS ELIGIBLE TO USE THE PARATRANSIT (VAN) SERVICE IN THEIR OWN COMMUNITY, THEY COULD NOT USE THAT SERVICE TO TRAVEL TO ANOTHER PART OF THE STATE BECAUSE EACH INDIVIDUAL TRANSIT AUTHORITY HAD ITS OWN RESIDENCY REQUIREMENTS. THIS IS WHY JOY HAD TO WHEEL THE ONE MILE TO MY APARTMENT IN THE MIDDLE OF WINTER OR SUMMER AT 9:30 AT NIGHT.

BECAUSE OF THE LENGTH OF SOME OF THE ROUTES, BUSES ONLY MADE ONE ROUND TRIP PER DAY. A DISABLED PERSON HAD TO HAVE ACCESSIBLE LODGING FOR THE NIGHT.

THE NEW ACCESSIBLE BUS PROGRAM WAS NOT WELL PUBLICIZED. THIS WAS DELIBERATE SINCE THE LIFTS WERE OF AN EXPERIMENTAL NATURE. THERE WAS CONCERN THAT CONSUMERS MIGHT BE STRANDED.

THE LIFTS FOR THE FIRST YEAR HAD SEVERAL MECHANICAL PROBLEMS, AND WERE OUT OF SERVICE FREQUENTLY. THEY WERE EVENTUALLY REWIRED BY ONE OF THE BUS COMPANIES IN MASSACHUSETTS AND THOSE IDEAS WERE INCORPORATED INTO THE NEW LIFT DESIGNS.

LASTLY, IT MUST BE MENTIONED THAT ONE OF THE REASONS FOR THE RIDERSHIP FIGURES NOT BEING HIGH IS THE TIMIDITY OF PERSONS WITH DISABILITIES. DISABLED PEOPLE HAVE BEEN CONDITIONED TO THINK THAT THEY CANNOT RIDE INTERCITY BUSES. INDEED, THEY HAVE BEEN SO BEATEN DOWN ABOUT THIS POINT THAT THEY HAVE BECOME RELUCTANT TO TRY ANYTHING AT ALL THAT IS "NEW". THE OLD ADAGE "IF IT SEEMS TOO GOOD TO BE TRUE,, IT PROBABLY IS" IS ETCHED ON THE HEARTS OF MANY DISABLED PEOPLE.

WHAT IS KNOWN IS THAT AS TRANSPORTATION SYSTEMS BECOME MORE ACCESSIBLE, THE RIDERSHIP BY DISABLED CONSUMERS INCREASES DRAMATICALLY. THE MASSACHUSETTS BAY TRANSIT AUTHORITY HAS SEEN THE DEMAND FOR ACCESSIBLE BUSES INCREASE SIX-FOLD SINCE 1986. YOU HAVE ALSO SEEN THE RIDERSHIP ON THE METRO SYSTEM HERE IN WASHINGTON, D.C. INCREASE. I UNDERSTAND THAT WHEN THAT SYSTEM WAS BEING BUILT THERE WAS CONCERN THAT THE DISABLED WOULD NOT RIDE IT. YOU NOW KNOW THAT THIS IS NOT TRUE. YOU HAVE SEEN THAT, AS CONFIDENCE IN THE SYSTEM GROWS, THE NUMBER OF DISABLED PEOPLE USING THE SYSTEM GROWS. ACCESSIBLE INTERCITY BUS SERVICE IN MASSACHUSETTS IS ALSO NEW, BUT I FEEL CONFIDENT THAT THERE IS A DEMAND AND THAT THE SERVICE WILL BE USED AS THE BUGS ARE WORKED OUT, AS THE SERVICE IS PUBLICIZED, AND AS LOCAL TRANSPORTATION -- NEEDED TO COMPLETE THE TRIP -- BECOMES ACCESSIBLE. THIS SUMMER, MASSACHUSETTS PURCHASED 22 MORE ACCESSIBLE COACHES WHICH SHOULD GREATLY IMPROVE TRAVEL ALTERNATIVES.

IT SHOULD ALSO BE NOTED THAT IF THE AMERICANS WITH DISABILITIES ACT IS PASSED, IT WILL INCREASE EMPLOYMENT OPPORTUNITIES FOR THE DISABLED. THIS INCREASE IN EMPLOYMENT WOULD RESULT IN MORE PEOPLE USING INTERCITY BUSES TO COMMUTE TO WORK. MOST DISABLED PEOPLE, PARTICULARLY THOSE BEGINNING WORK, WILL NOT HAVE MONEY TO PURCHASE A VEHICLE AND THUS WILL HAVE TO RELY ON PUBLIC TRANSPORTATION.

WE MUST STRIVE TO MAKE ALL FORMS OF TRANSPORTATION, PUBLIC AND PRIVATE, ACCESSIBLE TO THE DISABLED. IT WOULD MAKE NO SENSE TO HAVE THE BUSES IN CITY "A" ACCESSIBLE AND THE BUSES IN CITY "B" ACCESSIBLE BUT THE INTERCITY COACH WHICH CONNECTS THEM INACCESSIBLE. IT IS ONLY WHEN ALL FORMS OF TRANSPORTATION ARE 100% ACCESSIBLE TO THE DISABLED THAT WE WILL SEE A DRAMATIC INCREASE IN RIDERSHIP BY DISABLED PEOPLE.

LET ME GIVE YOU AN EXAMPLE OF THE NEED FOR ACCESSIBILITY IN ALL FORMS OF TRANSPORTATION. I LEFT MY HOUSE AT 9:30 LAST NIGHT AND TOOK THE ORANGE LINE (WHICH IS A HEAVY RAIL LINE IN BOSTON) TO THE AMTRAK STATION. THERE, I WHEELED FROM A HIGH LEVEL PLATFORM ONTO ONE OF AMTRAK'S NEW ACCESSIBLE SLEEPER CARS. WHEN I ARRIVED IN WASHINGTON THIS MORNING, I BOARDED THE METRO AND CAME HERE. IF ANY ONE OF THESE PIECES WAS MISSING, I WOULD NOT BE ABLE TO BE HERE TODAY.

WHAT THE AMERICANS WITH DISABILITIES ACT IS ALL ABOUT IS FINALLY GRANTING THE DISABLED FULL CITIZENSHIP IN THIS NATION. IT IS A CLEAR AND CONCISE MESSAGE TO ALL AMERICANS THAT WE ALL BELONG. LAST YEAR JOY AND I PAID CLOSE TO $5,000 IN FEDERAL INCOME TAX. ALL WE ASK IS THAT WE BE ABLE TO WORK AT ANY JOB AT WHICH WE ARE QUALIFIED, RIDE ON ANY BUS FOR WHICH WE HAVE THE MONEY, LIVE IN ANY COMMUNITY OF OUR CHOOSING, AND ENJOY THE COMMERCIAL AND RECREATIONAL OFFERINGS PROVIDED IN THESE UNITED STATES.

PVA
PARALYZED VETERANS
OF AMERICA
Chartered by the Congress
of the United States

STATEMENT OF
RALPH MARKWARD
EXECUTIVE DIRECTOR, ZIA CHAPTER
PARALYZED VETERANS OF AMERICA
BEFORE THE
SUBCOMMITTEE ON SURFACE TRANSPORTATION
OF THE
U.S. HOUSE OF REPRESENTATIVES
COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION
REGARDING THE
"AMERICANS WITH DISABILITIES ACT OF 1989"
SEPTEMBER 26, 1989

Mr. Ralph Markward
Executive Director
ZIA Chapter PVA
833 Gibson Boulevard, S.E.
Albuquerque, NM 87102

801 Eighteenth Street, N.W., Washington, D.C. 20006 (202) USA-1300 Fax: (202) 785-4452

Chairman Mineta and Members of the Subcommittee, my name is Ralph Markward. I am the Executive Director of the Zia Chapter of the Paralyzed Veterans of America in Albuquerque, New Mexico. I speak in favor of the private transportation requirements of the Americans with Disabilities Act from personal experience.

I am a veteran of World War II. I was a tailgunner and flew 30 missions over Germany. I am proud of my service to my country, but my country doesn't seem very proud of me. Because I and my fellow disabled veterans experience discrimination every day.

When I was in the US Army Air Corps, I was stationed in places like Pyote, Texas, St. Louis, Missouri, and Las Vegas, Nevada. In every station I took intercity Greyhound and Trailways buses from the base, to town, and sometimes, home to visit my family. With my duffel bag over my back, I and soldiers like me were a familiar sight.

Now the same ex-soldiers, like me, who are disabled, cannot take these buses. My wife and I would like to travel aboard Greyhound with senior citizen groups, because my wife is unable to drive a vehicle on highways. But we can't. When we reach a new city, we would like to take tour buses like thousands of other tourists. Our money, as the saying goes, is as green as theirs. But my business is not welcome. The buses cannot accommodate me. And sometimes, they refuse to accommodate me, even if, with help, I could get myself on the bus.

299

My fellow disabled Americans who, like me, need access to private transportation, are likely to be poor, because disabled Americans are much poorer, as a group, than non-disabled Americans. In 1984, according to a Lou Harris poll, half of us had household incomes under $15,000, while only 25% of all Americans were that poor For the older disabled, the poverty rate is greater...fully one in three older disabled Americans has an income below $7500; twice as high as for the non-disabled. The more severe the disability, the statistically lower the income.

I don't have to tell you that private transit is the only choice available to poor Americans. What this means is that access to private transit is even more crucial for disabled persons than for the rest of the population. Yet we have none.

Let's look at my state, New Mexico. It's 46th or 47th in per capita income of all the states. Tourism is a big business in my state. Albuquerque is the only city in New Mexico served by major airlines, therefore Greyhound bus travel is absolutely essential. But it is not available to us.

Accessible airport transportation, also essential, is absolutely unavailable. All paratransit is available ONLY to certified handicapped persons, not tourists or business travelers, since certification requires a month. The "Shuttle Jack" bus service between Albuquerque and Santa Fe is also not lift equipped.

The enforced isolation of older disabled Americans is truly un-American. You may think that my age peers and I -- and I am 64 years young -- are taken care of by paratransit. But we are not. Paratransit is unsatisfactory as it is, around town. It would never work over long distances. Older disabled Americans need access to mainline transit as well as private transit. We may be older, but don't let us be forgotten. Please help restore our pride and our ability to be a part of our society, with your support of the Americans with Disabilities Act.

Mr. MINETA. I would like to ask the following members of the next panel to come before us: Ms. Wilson, Immediate Past President, Community Transportation Association of America here in Washington, D.C., as well as Executive Director of JAUNT, Charlottesville. We will have Mr. Payne doing the honors here.

I would like to have, also, Mr. Ray Mundy, Executive Director of the Airport Ground Transportation Association, Knoxville, come before us; Mr. Alfred B. LaGasse, III, Executive Vice President, International Taxicab Association, Kensington, Maryland; Mr. Rudolph H. Bruhns, Executive Vice President and General Manager, Greater Houston Transportation Company, and Mr. Robert M. Werth; President, Diamond Transportation Incorporated; Alexandria.

I would like to yield time to our very fine colleague, Mr. Payne.

Mr. PAYNE. Mr. Chairman, thank you very much. It is my honor and privilege to introduce our next witness, Linda Wilson, who is representing the Community Transportation Association of America. Linda is the Executive Director of the Jefferson Area United Transportation Corporation, which is known as JAUNT, which serves the rural counties outside of Charlottesville, Virginia.

Prior to being elected to Congress, I was involved in running a business and owning a business near Charlottesville, Virginia, and in that capacity had direct dealings with Linda and with JAUNT in arranging transportation for workers who, without JAUNT, would have been unable to have a job there or anywhere else in a rural setting.

In addition to working for JAUNT, Linda is the Immediate Past President of the Community Transportation of America. She is extremely knowledgeable about transportation issues, and I found her advice regarding even this bill before the committee to be very useful. Linda, thank you very much for joining us here today.

I look forward to hearing your remarks regarding the Americans with Disabilities Act. Thanks.

Mr. MINETA. Ms. Wilson, you may proceed.

TESTIMONY OF LINDA WILSON, IMMEDIATE PAST PRESIDENT, COMMUNITY TRANSPORTATION ASSOCIATION OF AMERICA, EXECUTIVE DIRECTOR, JAUNT, CHARLOTTESVILLE, VA; RAY MUNDY, EXECUTIVE DIRECTOR, AIRPORT GROUND TRANSPORTATION ASSOCIATION, KNOXVILLE, TN; ALFRED B. LaGASSE, II, EXECUTIVE VICE PRESIDENT, INTERNATIONAL TAXICAB ASSOCIATION, KENSINGTON, MD; RUDOLPH H. BRUHNS, EXECUTIVE VICE PRESIDENT AND GENERAL MANAGER, GREATER HOUSTON TRANSPORTATION CO., HOUSTON, TX; AND ROBERT M. WERTH, PRESIDENT, DIAMOND TRANSPORTATION, INC., ALEXANDRIA, VA

Ms. WILSON. Thank you so much. You gentlemen are patient. You have waited a long time for this panel. I hope we can say you have left the best for last.

As Mr. Payne has introduced me, I am the Executive Director of JAUNT, Incorporated in Charlottesville and have been in that capacity since 1980. We are an agency providing primarily public transportation.

We are a public agency, and we provide public transportation services to residents of Virginia's Regional Planning District X, which includes Mr. Payne's home county of Nelson County, four other rural counties, and the small urbanized area of Charlottesville, Virginia.

We have a population of about 161,000 in that community and those rural counties. We operate a fleet of 32 vehicles and probably will be expanding that to about 34, all under 20 passenger. We offer demand response service, fixed route, commuter route service, and we run the regional ride sharing system in our area.

We do operate in a community where there is a fixed route system. In the city where the fixed route system exists, we provide the accessible transportation service. Our ridership this past year, that was for the 1987-1988 year, we provided 160,000 passenger trips, of which approximately half were for disabled persons, and about 23 percent of our total trips, or somewhere in the neighborhood of 37,000, were for persons in wheelchairs. So, we are experienced in transporting the disabled.

As for my own experience, in addition to operating this transportation system, I serve as a member of the executive committee of our local independent living center, I am on the Transportation Committee for the Virginia Board for the Rights of the Disabled, and I have served for the past three years, since 1986, and was one of the founders of the National Association for Transportation Alternatives, NASTA, which merged this summer with Rural America to form the Community Transportation Association of America.

We at CTAA are the advocacy and membership organization for what we always call the "significant others," but we basically serve the rural, small urban, human services and specialized transportation systems as a membership organization.

We have public entities as members, we have private non-profit members, and we have some private for profit members. We have about a 300-member membership, but we serve actually an industry of somewhere around four to five thousand providers.

About 1200 of those are small rural systems with Section 18 funds. And we have a number, I would say somewhere between four and five thousand out there of other kinds of systems, human services, HHS systems.

I am presently continuing as a member of the Board of CTAA, and I am here in my capacity as a member of the Board to present the CTAA Board's views.

We represent those folks who know what specialized and accessible transportation is all about. We know how difficult it is to provide, and we know how important it is. So I want to give you my views—remember that I am speaking for myself but mainly for my industry.

CTAA's statement of objectives pledges the organization to work to establish public policies that recognize individual mobility as a basic human right. That came out of our statement of purpose. So it follows logically that we subscribe to the central principle of the Americans With Disabilities Act, that this commitment to mobility cannot be discriminatory in character.

At a meeting of our Board last week, we agreed it was important that we establish a statement and a formal policy on accessibility, I am not going to read that. It's rather wordy, and we have a lot to accomplish. But it is attached to my written testimony, and I would ask that you take note of it because we worked hard to come up with a statement that we thought was fair and important.

The issue of accessible transportation has a special familiarity for our members. Most of us in this industry started out doing human services transportation. My own transit system began in 1975 as a consortium of several community agencies; probably at that time, only five or six.

We now serve 77 human service agencies in the 5-county area. We are the human service transportation provider. About half of our passengers are funded or paid for by human service agencies, and the other half pay out of their own pockets as public riders.

So, we know what we are talking about when we refer to the transit dependent. That includes persons with disabilities, and they continue to constitute the core of our ridership.

In many urban areas, it's interesting to note that CTAA members, and my own agency is one, are relied on at the present time to provide all the accessible transportation for the public transportation system.

In Charlottesville, Virginia, which is our central city, we have a very small fixed route bus system, and right now, the system is not life equipped or basically handicap accessible. It has kneeling buses that make it easy for elderly people to get on, but wheelchairs cannot be accommodated. So we provide the accessible system, all the accessible transportation in the urban area.

In many rural areas around the country, our members are human service transportation providers who receive no UMTA funding or no direct federal transit assistance. Many of these are human service agencies who get HHS funds, but there still may be in those rural communities—it was interesting this morning to hear Mr. Craig, for example, talking about his rural area because in many rural areas, only the human service agencies provide any transportation for the folks who live there.

We are particularly aware that the barriers to accessibility take many forms, and that removing those barriers requires a variety of responses. It's not going to take one response or another response to remove those barriers. That includes both accessible fixed route service and complimentary paratransit service.

The CTAA organization believes that this legislation should be put into the perspective of our members and the people we serve. I want to point out several concerns that we have. First of all, the national commitment to full accessibility for transit reflected by this bill—and I am going to say something that is unpopular with a lot of people—has to be accompanied by a national commitment to achieve it without making transit and those who depend on it bear the full cost.

There is no way that you can pass a bill like this and not have some accompanying appropriations bill. It is absolutely impossible. If enactment of ADA is not accompanied by appropriate financial support, it becomes a zero-sum game in which service will actually be diminished rather than made more equitable and adequate.

Just to point out a couple of things, currently the non-urban areas in the country receive about 3 percent of all the UMTA

3002

funds. This past fiscal year, non-urban areas received $64 million. The appropriations that have already been approved by the House for non-urban areas in 1990 is $52 million, so that is a $12 million dollar cut.

At the same time, it is being considered that we will have to increase the amount of transportation we are providing to the disabled. There is a definite contradiction here, because we already receive so little money that most of us aren't even able to buy new buses. This is significant because most of our vehicles are small vehicles. They are body on chassis vehicles or mini vans that have ramps. None of us have anything really fancy, no big buses. The most expensive vehicle in my fleet costs under $40,000.

You would think replacing a vehicle wouldn't be such an expensive proposition. We consider our vehicles worn out or depreciated at 90,000 miles, and about three years. But I just recently auctioned off some 1981 vehicles that were creeping up on 200,000 miles.

We have been, as we have been replacing vehicles, getting more and more wheelchair accessible vehicles. But it's an expensive proposition, because the money is not there to pay for them.

So what we are concerned about here is the fact that while we are talking about the program, in no way can you avoid discussing the costs.

One thing no one has mentioned today is insurance. If you are going to be handling persons who are disabled, you are going to expect your insurance to go up, believe me, take it from one who has to pay that insurance, and there are many hidden costs.

There just has to be accompanying money or this bill will never happen, no matter how much you want it to happen. It will never be a reality because the money won't be there.

Secondly, the equality of access to transit sought by this legislation is only a part of the equality of access to transit that our organization is working for. We want to stress that in many rural areas and in a surprising number of small urban areas, ADA is mandating equal access to non-existant or totally inadequate transit resources and services.

What we are saying here basically is that what ADA is mandating is that where transit exists, there be equal access, but no one is mentioning anywhere in this act that those areas that do not have any transit provide something for the disabled who do not have any way to get around.

We have heard people talking about the fact that when you are blind, you cannot drive. It's expensive to purchase a vehicle if you are disabled. People have different sorts of disabilities. There are some people who cannot even drive an equipped vehicle because of their type of disability.

What this basically means is that you have to live in the city. You cannot be disabled and live in a rural area. For instance, in Virginia, 77 percent of the state doesn't have any kind of public transportation. We have statistics showing that our recent analysis determined that one-fourth of all the urbanized areas of less than 100,000 population are unserved by federally assisted transit. 97 percent of the larger urbanized areas have public transit. The disparity is even greater in rural areas which represent 40 percent of the total population, an estimated one-third of those who could be classified as transit dependent, Rural areas only have 4 percent of federal transportation assistance, and a similar share of current transit services. So we are really looking here at a transit gap.

We do have, I think, a serious issue, and I will give you an example. I am trying to watch the time and have respect for my cohorts here, but I do want to give you one example.

Recently I dealt with an issue in a rural county in our service area that we currently don't serve. We don't provide any public transportation in that county because the local government wouldn't put up their share of the money, and you cannot get federal and state money without local money. I had a woman from that county come to me, she was really desperate. Her husband was diabetic and was on renal dialysis at the University Hospital, which is in Charlottesville, and she lived about 60 miles away. She wanted me to provide transportation for her husband. She had been able to get him in for his dialysis three days a week. He had one leg amputated, but even with one leg amputated, he could still get in and out of the car. Then he had his second leg amputated.

Suddenly the situation changed. Here's a very large man, a very small wife. They live far out in the country, no neighbors nearby, and she cannot get him in and out of the car, much less in and out of his wheelchair. So her doctors told her to call us. We couldn't help her. We cannot provide transportation in their county. They are not eligible for medicaid because they own property.

The result was that these folks had to give up their family home and move into the City of Charlottesville because it was the only way he could get access to medical treatment. So people in rural areas are really hurt by a lack of transportation, and the disabled in rural areas soon become the disabled in urban areas. That's where they go.

While this issue is probably most glaring for local transit services, it is also reflected in intercity service. Goodness knows we have heard enough about that today. Even before bus deregulation rural areas were losing intercity bus service. Since the 1982 legislation that loss has accelerated.

We feel this trend must be ended and reversed. We are working with Greyhound. As a matter of fact it was NASTA—that preceded CTAA—that worked with Mr. Currey to start the Rural Connector Program. My own system is a member of the Rural Connector system. We take people to the Greyhound bus. We have an arrangement with them. I told Mr. Currey this morning that it is an interesting fact that many of the people we transport to the Greyhound bus are disabled people, but they are not people in wheelchairs.

There are many disabled people using Greyhound but there is that one group of people, the people in wheelchairs, who cannot get up into the bus, who do not have this access.

We think that what Mr. Currey is proposing is an important initiative and that Greyhound deserves great credit for taking it. We are concerned that there is currently no accessible transportation outside the city limits.

Another brief story and I will close shortly: A year and a half ago, in January of 1988, we had our inaugural ceremony in Charlottesville for the Rural Connector program. We had a number of dignitaries there: people from UMTA, the state secretary of transportation, a vice-president from Greyhound. It was a very special ceremony to show the happy marriage between rural public transportation and the intercity bus service. The person who was master of ceremonies for that program was our board vice-president, a man, 28 years old, who is in a wheelchair because of a disease that caused him to have fragile, easily broken bones. It was almost impossible for him to get out of his wheelchair without injury.

He could not move around without injury outside of his wheelchair. He had a specially made motorized chair. The culmination of that ceremony was a ride on a brand new beautiful Greyhound bus. Everyone got to ride but the master of ceremonies. We had to bring a special van from our transit system that rode around behind the bus so that he could be part of the ceremony.

I think that this story is what we are all here about, folks. We would like to be able to see disabled people not always trailing around behind those who are able-bodied, but having their own entree to full accessibility. The problem is how do we do it and how do we afford it?

To summarize, we at CTAA believe enactment of the ADA is an important step toward our own goal of full accessibility and mobility regardless of where you live. Someone mentioned earlier the fact that, as you age you become more disabled. Remember that this is not someone else's problem, because all of us, if we live long enough, are going to begin to see our bodies go. I look at my own mother who is now 77 years old and still driving. A couple of weeks ago I was at a conference with a woman who told me about her mother in her 80's, who lived in a section of rural Iowa where there was no public transportation. I asked her if her mother was still driving and she said yes, illegally. She lost her license but she is out there, can't see, physically unable to get around, but, because she is determined to be independent and to live at home and to have that quality of life that we all want, she is still driving her car in spite of everything. She may end her years in jail, but by golly she will have her independence! We are all concerned about access to mobility, and the resulting quality of life.

Thank you for letting me testify.

Mr. **Mineta**. Thank you very, very much.

Mr. Ray Mundy, Executive Director, Airport Ground Transportation Association.

Mr. **Mundy**. Mr. Chairman and Members, I am gaining new respect for the durability of my elected representatives. I come today to make these remarks both as Executive Director of the Airport Ground Transportation Association and a professor of transportation at the University of Tennessee.

I am quite familiar with the users and the providers of transportation. In our association our operator members are people who run vans, people who run sedans, taxi cabs, mini-buses and over-the-road coaches. They run them on fixed routes, fixed schedules, in demand-responsive modes and mixed modes in many cases.

The predominant mode at the airport is demand-responsive from the airport and predominately fixed-route schedule from hotels to the airport. Does that make these services demand-responsive, fixed route services? It seems to me it is somewhat vague. The bill as presently constructed would severely impact the services we provide. A bullet to Greyhound would be a death blow to our fixed route operators. In many cases there are only three or four vans operating this kind of service.

For them to be responsible for putting a lift on each piece of equipment would be economically absurd. They could not afford the cost. It is not a matter of whether the cost is $5,000 per lift or $10,000 per lift, the cost would be prohibitive at any range to them. As has been stated by the bus representatives, it would be extremely difficult to equip a 47-passenger bus with a wheelchair lift and to provide enough aisle space to be able to make it back to a restroom facility.

You would have to take out at least 10 seats along the aisle in order to run a wheelchair down the aisle, or you could possibly make a 19 inch wheelchair, technically infeasible for people presently in wheelchairs. That is not to say we are not sympathetic to the plight of disabled or to their desires to be independent and free.

Most operators do provide access when asked. They are simply not asked a great deal. We tried to poll our membership and we got estimates like one rider in 25,000 trips or one in 100,000 trips. Drivers try to lift the individual, and to stow the wheelchair in the bus bay. As a matter of fact, providers are probably doing this in violation of the federal highway regulations which prohibit the transportation of acid batteries in over-the-road vehicles. They are doing this, though, because they are compassionate and trying to met the needs of the disabled.

There are some technical problems with the bill as we see it. When I say technical problems, I am not a lawyer but I do teach transportation law. I have been told by judges that I am not a lawyer and should not offer legal opinions. I am not certain therefore, what constitutes an automobile type body.

That is not defined. I teach transportation but we have no definition of what an over-the-road coach is nor what a demand responsive coach is. I don't recall any other piece of legislation where these terms have been defined. As to our operators in mini-bus service; are those over-the-road or demand responsive?

Thirty days after the act operators will all call themselves over-the-road coaches. Many that offer a schedule for downtown will probably offer more hotel schedules on a demand responsive basis so they can call themselves a demand responsive system and not be required to put a wheelchair lift on every vehicle.

Many of the points in our testimony have been touched upon. Many of our operators tell me they would be more compassionate and willing to provide service to the disabled and handicapped if their insurance permitted them to do so. Many are convinced by their insurance agencies that they are not covered when they try to assist anyone out of a wheelchair, so they are hesitant to provide that service.

The example was given earlier in testimony about some of our operators. Super Shuttle in California, for example, is a member. It does have wheelchair lift vehicles in its fleet. Out of about 200 vehicles it has four wheel chair equipped vans.

As that service is expanding, it would be ridiculous to require the fixed route operator serving the same community to put wheelchair lifts on their vehicles when their ridership is expected to be nil.

The alternative is the demand responsive van type operations and the fixed route carrier has a difficult time competing with that transportation.

Specifically, I think we would like to ask that the committee take three actions. One, we would like to ask that Section 304 of this bill be stricken until such time that the three-year study of private operator impacts is completed and the resulting recommendations are made known to Congress.

We would like to ask that consideration be given to other methods of wheelchair accessibility, i.e. ramps and others be studied as acceptable alternatives. As we read this bill we do not get that sort of understanding that other accessibility methods as such, are acceptable in place of wheelchair lifts. We would also like to suggest that other countries and their airports be studied to determine how they meet the needs of the disabled and maintain financial viability of their fixed route carriers.

In our remarks we gave an example of one carrier, Pearson International Airport in Toronto where they decided to take action to serve the handicapped. They allowed the next five permits for vehicles and limos only on the condition that they be wheelchair accessible. They are Chrysler mini-vans with a low floor. They have a ramp that comes out and they are easily accessible. Five vehicles are serving all the demands this major North American airport has for wheelchair accessibility.

There is a great demand for taxi cab and limo service at that airport. The entry is restricted. If one can get licensed at Pearson, then agreeing to have the vehicle equipped with the wheelchair device is very acceptable.

At no cost to the government, they are placed in service. These vehicles are called to go to the head of the line whenever a person in a wheelchair wants this service. People enjoy them because they are a more luxurious vehicle. They have solved the problem of wheelchair accessibility at that one airport. I use that example only to point out there are many ways to solve the accessibility problem, the real essence of the act, if you will, other than equipping every vehicle with a wheelchair lift. That provision of the bill would be extremely harsh.

It is discriminatory toward the fixed route industry and a lot of the service being provided by fixed route in rural areas would cease to exist. I don't know whether it would be 5,000 communities as Mr. Currey said, but it would be a large number. We in the airport ground transportation industry have empathy for the disabled. We are not disinterested in seeing that they are provided with equal access and service. It is a matter of who pays for it.

You cannot ask the isolated or present users to provide for the additional significant cost to provide this service. Comparing private and public transit and the financing of the two is like comparing apples and oranges. Public transit has provided access with public funds and society in general has supported that.

We are private operators. If you want these systems in fixed route service to have wheelchair accessibility, then you will have to provide some sort of fixed authorization bill in addition in order to pay for it. Otherwise, our operators simply cannot financially afford it and will cease to provide service.

Thank you.

Mr. **Mineta**. Thank you.

Mr. LaGasse.

Mr. **LaGasse**. I am Alfred LaGasse, Executive Vice-President of the International Taxicab Association. With me are Rudy Bruhns and Robert Werth.

The International Taxicab Association represents the owners and managers of taxicab, limousine, livery, van and minibus fleets. Our 696 member companies operate approximately 40,000 for-hire, demand-responsive vehicles.

In the United States, the private, for-hire vehicle fleet industry consists of over 6,300 companies, operating over 205,000 vehicles, providing over 355,000 jobs, transporting over 2 billion passengers and grossing approximately $6 billion annually.

No sector of public transportation is more experienced, more dedicated, or provides more mobility for disabled persons than does the demand-responsive, for-hire vehicle industry. With non-modified standard equipment, the 170,800 taxicabs and 16,600 limousines and liveries in the United States have long met the local public transportation needs of people with disabilities. Our industry also operates 10,900 vans, approximately 40 percent of which are equipped with lifts to serve passengers who use wheelchairs. The remaining 6,700 vehicles that are operated by our industry include minibuses, school buses, motor coaches, ambulances and supervisory vehicles.

A key indication of the for-hire vehicle industry's commitment and ability to transport people with disabilities is the degree to which public and private organizations contract with our industry for transportation service. Over 65 percent of all our industry's companies contract to provide transportation service to public and private organizations. Forty-six percent of all our companies contract to transport company employees, 45 percent contract to transport hospital and convalescent home patients, many of whom are disabled. Forty-four percent contract to transport senior citizens, a large proportion of whom are disabled. Forty-four percent contract to transport school children, particularly special education children who are disabled, and 44 percent contract specifically to provide transportation for those who have disabilities.

We are here to applaud H.R. 2273. However, we do see a few problems and a need for clarification.

The Senate and House bills were identical when introduced and remain generally similar. However, there are important distinctions between the two bills which we would like to bring to your attention.

First of all, the bills treat three types of transportation providers and we would like to review each one separately. Under public sector providers, all fixed route vehicles must be fully accessible, paratransit services must supplement fixed route service and general public demand-responsive service has an exception from the full accessibility requirement if the system, when viewed in its entirety, provides an equivalent level of service to those with disabilities.

The major difference between the two bills is that the Senate bill contains a potential loophole to the supplemental paratransit provision. Whether the House adopts the loophole or not, we urge this committee to adopt the six service criteria outlined in the Senate report which outlines what constitutes service to people with disabilities.

Both bills prohibit discrimination by public accommodations that provide transportation to their customers, guests, visitors and employees. These public accommodations will include hotels that provide shuttle service to the airport, major corporations providing van pool service, or retirement and nursing homes that provide transportation to the shopping malls.

The Senate bill exempts any vehicle carrying 16 or fewer passengers from the accessibility requirement. We urge the House to adopt the 16 or fewer passenger exception for public accommodation and private sector providers of public transportation service. Public accommodation providers are serious competitors to our industry and we believe that Congress should treat us equally.

The final category is private sector providers. Both bills permit the automobile to be exempt. We urge the committee to adopt a definition which states that any vehicle that carries 16 or fewer passengers be considered an automobile. This would provide for equal treatment of all private providers and it would recognize the real world situation that any vehicle that carries 16 or fewer passengers can be licensed as a taxicab and will be operated as a sedan.

Also, both bills provide an equivalent level of service exception to the full accessibility requirement for general public demand-responsive services to the public sector. The Senate bill provides this same exception to private operator providers of general public demand-response services. We urge this committee to accept the equivalent level of service exception for private providers.

Assuming your concurrence, we ask the committee to clarify the following three points under the term "equivalent level of service." One, equivalent level of service should not require service by the same type of vehicle. For example, if a company owns 10 sedan taxicabs and two minibuses and neither minibus is wheelchair accessible, it should be able to satisfy its requirements in the taxicabs.

Two, the equivalent of service can be achieved by one company making arrangements with another public transportation provider who has wheelchair accessible vehicles. Ms. Golden in her remarks says this is permitted. We have studied the bill and that is not clear.

Three, service delays to passengers with disabilities must take into consideration temporary service disruptions caused by extraordinary events such as extreme weather, wrecked equipment or even a convention of disabled persons in town. There are customers who are not disabled who often suffer disruptions of service due to extraordinary service disruptoins and we believe this should be taken into consideration along with our customers who may have disabilities.

Contracted services. We believe no organization, public or private, can contract away its responsibility under this act. We expect that public and private organizations will continue to contract with our industry for their transportation needs. However, we believe it should be made clear to those organizations that the responsibility for complying with the act is theirs alone.

In conclusion, the ITA believes that our recommendations will benefit both individuals with disabilities and the public transportation industry. We support an amended H.R. 2273 and we look forward to continuing our role as a major provider of transportation service to individuals who have disabilities.

Mr. Chairman, I would like to introduce two members of the International Taxicab Association who are here to tell you firsthand how they meet the needs of their passengers with disabilities and how they see this bill impacting their private, for-hire, demand-responsive companies.

On my right is Mr. Rudolph H. Bruhns. He is the Executive Vice President and General Manager of the Yellow Cab Service Corporation, which owns four taxicab companies, one of which is Yellow Cab of Houston. Yellow Cab of Houston is the third largest taxicab company in North America, operating 1,205 demand-responsive vehicles. They have recently begun to convert their fleet from four-door sedans to minivans. The company also operates 10 wheelchair-accessible vans to meet the transportation needs of its passengers who use wheelchairs.

On my left is Mr. Robert M. Werth. He is President of Diamond Transportation, Inc., which operates 11 wheelchair-accessible vans, five non-wheelchair-accessible vans and one wheelchair-accessible school bus. Mr. Werth's company is affiliated with both the Yellow Cab and Diamond Cab Companies in Alexandria, Virginia. Yellow Cab operates 166 taxicabs and Diamond operates 132 taxicabs. Mr. Werth is very committed to providing high quality, fully accessible public transportation service directly to the general public and through contracts with public agencies and private companies.

Following Mr. Bruhns' and Mr. Werth's brief statements, we would be happy to answer any questions the Members of the committee might have.

Thank you for the opportunity to address this important bill, and we hope that you will call on us for assistance.

Mr. **Bruhns**. Mr. Chairman and Members of the subcommittee, I want to thank you for the opportunity to testify this afternoon. As Mr. LaGasse said, my name is Rudolph Bruhns, Executive Vice President of Yellow Cab Service Corporation, headquartered in Houston, Texas.

Like the International Taxicab Association, Yellow Cab Service Corporation supports this legislation. We firmly believe that disabled Americans must have the same opportunities for employment and transportation that are available to all other Americans. At the same time, we are very concerned that this legislation not impose unnecessary costs on private providers of transportation for disabled persons that will raise the price of transportation for all, including the disabled.

I am here for one purpose, and one purpose only: to ask this committee to ensure that the definition of an automobile, for purposes of this act, includes standard vans and minivans which are now being introduced into taxicab service across the United States. The companies owned by Yellow Cab Service Corporation provide a good example of this trend.

Yellow Cab Service Corporation is a holding company that operates taxicab companies in Houston and Austin, Texas; Colorado Springs, Colorado; and Charlotte, North Carolina. The largest of these companies, Houston Yellow Cab, transports nearly 6 million passengers a year, including dispatch trips, airport trips, and passengers picked up on the street. Included in this number are over 100,000 trips made by elderly and handicapped passengers subsidized by the Houston Metropolitan Transit Authority. Over 14,000 of those subsidized trips were wheelchair trips, some of which were transported in one of ten wheelchair-accessible minivans operated by Houston Yellow Cab. The remainder of the wheelchair trips were transported in regular sedan taxicabs.

For many years, Houston Yellow Cab has used full-size sedans manufactured by the Chrysler Corporation, the Plymouth Gran Fury model. In November 1988, Chrysler Corporation built the last Gran Fury. After investigating the remaining two full-size vehicles available, the Chevrolet Caprice and the Ford Crown Victoria, incidentally there is no assurance that these two vehicles will continue to be produced by the manufacturers, and observing what other companies were doing with minivans, Yellow Cab Service Corporation decided to adopt the minivan as its taxicab vehicle for the future. As a result of that decision, we have already purchased 125 1989 Plymouth Voyager minivans that seat six passengers. By 1994, we expect to be operating 1,650 Plymouth Voyager minivans depending upon this legislation.

Why has Yellow Cab Service Corporation, and other taxicab companies across the country, begun to adopt minivans? There are six reasons why minivans are as good as or better than a regular sedan.

One, capacity. Minivans carry as many passengers as full-size taxicab sedans—usually six passengers including the driver.

Accessibility. Minivans are wheelchair-accessible. Houston Yellow Cab presently operates 10 minivans with lifts for wheelchairs. However, the expense of installing a wheelchair lift, nearly $6,000 per van, is 50 percent of the cost of the vehicle and makes it prohibitive to do so in every case. Ninety percent of our vehicles are owned by the drivers or are being purchased by the drivers.

Operating minivan conversion is also unnecessary in many cases, for the taxi drivers operating minivans are capable of lifting wheelchair users into the van in the same manner as they now lift wheelchair users into taxicab sedans. Thus, we do not expect any loss of quality of service for the disabled.

Increased passenger space. If General Motors or Ford discontinues building full-sized vehicles, if we don't have minivans, our only alternative will be to downsize the vehicles we are using, thus making it more inconvenient for the disabled. Minivans provide more leg and head room for the passengers, thus increasing the comfort of disabled passengers.

Increase luggage space. Minivans provide more luggage space than taxicab sedans, enabling disabled travelers to travel with more luggage and still accommodate their wheelchairs.

Safety. In operation, minivans appear to have 30 percent fewer accidents than taxicab sedans. We believe this is due to better visibility for the driver and the increased vehicle stability resulting from the front wheel drive configuration.

And very important, fuel economy. Minivans used by Houston Yellow Cab currently average 19 miles per gallon, compared to 15 miles per gallon for Gran Fury sedans. Assuming the average fleet mileage of Yellow Cab Service Corporation's four fleets, which is 100 million miles per year, this four-per-gallon difference would save approximately 1.4 million gallons of gasoline each year.

Mr. Chairman and Members of the subcommittee, for these reasons we ask that you amend the bill before you today to ensure that minivans are treated as automobiles, and are not subject to the requirement that they be equipped with wheelchair lifts. Houston Yellow Cab and the Yellow Cab Corporation are committed to providing accessible transportation for every disabled person that needs it. We believe that with a mix of standard and wheelchair-accessible minivans, we can do this conveniently, safely, and efficiently. We would ask your help to make it possible.

Thank you for the opportunity to testify today, and I would be happy to answer any questions you may have.

Mr. MINETA. Thank you, Mr. Bruhns.

Mr. Werth.

Mr. WERTH. My name is Robert Werth. I am the President of Diamond Transportation Services, Inc., which is located in Alexandria, Virginia.

I would like to thank the committee for having me before you today. My comments reflect experiences of a private paratransit operator. However, I am also the Vice President of the Virginia Taxicab Association which represents many small taxicab operators, as well as large ones, throughout the State of Virginia.

Our company's mission is fully consistent with the goals of the Americans with Disabilities Act of 1989: to provide a transportation system that permits the disabled persons to fully and independently participate in the economic and social life of this country.

It is my experience that privately operated taxicab and paratransit companies can and must play an important role in that system if this nation is to provide efficient, effective transportation to the disabled in a cost-efficient manner. I operate a lot of different services in Northern Virginia for children who are handicapped, beginning at age two-and-a-half up to the elderly disabled.

One of the services that we operate within the City of Alexandria whose population is 130,000, square mileage of 10, is called DOT, a specialized transportation service.

Mr. WERTH. This service began when the city decided to incorporate their own bus system, called DASH, and thus, DOT—that is the only meaning of DOT. The city worked through its local option with the Alexandria Commission on Disabled to come up with a demand-responsive door-to-door service to meet the needs of the disabled.

It is my feeling that DOT is a model specialized transportation service offering both taxicab and van services for trips wholly within the City of Alexandria. DOT operates seven days a week, during the same hours as the DASH bus service, 6 a.m. to 11:30 p.m, Monday through Friday, and the hours vary slightly on the weekend.

Any person living or visiting the City of Alexandria who has a disability preventing him or her from using the DASH bus service and who is certified for DOT transportation may use the service. Certification is obtained by applying and submitting a doctor's statement, which is included in a pamphlet concerning the disability.

Certification, I might add, can be made on a same day basis through the Alexandria Office of Transit Service, so there is no 30-day waiting period like many paratransit-services.

In addition, companions may ride with a disabled traveler at no cost. DOT service provides a two-tier level of service—bus stop to bus stop or bus stop to rail station for 65 cents, which is the same price as a bus, or a door-to-door service for a dollar and a quarter per trip.

Trips may be scheduled in advance, reservation, or on call. The on-call service just started through negotiations with the Alexandria Commission on Disabled, July 10th of this year, and this we feel removed another barrier to the provision of independent living for the disabled. Capacity has been added to accommodate increased demand without suppressing ridership, and new patrons have never been placed on an eligibility waiting list.

DOT is subsidized by the City of Alexandria, on a per-trip basis. Because the service is provided by Diamond Transportation and Alexandria Diamond Cab through a contract with the city, the city has to make the capital investment requirement in equipment and pays only for the service they actually use. The average cost to the city is about $7 per trip.

We began in November of 1984. The first month I had two wheelchair trips. Last month I think we did close to 800—789. Taxicab trips ranged in about the 1,300 range last month. Last year we did 20,000 total trips in the City of Alexandria for the disabled community, a total cost to the city of $140,000.

My personal experience is that there is a need for balance in the provision of transportation services to the disabled population. In order to provide complete independent living to all sections of the disabled community, transportation must be provided in the form of both lift buses and fixed routes and paratransit.

A large number of our DOT riders could not access fixed route buses if every bus had a lift. This population includes the severely disabled, dialysis patients, and an increasing number of elderly disabled. On the other hand, a great number of disabled are in need of the fixed bus accessibility. This group is fully capable of using fixed route, accessible transportation, as was previously evidenced by the panel that preceded us.

In speaking with a number of our DOT patrons, it becomes quite evident that some of the riders would used fixed route transportation if the routes were made accessible. On the other hand, many severely disabled riders can only use the door-to-door service. To many riders—a bus stop across a parking lot from their final destination is like being let out on the other side of the earth. Paratransit meets the needs of this constituency.

There are also people who need a combination or a multi-modal approach to transportation. This group would benefit from having access to both fixed route and paratransit. For example, we take a great number of riders from their homes to Metrorail, where they can access the accessible system.

Since I started this service, or was contracted to start this service in the City of Alexandria, I have observed a local phenomenon, and that is the complete integration of the disabled community into everyday life in the City of Alexandria.

When we first started, we would pull a van up to let out, and you couldn't do it because the cars would be blocking every entrance way. Doors were too heavy to open, curb cuts were not there, and there were many other barriers. Sometimes we would go to pick up somebody, there would be three or four steps going up to their door. Four or five years later, there are ramps built into those buildings. There are curb cuts. Electronic doors have been added.

The community has benefited from the economy that the disabled community has brought to the City of Alexandria. One barrier that we have in the city, however, is a lack of interjurisdictional travel. DOT goes up to the boundary, so somebody who lives in the city, for example, and works at Skyline, which is in Fairfax County, cannot ride DOT. They have to rely on the Metro on-call service, and this is just not workable sometimes. So that is one barrier that I must bring forth to you.

The DOT service is an example of government agencies contracting with private paratransit providers. It is very important that provisions of the ADA 1989 allow for transit agencies and public entities to contract for paratransit services.

Furthermore, where private priorities are required to provide comparable levels of service, such as the Super-Shuttle that was brought up, private paratransit providers such as myself should be allowed to contract for these services.

As a small businessman who is also a private transportation provider, I fully endorse the intent and futuristic vision of the Americans With Disabilities Act of 1989. However, it is extremely important for the subcommittee to recognize the role that can be played by a small private paratransit operator such as myself. I believe it is the intent of this legislation to provide opportunities and independent living for people with disabilities. Small, private providers like Diamond Transportation Services want to continue being a part of this effort.

I support the ITA's recommendations and improvements to this historic legislation and endorse the broad scope of the Senate bill 933 and the House bill 2733.

Thank you very much.

Mr. MINETA. Thank you very much, Mr. Werth.

Ms. Wilson, you mentioned that it is difficult to use the accessible fleets that are operated by CTAA members to feed inter-city fleets, such as Greyhounds, because the Greyhound fleet is not accessible. I am wondering if you could share with the subcommittee some specific examples of problems that you have encountered in this regard?

Ms. **Wilson**. I am not sure I understand. In getting people to Greyhound?

Mr. **Mineta**. That is it.

Ms. **Wilson**. Well, we have not had very many people in wheelchairs ask us to take them to Greyhound because they know that Greyhound doesn't provide wheelchair service. I think we have heard this earlier, that people know this, and they don't ask us to take them. We have not been able to do transportation for anyone in our transit system to Greyhound who would be able to go on beyond unless someone could take them up on the bus and someone can meet them at the other end.

We have transported a couple of folks who were in wheelchairs who took people along with them to get them on and off the bus. I don't know if that answers your question, but basically the people that we take to the Greyhound bus are people who know that they can get on it and go on to their destination.

Mr. **Mineta**. Now, Mr. Mundy, airport ground transportation providers operate services in various configurations, as you have mentioned, such as demand responsive, fixed route, and fixed schedule. How does the industry currently provide transportation services to individuals with disabilities?

Mr. **Mundy**. I asked the same question of many of our operators. They did not perceive it to be a problem. They were not asked to handle the disabled and wheelchair individuals, which I suppose was a rather naive response. Upon questioning them further and talking with our airport members, there are typically arrangements made. I must admit, these are not the best arrangements because they usually have to be made in advance. There is usually a local public provider who provides that service to their area. Pressed, these local private operators, usually know who to refer that caller to that provides handicapped wheelchair service in their particular area.

As a matter of fact, most of those are provided by 16(b)(2) vehicles. Many are provided by city transit systems. You have an unusual situation where, if they were required as fixed route operators to put wheelchair lifts on their vehicles, they would still probably recommend the alternative service, because it will be much cheaper.

Why would you pay $10 to $15 for a private operator's wheelchair lift and fixed route service when you could get a subsidized public operator for 80 cents? We, in essence, would require lifts on vehicles which would not be used. There have got to be better alternatives and accessibilities thought through than the rather vague references in this bill.

Mr. **Mineta**. Now, you have raised several concerns about the usage of such terms as "over-the-road coach" and "demand responsive" as used in the Senate passed bill. Can you provide the committee with any clarifying language that would conform with industry practices?

Mr. **Mundy**. I don't mean to be flippant, but the answer would be no, because we have no standard definitions. The terms are very loose when we refer to over-the-road coach. It could be anything from a minibus operating from one town to the next, or it could be a van which is running on a route maybe 80, 95 miles up into the areas of Connecticut.

For example, one of our largest operators, Connecticut Limousine, runs both buses and stretch limousines. Both vehicles would be considered to be over-the-road vehicles, so it is very difficult to specify over the road when you start talking about a size of vehicle. It is the type of service that it is used in.

There is one piece of legislation from UMTA which tries to specify "demand responsive," and it refers to demand responsive as a type of vehicle where an individual does not have the premium use of the vehicle. So even past legislative efforts to define these terms have not been entirely successful.

I don't feel that is an academic answer. I apologize. The answer is no, there are no simple terms and definitions that could be provided that try to cover all the areas that this bill is touching. That is one of its major problems. It is a net over a very broad range of services.

Mr. **Mineta**. Mr. Bruhns, in your testimony on the first page, you ask the committee to ensure that the definition of an automobile for purposes of this Act include standard vans and minivans. Then on page 4, you say amend the bill before you today to ensure that minivans are treated as automobiles. In both instances are you talking about standard vans and minivans?

Mr. **Bruhns**. Standard vans and minivans. They are both coming in usage. In our particular case, we have gone to minivans, but there are other operators, one in particular in Orlando, Florida, which is using standard sized vans as taxicabs, and that is because of the groups that come into Orlando to go to Disney World and so forth, vans are more convenient as a taxicab for larger groups.

Mr. **Mineta**. Families?

Mr. **Bruhns**. Yes.

Mr. **Mineta**. Now, in your testimony, you say that a for-hire driver must transport an orderly person unless the driver is otherwise unable or forbidden to do so. Can you give the subcommittee some examples of what you consider to be valid reasons for refusing to transport someone?

Mr. **Bruhns**. I think that was in Mr. LaGasse's testimony.

Mr. **LaGasse**. That was in my testimony. We are regulated at the municipal level, the taxicab industry, generally speaking. There are a few exceptions, but we are regulated by the City Council typically. They establish the regulations. There could be a provision that the taxicab industry is not allowed to go to a local airport. That happens sometimes because it is an exclusive franchise with someone else, and therefore, we would be prohibited from picking someone up at the airport, no matter who they are.

But generally speaking, we have to transport anyone except a falling down drunk, for example, or if there was an imminent sense of danger, and that is hard to qualify. But certainly a disabled person would meet the orderly person that we would have to transport unless he was carrying a gun or something.

But I mean, generally speaking, we are required by local ordinance, and earlier it was said some of the larger bus fleets are not accountable. I am not sure I accept that, but certainly in our case, where we are regulated at the local municipal level, we have city hearings all the time, we are very accountable to our passengers.

Mr. **Mineta**. You also stated that in a mixed transportation fleet, vans should not have to be lift equipped if the disabled could be transported alternatively by taxicab. How do our drivers presently handle heavy motorized wheelchairs and how would they handle them under the ADA?

Mr. **Bruhns**. Well, on those we have the wheelchair accessible vans. We have 11 of those, and those have ramps on them that they are accessible, and if somebody calls in, in our case, and particularly in Houston and Austin where we have a computerized dispatching system, we can assign attributes We can dispatch a trip to a particular cab, in that case the attribute is wheelchair accessible. So we can send that particular cab to pick up that particular person.

In other cases, where they have a foldup wheelchair and they can get into a cab with assistance from the driver, then we send a regular cab, and in most cases, they call for a regular taxicab, but in the case of a motorized wheelchair, then they do need, would need a wheelchair accessible vehicle.

Mr. **Mineta**. Thank you.

Mr. Hastert

Mr. **Hastert**. Thank you, Mr. Chairman.

Ms. Wilson, it was an interesting statement that you made that said that you certainly support the passage of this act, but only if there was financial support, and there needed to be federal dollars that went along with this, and you didn't think it was fair to try to pass the cost of this, increased cost of what this bill would cost, onto riders or onto the transportation companies. Is that what you meant, or would you want to clarify that?

Ms. **Wilson**. Well, of course, our transportation system, those represented by the Community Transit Association, receive federal, state, and local dollars, and also charge fares, and what has been happening over the last few years——

Mr. **Hastert**. What is the mix? Is it 50/50?

Ms. **Wilson**. I can only answer for my own system. About 40 percent of our income comes from fares.

Mr. **Hastert**. The rest of it comes from an assortment of state, local and federal governments?

Ms. **Wilson**. And that balance has been changing over the last few years, and is increasingly more local money, more state money, less federal money.

Mr. **Hastert**. The taxpayers, or the rate payers, or the fare payers pay for this?

Ms. **Wilson**. Exactly.

Mr. **Hastert**. What do you think an estimation—and this might be a big number or maybe you haven't thought it out—but you talked about the tremendous cost of this act on both rail and wheel vehicles? What would be the cost? Do you have any idea? Millions, billions?

Ms. **Wilson**. That is a good question, and I asked a couple of people about that before I came on to testify. I don't know that I have heard that there are people who would attempt to give that figure, but I don't have any idea. I think it is going to depend on each community. If you have a community that has a fixed route bus system that has no accessible vehicles and no paratransit, then that community, according to the way the act is presently written, is going to have to put lifts on their buses, and they are going to have to start a paratransit system. There are probably going to be other costs that are not obvious. If that community doesn't have curb cuts, they are going to have to put in curb cuts. They may have to change all of their bus stops if they have the little bus stop, and they are not accessible.

Each community's expenses are going to differ, and I don't think anyone in this community has done any kind of survey that would tell you the total cost.

Mr. Hastert. So you think probably the total cost—the Congressional Budget Office declines to make that estimate. So the total cost will be well in the multibillions of dollars?

Ms. Wilson. It could be. It could be. It is not—you know, it is not an easy thing to say, because just saying that all you have to do is put a lift on a bus is misleading.

Mr. Hastert. You said you think that there needs to be a parallel piece of legislation that would tie with this that not only would mandate these types of services and different opportunities, but would also mandate or furnish the price or the cost of the system.

How would you think that would be estimated?

Ms. Wilson. That is a good question. I don't think I can answer that. What I am saying is if Congress is going to mandate something and you know that there is going to be a cost, I think before you mandate it, you find out how much it is going to cost and make sure there is money there to pay for it. Otherwise, it is not going to happen.

Mr. Hastert. I mean, would you assume that we have to have an appropriations bill for multibillions of dollars—whatever the cost is?

Ms. Wilson. It could be.

Mr. Hastert. To parallel with this bill?

Ms. Wilson. The point is, I think if you are going to say that there has to be money, or that there has to be an accessible transportation system in every community that currently has transit, and you don't put any money out, then the entire burden falls on the locality.

Mr. Hastert. Then you are going to force us into debate where it is going to come out of the trust fund or not. There are a lot of questions here.

Mr. Mundy, you talked about insurance costs, and that prohibition of insurance today forces some people not to provide those services, is that correct?

Mr. Mundy. That is correct.

Mr. Hastert. What do you think in percentages? I am not asking you to put real dollars, I am not going to be mean to you like I was to Ms. Wilson, but in percentages of costs, what do you see in increased insurance? If all these services were mandated by everybody, what would they be?

Mr. Mundy. We have attempted to get insurance companies to give us some figures, to estimate what it would cost if we were to handle individuals with disabilities, severe disabilities. They have not given us those figures. They don't even want to estimate them at this point. They feel that our industry has lost so much in the last five years that there would be significant increases in premiums.

Mr. **Hastert**. To some people it might be obvious why the extra insurance is there. Could you elaborate why it would be?

Mr. **Mundy**. Primarily because of the increased risks when transporting someone in a wheelchair, and also physically assisting someone in a wheelchair. Often our industry has a lot of turnover in it. There are not people who are trained in being able to handle the handicapped, i.e., how to assist them properly, how to assist them onto the vehicle, if it were so equipped. In the case of an accident—and accidents are going to happen—there is great concern about the welfare of these individuals, especially near exits.

There is that kind of concern by the insurance industry of both the welfare of the individual within the wheelchair and other passengers on a vehicle if an exit is blocked. Typically, the favorable place for a wheelchair is near the exit door to eliminate the number of seats you would have to remove on a vehicle. In the case of an accident, which we know after so many hundred thousand miles, there is going to be, there is great concern that people will not be able to exit from this vehicle.

Mr. **Hastert**. And is there satisfactory ways to secure a wheelchair, for instance, in a bus or a van? I mean, are there floor——

Mr. **Mundy**. There are floor fasteners that are satisfactory. They are not as sound as you might have if you have got a bolted seat on the vehicle, but no one really knows yet. We have not tested those wheelchairs on vehicles in crash tests. We really do need to assess somehow what kind of expected liability the carriers are going to have.

Mr. **Hastert**. Do you think those insurance costs, say if they were increased 50 percent—I am not even sure what insurance costs on a carrier will be, I imagine significant—but if insurance costs were increased 50 percent or 75 percent, or 30 percent, would that be a significant amount to force different types of business decisions?

Mr. **Mundy**. Very much so. Behind labor and fuel, insurance is probably the greatest single cost of operating—save the vehicle. So it is a major cost in anyone's operation—a cost which has gone up four or fivefold, by the way—in the last years.

Mr. **Hastert**. I would like to ask Mr. Werth, and maybe you can comment. The feedback I have gotten back from my district—I have a lot of senior citizens that rely on paratransit—and they are literally very, very afraid, or there is a great deal of fear that if this bill is passed, all of a sudden the paratransits, people who provide that, wouldn't be able to provide it.

For instance, I have some senior citizens centers where senior citizens have bake sales, and these types of things. They have bought their own vans, and now if they are going to be required to have lifts and those types of things, that they can't afford it, and they are afraid that they will be forced to not have the services.

Is that a threat out there with this legislation?

Mr. **Werth**. According to the way I have read the legislation, if a jurisdiction had a bus system, they would have to offer the paratransit, but if you had a senior center, in other words, who went out and after this legislation was passed, had to buy a bus, would the bus have to have a lift on it, is that what you are asking?

Mr. Hastert. Yes.

Mr. Werth. I am going to have to yield to the floor on that. That is a question that I have as well, especially in a rural jurisdiction. In our area, almost everybody is operating bus service, so if you are not operating paratransit you are going to have to operate paratransit, and that should be a service to the senior centers.

The question is, who is going to pay for that service? The senior centers traditionally, even if they have fixed bus service, need the paratransit, and a great many of the disabled communities are elderly disabled. A great many of our riders are elderly who need to have the lift equipped service, and it needs to be door to door, and it needs to be passenger assistance, and we train all our drivers on passenger assistance techniques and everything.

So that is something that we do, but if a senior center was stuck out there in the middle of nowhere, and they had to have a bus to go to the grocery store and things of that nature, or if there was even a fixed route senior bus—I am reading this legislation that if they buy it, it has to have a lift or they have to have comparable services, and I am not sure, I am going to have to yield on that.

I think it is something that needs to be—maybe someone who testified before us can answer it. They are certainly I think capable.

Mr. Hastert. What do you see, for instance in your case—DOT and DASH—what happens if DASH has a mandate lift program, the service as law they have to have it, what happens to your service?

Mr. Werth. I contract, so when the contract is up, they can non-appropriate it, the city council can non-appropriate it, or this legislation they are going to have do—DASH is not lift equipped. They would have to lift equip under this new law into buses. They have an order in for 14 new buses, and their board has said lift equipment in anticipation of this legislation. Then they would come back and also have to provide the paratransit.

Now, would they have to—would they be allowed at that point to cut back on the hours of service, on the subsidy level, things of that nature? I am not sure about that. Also, we live in a very complex area in Washington, because Alexandria also has Metrobus that goes through it. So let's say in Arlington County, for example, that has no paratransit, door-to-door service, like Alexandria does. Metro would have to lift equip all of their new vehicles as they put them on the street, and Arlington County would have to have paratransit.

Now, Metro, I think, would be required to provide that paratransit in Arlington, and Alexandria might turn around and say, well, instead of doing our specialized service, we are going to latch onto Metro service, so the private—there are 13(c) requirements, you know, for labor, and they are not going to—Metro has to sue their labor, and that is very expensive. I mean, $7 a trip for paratransit within the City of Alexandria, I think is a pretty good rate. I don't know what the cost per trip will go up to.

It is a complex issue in multi-jurisdictional areas like Washington, and I personally need some clarification on it. I have asked—I have gotten opinions from different groups, so it is my understanding that Alexandria would have to continue to offer the paratransit in some form. Whether that be through Metro or a private contractor, I think is just up to the future to tell.

Mr. HASTERT. Thank you. So there is no real clear cut thing?

Mr. WERTH. They would have to continue the paratransit, that is clear. How they do it and what subsidy level, it is not.

Mr. HASTERT. Mr. Mundy, your final statement caught my attention. You said that some companies just won't be able to afford to put those programs in and still be profitable and will cease to provide service. Does that mean they will go out of business?

Mr. MUNDY. There are two ways that can happen. One they would go to demand responsive and because they are so small with three of four vehicles hope that the provisions of the bill about undue burden would apply and they would not have to equip their vehicles or they would cease to exist.

They are small operators. They don't make a lot of money. If they are faced with a situation where they have to equip their vehicles with wheelchair lifts they will make a prudent business decision and go elsewhere.

There are hundreds across the country. When I talk to them, they say, "They are going to do what? That is ridiculous. They will never pass such a bill." They don't realize that it can happen and it could happen very shortly to them. They would be the people affected by the 30-day provision, not the six years. They would be affected overnight.

Mr. HASTERT. That is part of my concern. I have a mixed district, a suburban district and also 130 miles of corn and bean fields with small towns where there is not much left there. It is the entrepreneurs that have gotten the van services that move seniors back and forth to the doctors and shopping that I am afraid are going to be wiped out and we will have a large group of people out there with no service because nobody will be the entrepreneurs because they can't afford it.

That is the real threat this bill has on small town America. It is going to wipe it off the map.

Thank you.

Mr. MINETA. Mr. Payne.

Mr. PAYNE. Thank you very much, Mr. Chairman.

I would like to ask Linda Wilson to comment on your statement about the necessity of providing more funds.

I know when you and I were working on some transportation issues, we determined that the fares of the Federal Government, state government and all the local governments in the area, were not sufficient and we could not raise enough funds by increasing the riders' fares. We began looking at private sources and ultimately pieced something together that barely worked in order to continue to provide the necessary services. JAUNT, which I suspect like many other organizations is so thinly financed and capitalized that any more demands raises some questions about how they might be accommodated.

If they are accommodated, then it may be necessary to curtail certain services that are provided in order to provide those new services. Would you say that is an accurate assessment?

Ms. **WILSON**. Yes, I think what might happen, I can see the possibility in the city that I serve now in Charlottesville where we currently provide transportation to all the handicapped who can't use the city bus system. The city is very flexible about how they approve for that system. If they have to lift equip all their buses then they could very easily get by with saying only folks who are in motorized wheelchairs or in very severe condition can't ride the city buses and can use the paratransit.

They might become much stricter and more restrictive about who can use the paratransit system. In rural areas like the area that you are from there are not very many handicapped people out there using the system because the cost of the transportation is so high that we have very limited service.

We are not doing the kind of service we are doing in Charlottesville. The reason for that is money. Charlottesville puts close to $100,000 in our transportation system. The highest amount of money I get from any rural county is $9500 and that goes down to one that gives me $950 a year. The burden will fall on the local governments. Those local governments that have the money might be able to implement it but they have a lot of other priorities as well. It will become a local burden. Over the years more and more of the cost of transportation is falling on the local governments. They are the ones that are going to have to do the cuts and make the cities accessible as well.

It is going to be a big burden. It is very unclear to me, in this bill, I mean, I share Mr. Werth's concern about the problems with the definitions, it is unclear what this means. Are rural areas going to have to have curb cuts? Does it mean when I pull up to someone's dirt road on their farm that they will have to have a curb cut?

It sounds ridiculous but I have been living with federal regulations for a long time. After it is passed, all the bureaucrats get together and play, "Let's interpret" and we have to live with it. We live in a nightmare of having to face this down the road after the bill is passed.

Mr. **PAYNE**. Would you comment on one other Mr. Werth. I would appreciate your views as well because I think we are dealing with similar systems in Charlottesville and Alexandria. Both are medium sized cities which have bus systems and a paratransit system, neither of which have lift equipped buses. Under this act all buses will be required to be lift equipped.

You mentioned your concern that that might affect the funding for the paratransit system in a negative way. In your judgment what is the best way to meet the needs of the handicapped citizens and at the same time provide the best overall service for all passengers.

Ms. **WILSON**. Well, I would like to say that I really support the idea of having the buses lift equipped but I am concerned about the cost. I think the City of Charlottesville is probably ahead of the game because they do plan as they replace buses—and it is going to be a while before they do that—they do plan to lift equip the buses because the handicapped community in Charlottesville has been very vocal and has gotten that across. However, I do feel that there are going to be a lot of surprises when that happens because I don't think it is going to be used as much as people think it will be.

I know in Winchester, Virginia, all the buses in the small community of Winchester are lift equipped or they were when I talked to the manager a year or two ago and he told me that every now and then they have to work the lifts to be sure they still work.

They may have one or two trips a year. The people in Winchester are now begging for a paratransit system because they want door to door service. My feeling is that the people I serve want paratransit. Among the handicapped community and I am sure the folks who testified earlier would probably tell you this, there is a lot of disagreement about whether there should be lift equipped buses or paratransit.

Mr. **Payne**. But you do see in an era of scarce resources that those two groups will be vying against one another for those funds.

Ms. **Wilson**. It is not so much vying against each other as it is if the city's buses are lift equipped then that makes it easier for them to deny us funding because they say we would not have to serve as many people. Of the 37,000 trips a year in wheelchairs probably a number of those would be using the city system.

So it could eliminate funding for us. I don't know if Mr. Werth feels that is a problem for him.

Mr. **Werth**. Because Alexandria pays me on a per trip basis, if I lose ridership, they pay less money. They put the lifts in the buses and more people use the bus service then their payments to me will go down. I don't think it is going to. They are not looking at dropping the DOT service. In discussions with the disabled community I think they would be open to reducing. I also see the ridership going down because the people. It is my feeling that there is a large segment of the disabled community right now that doesn't use paratransit.

They are using what fixed route service is out there, Metro call, driving their own vehicles, using companions to drive their own vehicles. They want to be mobile and independent. You are talking about two different groups, those who need paratransit and those who need the fixed route for independent living.

For the city, I think when you spread the costs of the lifts over 10-year useful life and the maintenance cost over that same life that the payout to the community is going to be a good payout. Rural Virginia is a totally different story but inner-city Alexandria, I think it will be a workable system.

Mr. **Payne**. You mean the $7 they pay you per trip versus the capital cost, however much that is, over some period of time you think that is the difference?

Mr. **Werth**. The capital costs they would have would be only for the lifts and the buses in our system. That is a separate issue. If our ridership goes down, then the payments to the paratransit system will go down. I don't foresee that happening. We have had incremental growth, up and up and up as more people have joined the paratransit system. If the lifts are put on buses, will the ridership go down? I just don't foresee it.

We have an increasingly elderly population in this country, as you know, the baby boomers, you and me both Congressman Payne, we will be in the same category one day. I see a lot of disabled elderly people who need the door to door service. There is also a lot of young disabled and elderly disabled who need the fixed route.

The city will have to pay for the lifts which can be amortized over 10 years. You are talking about a wealthy community by the way. It is not the same as rural Virginia. I think that they will pay for it. That is the indication that I am getting.

Mr. PAYNE. Thank you very much. I don't have any further questions.

Mr. MINETA. Thank you very, very much for bringing to the subcommittee your combined experiences. We appreciate it very, very much. If there is no further business, the subcommittee is adjourned.

[Whereupon, at 6:15 p.m., the subcommittee was adjourned.]

[The prepared statements of Ms. Wilson, Mr. Mundy, Mr. LaGasse, Mr. Bruhns, and Mr. Werth follow:]

STATEMENT OF
LINDA WILSON
EXECUTIVE DIRECTOR OF JAUNT, INC., CHARLOTTESVILLE, VIRGINIA
AND
IMMEDIATE PAST PRESIDENT, CTAA

ON BEHALF OF THE
COMMUNITY TRANSPORTATION ASSOCIATION OF AMERICA (CTAA)

ON THE PROPOSED
AMERICANS WITH DISABILITIES ACT

BEFORE THE
SURFACE TRANSPORTATION SUBCOMMITTEE
COMMITTEE ON PUBLIC WORKS
U. S. HOUSE OF REPRESENTATIVES

SEPTEMBER 26, 1989

Chairman Mineta and members of the committee, my name is Linda Wilson and I am the Executive Director of JAUNT, an agency providing public transportation services to residents of Virginia Regional Planning District Ten. Our agency operates a fleet of nearly three dozen vehicles and offers demand-response, fixed route, commuter and ride-sharing services in an area that reaches into six counties. Our ridership last year was 160,000 and half of those trips were for persons with disabilities.

I have also served for three years as president of the National Association for Transportation Alternatives (NASTA), which has now merged with Rural America to become the Community Transportation Association of America (CTAA). Ours is an organization of rural, small urban and specialized transportation agencies and we have a membership of more than 300 with representation from virtually every state. I continue as a member of the board of directors of CTAA and appreciate this opportunity to present our views on the proposed Americans with Disabilities Act (ADA) to your committee.

CTAA's statement of objectives pledges the organization to "work to establish public policies that recognize individual mobility as a basic human right." It follows logically that we subscribe to the central principle of the Americans with Disabilities Act -- that this commitment to mobility cannot be discriminatory in character.

At a meeting last week, CTAA's board approved a formal resolution on accessibility and I have attached a copy of that resolution to this statement.

The issue of accessible transportation has a special familiarity for many of our members because they began as human service transportation agencies, and the "transit dependent," including persons with disabilities, continue to constitute the core of their ridership. In many urban areas, CTAA members -- my own agency being one -- are relied on at the present time to provide the accessible component of public transportation. In many rural areas, our members are human service transportation providers who receive no direct federal transit assistance but are the only mobility resource available. We are particularly aware that the barriers to accessibility take many forms and that removing those barriers requires a variety of responses -- including both accessible fixed route service and complementary paratransit service.

CTAA believes, at the same time, that this legislation should be put into the perspective of our members and the people they serve.

First, the national commitment to full accessibility for transit reflected by this bill needs to be accompanied by a national commitment to achieve it without making transit and those who depend on it bear the full costs. If enactment of ADA is not accompanied by appropriate financial support, it becomes a zero-sum game in which service may be diminished rather than made more equitable and adequate.

Second, the equality of access to transit sought by this legislation is only a part of the equality of access to transit for which our organization is working. It needs to be stressed that in many rural areas and in a surprising number of small urban areas, ADA is mandating equal access to non-existent or completely inadequate transit resources and services. A recent analysis determined that more than one-fourth of all urbanized areas of less than 100,000 population are unserved by federally-assisted transit. The disparity is far, far greater in rural areas. With almost 40 percent of the total population and an estimated one-third of those who could be classified as "transit dependent" (lacking access to a private vehicle for regular transportation), rural areas receive only about 4 percent of total federal assistance and a similar share of current transit service. Put another way, the "transit gap" in rural areas is more than four times as great as that in large urbanized areas.

While this gap is probably most glaring for local transit services, it is also reflected in intercity service. Even before bus deregulation, rural areas were losing intercity bus service and since the 1982 legislation, that loss has accelerated. CTAA believes that this trend must be ended and reversed and we are working with Greyhound and other intercity carriers to try and have some impact through the provision of feeder services, making it possible to re-connect the intercity system with places it no longer serves directly. Again, my agency, JAUNT, is a part of this effort. We think it is an important initiative and that Greyhound deserves great credit for taking it. At the same time, since most of us in the feeder network operate accessible systems, we are acutely aware of the anomaly of connecting with an intercity network that has not yet become fully accessible.

302.3

We look forward to the day when that will not have to be the case.

To summarize and close this statement, CTAA believes that enactment of the Americans with Disabilities Act is an important step, but only a step, toward our own goal of full accessibility to mobility regardless of who you are or where you live.

Thank you again for this opportunity to present our views and I will be happy to try and answer any questions you may have.

CTAA Board Resolution on Accessibility

(Approved September 18, 1989)

The Board of Directors of the Community Transportation Association of America believes there is an urgent need to take a fresh look at national transportation policies and priorities to determine their adequacy in assuring full mobility for all members of our society. As a nation, we should commit ourselves to specific, measurable and attainable goals of reducing individual and community isolation by the year 2000. It should be the objective of such a 10-year campaign to assure the right of access for all citizens to jobs, needed education and training, and to meet life's most basic needs --- without regard to place of residence, age, economic status or disability.

We therefore support the proposed Americans With Disabilities Act (ADA) to assure full accessibility of public transit services and to provide for individual mobility needs through the establishment of affordable paratransit services in urban and rural communities. However, if enactment of ADA is not accompanied by appropriate financial support, transportation services may be diminished rather than made more equitable and adequate. We therefore recognize that there is a public responsibility to pay for such accessible services as outlined in ADA.

To: House Public Works Committee
Re: Americans with Disabilities Act of 1989

I would like to share my deep concerns surrounding Senate Bill 933/H.R. 2273. I am making these remarks on behalf of the Airport Ground Transportation Association. The Airport Ground Transportation Association is a non-profit trade association composed of airport ground transportation providers, the major as well as many smaller airports, and industry suppliers. The one hundred twenty-seven operator members provide a range of services from taxi/sedan service through limo, van, and minibus service to large bus service. These services are provided in all configurations of demand - responsive, fixed route, fixed schedule and mixed combinations. The vast majority of these operations are small businesses, most with fewer than twenty-five vehicles, and many with only four or five vans.

As this Bill is presently constructed, it would severely impact our nation's intercity bus carriers; create economic chaos in the van and bus-type vehicle markets; displace the present services of many small airport ground transportation providers; and, perhaps worst of all, decrease the level of service now provided for the disabled in small urban and rural areas. I ask your assistance in attempting to reach a compromise on this Bill which would increase services to the disabled, yet maintain the economic survival of these services.

As has been stated in previous testimony by representatives of the bus industry, equipping a 47 passenger bus with a wheelchair lift, widening the aisles, and installing a wheelchair accessible restroom would require a reduction of between 10 and 17 seats and the loss of baggage area. While this may sound absurd, it is what would be necessary to make a standard coach "fully accessible" to individuals in wheelchairs.

Worse yet would be the plight of a small fixed route van operators serving our nation's airports. In order to equip a 9 passenger van with an acceptable lift, two bench seats would have to be removed - 2/3 of the seating capacity. Fold-down seats could be used to replace 2 or 3 of these seats when wheelchairs were not in the vehicle; however, such seats are not passenger acceptable for rides of any significant distance. It is clear and predictible that these van and minibus services, of which there are hundreds across the nation, would simply cease to exist. Operators would turn to the one option left, and that would be to change their services to "demand responsive". I am concerned further that fixed-route scheduled service to many of our nation's small urban and rural communities would also cease to exist. Our disabled would therefore be left with no, or fewer, alternatives to meet their very special needs.

We should not ask our nation's isolated citizens to pay for the unintended consequences of this bill. Rather, we might attempt to work with the small businessmen and women involved in the transportation industry to augment their present services through government grants for wheelchair-equipped vehicles. We might look also at new alternate solutions, perhaps some requiring no direct government intervention.

It is possible to provide service to our disabled without the ruinous expense and loss of capacity due to cumbersome wheelchair lifts on all fixed route bus and van-type vehicles. One such innovative solution can be found in Toronto, Canada. At Pearson International Airport, officials have permitted 5 additional vehicle permits for taxi/limo operators only if these vehicles are wheelchair compatible. The Toronto airport taxi/limo permits are attractive business ventures and operators willingly pay $5,000 or more per year for the privilege of operating at the airport. The 5 new vehicles are Chrysler minivans with adapted floors so wheelchairs can gain easy entry.

These new wheelchair vehicles wait in the taxi/limo line as others, but are called to the head of the line when a wheelchair vehicle is requested. Thus far, this disabled service experiment at Pearson International Airport has been a rousing success. A supply of vehicles is always available to the disabled at regular prices and the supplying operator earns as much or more than others in the system because the vehicle configuration may also be preferred by people travelling with a great deal of luggage. In addition, the back seat of the minivans are very comfortable, giving the passenger the feeling of riding in a limousine. I use this example to illustrate that there are innovative methods of accommodating the disabled at our airports. However, requiring wheelchair lift devices on all fixed route vehicles is plainly not economically feasible for anyone.

There are also several technical problems with the Bill as stated, which would probably jeopardize its eventual application. It would appear to me that the Bill could be construed as unconstitutionally vague and/or discriminitory against fixed route ground transportation services. The language of the Bill refers to "over-the-road" coach, and "demand responsive" services, but there is no clear definition of these terms. There is no definition in the Bill no are there generally accepted definitions for these terms in the industry. The Bill may be viewed as inherently discriminatory in that it singles out only fixed scheduled ground transportation operators. Many such operators compete with demand responsive services, which use the same type of vehicles, and commuter airlines - both of which are exempt from the provisions of this proposed bill.

Another problem relating to the Bill is its total reliance on current wheelchair lift technology. All such devices are not the same. Prices vary widely and not every kind of wheelchair can be accommodated by every model of lift. Many aspects of wheelchairs and lift devices have not been adequately considered. In fact, current Interstate Commerce Commission regulations prohibit the transportation of acid batteries, a component of most electric-powered wheelchairs, in over-the-road vehicles. Further research needs to be conducted on these devices and alternatives to wheelchair lifts, such as ramps.

Consideration needs also to be given to the safety and comfort all passengers on longer intercity trips. In the event of an accident, wheelchairs may pose a hazard to other passengers and the disabled, as they attempt to exit the vehicle. Furthermore, the wheelchair is much less comfortable than a reclining coach seat for a long trip. Clearly, these issues need examination and the preferences of the disabled taken into account.

A final hurdle not touched upon in the Bill is the matter of insurance for carriers when they do transport disabled passengers. Some insurance companies will not provide coverage or will do so only at extremely high premiums if disabled patrons are transported. Thus, enactment of this Bill would again mean the further loss of fixed route service. Clearly, this issue needs further study and amplification.

The airport ground transportation industry is not insensitive to the needs of our nation's disabled. Most operators provide service where practical and insurance coverage permits. However, the economic burdens posed by this Bill are simply insurmountable. We ask the committee's help in reshaping Senate Bill 933/H.R. 2273 in order to not unduly penalize the fixed scheduled segment of this industry. Specifically, we would ask the following:

1) That Section 304 of this Bill be stricken until such time that the three year study of private operator impacts recommended in the Bill is completed and their resultant recommendations made known to Congress.

2) That other methods of wheelchair accessability; i.e. vehicle ramps, be studied as acceptable alternatives.

3) That other countries and their airports be studied to determine how they meet the needs of the disabled, yet maintain the financial viability of their fixed route carriers.

These suggestions are broadly stated, but their accomplishment would insure the temporary survival of fixed route service while we address the needs of the disabled in a forthright manner. Your consideration of these issues and leadership in preventing serious harm to our transportation industry is greatly appreciated. The airport ground transportation industry is anxious to assist in meeting the needs of the disabled and looks forward to moving ahead with constructive proposals that would not seriously injure this industry.

Thank you for your interest. If I can provide any further assistance to you or to your staff, please do not hesitate to request it.

Respectfully submitted,

Ray Mundy

SUBCOMMITTEE ON SURFACE TRANSPORTATION

concerning the

AMERICANS WITH DISABILITIES ACT OF 1989
H.R.2273

SEPTEMBER 26, 1989

Mr. Chairman, the International Taxicab Association (ITA) and its member companies thank you for the opportunity to appear here today. As the most experienced and dedicated providers of transportation to disabled persons, our members, demand-responsive, for-hire transportation providers, fully support the goals of the Americans with Disabilities Act of 1989 -- the full and complete inclusion of disabled persons in every facet of American life, whether it be work, recreation or transportation.

INDUSTRY OVERVIEW

The International Taxicab Association represents the owners and managers of taxicab, limousine, livery, van and minibus fleets. Our 696 member companies operate approximately 40,000 for-hire, demand-responsive vehicles.

In the United States, the private, for-hire vehicle fleet industry consists of over 6,300 companies, operating over 205,000 vehicles, providing over 355,000 jobs, transporting over 2 billion passengers and grossing approximately $6 billion annually.

No sector of public transportation is more experienced, more dedicated, or provides more mobility for disabled persons than does the demand-responsive, for-hire vehicle industry. With non-modified standard equipment, the 170,800 taxicabs and 16,600 limousines and liveries in the United States have long met the local public transportation needs of people with disabilities. Our industry also operates 10,900 vans, approximately 40% of which are equipped with lifts to serve passengers who use wheelchairs. The remaining 6,700 vehicles operated by our industry include minibuses, school buses, motor coaches, ambulances and supervisory vehicles.

A key indication of the for-hire vehicle industry's commitment and ability to transport people with disabilities is the degree to which public and private organizations contract with our industry for transportation service.① Nationally, over 65% of all private sector, demand-responsive transportation companies have contracts to provide transportation services for a wide array of groups, many of which include people with disabilities. Over 46% of all our industry's companies contract to transport company employees, such as airline or railroad crews; 45% contract to transport hospital patients and convalescents; 44% contract to transport senior citizens; 44% contract to transport school children; 44% contract to transport public aid recipients; 35% contract to transport other persons with disabilities; 14% contract to transport government employees; and 10% contract to provide community dial-a-ride service.

Further evidence of the for-hire vehicle industry's commitment to serve persons with disabilities is found in ITA's support for expansion of the regulations promulgated by the U.S. Department of Transportation under §504 of the Rehabilitation Act of 1973; our industry-wide educational sessions and published guidelines for assisting people with disabilities; our promotion of special service contracts with social service agencies and public transit authorities; our service on the Easter Seals steering committee that is examining transportation for persons with disabilities; and our development of model guidelines for taxicab driver training programs which include serving disabled passengers.

The demand-responsive, for-hire vehicle industry's commitment to serving disabled passengers is further reinforced by the overwhelming majority of taxicab ordinances in U.S. cities which prohibit taxicab drivers from refusing to convey any orderly person upon request, unless previously engaged or otherwise unable or forbidden to do so. Needless to say, "any orderly person" includes disabled persons.

For these reasons, the demand-responsive, for-hire vehicle industry does not need this legislation. Nevertheless, we welcome it so that our competitors and those organizations who hire our transportation services will become more sensitive and responsive to the needs of disabled passengers.

TRANSPORTATION PROVISIONS OF BILL

The Senate passed its version of the Americans with Disabilities Act of 1989 on September 6. Although S.933 and H.R.2273 were identical when introduced, and remain generally similar, ITA wants to highlight some important distinctions between the bills to which this Committee should give its attention.

These distinctions are important because unlike most employers, ITA's members will be subject to not only the employment and public services provisions of this legislation, but also the new rules prohibiting discrimination in the provision of public transportation.

Legislative Analysis

Both H.R.2273 and S.933 are structured to apply in different ways to public sector transportation providers, such as Washington's Metro bus and rail systems; private sector businesses that provide incidental transportation service, such as hotels and office buildings; and private sector transportation providers, including taxicabs and other paratransit providers.

Public Sector Providers

Both H.R.2273 and S.933 require public sector providers to: 1) purchase accessible, fixed route vehicles; 2) recognize the special operating style and opportunities available through demand-responsive systems by providing comparable service through paratransit supplements to disabled persons who cannot use accessible, fixed route vehicles; and 3) provide service to disabled persons equivalent to that provided to the general public when operating a demand-responsive system open to the general public. ITA supports these provisions.

However, the bills have two differences affecting demand-responsive paratransit providers. First, S.933 limits the requirement for public sector paratransit supplements to services that would not impose an "undue financial burden" on the public authority. The ITA believes that this standard could become a loophole enabling public transportation authorities to avoid their obligation to continue to provide existing supplemental services, which are highly effective in serving disabled persons, or to add new supplemental service when required to adequately serve disabled persons in the community.

To ensure that this does not occur, the Senate report specifies six factors -- eligibility, response time, restrictions or priorities based on trip purpose, fares, hours and days of service, and service area -- that are to be used to determine whether a supplemental paratransit system provides comparable service to disabled persons. The ITA strongly supports these criteria and urges this Committee to concur in them.

A second distinction regarding public transportation authorities is in the scope of the provisions governing supplemental or general purpose demand-responsive systems. S.933 applies those rules to any "public entity," while H.R.2273 applies them to any "individual or entity" operating a demand-responsive system. These rules, (§303(c) and (d) of H.R.2273) should apply only to public entities. Otherwise, private sector operators under contract to public transportation authorities will be subject to overlapping and perhaps conflicting rules -- one governing their direct provision of licensed services to the general public, and one governing their provision of services under contract to a public authority. In the latter case, the public authority should bear the legal responsibility for compliance, not the contractor.

Public Accommodations

Both H.R.2273 and S.933 also prohibit discrimination by public accommodations that provide incidental transportation to their customers, guests or visitors. These providers include, for example, hotels that provide airport or other intracity transportation service, and private companies, such as major corporations, apartment complexes, or retirement and nursing homes, that provide shuttle service to commuter rail stations or shopping malls.

H.R.2273 prohibits these operators from purchasing any vehicle capable of carrying more than 12 passengers that is not accessible to disabled persons unless they provide equivalent levels of service to disabled persons and the general public.

Although S.933 has nominally separate standards for fixed route and demand-responsive systems operated by such businesses, both standards effectively prohibit such operators from purchasing any vehicle carrying more than 16 passengers that is not accessible to disabled persons unless they provide equivalent levels of service.

ITA believes that the 16-passenger standard is more appropriate, and urges this Committee to adopt the Senate language on this point. In addition, because these providers of incidental transportation service compete directly with private providers of taxicab and other demand-responsive service, the standard adopted here -- whether it be 12 passengers or 16 -- must be identical to the standard applicable to private, demand-responsive providers.

ITA's second concern regarding public accommodations is the liability of private, for-hire, demand-responsive operators who provide services under contract to public accommodations, including a wide array of both private and public sector clients. These may include, for example, private companies, hotels, and welfare and rehabilitation agencies. In these cases, the client company or agency controls the type of vehicle and frequency of service. For this reason, we ask this Committee either to amend the bill or to include language in its report to clarify that when services are being provided under

3042

a contract between: 1) a public operator or a public accommodation, and 2) a private operator, accessible equipment need be used only to the extent required to ensure that the public operator or public accommodation is satisfying its duties under the Act.

Private Sector Providers

As applied to private sector providers of transportation service, such as taxicab and paratransit operators, H.R.2273 and S.933: 1) require private sector providers to reasonably accommodate disabled passengers through changes in policies and practices, including the addition of auxiliary services (other than hydraulic or other lifts); and 2) prohibit private providers from purchasing or leasing any new vehicle (other than an automobile or over-the-road bus) that is not wheelchair accessible. The Senate bill also would exempt providers from the full accessibility requirement if the provider is otherwise able to provide disabled persons with service equivalent to that provided to the general public.

ITA supports these rules, but requests that the Committee amend the bill to define an "automobile," which the Senate failed to do. Consistent with the Federal Highway Safety Act, ITA recommends that any vehicle whose capacity is 16 or fewer passengers should be treated as an automobile.

In addition, this Committee should adopt the Senate bill's "equivalent service" provision, which recognizes that demand-responsive providers should not be required to purchase more expensive equipment than is required to actually provide equivalent service to disabled persons. To require all non-automobile vehicles to be equipped to serve disabled persons who only require a small portion of the service would unnecessarily increase transportation costs for disabled persons and the general public alike.

This provision also would recognize the special opportunities and characteristics of the demand-responsive transportation provider. These providers are usually easily able to provide equivalent levels of service to disabled persons because the trip normally begins with a call from the passenger, who can notify the dispatcher of any special needs. Knowing this need, the dispatcher is then able to ensure that the driver who takes the call is equipped and able to provide the required service. Such a driver tends to be sensitive to and enthusiastic about serving disabled persons, and therefore provides better service than might otherwise be available.

Equivalent Level of Service

ITA has three concerns about the definition of the phrase, "equivalent level of service." First, even if the term "automobile" is appropriately defined, and if this Committee adopts a provision allowing private operators to purchase non-automobile vehicles if they provide equivalent levels of service to disabled persons, the bill or the Committee report should clarify that providing an "equivalent level of service" does not require that the operator use the same type of vehicle. Thus, for example, if a small operator has 15 taxicabs and 2 non-automobile vans, and neither of the vans is wheelchair equipped, the operator may satisfy his obligation to provide an "equivalent level of service" by providing transportation in a taxicab instead of a van.

Second, when a system is viewed in its "entirety" to determine whether it provides equivalent or comparable service, allowances should be made for unusual circumstances which temporarily prevent an operator from rendering equivalent or comparable service to any particular disabled person. Assume, for example, that an operator who ordinarily provides service to non-disabled persons in 15 minutes and to disabled persons in 30 minutes is treated as providing comparable service. If the service to disabled persons were ordinarily provided only after 60 minutes, ITA agrees that the service would not be comparable. However, unusual circumstances, such as a vehicle being out of service, extreme weather conditions, an unusually high demand in a short period of time or a local convention of disabled people, could increase waiting times for disabled persons during the extraordinary event. Likewise, a wrecked vehicle, extreme weather, high demand, or a local convention could create delays for non-disabled passengers. If service waiting periods for disabled persons are unusually long for the period of time that coincides with the disruptive event, the operator should not be considered to be discriminating against those disabled persons who, like other consumers, may on occasion be required to wait longer than usual for transportation service.

Third, some small, private operators may operate only non-automobile vans, none of which are wheelchair equipped. These operators should be permitted to satisfy their obligations to provide equivalent levels of service to disabled persons by contracting with other providers who either operate wheelchair-equipped vans or taxicabs. In such a case, the vehicles available under the contract would be treated as part of the small operator's "system."

EMPLOYMENT ISSUE

ITA also wishes to make the Committee aware of its concerns about the effect of the bill's prohibitions against employment discrimination in the for-hire vehicle industry, particularly in the case of applicants for positions as drivers. While both H.R.2273 and S.933 include provisions that permit employers to take into account qualification and performance standards that are both "necessary and substantially related to" an individual's ability to perform the tasks required in a job, these provisions or the Committee Report should be drafted to ensure that compliance with other state or municipal safety rules, such as state laws governing commercial drivers, should be sufficient to satisfy the operator's duty under the Act.

CONCLUSION

In conclusion, the private sector, demand-responsive, for-hire vehicle industry (taxicabs, limousines, liveries, vans and minibuses) fully endorses the intent and broad scope of the Americans with Disabilities Act of 1989. Taken together, H.R.2273 and S.933 provide an excellent framework for ensuring the inclusion of disabled persons in all parts of American life. The following recommendations are made not to change this historic legislation, but to improve it in a manner that will assure the equitable sharing of burdens by all parts of the public transportation industry.

1. Define the term "automobile," preferably to include any vehicle carrying 16 or fewer passengers.

2. Equalize treatment of public accommodation transportation providers and private transportation providers by excluding vehicles serving 16 or fewer passengers from the full accessibility requirements applicable to public accommodations and private transportation providers.

3. Clarify the definition and application of the term, "equivalent levels of service" by --
   a. Permitting private sector operators to purchase new, non-accessible, non-automobile vehicles if they provide equivalent levels of service by other means;
   b. Clarifying that unusual instances of disparate service to disabled persons will not, in themselves, support a finding that an operator has discriminated against disabled persons; and
   c. Permitting small fleet operators to fulfill their responsibilities by contracting with other providers for service to disabled persons.

4. Clarify the application of the employment nondiscrimination rules to the employment of commercial drivers.

5. Clarify that responsibility for satisfying the Act rests with the public authority or public accommodation when services are provided by a private operator under contract to a public authority or public accommodation.

6. Limit the scope of the "undue financial burden" exception to the requirement that public sector transportation providers provide supplemental paratransit service to individuals unable to use accessible, fixed route vehicles.

ITA believes that these improvements will benefit both individuals with disabilities and the public transportation industry alike, and stands ready to work with the Committee and its staff to this end.

PANEL MEMBERS

Mr. Chairman, I would like to introduce two members of the International Taxicab Association who are here to tell you firsthand how they meet the needs of their passengers with disabilities and how they see this bill impacting their private, for-hire, demand-responsive companies.

On my right is Mr. Rudolph H. Bruhns. He is the Executive Vice President and General Manager of Yellow Cab Service Corporation, which owns four taxicab companies, one of which is Yellow Cab of Houston. Yellow Cab of Houston is the third largest taxicab company in North America, operating 1,205 demand-responsive vehicles. They have recently begun to convert their fleet from four-door sedans to minivans. The company also operates 10 wheelchair-accessible vans to meet the transportation needs of its passengers who use wheelchairs.

On my left is Mr. Robert M. Werth. He is president of Diamond Transportation, Inc., which operates 11 wheelchair-accessible vans, five non-wheelchair-accessible vans and one wheelchair-accessible school bus. Mr. Werth's company is affiliated with both the Yellow Cab and Diamond Cab Companies in Alexandria, Virginia. Yellow Cab operates 166 taxicabs and Diamond operates 132 taxicabs. Mr. Werth is very committed to providing high quality, fully accessible public transportation service directly to the general public and through contracts with public agencies and private companies.

Following Mr. Bruhns' and Mr. Werth's brief statements, we would be happy to answer any questions the members of the Committee might have.

Thank you for the opportunity to address this important bill, and we hope that you will call on us for assistance.

TESTIMONY OF MR. RUDOLPH H. BRUHNS
EXECUTIVE VICE PRESIDENT
YELLOW CAB SERVICE CORPORATION
HOUSTON, TEXAS
H.R. 2733
AMERICANS WITH DISABILITIES ACT OF 1989

Mr. Chairman and members of the Subcommittee, I first want to thank you for the opportunity to testify here this morning. As Mr. LaGasse has said, my name is Rudolph H. Bruhns, and I am the Executive Vice President of Yellow Cab Service Corporation, in Houston, Texas.

Like the International Taxicab Association, Yellow Cab Service Corporation supports this legislation. We firmly believe that disabled Americans must have the same opportunities for employment and transportation that are available to all other Americans. At the same time, we are very concerned that this legislation not impose unnecessary costs on private providers of transportation for disabled persons that will raise the price of transportation for all, including the disabled.

I am here for one purpose, and one purpose only: To ask this committee to ensure that the definition of an automobile, for purposes of this act, includes standard vans and minivans which are now being introduced into taxicab service across the United States. The companies owned by Yellow Cab Service Corporation provide a good example of this trend.

Yellow Cab Service Corporation is a holding company that operates taxicab companies in Houston and Austin, Texas; Colorado

Springs, Colorado; and Charlotte, North Carolina. The largest of these companies, Houston Yellow Cab, transports nearly 6 million passengers a year, including dispatch trips, airport trips, and passengers picked up on the street. Included in this number are over 100,000 trips made by elderly and handicapped passengers subsidized by the Houston Metropolitan Transit Authority. Over 14,000 of those subsidized trips were wheelchair trips, some of which were transported in one of ten wheelchair - accessible minivans operated by Houston Yellow Cab. The remainder of the wheelchair trips were transported in regular sedan taxicabs.

For many years, Houston Yellow Cab has used full-size sedans manufactured by the Chrysler Corporation, the Plymouth Gran Fury model. In November, 1988, Chrysler Corporation built the last Gran Fury. After investigating the remaining two full-size vehicles available, the Chevolet Caprice and the Ford Crown Victoria, and observing what other companies were doing with minivans, Yellow Cab Service Corporation decided to adopt the minivan as its taxicab vehicle for the future. As a result of that decision, we have already purchased 125 1989 Plymouth Voyager minivans that seat six passengers. By 1994, we expect to be operating 1650 Plymouth Voyager minivans.

Why has Yellow Cab Service Corporation, and other taxicab companies across the country begun to adopt mini-vans? There are six reasons why minivans are as good as or better than a regular sedan.

1. Capacity. Mini vans carry as many passengers as full-size taxicab sedans - usually 6 passengers.

2. Accessibility. Minivans are wheelchair - accessible. Houston Yellow Cab presently operates ten minivans with lifts for wheelchairs. However, the expense of installing a wheelchair lift, nearly $6,000 per van, makes it prohibitive to do so in every case. Lifts are also unnecessary in many cases, for the taxi drivers operating minivans are capable of lifting wheelchair users into the van in the same manner as they now lift wheelchair users into taxicab sedans. Thus, we do not expect any loss of quality of service for the disabled.

3. Increased passenger space. Minivans provide more leg and head room for the passengers, thus increasing the comfort of disabled passengers.

4. Increase luggage space. Minivans provide more luggage space than taxicab sedans, enabling disabled travelers to travel with more luggage and still accomodate their wheelchairs.

5. Safety. In operation, minivans appear to have 30 percent fewer accidents than taxicab sedans. We believe this is due to better visibility for the driver and the increased vehicle stability resulting from the front wheel drive configuration.

6. Fuel economy. Minivans used by Houston Yellow Cab currently average 19 miles per gallon, compared to 15 miles per gallon for Gran Fury sedans. Assuming the average fleet mileage of Yellow Cab Service Corporation's four fleets, which is 100

million miles per year, this four mile per gallon difference would save approximately 1.4 million gallons of gasoline each year.

Mr. Chairman and members of the subcommitte, for these reasons we ask that you amend the bill before you today to ensure that minivans are treated as automobiles, and are not subject to the requirement that they be equipped with wheelchair lifts. Houston Yellow Cab and the Yellow Cab Corporation are committed to providing accessible transportation for every disabled person that needs it. We believe that with a mix of standard and wheelchair - accessible minivans, we can do this conveniently, safely, and efficiently. We would ask your help to make it possible.

Thank you for the opportunity to testify today, and I would be happy to answer any questions you may have.

TESTIMONY OF

ROBERT M. WERTH

PRESIDENT
DIAMOND TRANSPORTATION SERVICES, INC.
3025 MT. VERNON AVE.
ALEXANDRIA, VA 22305

BEFORE THE

COMMITTEE
ON

PUBLIC WORKS AND TRANSPORTATION
SUBCOMMITTEE ON SURFACE TRANSPORTATION

U.S. HOUSE OF REPRESENTATIVES

concerning the

AMERICANS WITH DISABILITIES ACT OF 1989
H.R. 2273

SEPTEMBER 26, 1989

Good monring, Mr. Chairman and members of the committee. My name is Robert M. Werth. I appear before you today as President of Diamond Transportation Services, Inc. (DTS) located in Alexandria, Virginia. My comments today reflect the experiences of a private paratransit operator. A large majority of my firms business is contracting with local government for the provision of public and human service transportation for the disabled communities of Alexandria and Arlington, Virginia. I am currently the contract provider for DOT specialized public transportation service that operates within the city of Alexandria. This service is for persons who cannot use regular transit buses because of disabilities. Taxicabs and wheelchair accessible vans serve the patron.

The mission of our company is consitent with the goals and objectives of the Americans with Disabilities Act of 1989 (ADA) -- to provide a transportation system that allows for full participation and independent living for the nations disabled persons. It is my hope that by giving detailed testimony concerning the DOT service, the committee can develop a full understanding of the role paratransit can play in acheiving the goals of ADA and how a private taxicab/paratransit company has been able to provide such a service.

DOT: SPECIALIZED PUBLIC TRANSPORTATION SERVICE

Historically, the DOT service began following Alexandria's decession to provide their own bus service called **DASH**. DASH is not lift-equipped. The City worked with a special task force formed by the Alexandria Commission on Disabled to develop a specialized public transportation service. This system is a demand responsive door to door service.

Both taxicab and accessible van service are offered for trips wholly within the City of Alexandria. This service runs seven days a week during the same hours that the DASH bus service operates.

Any person living in or visiting Alexandria who has a certified disability which prevents him or her from using the regular transit bus may use the service. A physician's statement is required for certification.

If the rider is using another specialized transportation service, then the rider is encouraged to continue using that service. DOT is not available for group transportation requests or charter service.

DOT began with a two tier level of service. The first level was for a bus stop to bus stop, or bus stop to Metro service. The price for this service is the same price as the bus service, currently $.65. The second level of service is the door to door service for $1.25 per trip.

Trips are scheduled by calling a special number. Prior to July, 1989 trips were only made on an advance reservation basis. However, through negotiations with the City of Alexandria, the contract provider and the Alexandria Commission on Disabled, the advanced reservation requirement was lifted and **DOT On Call** service was implemented. This allowed for patrons to call the transportation companies directly if they were not able to make prior reservations.

As demand for this service has grown, capacity has been increased to accomodate this demand and ridership has not been suppressed. Trips are not limited to certain purposes and may be made for any reason whats so ever. There has never been an instance where service to new persons has been limited by placing applicants on a waiting list. Although there is permission to use the service by an application process, the City has the ability to same day certify potential riders. The service can accomodate visitors from out of town. In the cases were companions ride with the patrons, the companions ride for free.

The City pays the provider on a per trip basis. Neither the City or the Transit Agency has had to invest in any capital equipment. Alexandria Diamond Cab uses existing taxicabs on the street for the taxi portion of the service. Diamond Transportation Services, Inc. has made all the necessary investment for the capitalization of equipment in order to provide the City with the necessary vehicles in the provision of services. No guarantee or hourly fee is obligated by the City to the provider. The average cost to the City on a per trip basis is as follows:

	FY 1985	FY 1986	FY 1987	FY 1988	FY 1989
Cost per trip	$6.07	$8.00	$7.43	$6.82	$7.01
Ridership	3,264	10,514	14,357	17,393	19,907

Alexandria's DOT specialized transportation service is a model example of a public/private partnership, where a private company has contracted with the city to provide the service. This service demonstrates the ability of private industry in the form of the taxicab/paratransit industry to be the contractor of transportation services to the public.

BALANCE IN THE PROVISION OF SPECIALIZED TRANSPORTATION

My personal experience is that there is a need for a balance in the provision of transportation services to the disabled population. In order to provide complete independent living to all segments of the disabled community, transportation must be provided in the form of both lifts on buses and paratransit.

A large number of our DOT riders could not access the fixed bus routes, even if every bus had a lift. This population includes the severly disabled, dialysis patients and the increasing number of elderly disabled.

On the other hand, a great number of disabled are in need of fixed route bus accessiblity. This group is perfectly capable of using fixed route accessible transportation.

In speaking with a number of DOT patrons, it becomes quite evident that some of the riders would use fix route bus transportation if the routes were made accessible. On the other hand, many severly disabled riders can only use the door to door service. To many riders, a bus stop accross the parking lot, from their final destination, is the same as being let off on the other side of the earth. Paratransit, meets the needs of this constituency.

There are also people who need a combination or multi-modal approach to specialized transportation. This group will benifit from having access to both fixed route and paratransit. An example is a person who uses paratransit to link up with Metro.

MOBILIZATION WITHIN THE CITY OF ALEXANDRIA

Since the start of the DOT specialized transportation service, there has been a complete change in life and living styles in the City of Alexandria. When the service first began, we observed many barriers to complete mobility for the disabled. These barriers manifested themselves in the form of stairways to homes where DOT riders lived, lack of curb cuts, limited access for discharging riders and doorways that were impossible to manage for the disabled.

Over the past five years I have personally observed the breaking down of these physical barriers. Ramps have replace stairs, curb cuts have been added to inaccessible side walks and electronic doorways have been added to many buildings. These events have been tremendously benificial to the citizens of Alexandria, not only because of the mobility of the disabled, but because of the benifits to the remainder of the community. These benifits are the complete integration of the disabled into the Alexandria community which create economies that never existed before.

Recongnizing the need for a dichatomy of service, paratransit and fixed route, there still exists a service problem. This service problem is interjurisdicational travel for the disabled. DOT, for example does not go outside the city limits of Alexandria.

CONTRACTING FOR SERVICE

The DOT service is an example of governmental agencies contracting with private paratransit providers. It is very important that the provisions of ADA, 1989 allow for transit agencies and and public entities to contract for paratransit services.

Furthermore, where private operators are required to provide comparable levels of service to disabled riders, private paratransit providers should be allowed to contract for these services.

CONCLUSION

As a small business man, who is also a private transportation provider, I fully endorse the intent and futuristic vision of the Americans with Disabilities Act of 1989. However, it is extremely important for the subcommittee to recognize the role that can be played by small private paratransit operator. I believe it is the entent of this legislation to provide opportunities and independent living for people with disabilities. Small private providers like Diamond Transportation Services want to continue being part of this effort. I support the ITA's recommended improvements to this historic legislation and endorse the broad scope of S. 933.

American Foundation for the Blind, Inc.
Governmental Relations Department
1615 M Street, N.W. Suite 250 Washington, D.C. 20036
(202) 457-1487

September 20, 1989

Hon. Norman Mineta, Chairman
Subcommittee on Surface Transportation
Committee on Public Works and Transportation
U.S. House of Representatives
Washington, DC 20515

RE: Americans with Disabilities Act, H.R.2273,
Hearing Record Date September 20, 1989

Dear Chairman Mineta:

The undersigned disability organizations are pleased for this opportunity to comment upon the Americans with Disabilities Act (ADA). The purpose of this letter is to offer our recommendations concerning transportation aspects of the (ADA). The Governmental Relations Department of the American Foundation for the Blind has analyzed H.R. 2273, the Senate passed companion bill (S. 933), and the report of the Senate Committee on Labor and Human Resources (S.Rep.101-116). As more fully explained below, we believe that the ADA as passed by the full Senate and/or the accompanying Committee report require certain amendments in order to better address discrimination faced by blind or visually impaired people. We are hopeful that an amended version of H.R. 2273 and the legislative history of the ADA in the House will address our concerns. The recommendations contained in this letter relate primarily to the transportation provisions of the ADA. Statutory references are to the Senate passed bill and Committee Report.

Scope of Accessibility

We are concerned that Section 203(c) entitled ACTIONS APPLICABLE TO TRANSPORTATION PROVIDED BY PUBLIC ENTITIES CONSIDERED DISCRIMINATORY seems to focus almost exclusively on issues facing persons who use wheelchairs. There are many transportation-related communication barriers faced by blind or visually impaired persons. Many of these barriers represent significant health or safety concerns to the user of public (or private) transportation services. Issues such as recognition of signage, adequate lighting, platform edging, or warning of dangerous conditions can benefit not only the blind or visually impaired traveler, but also members of the general public as well. Although some subway accidents have involved blind or visually impaired persons, many subway platform falls have involved fully sighted subway riders who, obviously, could also benefit from safer design considerations. Other transportation and communication barriers include the inaccessibility of printed schedule information, inconsistent locating of fare card or other equipment, unnecessary white noise which masks ambient sounds used for orientation clues, etc. Please note that most, if not all, of these barriers would *not* be costly to surmount.

In addition to including examples of transportation/communication barriers faced by blind or visually impaired persons in the statute and/or report, we recommend that the several references to "including individuals who use wheelchairs" are unnecessary and have the negative effect of seeming to focus exclusively on such individuals. This language, coupled with the absence of examples illustrating transportation/communication barriers as discussed above, creates a negative implication, which we trust was not intended, that the ADA is primarily targeted to elimination of discrimination faced by wheelchair users. Although we somewhat can appreciate the Senate Committee's reasoning for specifically mentioning wheelchair access and including several examples of physical barrier removal in the Act due to recent case law developments in the transportation area, we believe that the reiteration of this language raises an unnecessary scope of coverage question which may impact negatively upon blind or visually impaired people. Whether or not this language is dropped--and we think it should be--we recommend the addition of a new provision in Title V: MISCELLANEOUS PROVISIONS which we believe will help make clear the proper cross-disability construction of the Act, i.e., that the ADA is intended to address discrimination faced by all persons with disabilities, regardless of disability category or type. Proposed Section 501(a) follows.

Title V: Miscellaneous Provisions

Sec. 501. Construction

> (a) IN GENERAL. The requirements contained in Titles I through IV of this Act shall be construed in a manner to eliminate discrimination faced by all persons with disabilities, regardless of disability category or type.

Unwanted Accommodations

Proposed Section 501(a) (continued)

> Nothing in this Act shall be construed to require a person with a disability to accept an accommodation, auxiliary aid, service, opportunity, or benefit which is not appropriate to, or desired by, such individual.

The last sentence of this new subsection addresses the "unnecessary accommodation" issue. A blind or otherwise disabled person must be guaranteed the right to choose to accept or reject proffered accommodations, benefits, etc. It is not uncommon, for example, for a transportation provider to require a blind person to use a wheelchair in situations where the blind individual prefers to use a sighted guide or prefers no assistance at all. Attempts by service providers to offer a "one size fits all" accommodation or aid should, therefore, be reduced through this language.

Paratransit Services

Blind and other persons with disabilities must be guaranteed the right to use paratransit services if they choose to use them in preference to fixed-route transportation. Both accessible fixed-route and paratransit services must be available in order to meet individual need. A blind person with no other disabilities and good mobility skills would probably prefer to use accessible fixed-route transportation. On the other hand, if that same individual needed to cross a six lane highway to reach the fixed-route bus stop, or is unable to effectively or safely travel, even on a temporary basis because of illness for example, such a person may prefer to use paratransit services. An individual's personal choice whether to use paratransit services or not is essential, and is more feasible (and certainly less costly) than attempting to apply an arbitrary criterion or test to whether the individual can physically use fixed-route bus transportation. Under current law, some transportation authorities have attempted to exclude blind persons from paratransit services on the grounds that such individuals could use a fixed-route bus system.

The Senate Committee report (S.Rep.101-116 at p. 50) deals quite explicitly with the issue of paratransit services. Although the report language indicates that all disabilities must be served by a paratransit system as an interim step toward full fixed-route accessibility, the report does recognize that paratransit service will nevertheless be required by some disabled passengers.On the question of who cannot otherwise use a fixed-route accessible system, the report cites an example of a wheelchair user who cannot reach the bus stop due to the lack of curbcuts.

We believe that the ADA and its legislative history should clearly state that all disabled people are eligible to use paratransit services regardless of disability type. Comparability questions including fares, scheduling, routes, etc., can be worked out on the local level, as contemplated by the Senate Committee Report, in consultation with an advisory committee whose members represent the concerns of the entire disability community.

Therefore, section 203(c) should be amended as follows to accomplish the above stated objectives: (new text is indicated by brackets)

> If an individual or entity operates a fixed-route public transportation system to provide public transportation, it shall be considered discrimination, for purposes of this act and section 504 of the Rehabilitation Act of 1973 for such individual or entity to fail to provide paratransit or other special transportation services sufficient to provide a comparable level of services as is provided to individuals using fixed-route public transportation to individuals with disabilities, including individuals who use wheelchairs, who [prefer not to or] cannot otherwise use fixed-route public transportation. [Nothing herein contained shall be construed to permit a transportation provider to deny paratransit services to an otherwise qualified person with a disability based solely upon the type or severity of such individual's disability.]

We hope that the above recommendation will be adopted by your Subcommittee during its consideration of the Americans with Disabilities Act. If you have any additional questions, please do not hesitate to contact me.

Please include this letter as part of the hearing record.

Very truly yours,

American Foundation for the Blind

Hon. Norman Y. Mineta, Chairman
Subcommittee on Surface Transportation
Committee on Public Works and Transportation
Rm. B-376, Rayburn H.O.B.
Washington, D.C. 20515

Dear Chairman Mineta:

This letter is sent to share my thoughts with you and the Surface Transportation Subcommittee members about the public transportation sections of the "Americans with Disabilities Act" (H.R. 2273). I hope you will include it in the record of your subcommittee's hearings on this matter.

As an original cosponsor of this legislation, I strongly support its goal of mainstreaming our nation's largest minority group, the disabled, into everyday life. Access to reliable public transportation is a key part of this effort, which I also support.

However, the broad approach of this bill with respect to inner-city fixed-route buses is unsatisfactory. Lift-equipped buses are not the only answer to the disabled community's mobility problem. Even more importantly, mandating all newly acquired fixed-route buses to be lift-equipped would turn the clock back on serving the disabled in communities such as Milwaukee, Wisconsin.

The facts about Milwaukee County's experience with lift-equipped buses, and subsequent switch to a paratransit system, tell a compelling story about the county's commitment to providing mobility for the area's nearly 8,000 wheelchair-confined residents. Since June, 1978, the User Side Subsidy Program (USSP) has provided paratransit service to mobility-impaired people in Milwaukee County. The U.S. Department of Transportation's (DOT) 1979 regulations concerning Section 504 of the Rehabilitation Act mandated that recipients of federal mass transit funds make each mode of local mass transportation accessible to handicapped persons, including wheelchair users. The effect of these regulations in Milwaukee County was to require continuation of purchase of lift-equipped buses, regardless of availability, or use of other accessible transportation.

But the county's experience with these buses was frustrating and financially disastrous. The expensive lifts were plagued with mechanical problems, exacerbated by inclement winter weather conditions. Service delays were commonplace and usage was very low. In 1981, the last full year of universal lift-equipped bus service in Milwaukee County, the service averaged only 69 trips per month -- or just over 2 trips per day. No more than 15 individuals ever used these lifts at a time. Approximately 7,000 individuals confined to wheelchairs then lived within Milwaukee County.

Providing both paratransit and lift-equipped bus service to the county's mobility-impaired residents proved a costly duplication of transportation services. Usage patterns clearly demonstrated that handicapped persons preferred the USSP over lift-equipped buses. In a 1980 case with similar circumstances, the U.S. Court of Appeals for the District of Columbia found that Section 504 did not authorize the DOT to issue the extensive 1979 mass transit regulations.

Shortly afterward in 1982, a consent agreement permitting expansion of paratransit in Milwaukee County was signed by Judge Robert W. Warren of the U.S. District Court for Eastern Wisconsin. This agreement established a high minimum financial commitment to the USSP, and mandated regular assessments of USSP quality and use.

As of December, 1988, the USSP had enrolled 7,600 mobility-impaired county residents, and was providing over 29,500 one-way trips per month. While the average cost of these rides to the user was $2-$5, the door-to-door service is a substantial additional benefit accompanying this higher fare. Paratransit costs make up approximately 5% ($3.3 million in 1988) of Milwaukee County's regular transit system operating budget.

Mr. Henry Mayer, a transit consultant of Milwaukee, Wisconsin, has testified before your subcommittee about the impracticality of lift-equipped buses in northern climates. With this in mind, and the example of Milwaukee County's paratransit system before you, I urge subcommittee members to examine the possibility of involving communities in determining what type of service best serves their handicapped citizens.

Provision of accessible transit services for the mobility-handicapped is a sensitive issue, with many facets deserving careful examination. I appreciate you taking my views on this important matter into account.

Sincerely,

Gerald D. Kleczka

Good Afternoon Mr. Chairman and Members of the Subcommittee:

My name is Laura Oftedahl. I am presently employed as the Director for Public Affairs of the Columbia Lighthouse for the Blind here in Washington, DC. I speak to you today as a consumer: a professional woman who is visually impaired. My work experience has included jobs in sales, broadcasting, and public relations. I have also been involved in competitive sports programs for people with disabilities, and am proud to have won national and international medals in cross country skiing. Competitive sports activities provide people with disabilities the opportunity to prove what we can do. Too often we are told that we cannot compete effectively in all aspects of life. We Can!

You might be asking yourself at this point: "It sounds like this woman has her life together! Has she experienced discrimination? Does she need the ADA?" The answer to the last question is a definite "yes!" Although I try to lead a productive, active life despite my disability, I nevertheless face barriers which the Americans with Disabilities Act will address. I have been asked to discuss primarily transportation barriers and barriers to accessing public services faced by blind or visually-impaired people. I could also easily discuss employment discrimination because I have faced that, too. My bottom line message to you is that the accommodations I need as a visually-impaired person in order to effectively access transportation and public services do not cost a lot of money, and would, for the most part, be of great benefit to the public generally.

Let me give you some real life examples. I am a regular subway rider, but for me, as a visually-impaired person, each trip requires a great deal of extra concentration. Wayfinding for a blind or visually-impaired person is a task involving all one's remaining senses. I have frequently tried to ride an escalator in the wrong direction because I could not see the sign or direction indicator. I have been disoriented when embarking from a subway car because of variations in lighting from the car's interior to the platform. While on the platform, I cannot read the directional signs, and must rely upon information from other passengers. I must always be vigilant as to where the platform edge is located. A momentary distraction, or even a casual conversation with a fellow passenger might be deadly, since I must always be aware of every orientation cue available to me. The subway platform can be particularly hazardous during the jostling of rush hour. The station environment can also be confusing because equipment such as add-fare machines or transfer dispensers are not uniformly positioned in each station.

Bus transportation can also pose a problem. I, and many of my blind or visually-impaired friends, have been late for important appointments because a bus driver failed to announce a stop, even though asked to do so. Such occurrences can cause us great embarrassment, vis-a-vis employers or prospective employers, for example. Bus transfer points where many lines converge also can be a problem, particularly at night when no one is nearby to read the signs. Features such as adequate lighting, safety strips along platform edges, readable signage, and public address systems on buses coupled with better training of vehicle operators would greatly enhance my access to public transportation. These accommodations, which I understand may be required by the ADA, are not costly, and more importantly, benefit everyone. Some of the people who have unfortunately fallen from subway platforms here in Washington have not been blind, but have been careless fully sighted individuals. Thus, safety features such as platform edge markings and adequate lighting would help not only blind or visually-impaired people, but the general public as well.

Public transportation authorities have also attempted to exclude blind people from the use of paratransit or "dial-a-ride" systems. Such discrimination is predicated on the notion that blind people can physically mount a fixed route bus. Although a blind person without a secondary disability is perfectly capable of boarding a bus, a blind or visually-impaired person, depending upon his/her travel skills, may not be willing or able to cross a six-lane highway to reach the fixed-route bus stop. Finding the location of the fixed-route bus stop may also be difficult in some situations.

Turning to access to public services, many of the same barriers also apply. Wayfinding in public buildings can be a problem because of inadequate signage or lighting. Large open areas such as building atriums can pose significant orientation barriers. White noise created by a cascading fountain, which are popular in some new buildings may destroy the sound cues which blind and visually-impaired people rely upon for orientation and mobility.

The solution for the white noise problem is simple: building managers need only to turn the fountain's water pressure down.

Barriers to accessing public information also exist. Few agencies produce publicly distributed material in braille, large-print, recorded, or computer-accessible form. When public information is not available in special media, alternate access (such as personal assistance) is frequently not available. I recently experienced this problem when I applied for a nondriver's ID card. It was difficult for me to determine which line to stand in, and I had to rely upon another applicant to help me fill out the necessary forms. When I asked the woman who took the applications for help, she told me: "That's not my job!", and made no effort to locate a supervisor or other assistance.

Mr. Chairman, I believe that the barriers I have described above can be eliminated at minimal cost and with benefit to the general public if the ADA is enacted into law. I hope the Congress will recognize the barriers faced by all people with disabilities which impede our full participation in society. I urge you to promptly pass the Americans with Disabilities Act.

Mr. Chairman, this concludes my remarks.

The Honorable Norman Y. Mineta, Chairman
Sub Committee on Surface Transportation
2350 Rayburn House Office Building
Washington, D.C 20515

Dear Representative Mineta;

We are writing to urge your quick and favorable action on the Americans with Disabilities Act (ADA). Your subcommittee will be considering the transportation provisions of the Act and we wish to call to your attention the tremendous success that the Municipality of Metropolitan Seattle has had with main line wheelchair accessible buses.

The ADA should contain a clear requirement that transit providers must begin with accessible mainline service. All new vehicles purchased should have wheelchair lifts. Subway and rail systems must also be able to accommodate passengers who use wheelchairs.

Intercity bus companies have long been exempted from requirements to provide service to disabled passengers and that oversight should also be addressed by your committee.

The technology to include disabled passengers in the mainstream of public transportation clearly is available, reliable and affordable. Your subcommittee can do its part by ensuring that the ADA requires public transit operators provide their services to all of their constituents.

The version of ADA passed by the Seante meets most of our needs and we urge you to see that it is not weakened in any way.

Sincerely,

George B. Turner

RE: Americans with Disabilities Act

Dear Sir:

Our thanks to you and your committee for the opportunity to deliver our comments concerning the transportation issues contained in this important legislation. The Americans with Disabilities Act has the potential of freeing persons with disabilities from constraints that now limit employment and full participation in their communities. Fully accessible transportation is an essential link to all other community services and activities.

We ask you to examine the highly successful METRO transit system which has over a decade of experience in providing accessible mainline transit service. The community of persons with disabilities is well served at a much lower cost per rider than other transportation options. The cornerstone upon which this service is built, is a fleet of coaches fully equipped with lifts. The other essential ingredient is special service options for those persons who cannot use a fixed route service.

The version of the bill that has passed the Senate by an overwhelming margin and which is supported by the Administraton, would go a long way toward providing equal and integrated transportation services, without undue hardship on the part of public and private sector business. We urge you to recommend this version of the bill for House vote.

We now have available technology that is reliable and affordable, that will make both transit and intra-city transportation services accessible. We hope Congress has the will to make this dream a reality for our millions of disabled citizens.

Sincerely,

Anne Waltz

Anne. Waltz, President
